A. *Statutory Requirements for Submissions.* Section 5(a) of the National Capital Planning Act of 1952, as amended (hereinafter "Planning Act"), provides that each Federal and District of Columbia agency, prior to the preparation of construction plans originated by such agency for proposed developments and projects or to commitments for the acquisition of land, to be paid for in whole or in part from Federal or District funds, shall advise and consult with the National Capital Planning Commission (hereinafter "Commission") in the preparation by the agency of plans and programs in preliminary and successive stages which affect the plan and agency of plans and programs in preliminary and successive stages which affect the plan and development of the National Capital. Section 16 of the Act of June 20, 1938, (hereinafter "Zoning Act") requires Commission approval of the location, height, bulk, number of stories, and size of Federal public buildings in the District of Columbia and the provision of open space in and around the same. Section 5(c) of the Planning Act requires a similar approval by the Commission for District of Columbia public buildings in the central area of the District as concurrently defined by the Commission and the Council of the District of Columbia. Section 7(b) of the act entitled "An Act to provide standards for placement of commemorative works on certain Federal lands in the District of Columbia and environs, and for other purposes", November 14, 1986,

(hereinafter "Commemorative Works Act") requires Commission approval of site and design proposals for commemorative works proposed to be placed in the District and its environs.

B. *Coverage of Submission Requirements.* These requirements cover the process to be followed in submitting proposals and plans for Commission action pursuant to the Planning Act, section 16 of the Zoning Act, and the Commemorative Works Act. They apply to proposals of the District of Columbia and Federal Governments, including civilian and military installations and facilities in the National Capital Region (hereinafter "Region"), except as provided in section 1.C. They also are intended to be used in connection with proposed developments of sponsors (both governmental and private organizations) of proposed commemorative works in the District of Columbia and its environs submitted to the Commission by the Mayor of the District of Columbia, Secretary of Interior, and Administrator of the General Services Administration. The types of projects and proposals covered include the following: Site acquisition; building construction or renovation, with or without related site improvements; site development, such as grading, landscaping, street and road extensions and improvements involving changes in cartway configurations, and surface parking; and all forms of commemorative works. Submission requirements for the installation of antennas on Federal sites are covered in the Commission's *Guidelines and Submission Requirements for Antennas on Federal Property in the National Capital Region.*

C. *Statutory Exemptions.* In accordance with section 5(b) of the Planning Act, these requirements shall not apply to projects within the Capitol grounds or to structures erected by the Department of Defense during wartime or national emergency within existing military, naval, or Air Force reservations, except that the appropriate defense agency shall consult with the Commission as to any developments which materially affect traffic or require coordinated planning of the surrounding area.

D. *Relationship to Master Plan Submission Requirements.* For projects located on sites and installations for which master plans are required by the Commission, these requirements are expected to be applied in conjunction with the Commission's *Master Plan Submission Requirements.* Master plans are necessary for installations on which more than one principal building, structure, or activity is located or is proposed to be located. Ordinarily, the Commission will not approve, or recommend favorably on, project plans for an installation for which there is no approved master plan unless the sponsoring agency provides an explanation satisfactory to the Commission as to its reasons for not submitting a current master plan, or modification thereto, for the installation. For projects not located on sites for which master plans are required, site acquisition (location and program) proposals and preliminary plans will generally constitute the master plans for such sites and serve as the basic planning documents for intergovernmental coordination. (See section 5.)

E. *Extension, Modification or Waiver of Requirements.* The Executive Director of the Commission (hereinafter "Executive Director") may extend, modify or waive any requirement as it pertains to any project proposal or development plan submitted for Commission review that does not meet the requirement because of its unique or special character or quality. Where such extension, modification, or waiver involves contents of the submission that may reasonably be expected to address or involve potential significant off-site impacts, the Executive Director shall provide notice to potentially affected public agencies and, if appropriate, provide opportunity for consultation.

Section 2—Submission Exceptions

The Planning Act authorizes the Commission to determine in advance the types or kinds of plans that need not be submitted for its review. The Commission has determined that plans for the following types of projects need not be submitted:

A. Projects involving the replacement of walks, roadways, and parking areas where no change in the location or the existing character or extent of the improvement is involved.

B. Projects involving the rehabilitation and improvement of buildings and structures where no change in the existing character, predominant use, or extent of the building or structure is involved.

C. Projects involving the replacement of trees, shrubs, and other plant materials, including minor changes in plant materials that do not change the existing character of the site.

D. Projects involving the replacement, but not the relocation or extension, of underground utility lines, such as pipes and cables, except pumping stations and treatment facilities, that do not (1) involve the removal of existing trees or changes in the natural topography or (2) perpetuate or create an adverse environmental impact.

Section 3—Submission Stages

Sponsoring agencies are requested to contact the Commission staff at the earliest possible time in considering the proposed acquisition of land and in the siting and initial planning and design of proposed new permanent or temporary developments within the Region. Such contact will provide an opportunity for the staff to advise sponsoring agencies of the appropriate submission and review stages and respond to questions concerning submission contents. The Commission staff is available at all times to advise and consult with sponsoring agencies on submission requirements. In cases in which an agency or organization other than the agency with jurisdictional responsibility over an affected site is sponsoring a development proposal, the agency holding jurisdiction will normally be responsible for submissions to the Commission. Questions concerning such responsibility should be addressed to the Commission staff at the earliest possible time in the project planning.

Submissions of plans and related documentation shall be made to the Commission at the following stages, where applicable:

A. *Location and Program submissions* shall be made prior to commitments for the acquisition of land to be paid for in whole or in part from Federal or District funds.

B. *Design/Development Concept submissions* should be made for developments and projects for which, because of their size and/or projected impacts, early Commission review and guidance are appropriate prior to the expenditure of substantial funds for more detailed project design. The recommended early contact between sponsoring agencies and the Commission staff is intended to provide an opportunity to identify the need for concept submissions in advance of the preparation of preliminary plans. In cases involving complex planning and development proposals, the Executive Director may, on the basis of such consultation, require concept submissions. Where the complex planning issues relate to the potential suitability of a proposed site, the Executive Director may require that location and program and concept submissions be made simultaneously. Sponsoring agencies may on their own initiative, make concept submissions if they desire to solicit the Commission's views on proposals prior to proceeding

with the development of preliminary plans. Concept submissions may be made not only for buildings and other types of structures but also for site improvements and commemorative works, where the complexity of the proposal warrants. They are normally made at the earliest possible time to allow the Commission's recommendations to serve usefully in the preparation of preliminary plans.

C. *Preliminary submissions (including Site and Building Plans, Building Plans, Site Development Plans, and Commemorative Works Designs)* shall be made for all projects involving new construction or renovation activities, except as outlined in section 2. Preliminary site and building plans, the most typical type of submission, are required for projects involving both building construction or renovation and related site improvements. Preliminary building plan submissions are required for projects involving building renovation only, where no site improvements are involved. Preliminary site development plan submissions are required for projects involving only site improvements. Preliminary design submissions are required for all commemorative works proposals. In cases in which the proposed commemorative works involve site improvements only, including sculpture, the preliminary design submission contents shall be as required for preliminary site development plans. Where proposed commemorative works include substantial structures, the preliminary design submission contents shall be as required for preliminary site and building plans.

Preliminary plans should be submitted at the stage when tentative design decisions about a project have been made by the sponsoring agency but well before detailed design work begins. Such plans are typically submitted at the 20 to 25 percent design stage. Timely submissions of preliminary plans are vital to avoid costly revisions in the later detailed design stage. If major changes are made in either the design or the program for a proposed development after the Commission has reviewed the preliminary submission, the affected sponsoring agency shall submit revised preliminary plans for review as far in advance of the completion and submission of final plans as possible, except where such changes have been made specifically in response to Commission recommendations on the preliminary submission.

D. *Final submissions (including Site and Building Plans, Building Plans, Site Development Plans, and Commemorative Works Designs)* shall be made for all proposals for which a requirement for a preliminary submission is identified pursuant to section 3.C. Final plans should be submitted after all design decisions, including building materials and landscaping materials, have been made and prior to advertisement and awarding of construction contracts. Final plans are typically submitted at the 60 to 80 percent design stage. They should be sufficiently advanced at the time of submission to represent definitively what the sponsoring agencies intend to build.

Final site and building plans for Federal public buildings within the District of Columbia and for District Government public buildings within the central area of the District of Columbia as concurrently defined by the Commission and the Council of the District of Columbia will ordinarily constitute the required submissions under section 16 of the Zoning Act and section 5(c) of the Planning Act, respectively. The Commission may not lawfully qualify or condition its approval of a proposed development pursuant to these provisions and a sponsoring agency may not lawfully deviate from such plans approved by the Commission under these provisions. Therefore, sponsoring agencies are urged to resolve all outstanding planning and design issues with affected agencies and organizations prior to the submission of final site and building plans. The Commission staff is available to assist in the resolution of such issues.

If substantial changes are made in any final plans after the Commission has reviewed and taken action on them but prior to construction, sponsoring agencies shall submit revised final plans for Commission review and action. Guidance as to what constitutes non-substantial changes is found in section 2. The Commission staff is available to assist in determining whether changes in approved final plans are substantial and require a resubmission to the Commission.

Section 4—Contents of Submissions

Project plan submissions include narrative materials and data, maps and drawings, and presentation materials which describe and illustrate existing conditions and proposed developments. The narrative materials, data, and supporting documentation required for submissions are generally consistent for all submission stages outlined in section 3, although the level of completion required for some supporting documentation varies according to the submission stage. Requirements for these materials are described in section 4.A. The types of maps and drawings required in submissions vary according to the submission stages. The required maps and drawings for the various submission stages are described in section 4.B. Required presentation materials also vary according to the submission stages and are described in section 4.C.

A. Narrative Materials and Data

1. *Project Report.* A project report including the following information shall be submitted at all stages, as applicable:

a. Name and telephone number for agency project manager;

b. Narrative description of the project, including a description of existing site/building conditions to be affected;

c. Total area of site and allocation of land to the various proposed uses;

d. Area of building, or buildings, and site coverage;

e. Existing and projected employment, by grade level;

f. A description of proposed energy conservation measures addressing the siting and design of the building or buildings, transportation practices, and consumption of non-renewable energy resources;

g. An analysis, pursuant to the implementation proposals of the Federal Employment element of the *Comprehensive Plan for the National Capital*, of the availability of affordable housing within reasonable commuting distances from the affected project location for employees and their families for projects proposed to add or change the location of 100 or more Federal employees;

h. The status of coordination with the affected local and state governments and the Metropolitan Washington Council of Governments for projects not previously coordinated through an installation master plan;

i. The status of community participation, including a summary of community views;

j. Schedule for construction and occupancy;

k. Total cost of project and funding status; and

l. A Transportation Management Program (TMP) for all work sites of: (1) *500 or more employees* (including existing and proposed additional employees on a site), containing strategies to ensure that the proposed project can be accommodated without unacceptable impacts on existing and planned transportation facilities. Where the TMP for a project is an integral part of a larger TMP previously approved in the Commission's review of an

installation master plan, a summary of the applicable provisions of the larger program should be provided. The TMP should include firm commitments to strategies to minimize vehicle work trips to the project site during both peak and off-peak hours. Examples of such strategies include incentives for ridesharing (vanpools and carpools) and public transit usage and public transit and ridesharing information services. The TMP should also include descriptions of existing and projected peak hour traffic by mode, a summary of existing and proposed parking by types of assignment (official cars, vanpools, carpools, single occupant vehicles, etc.), and an evaluation of the projected transportation impacts from the project; and (2) *100 to 500 employees*, where practicable.

The project report constitutes the development program information required for Commission review of location and program where site acquisition is involved. In cases in which information required in the project report is fully provided in the required environmental documentation, it need not be repeated in the project report. A project report Supplement fully updating the information contained in a project report submitted at the initial review stage may be submitted for successive stages. The Supplement should include responses to the recommendations, if any, of the Commission at the previous stage of review.

2. *Environmental Document.* The environmental document prepared by the sponsoring agency pursuant to the National Environmental Policy Act of 1969, as amended, (NEPA) and Council on Environmental Quality Regulations shall be a part of the project submission. The document shall be an environmental impact statement (EIS), if required pursuant to section 102(2)(C) of the NEPA. If an EIS is not required, an environmental assessment shall be submitted, unless the sponsoring agency provides documentation that the project has been determined to be a categorical exclusion pursuant to its environmental policies and procedures. A determination as to whether the NEPA process is completed should accompany an environmental assessment. The environmental document submitted at the initial review stage may be used for successive stages if sufficient for those stages and no substantial changes have been made in the proposal. Where substantial changes are made, the appropriate environmental document shall be supplemented or amended by the sponsoring agency and resubmitted at the appropriate successive review stage.

Each submission by an agency of the District of Columbia Government shall include an environmental assessment. If the proposed development is a District of Columbia public building within the boundaries of the central area of the District, as defined by concurrent action of the Commission and Council of the District of Columbia, the Commission will have responsibility for determining the appropriate environmental document for its action. An environmental impact statement (EIS), if required in conjunction with Commission action on the project, will be based on the environmental information submitted by the sponsoring agency. Steps to be taken in such a case are discussed in section 5.D.

3. *Historic Preservation Report.* Each submission shall include an analysis of the effects, if any, the proposed project will have on recognized historic resources both on the site and in its vicinity. Each submission by a Federal agency shall also include a determination by the head of that agency, or other authorized official, as to whether the project is subject to section 106 of the National Historic Preservation Act of 1966, as amended, or section 2(b) of Executive Order 11593 of May 13, 1971. The review procedures pursuant to section 106 require consultation with the affected State Historic Preservation Officer (SHPO) and, in many cases, the Advisory Council on Historic Preservation (ACHP). If the responsible official determines that a review pursuant to section 106 is required, the agency shall in the initial submission to the Commission (location and program, design/development concept, or preliminary plan stage) include a copy of its letter to the affected SHPO initiating the review process.

In general, evidence of initiation of consultation with the affected SHPO will suffice at the initial review stage. In some cases, however, because of the potential impacts of a project on recognized historic resources on its site or in the vicinity, the Executive Director may require that the sponsoring agency obtain the views of the affected SHPO, or the review body advising that SHPO, prior to Commission action on the project at the initial stage. The early contact between sponsoring agencies and the Commission staff recommended in section 3 is intended to provide an opportunity to identify the level of progress required in the section 106 review prior to the Commission's initial review of a project. Each submission by a Federal agency of final plans shall include a copy of the letter(s) from the SHPO and/or ACHP certifying compliance with section 106, if applicable.

If the proposed development is a District of Columbia public building within the boundaries of the central area of the District, as defined by concurrent action of the Commission and Council of the District of Columbia, the Commission will have responsibility for compliance with section 106, if applicable. Steps to be taken in such cases are discussed in section 5.E.

4. *Floodplain Management and Wetlands Protection.* The initial submission by a Federal agency for a project to be located in a floodplain or wetland shall include a copy of the agency's Statement of Findings pursuant to Executive Order 11988 or Executive Order 11990. The Statement, if required, should evaluate potential impacts and identify proposed mitigation measures.

B. Maps and Drawings

1. *Location and Program submissions* shall include vicinity and boundary maps and, as appropriate, a basic development proposals map, as follows:

a. *Vicinity Map.* The vicinity map, indicating the boundaries of the site proposed to be acquired and building outlines, streets, and other physical features, both within the site and in the surrounding area, shall be submitted at a scale of 1 inch equals 400 feet, or larger. It shall cover an area extending at least 500 feet in all directions beyond the boundaries of the site proposed to be acquired. Existing land uses and zoning shall be shown on the map. Where adopted local and/or state plans propose changes in surrounding transportation facilities, land use, or zoning, the proposed changes shall be shown on the vicinity map. If the proposed changes cannot be clearly depicted in combination with existing conditions, a separate vicinity map showing the site in relation to planned surrounding conditions shall be provided.

b. *Boundary Map.* The boundary map shall be submitted uncolored, at a scale of at least 1 inch equals 50 feet for sites of less than 40 acres and at least 1 inch equals 100 feet for larger sites, and shall contain the following information:

(1) Boundary dimensions;

(2) Existing topography of the site, preferably at 1- or 2-foot contour intervals; and

(3) Outlines of existing buildings, with annotations indicating those proposed to remain and to be demolished; roadways and parking areas; existing vehicular

entrances to the site; major utilities; walkways, fences, walls, and other man-made improvements; and substantial groupings of trees and shrubs.

c. *Basic Development Proposals Map.* To the extent identified at the time of the Location and Program submission, basic development proposals should be submitted on an uncolored map at the same scale as the required boundary map. The basic development proposals can be combined with the boundary map if the information presented is clear and readable. Basic development information includes such features as general building locations, proposed vehicular access points and roadway locations, proposed groupings of trees and other basic landscape features, and any other identified building or site design features. A basic development proposals map is *not* a required part of a location and program submission but should be submitted where early development proposals have been identified, in order to provide the easiest possible opportunity for Commission comment on such proposals.

2. *Design/Development Concept submissions,* as noted in section 3.B., are generally made only for those projects for which, because of their size and/or projected impacts, early Commission review and guidance on design issues is necessary or appropriate. Because such submissions will often be focused on specific development issues or expected impacts, flexibility is permitted in the type and level of definition of information incorporated in the concept drawings. A submission shall be considered as *Development Concepts* in cases where it focuses principally on basic development issues, such as the allocation of the site to various uses and activities and the identification of principal access points. In cases where the submission addresses site and/or building design issues at a more detailed conceptual level, it will be considered as *Design Concepts.* The recommended early contact between sponsoring agencies and the Commission staff is intended to provide an opportunity to determine the appropriate level of detail for concept submissions, where applicable. Concept submissions shall include the following, as applicable:

a. *Vicinity Map.* A vicinity map containing the information outlined in section 4.B.1.a. shall be provided for all concept submissions.

b. *Design/Development Concept Drawings.*

(1) *Site Concepts.* Where the proposed project involves site development proposals, including the siting of buildings and structures, concept submissions shall include a site development concepts drawing containing, to the extent possible at the concept stage, the following information, as applicable:

(a) Site boundaries, including dimensions;

(b) Existing topography of the site, preferably at 1- or 2-foot contour intervals, and a general indication of any proposed substantial site grading; and

(c) Outlines of all existing man-made features proposed to remain; the general location and footprint of proposed buildings and structures; and the general location and outline of all major proposed site improvements, including roadways and parking areas, major walkways, stormwater management facilities, and landscape proposals; and, for design concepts submissions, any additional information or proposals indicating early design direction.

(2) *Building Concepts.* Where the proposed project involves proposed buildings or structures, concept submissions shall include building/structure concept drawings, except in cases in which the sponsoring agency and the Commission staff have concluded that the submission should be limited to site development proposals. The building/structure concept drawings shall contain, to the extent possible at the concept stage, the following information, as applicable:

(a) Schematic floor plans indicating pedestrian and vehicular entrances, general allocation of principal uses, public areas, and any proposed special interior features;

(b) Schematic elevations indicating the height of the building or structure, general bulk and massing, tentative fenestration proposals, and other similar features affecting the general design concept for and character of the proposed building or structure; and

(c) For design concepts submissions, any additional information or proposals indicating early design direction for the building or structure.

3. *Preliminary and Final submissions (including Site and Building Plans, Building Plans, Site Development Plans, and Commemorative Works Designs)* shall include the following, as applicable:

a. *Vicinity Map.* A vicinity map containing the information outlined in section 4.B.1.a. shall be provided for all preliminary and final plan submissions.

b. *Site Plan.* A site plan shall be provided for all preliminary and final plan submissions, except building plans for renovation of existing buildings where no site improvements are proposed. The site plan shall be uncolored and presented at a scale of at least 1 inch equals 50 feet for sites of less than 40 acres and at least 1 inch equals 100 feet for larger sites, and shall contain the following information:

(1) Site boundaries, including dimensions;

(2) Existing and proposed topography of the site, preferably at 1- or 2-foot contour intervals; and

(3) Outlines of all existing man-made features proposed to remain and all proposed buildings, structures, and related improvements on and immediately adjacent to the site, including, but not limited to, access ways, driveways, sidewalks, walls, fences, loading areas, and off-street parking.

When the proposed improvements involve only a portion of the site of a facility, the site plan shall include all the site area of the facility, showing the relationship between the portion of the site to be improved and the portion to remain undisturbed. When an existing adjacent facility has an integral supporting relationship to a facility to be constructed or improved, such as a parking lot that is proposed to serve a new office facility, the site of the adjacent facility shall be included in the site plan to show the functional relationship of the facilities.

c. *Landscape and Grading Plan.* A landscape and grading plan shall be submitted for all preliminary and final plan submissions, except building plans for renovation of existing buildings where no site improvements are proposed. The landscape and grading plan should preferably be submitted as a separate plan but may be incorporated with the site plan if the combined plan is clear and readable. If presented as a separate plan, the landscape and grading plan shall be at the same scale as the site plan. The following information shall be included, as applicable:

(1) Existing and proposed topography of the site, preferably at 1- or 2-foot contour intervals;

(2) General locations of all existing-to-remain, existing-to-be-removed, and proposed trees, shrubs, and other plant materials; and

(3) At the preliminary stage, general identification of proposed plant materials, and, at the final stage, a list of the type, quantity, and size of the proposed plant materials.

d. *Stormwater Management and Erosion and Sedimentation Control Plan.* A stormwater management and erosion and sedimentation control plan shall be provided for all final plan submissions for projects for which there is more than 5,000 square feet of

disturbed site area. The plan shall indicate the locations and size of natural drainageways, storm sewer lines and outfalls, infiltration devices, retention and detention ponds, and any other needed mitigation measures to control stormwater runoff and limit erosion and sedimentation on the site, with back-up calculations. The plan may be incorporated in the environmental document for the project.

e. *Floor Plans.* Floor plans shall be submitted at preliminary and final stages for each floor of all proposed buildings, indicating the following:

(1) Uses allocated to all interior spaces;

(2) Interior partitions, stairs, and elevators,

(3) Overall dimensions;

(4) Dimensions of interior spaces; and

(5) Elevations of various floor levels.

The scale of the floor plans shall be commensurate with sheet size limitations indicated in section 4.D.1. In general, the scale of floor plans should be sufficiently large to permit presentation of the plans in a large meeting room at a distance of 20 to 25 feet.

f. *Elevations.* Elevations of all sides of all proposed buildings or structures shall be submitted at preliminary and final stages, at the same scale as the floor plans, indicating, but not limited to, the following:

(1) The height of the building or structure and its bulk and massing;

(2) All pedestrian and vehicular entrances;

(3) Fenestration;

(4) At the preliminary stage, general identification of proposed materials, and, at the final stage, detailed identification of proposed materials;

(5) The treatment of the roof and all related appurtenances, including features such as penthouses, ventilation shafts, chimneys, smoke stacks, antennas, and related screening; and

(6) In the District of Columbia, the point of measurement of the height of the proposed building in accordance with the Zoning Act.

g. *Sections.* At least two cross sections through all proposed buildings, at the same scale as the floor plans, shall be submitted at preliminary and final stages. One or more exterior wall sections illustrating the proposed installation of principal exterior materials identified at the preliminary and final stages shall also be submitted.

h. *Roof Plan.* Roof plans for all buildings shall be submitted at preliminary and final stages, at the same scale as the floor plans, indicating the following:

(1) The proposed design of the roof and materials and finishes to be used; and

(2) Proposed roof appurtenances, including all proposed screening. (*Antenna installations are also subject to separate Commission guidelines and submission requirements.*)

i. *Construction and Equipment Drawings.* Construction and equipment drawings for exterior building features, site work, and any proposals requiring coordination with off-site activities shall be submitted at the final stage.

C. Presentation Materials

1. *Rendered plans and perspectives.* Rendered plan maps and drawings shall be submitted at each review stage. Rendered presentation maps and drawings should be presented in color, using zip-a-tone, magic marker, or other suitable media. At least one rendered perspective of all proposed buildings and substantial site developments shall be submitted at the design/development concept stage, as applicable, and at preliminary and final stages. Perspectives prepared at an early stage may be resubmitted at later stages if the project design has remained unchanged.

2. *Models.* A model shall be submitted for all major development proposals. The early contact between sponsoring agencies and the Commission staff recommended in section 3 is intended to provide an opportunity for the Commission staff to advise whether a proposed project is a "major" development requiring a model. Agencies uncertain as to the requirement of a model for a particular submission are urged to contact the Commission staff for clarification. Models shall depict topography, existing-to-remain and proposed new buildings and improvements, pedestrian and vehicular circulation, parking and loading areas, and principal areas of vegetation. They should be prepared at the same scale as the project site plan, or larger, if necessary for presentation purposes.

D. Form of Submissions

1. *Sheet Size.* Submission drawings should be a standardized sheet size, whenever possible, and shall not exceed a sheet size of 33 by 44 inches, in order to be compatible with the Commission's microfilm file requirements. For projects requiring larger maps or drawings, multiple sheets within the maximum size limits, covering portions of the subject and with match lines, may be submitted.

2. *Reduced Size Drawings.* One set of maps and drawings, including the vicinity map, boundary map, site plan, landscape and grading plan, floor plans of the entrance level and any other levels containing major public spaces, and elevations, as applicable to the specific type of submission being made, shall be submitted at a reduced page size no greater than 8½ by 14 inches. This reduced set of drawings shall be presented in a form that will permit reproduction by standard copying machine to facilitate distribution of copies to members of the Commission.

3. *Number of Copies.* At least three sets of maps and drawings, except construction and equipment drawings, at full sheet size, and narrative materials and data shall be submitted at all stages of review for all projects. One set of construction and equipment drawings, as described in section 4.B.3.h., shall be submitted at the final stage. As discussed in sections 1.D. and 5, for projects not located on sites for which master plans are required, the location and program and preliminary plans submissions will normally constitute the master plan for such sites and must be referred to other agencies and organizations as part of the Commission's review process. The number of complete sets of submission materials required in such cases shall be determined pursuant to section 4.D. of the Commission's *Master Plan Submission Requirements.*

Section 5—Project Plans Coordination and Review Process

The following steps are involved in the coordination and review of project plans prior to and during their preparation by a sponsoring agency and following their submission to the Commission:

A. *Early Contact with Commission staff.* As noted in section 3, sponsoring agencies should contact the Commission staff at the earliest possible time in considering the proposed acquisition of land and in the siting and initial planning and design of proposed new developments within the Region. The early contact provides an opportunity to discuss and make decisions on the following matters: The need for, as well as the appropriate level of detail for, concept submissions for complex projects; the type and scope of environmental documentation required; the level of progress required in the section 106 review prior to the Commission's initial review of a project, where applicable; the need for a model as part of the presentation materials; and the need for early consultation with other organizations as part of the intergovernmental review process, where applicable.

B. *Early Consultation on Proposed Project with Other Affected Government Agencies.* If the Commission staff and a sponsoring agency determine in their early contact that the planning for a particular project requires early consultation with other agencies, the Commission staff will, as appropriate contact the planning agency, intergovernmental review officer, chief administrative officer, and responsible elected official of the local government and the affected area and state clearinghouses about the project and the anticipated submission schedule. Where appropriate, the Commission will arrange a meeting of concerned agencies with the sponsoring agency to discuss a project prior to the initial submission to the Commission. The purpose of this step is to give local, regional, and state agencies an opportunity to learn about proposed Federal development in the Region and permit early identification of possible questions, issues, and concerns. This step in the submission and review process has been established in accordance with section 5(a) of the Commission's *Procedures for Intergovernmental Cooperation in Federal Planning in the National Capital Region.*

In general, early consultation will be required on sites not covered by master plans. Frequently, the coordination previously provided through the review of an agency's master plan will satisfy early consultation requirements for projects within the installation covered by the master plan.

C. *Submission Schedule.* Sponsoring agencies shall make submissions (including all required materials) in accordance with established monthly deadlines that are available from the Commission staff.

D. *Environmental Documentation by the Commission, Where Required.* As discussed in section 4.A.2., if the proposed development is a District of Columbia public building within the central area of the District, as concurrently defined by the Commission and the Council of the District of Columbia, the Commission will have responsibility for the preparation of an EIS, if required. At the time of the initial submission for such a project by the sponsoring agency, the Executive Director shall determine the appropriate environmental document required for Commission action. If the environmental information submitted is not sufficient for the making of a determination, more information will be requested from the sponsoring agency. If the Executive Director, after consultation with the sponsoring agency, determines that an EIS is required for Commission action, the Commission will prepare an EIS based on the environmental information submitted by the agency. Commission action will then be scheduled in accordance with the requirements of the NEPA process.

E. *Commission Compliance with Section 106 of the National Historic Preservation Act of 1966, as amended, if required.* As discussed in section 4.A.3., if the proposed development is a District of Columbia public building within the boundaries of the central area of the District, as defined by concurrent action of the Commission and Council of the District of Columbia, the Commission will have responsibility for compliance with section 106, if applicable. At the time of the initial submission for such a project by the sponsoring agency, the Executive Director shall determine whether the proposed development is subject to the provisions of section 106. If he so determines, the Executive Director will initiate procedures for compliance. Commission review of the submission can then proceed, unless the Executive Director determines that the views of the District of Columbia SHPO or the District of Columbia Historic Preservation Review Board are required prior to the Commission's initial action, because of the potential impacts of a project on recognized historic resources on its site or in the vicinity. Compliance with section 106 shall be completed prior to Commission action on final site and building plans for District of Columbia public buildings in the central area.

F. *Commission Coordinating Committee.* Submissions for proposed projects located in, or adjacent to, the District of Columbia, shall be referred by the Commission staff to the Commission's Coordinating Committee, pursuant to section 2(d) of the Planning Act. The purpose of this referral is to ensure that such projects are coordinated with interested and affected District of Columbia and Federal agencies.

G. *Referral, Where Appropriate, of Project Plan.* Upon receipt of location and program and preliminary plan submissions for projects on sites not covered by a master plan and not subject to review by the Commission's Coordinating Committee, the Commission will refer the submission to the affected local planning agency and regional and state clearinghouse for review and comment. The submission will also be referred by the regional clearinghouse to the designated intergovernmental review official of the affected jurisdiction for review and comment.

H. *Resolution of Planning Issues.* Upon the identification of any planning issues by the Coordinating Committee or in the referral of a submission, the Commission staff, in conjunction with the staff of the Metropolitan Washington Council of Governments, will work with the affected local, regional, or state agencies and the sponsoring agency to resolve such issues.

I. *Review, Evaluation, and Recommendation of the Commission Staff.* Following the receipt of comments from other organizations and the Coordinating Committee, where appropriate, the staff will prepare recommendations for action by the Commission on the project submission. The staff recommendations will normally be provided to the Commission and made available to the sponsoring agency and the general public approximately one week in advance of the scheduled Commission review and action on the submission. In infrequent cases, unresolved issues may delay the staff's recommendation. In such a case the staff will consult with the sponsoring agency as to the reasons for the delay and the necessary steps to resolve outstanding issues.

J. *Notification to the Public and Public Participation in Commission Review.* In accordance with the Commission's *Revised Procedures for Public Participation*, organizations in the vicinity of a project site will receive a notice titled "Tentative Agenda Items" indicating the tentative schedule for the Commission's review of a submission. Organizations or individuals may submit written comments for consideration by the Executive Director in the preparation of staff recommendations. In addition, organizations or individuals may appear before the Commission to comment on a project submission and/or the Commission staff's recommendations on the submission.

K. *Review and Action of the Commission.* The Commission will review the project submission at a scheduled meeting. The Commission staff will notify the sponsoring agency of the schedule for review and any requirements concerning its participation in the presentation of the submission to the Commission.

L. *Official Notification of Commission Action.* Notification of the Commission action on a project submission will be provided by letter to the sponsoring agency immediately following such action.

BEST COPY AVAILABLE

Section 6—Time Period for Review

Project submissions for sites for which referral to local, regional, and state agencies is required will be subject to a review period of approximately 90 days, wherever possible, 60 days of which will be devoted to review by the agencies receiving the referral. A sponsoring agency may request a reduction of 30 days of this review period from the Executive Director if special and unusual circumstances warrant, but every effort should be made to comply with the 90-day review period. Project submissions for sites not requiring such referral will normally be subject to a review period of approximately 30 days.

Section 7—Delegation of Authority to Executive Director

With respect to projects outside the District of Columbia but within the National Capital Region on reservations or sites for which the Commission has submitted to the agency its report and recommendations on the master plan therefor, the Executive Director may make environmental impact findings on and approve the following:

A. Preliminary and final site and building plans for proposed temporary or permanent additions of less than 10,000 square feet of floor area to existing structures and for temporary or permanent structures of less than 10,000 square feet of floor area, if the Executive Director determines that (1) the proposed development (a) is consistent with the recommendations of the Commission on the land use and circulation plan elements of the master plan, (b) will have no significant adverse impact on the environment, access and egress facilities, and utilities, and (c) is compatible with existing and proposed developments in its immediate vicinity, and (2) the addition or relocation of employees to the proposed development would not cause a significant impact on low- and/or moderate-income housing needs in the vicinity of the development; and

B. Final site and building plans where such plans conform to applicable recommendations made by the Commission in its review of the preliminary site and building plans for the project and of any EIS or environmental assessment submitted pursuant to the Commission's *Environmental Policies and Procedures.*

Robert E. Gresham,

Assistant Executive Director for Operations.

BILLING CODE 7020-02-M

NATIONAL COMMISSION ON CHILDREN

Hearing

Background

The National Commission on Children was created by Public Law 100-203, December 22, 1987 as an amendment to the Social Security Act. The purpose of the law is to establish a nonpartisan Commission directed to study the problems of children in the areas of health, education, social services, income security, and tax policy.

The powers of the Commission are vested in Commissioners consisting of 36 voting members as follows:

1. Twelve members appointed by the President
2. Twelve members appointed by the Speaker of the House of Representatives
3. Twelve members appointed by the President pro tempore of the Senate.

This notice announces a Hearing and Meeting of the National Commission on Children to be held in Minneapolis, Minnesota.

Hearing

Time: 1 p.m.–4 p.m., Thursday, October 18, 1990

Place: St. Paul Technical College, 235 Marshall Street, St. Paul, Minnesota.

Status: 1 p.m.–4 p.m. Open to the public.

Agenda: Field Hearing on "Building a Productive Labor Force."

Meeting

Time: 9 a.m.–4 p.m., Friday, October 19, 1990.

Place: Hyatt Regency, 13 Nicollet Mall, Minneapolis, Minnesota.

Status: 9 a.m.–4 p.m. Open to the public.

Contact: Jeannine Atalay, (202) 254-3800.

Dated: October 12, 1990.

John D. Rockefeller, IV,

Chairman, National Commission on Children.

BILLING CODE 6820-27-M

NATIONAL SCIENCE FOUNDATION

Permit Applications Received Under the Antarctic Conservation Act of 1978

AGENCY: National Science Foundation.

ACTION: Notice of Permit Applications Received Under the Antarctic Conservation Act of 1978 (Pub. L. 95-541).

SUMMARY: The National Science Foundation (NSF) is required to publish notice of permit applications received to conduct activities regulated under the Antarctic received to conduct activities regulated under the Antarctic Conservation Act of 1978. NSF has published regulations under the Antarctic Conservation Act of 1978 at title 45 part 670 of the Code of Federal Regulatons. This is the required notice of permit applications received.

DATES: Interested parties are invited to submit written data, comments, or views with respect to these permit applications by November 19, 1990. Permit applications maybe inspected by interested parties at the Permit Office, address below.

ADDRESSES: Comments should be addressed to Permit Office, Room 627, Division of Polar Programs, National Science Foundation, Washington, DC 20550.

FOR FURTHER INFORMATION CONTACT: Charles E. Myers at the above address or (202) 357-7934.

SUPPLEMENTARY INFORMATION: The National Science Foundation, as directed by the Antarctic Conservation Act of 1978 (Public Law 95-541), has developed regulations that implement the "Agreed Measures for the conservation of Antarctic Fauna and Flora" for all United States citizens. The Agreed Measures, developed in 1964 by the Antarctic Treaty Consultative Parties, recommended establishment of a permit system for various activities in Antarctica and designation of certain animals and certain geographic areas as requiring special protection. The regulations establish such a permit system to designate Specially Protected Areas and Sites of Special Scientific Interest.

The applications received are as follow:

1. *Applicant*

Rennie S. Holt, Southwest Fisheries Science Center, National Marine Fisheries Service, NOAA, La Jolla, California 92038.

Activity for Which Permit Requested

Taking, Import into USA. The applicant is conducting studies of food web dynamics of krill-consuming species of seabirds, and proposes to use doubly-labeled water techniques (using the stable, non-radioactive isotopes of oxygen-18 and deuterium) to measure energy requirements of penguins and other sea birds. Blood samples will be taken from birds and samples will be returned to the U.S. for analysis. Seabirds will be taken by capture and release for (numbers refer to table below): (1) banding and/or marking, (2)

measuring, weighing, and/or examining, (3) stomach pumping, (4) attaching/removing instruments, and (5) injecting isotopes and/or drawing blood samples. An unspecified number of seabirds and seals may be incidentally disturbed during research; efforts will be made to avoid or minimize such disturbance.

Species	Annual numbers taken	Taken by	Import to USA
Chinstrap penguin.	2,500	Capt/release #1.	No.
Chinstrap penguin.	1,000	Capt/release #2.	No.
Chinstrap penguin.	100	Capt/release #3.	No.
Chinstrap penguin.	160	Capt/release #4.	No.
Chinstrap penguin.	21	Capt/release #5.	Yes (blood samples).
Macaroni penguin.	500	Capt/release #1.	No.
Macaroni penguin.	200	Capt/release #2.	No.
Macaroni penguin.	50	Capt/release #3.	No.
Macaroni penguin.	50	Capt/release #4.	No.
Macaroni penguin.	7	Capt/release #5.	Yes (blood samples).
Cape petrel	200	Capt/release #1.	No.
Cape petrel	100	Capt/release #2.	No.
American Shelfbill	200	Capt/release #1.	No.

Location

Antractic Penisula area.

Dates

November 1990–October 1992.

2. Applicant

Jonathan H. Berg, Department of Geology, Northern Illinois University, Dekalb, Illinois 60115.

Activity for Which Permit Requested

Enter Specially Protected Area. Enter Site of Special Scientific Interest. The applicant is conducting geological research and requests permission to enter Specially Protected Area No. 4, Sabrina Island and Site of Special Scientific Interest No. 4, Cape Crozier to collect rock samples. The types of rocks available at these sites are not available elsewhere.

Location

Cape Crozier; Sabrina Island; Antractica.

Dates

December 1990–January 1991.

Charles Myers,
Permit Office.

BILLING CODE 7555-01-M

NUCLEAR REGULATORY COMMISSION

Advisory Committee on Reactor Safeguards Subcommittee on Advanced Pressurized Water Reactors; Meeting

The Subcommittee on Advanced Pressurized Water Reactors will hold a meeting on November 1, 1990, room P–110, 7920 Norfolk Avenue, Bethesda, MD.

The entire meeting will be open to public attendance.

The agenda for the subject meeting shall be as follows:

Thursday, November 1, 1990—8:30 a.m. until the conclusion of business.

The Subcommittee will discuss the licensing review basis document for the CE System 80+ designs.

Oral statements may be presented by members of the public with the concurrence of the Subcommittee Chairman; written statements will be accepted and made available to the Committee. Recordings will be permitted only during those sessions of the meeting when a transcript is being kept, and questions may be asked only by members of the Subcommittee, its consultants, and staff. Persons desiring to make oral statements should notify the ACRS staff member named below as far in advance as is practicable so that appropriate arrangements can be made.

During the initial portion of the meeting, the Subcommittee, along with any of its consultants who may be present, may exchange preliminary views regarding matters to be considered during the balance of the meeting.

The Subcommittee will then hear presentations by and hold discussions with representatives of Combustion Engineering, NRC staff, their consultants, and other interested persons regarding this review.

Further information regarding topics to be discussed, the scheduling of sessions open to the public, whether the meeting has been cancelled or rescheduled, the Chairman's ruling on requests for the opportunity to present oral statements and the time allotted therefore can be obtained by a prepaid telephone call to the cognizant ACRS staff member, Mr. Medhat M. El-Zeftawy (telephone 301/492-8901) between 7:30 a.m. and 4:15 p.m. Persons planning to attend this meeting are urged to contact the above named individual one or two days before the scheduled meeting to be advised of any changes in schedule, etc., which may have occurred.

Dated: October 11, 1990.

Gary R. Quittschreiber,
Chief, Nuclear Reactors Branch.

[FR Doc. 90-24514 Filed 10-17-90; 8:45 am]
BILLING CODE 7590-01-M

Advisory Committee on Reactor Safeguards; Subcommittee on Improved Light Water Reactors; Meeting

The Subcommittee on Improved Light Water Reactors will hold a meeting on October 31, 1990, room P–110, 7920 Norfolk Avenue, Bethesda, MD.

The entire meeting will be open to public attendance.

The agenda for the subject meeting shall be as follows:

Wednesday, October 31, 1990—8:30 a.m. until 11 a.m. The Subcommittee will discuss and review the latest NRC staff proposal regarding the level of design detail under 10 CFR part 52.

Oral statements may be presented by members of the public with the concurrence of the Subcommittee Chairman; written statements will be accepted and made available to the Committee. Recordings will be permitted only during those portions of the meeting open to the public, and questions may be asked only by members of the Subcommittee, its consultants, and staff. Persons desiring to make oral statements should notify the ACRS staff member named below as far in advance as is practicable so that appropriate arrangements can be made.

During the initial portion of the meeting, the Subcommittee, along with any of its consultants who may be present, may exchange preliminary views regarding matters to be considered during the balance of the meeting.

The Subcommittee will then hear presentations by and hold discussions with representatives of the NRC staff and NUMARC regarding this review.

Further information regarding topics to be discussed, the scheduling of sessions open to the public, whether the meeting has been cancelled or rescheduled, the Chairman's ruling on requests for the opportunity to present oral statements and the time allotted therefor can be obtained by a prepaid telephone call to the cognizant ACRS

staff member, Mr. Medhat El-Zeftawy (telephone 301/492-9001) between 7:30 a.m. and 4:15 p.m. Persons planning to attend this meeting are urged to contact the above named individual one or two days before the scheduled meeting to be advised of any changes in schedule, etc., which may have occurred.

Dated: October 11, 1990.

Gary R. Quittschreiber,

Chief, Nuclear Reactors Branch.

BILLING CODE 7590-01-M

[Docket No. 70-25]

Rockwell International Corp., Rocketdyne Division; Closing of Temporary Local Public Document Room

Notice is hereby given that the Nuclear Regulatory Commission (NRC) has closed the temporary local public document room (LPDR) for Rockwell International Corporation, Rocketdyne Division's Santa Susana Field Laboratory.

The LPDR was maintained at the Chatsworth Branch Library, Chatsworth, California, for the duration of the proceedings on Rockwell International Corporation's request to renew the special material license for this facility (Special Material License Number SNM-21).

Rocketdyne Division of Rockwell International Corporation terminated all activities involving materials authorized under the license effective April 4, 1990, and withdrew its application for renewal of the license. The Memorandum and Order dismissing the case was issued on April 4, 1990 by NRC Administrative Judge Peter B. Bloch.

Questions concerning the NRC's local public Document room program may be addressed to Ms. Jona Souder, LPDR Program Manager, Freedom of Information Act/Local Public Document Room Branch, Division of Freedom of Information and Publications Services, Office of Administration, U.S. Nuclear Regulatory Commission, Washington, DC 20555, telephone number (800) 638-8081, toll-free.

Dated at Bethesda, Maryland, this 11th day of October, 1990.

For the Nuclear Regulatory Commission.

Dennis H. Grimsley,

Director, Division of Freedom of Information and Publications Services, Office of Administration.

[FR Doc. 90-24605 Filed 10-17-90; 8:45 am]

BILLING CODE 7590-01-M

[Docket No. 50-219]

GPU Nuclear Corp; Notice of Consideration of Issuance of Amendment to Provisional Operating License and Opportunity for Hearing

The U.S. Nuclear Regulatory Commission (the Commission) is considering issuance of an amendment to Provisional Operating License No. DPR-16, issued to GPU Nuclear Corporation (GPUN, the licensee), for operation of the Oyster Creek Nuclear Generating Station located in Ocean County, New Jersey.

The amendment would revise the Technical Specifications to accommodate implementation of a 21 month operating cycle with a 3 month outage, or a 24 month plant refueling cycle for Technical Specification surveillance intervals which will expire prior to the currently scheduled 13R refueling outage. Specifically, license Condition 2.c.(7) is revised to extend inspections of all accessible surfaces and welds of both core spray spargers and repair assemblies from each refueling outage to at least once per 24 months.

Technical Specification Table 4.15.2 is revised to extend the channel calibrations for the Radioactive Noble Gas Monitors and the Effluent Flow Measuring Devices for the Main Stack Monitoring System and the Turbine Building Ventilation Monitoring System from once per 18 months to once per 24 months. The legend to Table 4.15.2 is revised to include the designation of 1/24 = once per 24 months.

Prior to issuance of the proposed license amendment, the Commission will have made findings required by the Atomic Energy Act of 1954, as amended (the Act) and the Commission's regulations.

By November 19, 1990, the licensee may file a requested for a hearing with respect to issuance of the amendment to the subject facility operating license and any person whose interest may be affected by this proceeding and who wishes to participate as a party in the proceeding must file a written request for a hearing and a petition for leave to intervene. Requests for a hearing and petitions for leave to intervene shall be filed in accordance with the Commission's "Rules of Practice for Domestic Licensing Proceedings" in 10 CFR part 2. Interested persons should consult a current copy of 10 CFR 2.714 which is available at the Commission's Public Document Room, the Gelman Building, 2120 L Street, NW., Washington, DC 20555 and at the Local Public Document Room located at Ocean County Library, Reference Department, 101 Washington Street, Toms River, New Jersey 08753. If a request for a hearing or petition for leave to intervene is filed by the above date, the Commission or an Atomic Safety and Licensing Board, designated by the Commission or by the Chairman of the Atomic Safety and Licensing Board Panel, will rule on the request and/or petition; and the Secretary or the designated Atomic Safety and Licensing Board will issue a notice of hearing or an appropriate order.

As required by 10 CFR 2.714, a petition for leave to intervene shall set forth with particularity the interest of the petitioner in the proceeding, and how that interest may be affected by the results of the proceeding. The petition should specifically explain the reasons why intervention should be permitted with particular reference to the following factors: (1) The nature of the petitioner's right under the Act to be made a party to the proceeding; (2) the nature and extent of the petitioner's property, financial, or other interest in the proceeding; and (3) the possible effect of any order may be entered in the proceeding on the petitioner's interest. The petition should also identify the specific aspect(s) of the subject matter of the proceeding as to which petitioner wishes to intervene. Any person who has filed a petition for leave to intervene or who has been admitted as a party may amend the petition without requesting leave of the Board up to fifteen (15) days prior to the first pre-hearing conference scheduled in the proceeding, but such an amended petition must satisfy the specificity requirements described above.

Not later than fifteen (15) days prior to the first prehearing conference scheduled in the proceeding, a petitioner shall file a supplement to the petition to intervene which must include a list of the contentions which are sought to be litigated in the matter. Each contention must consist of a specific statement of the issue of law or fact to be raised or controverted. In addition, the petitioner shall provide a brief explanation of the bases of the contention and a concise statement of the alleged facts or expert opinion which support the contention and on which the petitioner intends to rely in proving the contention at the hearing. The petitioner must also provide references to those specific sources and documents of which the petitioner is aware and on which the petitioner intends to rely to establish those facts or expert opinion. Petitioner must provide sufficient information to show that a genuine dispute exists with

the applicant on a material issue of law or fact. Contentions shall be limited to matters within the scope of the amendment under consideration. The contention must be one which, if proven, would entitle the petitioner to relief. A petitioner who fails to file such a supplement which satisfies these requirements with respect to at least one contention will not be permitted to participate as a party.

Those permitted to intervene become parties to the proceeding, subject to any limitations in the order granting leave to intervene, and have the opportunity to participate fully in the conduct of the hearing, including the opportunity to present evidence and cross-examine witnesses.

A request for a hearing or a petition for leave to intervene must be filed with the Secretary of the Commission, U.S. Nuclear Regulatory Commission, Washington, DC 20555, Attention: Docketing and Services Branch, or may be delivered to the Commission's Public Document Room, the Gelman Building, 2120 L Street, NW., Washington, DC 20555, by the above date. Where petitions are filed during the last ten (10) days of the notice period, it is requested that the petitioner promptly so inform the Commission by a toll-free telephone call to Western Union at 1–(800) 325–6000 (in Missouri 1–(800) 342–6700). The Western Union operator should be given Datagram Identification Number 3737 and the following message addressed to John F. Stolz: petitioner's name and telephone number; date petition was mailed; plant name; and publication date and page number of this **Federal Register** notice. A copy of the petition should also be sent to the Office of the General Counsel, U.S. Nuclear Regulatory Commission, Washington, DC 20555, and to Ernest L. Blake, Jr., Esquire, Shaw, Pittman, Potts and Trowbridge, 2300 N Street, NW., Washington, DC 20037, attorney for the licensee.

Nontimely filings of petitions for leave to intervene, amended petitions, supplemental petitions and/or requests for hearing will not be entertained absent a determination by the Commission, the presiding officer or the presiding Atomic Safety and Licensing Board that the petition and/or request should be granted based upon a balancing of the factors specified in 10 CFR 2.714(a)(1)(i)-(v) and 2.714(d).

If a request for a hearing is received, the Commission's staff may issue the amendment after it completes its technical review and prior to the completion of any required hearing if it publishes a further notice for public comment of its proposed finding of no significant hazards consideration in accordance with 10 CFR 50.91 and 50.92.

For further details with respect to this action, see the application for amendment dated September 21, 1990, which is available for public inspection at the Commission's Public Document Room, the Gelman Building, 2120 L Street, NW., Washington, DC 20555, and at the Local Public Document Room, Ocean County Library, Reference Department, 101 Washington Street, Toms River, New Jersey 08753.

Dated at Rockville, Maryland, this 12th day of October, 1990.

For the Nuclear Regulatory Commission.

John F. Stolz,

Director, Project Directorate I–4, Division of Reactor Projects -I/II, Office of Nuclear Reactor Regulation.

[FR Doc. 90–24597 Filed 10–17–90; 8:45 am]

BILLING CODE 7590–01–M

[Docket No. 50–458]

Gulf States Utilities Co.; Notice of Consideration of Issuance of Amendment to Facility Operating License and Proposed No Significant Hazards Consideration Determination and Opportunity for Hearing

The U.S. Nuclear Regulatory Commission (the Commission) is considering issuance of an amendment to Facility Operating License No. NPF–47, issued to Gulf States Utilities Company (GSU) (the licensee), for operation of the River Bend Station, Unit 1, located in West Feliciana Parish, Louisiana.

The proposed amendment would modify Technical Specification (TS) Table 3.8.4.1–1, "Primary Containment Penetration Conductor Overcurrent Protection Devices," sections C.1 and C.4 to reflect the removal of a load from section C.1 and the addition of a load to section C.4. The increased load addition is a result of the installation of a larger Reactor Water Cleanup (RWCU) precoat pump motor. The larger pump motor will improve precoating of the RWCU filter and will improve RWCU system performance. The pump is not safety-related, but is located in containment; therefore, the power supply containment penetration must be protected against loss of containment integrity. This necessitates the change to Table 3.8.4.1.

Before issuance of the proposed license amendment, the Commission will have made findings required by the Atomic Energy Act of 1954, as amended (the Act), and the Commission's regulations.

The Commission has made a proposed determination that the amendment requests involves no significant hazards consideration. Under the Commission's regulations in 10 CFR 50.92, this means that operation of the facility in accordance with the proposed amendment would not (1) involve a significant increase in the probability or consequences of an accident previously evaluated; or (2) create the possibility of a new or different kind of accident from any accident previously evaluated; or (3) involve a significant reduction in a margin of safety.

The licensee provided an analysis that addressed the above three standards in the amendment application.

1. No significant increase in the probability or consequences of an accident previously evaluated results from the proposed change because the equipment involved in this request resides in the non-safety related, low pressure portion of the RWCU system and is located outside of the reactor coolant pressure boundary. The precoat pump is only operated when each of the demineralizer/filter trains are isolated and to be regenerated. The equipment involved in this request is not involved in any analyzed accident nor called upon to mitigate the consequences of any event. The conduit, cable and equipment associated with this modification are being installed in accordance with all applicable seismic and electrical separation criteria. As such, adequate electrical protection in conformance with the Technical Specification Bases and USAR section 8.3.1.1.4.3 is provided for all containment penetrations used. Operation or failure of the equipment installed by this modification has no impact on any safety related system. Because this proposed change does not result in any new plant operating modes and electrical penetration overcurrent protection is provided as described in the USAR, this proposed change cannot increase the probability or consequences of any accident previously evaluated.

2. The proposed change would not create the possibility of a new or different kind of accident than from any previously evaluated because a single failure of the equipment installed by this modification would at worst cause a loss of power to motor control center (MCC) 1NHS–MCC2E. Loss of this non-safety related MCC is assumed by the USAR during design basis accident conditions and is therefore as previously analyzed. No other new, credible failure modes can be identified. The circuit protection design is similar to the

remaining circuits identified in section C.4 already listed on Technical Specification Table 3.8.4.1–1. Additionally, this proposed change does not introduce any new plant operating modes. Therefore, this proposed change cannot create the possibility of a new or different kind of accident from any previously evaluated.

3. The proposed change would not involve a significant reduction in the margin of safety because overcurrent protection is provided such that no single failure will cause excessive current in the penetration conductors. This ensures that the overcurrent protection is in accordance with the RBS USAR. Additionally, the circuit protection design is similar to the remaining circuits identified in section C.4 already listed on Technical Specification Table 3.8.4.1–1. The RWCU system performs no safety related function and no safety related systems, other than the containment penetrations, are affected by this modification. Further, the proposed change does not result in any new plant operating modes. Therefore, the proposed change does not result in any reduction in the margin of safety.

Therefore, based on the above considerations, the Commission has made a proposed determination that the amendment request involves no significant hazards consideration.

The Commission is seeking public comments on this proposed determination. Any comments received within 30 days after the date of publication of this notice will be considered in making any final determination. The Commission will not normally make a final determination unless it receives a request for a hearing.

Written comments may be submitted by mail to the Regulatory Publications Branch, Division of Freedom of Information and Publications Services, Office of Administration, U.S. Nuclear Regulatory Commission, Washington, DC 20555, and should cite the publication date and page number of this Federal Register notice. Written comments may also be delivered to room P–223, Phillips Building, 7920 Norfolk Avenue, Bethesda, Maryland, from 7:30 a.m. to 4:15 p.m. Copies of written comments received may be examined at the NRC Public Document Room, the Gelman Building, 2120 L Street, NW., Washington, DC. The filing of requests for hearing and petitions for leave to intervene is discussed below.

By November 19, 1990, the licensee may file a request for a hearing with respect to issuance of the amendment to the subject facility operating license and any person whose interest may be affected by this proceeding and who wishes to participate as a part in the proceeding must file a written petition for leave to intervene. Requests for a hearing and petitions for leave to intervene shall be filed in accordance with the Commission's "Rules of Practice for Domestic Licensing Proceedings" in 10 CFR part 2. Interested persons should consult a current copy of 10 CFR 2.714 which is available at the Commission's Public Document Room, the Gelman Building, 2120 L Street, NW., Washington, DC 20555 and at the local public document room located at the Government Documents Department, Louisiana State University, Baton Rouge, Louisiana 70803. If a request for a hearing or petition for leave to intervene is filed by the above date, the Commission or an Atomic Safety and Licensing Board, designated by the commission or by the chairman of the Atomic Safety and Licensing Board Panel, will rule on the request and/or petition and the Secretary or the designated Atomic Safety and Licensing Board will issue a notice of hearing or an appropriate order.

As required by 10 CFR 2.714, a petition for leave to intervene shall set forth with particularity the interest of the petitioner in the proceeding, and how that interest may be affected by the results of the proceeding. The petition should specifically explain the reasons why intervention should be permitted with particular reference to the following factors: (1) The nature of the petitioner's right under the Act to be made a party to the proceeding; (2) the nature and extent of the petitioner's property, financial, or other interest in the proceeding; and (3) the possible effect of any order which may be entered in the proceeding on the petitioner's interest. The petition should also identify the specific aspect(s) of the subject matter of the proceeding as to which petitioner wishes to intervene. Any person who has filed a petition for leave to intervene or who has been admitted as a party may amend the petition without requesting leave of the Board up to fifteen (15) days prior to the first prehearing conference schedule in the proceeding, but such an amended petition must satisfy the specificity requirements described above.

Not later than fifteen (15) days prior to the first prehearing conference schedule in the proceeding, a petitioner shall file a supplement to the petition to intervene which must include a list of the contentions which are sought to be litigated in the matter. Each contention must consist of a specific statement of the issue of law or fact to be raised or controverted. In addition, the petitioner shall provide a brief explanation of the bases of the contention and a concise statement of the alleged facts or expert opinion which support the contention and on which the petitioner intends to rely in proving the contention at the hearing. The petitioner must also provide references to those specific sources and documents of which the petitioner is aware and on which the petitioner intends to rely to establish those facts or expert opinion. Petitioner must provide sufficient information to show that a genuine dispute exists with the applicant on a material issue of law or fact. Contentions shall be limited to matters within the scope of the amendment under consideration. The contention must be one which, if proven, would entitle the petitioner to relief. A petitioner who fails to file such a supplement which satisfies these requirements with respect to at least one contention will not be permitted to participate as a party.

Those permitted to intervene become parties to the proceeding, subject to any limitations in the order granting leave to intervene, and have the opportunity to participate fully in the conduct of the hearing, including the opportunity to present evidence and cross-examine witnesses.

If a hearing is requested, the Commission will make a final determination on the issue of no significant hazards consideration. The final determination will serve to decide when the hearing is held.

If the final determination is that the amendment request involves no significant hazards consideration, the Commission may issue the amendment and make it effective, notwithstanding the request for a hearing. Any hearing held would takeplace after issuance of the amendment.

If the final determination is that the amendment request involves a significant hazards consideration, any hearing held would take place before the issuance of any amendment.

Normally, the Commission will not issue the amendment until the expiration of the 30-day notice period. However, should circumstances change during the notice period such that failure to act in a timely way would result, for example, in derating or shutdown of the facility, the Commission may issue the license amendment before the expiration of the 30-day notice period, provided that its final determination is

that the amendment involves no significant hazards consideration. The final determination will consider all public and State comments received. Should the Commission take this action, it will publish a notice of issuance and provide for opportunity for a hearing after issuance. The Commission expects that the need to take this action will occur very infrequently.

A request for a hearing or a petition for leave to intervene must be filed with the Secretary of the Commission, U.S. Nuclear Regulatory Commission, Washington, DC 20555, Attention: Docketing and Service Branch, or may be delivered to the Commission's Public Document Room, the Gelman Building, 2120 L Street, NW., Washington, DC, by the above date. Where petitions are filed during the last ten (10) days of the notice period,it is requested that the petitioner promptly so inform the Commission by a toll-free telephone call to Western Union at 1 (800) 325–6000 (in Missouri 1 (800) 342–6700). The Western Union operator should be given Datagram Identification Number 3737 and the following message addressed to James C. Linville: petitioner's name and telephone number; date petition was mailed; plant name; and publication date and page number of this **Federal Register** notice. A copy of the petition should also be sent to the Office of the General Counsel, U.S. Nuclear Regulatory Commission, Washington, DC 20555, and to Mark Wetterhahn, Esq., Bishop, Cook, Purcell and Reynolds 1401 L Street, NW., Washington, DC 20005, attorney for the licensee.

Nontimely filings of petitions for leave to intervene, amended petitions, supplemental petitions and/or requests for hearing will not be entertained absent a determination by the Commission, the presiding officer, or the Atomic Safety and Licensing Board that the petition and/or request, should be granted based upon a balancing of the factors specified in 1 CFR 2.714(a)(1)(i)-(v) and 2.714(d).

For further details with respect to this action, see the application for amendment dated October 12, 1990, which is available for public inspection at the Commission's Public Document Room, the Gelman, Building, 2120 L Street, NW., Washington, DC 20555, and at the Government Documents Department, Louisiana State University, Baton Rouge, Louisiana 70803.

Dated at Rockville, Maryland, this 12th day of October 1990.

For the Nuclear Regulatory Commission.

George F. Dick, Jr.,

Acting Director, Project Directorate IV–2, Division of Reactor Projects—III IV, V and Special Projects, Office of Nuclear Reactor Regulation.

BILLING CODE 7590–01–M

OFFICE OF THE UNITED STATES TRADE REPRESENTATIVE

Generalized System of Preferences (GSP); Withdrawal of Petition

SUMMARY: This notice serves to announce the withdrawal of a petition accepted as part of 1990 GSP Annual Review.

FOR FURTHER INFORMATION CONTACT: GSP Subcommittee, Office of the United States Trade Representative, 600 17th Street, NW., Room 414, Washington, DC 20506. The telephone number is (202) 395–6971.

I. Withdrawal of Petition

Cydsa Bayer has withdrawn its petition concerning Harmonized System subheading 2929.15, mixtures of 2,4 and 2,6 toluenediisocyanates, from consideration (case number 90–45). However, this case will continue to be reviewed during the 1990 Annual Review with Petroquimica Rio Tercero serving as the sole petitioner.

David A. Weiss,

Chairman, Trade Policy Staff Committee.

BILLING CODE 3190–01–M

OFFICE OF SCIENCE AND THE TECHNOLOGY POLICY

National Advisory Committee on Semiconductors

The purpose of the National Advisory Committee on Semiconductors (NACS) is to devise and promulate a national semiconductor strategy, including research and development. The implementation of this strategy will assure the continued leadership of the United States in semiconductor technology. The Committee will meet on Thursday, November 1, 1990 at Science Applications International Corporation, 1555 Wilson Blvd., 7th Floor, Rosslyn, Virginia. The proposed agenda is:

1. Briefing of the Committee on its organization and administration.
2. Presentations to the Committee by NACS members and staff on proposed and ongoing studies regarding semiconductors.
3. Discussion of Working Group actions.

A portion of the November 1st session will be closed to the public.

The briefing on some of the current activities of OSTP necessarily will involve discussion of material that is formally classified in the interest of national defense or for foreign policy reasons. This is also true for a portion of the briefing on panel studies. As well, a portion of both of these briefings will require discussion of internal personnel procedures of the Executive Office of the President and information which, if prematurely disclosed, would significantly frustrate the implementation of decisions made requiring agency action. These portions of the meeting will be closed to the public pursuant to 5 U.S.C. 552b. (c)(1), (2), and (9)(B).

A portion of the discussion of panel composition will necessitate the disclosure of information of a personal nature, the disclosure of which would constitute a clearly unwarranted invasion of personal privacy. Accordingly, this portion of the meeting will also be closed to the public, pursuant to 5 U.S.C. 552b.(c)(6).

Because of advance security arrangements, persons wishing to attend the open portion of the meeting should contact Mrs. Kathleen Elim, at (703) 528–6090 prior to October 31, 1990. Mrs. Elim is also available to provide specific information regarding time, place and agenda for the open session.

Dated: October 12, 1990.

Damar W. Hawkins,

Executive Assistant, Office of Science and Technology Policy.

BILLING CODE 3170–01–M

PHYSICIAN PAYMENT REVIEW COMMISSION

Commission Meeting

AGENCY: Physician Payment Review Commission.

ACTION: Notice of public meeting.

SUMMARY: The Physician Payment Review Commission will hold a public meeting on Thursday, October 25, 1990, from 9:30 a.m. to 5:30 p.m., and on Friday, October 26, 1990, beginning at 8:30 a.m. It will be held at the Grand Hotel, 2350 M Street, NW., in The Ballroom.

An agenda for the meeting will be available on Friday, October 19, 1990.

ADDRESSES: The Commission office is located in suite 310, 2120 L Street, NW.,

Washington, DC. The telephone number is 202/663-7220.

FOR FURTHER INFORMATION CONTACT: Lauren LeRoy, Deputy Director, 202/653-7220.

Paul B. Clusberg,
Executive Director.

BILLING CODE 8010-01-M

SECURITIES AND EXCHANGE COMMISSION

[Rel. No. 34-28631; International Series Rel. No. 174; File No. SR-BSE-90-13]

Self-Regulatory Organizations; Filing of Proposed Rule Change by the Boston Stock Exchange, Inc. Relating to the Listing of Index Warrants Based on the CAC-40 Index

Pursuant to section 19(b)(1) of the Securities Exchange Act of 1934 ("Act"), 15 U.S.C. 78s(b)(1), notice is hereby given that on September 4, 1990, the Boston Stock Exchange, Inc. ("BSE" or "Commission") filed with the Securities and Exchange Commission ("Commission") the proposed rule change as described in Items I, II and III below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The BSE proposes to amend its rules to allow it to trade, both on a listed and Unlisted Trading Privileges ("UTP") basis, index warrants based on the CAC-40 Index ("CAC"), a capitalization-weighted index consisting of 40 leading stocks listed and traded on the Paris Bourse.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of, and statutory basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The self-regulatory organization has prepared summaries, set forth in sections (A), (B), and (C) below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

The BSE is submitting the proposed rule change in order to allow the Exchange to trade index warrants based on the CAC-40 Index. The CAC-40 Index is an internationally recognized, capitalization-weighted index consisting of 40 leading stocks listed and traded on the Paris Bourse. The CAC-40 Index is calculated and managed by the Societe des Bourses Francaises.

Such warrant issues will conform to the BSE listing guidelines as proposed in BSE filing SR-BSE-90-02,[1] which provide that: (1) The issuer shall have assets in excess of $100,000,000 and otherwise substantially exceed the financial listing criteria of the BSE; (2) the term of the warrants shall be for a period ranging from one to five years from the date of issuance; and (3) the minimum public distribution of such issues shall be 1,000,000 warrants together with a minimum of 400 public holders, and have an aggregate market value of $4,000,000. In addition, warrants which have been approved for trading on another national securities exchange would be eligible for listing on the BSE.

CAC-40 index warrants will be direct obligations of their issuer subject to cash-settlement during their term, and either exercisable throughout their life (*i.e.*, American style) or exercisable only on their expiration date (*i.e.*, European style). Upon exercise, or at the warrant expiration date (if not exercisable prior to such date), the holder of a warrant structured as a "put" would receive payment in U.S. dollars to the extent that the CAC-40 Index has declined below a pre-stated cash settlement value. Conversely, holders of a warrant structured as a "call" would, upon exercise or at expiration, receive payment in U.S. dollars to the extent that the CAC-40 Index has increased above the pre-stated cash settlement value. If "out-of-the-money" at the time of expiration, the warrants would expire worthless.

Trading in warrants will be subject to several safeguards designed to ensure investor protection. In SR-BSE-90-02, the BSE proposed suitability standards applicable to recommendations to customers of index warrants and transactions in customer accounts. Specifically, the proposed amendments to the BSE's rules will make options suitability standards applicable to recommendations regarding index warrants, so that members or member organizations will be required to have reasonable grounds to believe that recommended index warrant transactions are suitable for their customer, and customers are able to bear the risks of the proposed transactions. For warrants based on foreign indexes, the Exchange also recommends that index warrants be sold only to option-approved accounts. In addition, the proposed amendments will require a Senior Registered Options Principal ("SROP") or a Registered Options Principal ("ROP"), to approve and initial a discretionary order in index warrants on the day the order is executed. Finally, prior to the commencement of trading, the BSE will distribute a circular to its membership calling attention to the specific risks associated with index warrants.

Due to the fact that the BSE is not the Designated Options Examining Authority ("DOEA") for any of its member firms, BSE members with public customers trading CAC-40 Index warrants will be required to have a SROP or ROP designated and qualified in accordance with the rules of the self-regulatory organization ("SRO") that is the DOEA for the BSE member. This will ensure that BSE members with public customers trading index warrants will have an options compliance infrastructure in place to ensure compliance with the warrants account opening and suitability requirements. This requirement will also ensure that BSE members trading index warrants will be subject to oversight by an SRO experienced in regulating options.

The Commission has noted that the trading of warrants based on a foreign index requires an adequate mechanism for sharing surveillance information with respect to the index's component stocks. In this regard, the BSE is ensuring that there will be an adequate mechanism for the sharing of surveillance information with respect to the CAC's component stocks.

The Exchange believes that the proposed rule change is consistent with the requirements of the Act, and, in particular, section 6(b)(5), as the warrants are designed to prevent fraudulent and manipulative acts and practices and to promote just and equitable prinicples of trade, and are not designed to permit unfair discrimination between customers, issuers, brokers or dealers.

[1] As of the date of this release, SR-BSE-90-02 has not been approved by the Commission. Approval of SR-BSE-90-02 must occur before approval of the Exchange's proposal to list warrants based on the CAC.

B. Self-Regulatory Organization's Statement on Burden on Competition

The BSE does not believe that the proposed rule change will impose an inappropriate burden on competition.

C. Self-Regulatory Organizaiton's Statement on Comments on the Proposed Rule Change Received from Members, Participants, or Others

No written comments were either solicited or received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Within 35 days of the date of publication of this notice in the Federal Register or within such longer period (i) As the Commission may designate up to 90 days of such date if it finds such longer period to be appropriate and publishes its reasons for so finding or (ii) as to which the self-regulatory organization consents, the Commission will:

(a) By order approve such proposed rule change, or

(b) Institute proceedings to determine whether the proposed rule change should be disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing. Persons making written submissions should file six copies thereof with the Secretary, Securities and Exchange Commission, 450 Fifth Street, NW., Washington, DC 20549. Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for inspection and copying in the Commission's Public Reference Section, 450 Fifth Street, NW., Washington, DC. Copies of such filing will also be available for inspection and copying at the principal office of the above-mentioned self-regulatory organization. All submissions should refer to the file number in the caption above and should be submitted by November 8, 1990.

For the Commission, by the Division of Market Regulation, pursuant to delegated authority

Dated: October 11, 1990.

Margaret H. McFarland,

Deputy Secretary.

Office of the Secretary

Provision of aviation insurance coverage for commercial air carrier service

October 12, 1990.

By virtue of the authority vested in me by Presidential Determination No. 90-29, issued August 14, 1990, and Presidential Determination 90-32, issued August 17, 1990, and by virtue of the authority set forth in section 1302 of the Federal Aviation Act of 1958, as amended, 49 U.S.C. app. 1532, I hereby:

1. Determine, on behalf of the President, that continuation of commercial air services to and from Saudi Arabia, Turkey, Syria, Jordan, Egypt, Yemen, Oman, United Arab Emirates, Israel, Bahrain, Qatar, and Cyprus, and to and from Iraq and Kuwait to the extent permitted by Executive Orders Nos. 12724 and 12725, is necessary to carry out the foreign policy of the United States. Such commercial air services facilitate, in particular, actions in support of the United States and international response to the Iraqi invasion of Kuwait and the evacuation of American citizens from areas affected by the invasion. These services facilitate, in addition, the maintenance of normal political and commercial exchange with the countries of the region.

2. Approve, on behalf of the President, the Department of Transportation's provision of insurance against loss or damage arising out of any risk from the operation of an aircraft in the manner and to the extent provided in title XIII of the Act, 49 U.S.C. App. 1531, *et seq.* whenever I have determined that such insurance cannot be obtained on reasonable terms and conditions from any company authorized to conduct an insurance business in a State of the United States.

These actions are taken in consultation with the Secretary of State with respect to section 1302 (a) and (c) of the Act, 49 U.S.C. app. 1532 (a) and (c), and in consultation with the Director of the Office of Management and Budget with respect to section 1302(c) of the Act, 49 U.S.C. app. 1532(c). Pursuant to section 1302(c) of the Act, 49 U.S.C. app. 1532(a), this Determination is effective for sixty days.

This Determination shall be brought to the attention of all air carriers within the meaning of section 101(3) of the Act, 49 U.S.C. app. 1301(3), and published in the Federal Register.

Samuel K. Skinner,

Secretary of Transportation.

National Boating Safety Advisory Council; Meeting

Pursuant to section 10(a) of the Federal Advisory Committee Act (Pub. L. 92-463; 5 U.S.C. App.1), notice is hereby given of a meeting of the National Boating Safety Advisory Council to be held on Monday and Tuesday, November 12 & 13, 1990 at the U.S. Grant Hotel, 326 Broadway, San Diego, California, beginning at 9 a.m. and ending at 4 p.m. on both days. The agenda for the meeting will be as follows:

1. Review of action taken at the 45th meeting of the Council.
2. Members' items.
3. Executive Director's Report.
4. Report on Chartmaker 2000 Conference.
5. Presentation on California's Boater Education Program.
6. Presentation on Airboat Standards Exemptions.
7. Recreational Boating Standards Review Subcommittee Report.
8. Report on the National Association of State Boating Law Administrators (NASBLA) Annual Conference.
9. Report on Communications Issues.
10. Consumer Relations Review Subcommittee Report.
11. Report of "Passengers for Consideration" Subcommittee.
12. Report on the results of the 1990 National Safe Boating Week.
13. Report on the United Safe Boating Institute Study on Boating Safety Instruction.
14. Report by Personal Watercraft Industry Association.
15. Report on the National Boating Survey.
16. Presentation on Hyper and Hypothermia.
17. Reply to members' items.
18. Remarks by Chief, Office of Navigation Safety and Waterway Services.
19. Chairman's session.

Attendance is open to the interested public. With advance notice to the Chairman, members of the public may present oral statements at the meeting. Persons wishing to present oral statements should so notify the Executive Director no later than the day before the meeting. Any member of the public may present a written statement

to the Council at any time. Additional information may be obtained from Mr. Albert J. Marmo, Executive Director, National Boating Safety Advisory Council, U.S. Coast Guard, (G–NAB), Washington, DC 20593–0001, or by calling (202) 267–0997.

Dated: October 11, 1990.

Navigation Safety Advisory Council; Meeting

AGENCY: Coast Guard, DOT.

ACTION: Notice of meeting.

As required by the Federal Advisory Committee Act, this notice announces a meeting of the Navigation Safety Advisory Council on Monday through Wednesday, November 5–7, 1990. The meeting will be held at the Department of Commerce Building, on 14th Street between Constitution and Pennsylvania Avenues, NW., Washington, DC. The meeting will begin at 8 a.m. and end at 5 p.m. each day.

Committees will meet all day Monday, November 5 and during the morning of Tuesday, November 6. Committee discussions will include the following topics:

a. *Navigation Rules.*

1. Definition of "towed alongside" for application of yellow flashing light on barges.

2. Marking of submerged dredged pipelines.

3. Sailing vessel lighting.

4. Lights and shapes displayed by vessels engaged in fishing.

b. *Vessel Traffic Service (VTS) Issues.*

c. *Provisional International Maritime Organization (IMO) standards for Electronic Chart Display Information System (ECDIS).*

d. *Establishment of permanent committees.*

e. *Information item:* Presentation on effects of new technology on vessel manning.

The Council will convene in plenary session on Tuesday, November 6 at 1 p.m. to hear the presentation on the above information item, Committee status reports, and any matters properly brought before the Council.

The meeting is open to the public. Persons wishing to make oral statements should notify the Coast Guard no later than the day before the meeting. Any person may present a written statement to the Council at any time without advance notice.

For additional information, contact Margie G. Hegy, Navigation Safety Advisory Council, U.S. Coast Guard (G–NSR–3), Washington, DC 20593–0001, Telephone (202) 267–0415.

Dated: October 12, 1990.

R.A. Appelbaum,

Rear Admiral, U.S. Coast Guard, Chief, Office of Navigation Safety and Waterway Services.

BILLING CODE 4910-14-M

Federal Highway Administration

Environmental Impact Statement: Marin County, CA

AGENCY: Federal Highway Administration (FHWA), DOT.

ACTION: Withdrawal of NOI/EIS.

SUMMARY: The FHWA is issuing this notice to advise the public that the Notice of Intent for the preparation of the environmental impact statement for a proposed highway project in Marin County, California is hereby withdrawn.

FOR FURTHER INFORMATION CONTACT: Mr. C. Glenn Clinton, District Engineer, Federal Highway Administration, P.O. Box 1915, Sacramento, California 95812–1915, Telephone: (916) 551–1314.

SUPPLEMENTARY INFORMATION: The June 27, 1990 Federal Register indicated that the Federal Highway Administration (FHWA), in cooperation with the California Department of Transportation, will prepare an environmental impact statement (EIS) on a proposal to repair a 800-foot section of State Route 1 (PM 9.2) between Muir Beach and Stinson Beach along the Pacific Coast in Marin County. Subsequent interdisciplinary studies and consultation with various Federal, State, and local agencies to date have determined that the relocation of roadway onto stable material by realigning the road approximately 250 feet inland, and disposing of approximately 500,000 cubic yards of cut materials by planned ocean disposal, is the only practical alternative. The planned ocean disposal includes the placing of cut materials in approximately 2.5 acres at the current toe of existing slide and compacting the fill above the water level. The expected erosion rate will be similar to the natural rate of deposition of earth into the ocean. Studies and coordination with various levels of government to date show that an environmental assessment/Finding of No Significant Impact (FONSI) is the appropriate environmental document. Accordingly, the NOI/EIS is hereby withdrawn.

(Catalog of Federal Domestic Assistance Program Number 20.205, Highway Research, Planning, and Construction. The regulations implementing Executive Order 12372 regarding intergovernmental consultation of Federal Programs and activities apply to this program.)

Issued on: October 10, 1990.

Susan E. Klekar,

District Engineer, Sacramento, California.

Federal Railroad Administration

[ES-AP-No. 2965]

Norfolk and Western Railway Co.; Change of Location of Public Hearing

The Norfolk and Western Railway Company has petitioned the Federal Railroad Administration (FRA) seeking approval of the proposed discontinuance and removal of the traffic control system from Arcadia, Ohio to Lima, Ohio, and from South Lima, Ohio, to Muncie, Indiana.

FRA has issued a public notice scheduling a public hearing in this matter to be held on November 14, 1990. The location of the public hearing to be held on that date has been changed. The new location is: Second Floor Joint Use Conference Room, Federal Courthouse, 1300 South Harrison Street, Fort Wayne, Indiana.

Issued in Washington, DC on October 10, 1990.

J. W. Walsh,

Associate Administrator for Safety.

BILLING CODE 4910-06-M

National Highway Traffic Safety Administration

Denial of Motor Vehicle Defect Petition

This notice sets forth the reasons for the denial of a petition for a defect and recall determination submitted to NHTSA under section 124 of the National Traffic and Motor Vehicle Safety Act of 1966, as amended (15 U.S.C. 1381 *et seq.*).

Ms. M. Kristen Rand, Counsel for Consumer Union, submitted a petition dated June 21, 1990, requesting that NHTSA conduct an investigation into and order a recall of all Gerry Guardian model #643 child car seats manufactured by the Takata-Gerico Corporation.

The petition alleges that a defect exists in the design of the shoulder harness retractor mechanism which may retract too far and hinder removal of a child from the seat, especially in an emergency situation.

Consumers Union suggests that the design of the Gerry Guardian presents a safety hazard similar to that previously addressed by NHTSA in its investigation EA88-013, which involved the Fisher Price Model #9100 child safety seat which used an automatic locking retractor (ALR). The Fisher Price model 9100 child safety seat was subsequently voluntarily recalled. The Fisher Price model 9100 has a lever located next to the buckle which engages the ALR when the harness is buckled in place. The ALR then serves as a one way retractor, removing any slack from the system and not allowing any slack to be reintroduced. When the harness is unbuckled, the lever disengages the ALR allowing the harness to move freely in either direction. In the case of EA88-103, the lever could stick in the engaged position (due to foreign objects, dirt, clothing, etc., lodging in the mechanism) when the harness was unbuckled. In this condition, the harness cannot be released, possibly trapping a child. The remedy for this defect consisted of providing owners with a button-stop kit to be fastened onto one side of the harness webbing. This limited the amount of shoulder harness which could be retracted once the shield was unfastened.

The Gerry Guardian model #643, as well as all Guardian models manufactured since 1984 with an approximate population of 430,000, utilizes a web sensitive emergency locking retractor (ELR) which allows the occupant to move comfortably in the safety seat during normal driving, yet locks up during a crash. The ELR system is web sensitive and locks up when the level of webbing acceleration "trips" a centrifugal mechanism. When removing a child from the seat the possibility exists for momentarily locking the retractor if the shoulder harness is pulled out too swiftly; however, by pausing and allowing the shoulder harness to slightly retract, the retractor unlocks and releases the harness. This is described in the instruction booklet which accompanies the seat.

Analysis of the Office of Defects Investigation computer records of owner complaints for the subject child safety seat revealed one report alleging that the harness/shield retracted and locked hindering removal of a child. The agency has received additional retractor-related concerns regarding this seat alleging use difficulties, i.e., the harness must be pulled slowly (as stated in the instruction manual) in order to avoid temporarily locking the restraint while removing the child from the seat; however, none allege a locking, non-releasable retractor. The agency continues to receive consumer concerns regarding the functioning of this seat's retractor, perhaps in part due to Consumers Union's continued publicity alleging similarity between the Gerry Guardian and the Fisher Price seat which was recalled for an unrelated problem.

Consumers Union was requested by letter dated July 23, 1990, to provide all supporting documentation available regarding the alleged defect. Consumers Union has not responded to this request.

In consideration of the available information there is no reasonable possibility that an order concerning the notification and remedy of a safety-related defect in relation to the petitioner's allegations would be issued at the conclusion of an investigation. Since no evidence of a safety-related defect trend was discovered, further commitment of resources to determine whether such a trend may exist does not appear to be warranted at this time. Therefore, the petition is denied.

This notice sets forth the reason for the denial of a petition submitted to NHTSA under section 124 of the National Traffic and Motor Vehicle Safety Act of 1966, as amended (15 U.S.C. 1381 *et seq.*).

Authority: Sec. 124, Pub. L. 89-562; 80 Stat. 1470 (15 U.S.C. 1410a); delegations of authority at 49 CFR 1.50 and 501.8.

Issue on October 5, 1990.

Michael B. Brownlee,

Acting Associate Administrator for Enforcement.

Federal Register
Vol. 55, No. 202
Thursday, October 18, 1990

This section of the FEDERAL REGISTER contains notices of meetings published under the "Government in the Sunshine Act" (Pub. L. 94-409) 5 U.S.C. 552b(e)(3).

COMMODITY FUTURES TRADING COMMISSION

"FEDERAL REGISTER" CITATION OF PREVIOUS ANNOUNCEMENT: 55 F.R. 41107.

PREVIOUSLY ANNOUNCED TIME AND DATE OF MEETING: 11:00 a.m., Tuesday, October 16, 1990.

CHANGES IN THE MEETING: The Commission has rescheduled the closed meeting to discuss enforcement matters for 1:00 p.m., Thursday, October 18, 1990.

CONTACT PERSON FOR MORE INFORMATION: Jean A. Webb, Secretary of the Commission

Jean A. Webb,

Secretary of the Commission.

BILLING CODE 6351-01-M

FEDERAL ELECTION COMMISSION

* * * * *

"FEDERAL REGISTER" NUMBER: 90-24144.

PREVIOUSLY ANNOUNCED DATE AND TIME: Thursday, October 18, 1990, 10:00 a.m. Meeting open to the public.

THE FOLLOWING ITEM HAD BEEN REMOVED FROM THE AGENDA: Advisory Opinion 1990-19, Gordon M. Strauss on behalf of the Suarez Corporation.

* * * * *

DATE AND TIME: Tuesday, October 23, 1990, 10:00 a.m.

PLACE: 999 E Street, NW., Washington, DC.

STATUS: This meeting will be closed to the public.

ITEMS TO BE DISCUSSED:

Compliance matters pursuant to 2 U.S.C. § 437g.
Audits conducted pursuant to 2 U.S.C. § 437g, § 438(b), and Title 26, U.S.C.
Matters concerning participation in civil actions or proceedings or arbitration.
Internal personnel rules and procedures or matters affecting a particular employee.

* * * * *

DATE AND TIME: Thursday, October 25, 1990, 10:00 a.m.

PLACE: 999 E Street, NW., Washington, DC (Ninth Floor).

STATUS: This meeting will be open to the public.

MATTERS TO BE CONSIDERED:

Correction and Approval of Minutes
Advisory Opinions:
1990-19—Gordon M. Strauss on behalf of the Suarez Corporation
1990-24—Representative Edward R. Madigan—Administrative Matters

* * * * *

PERSON TO CONTACT FOR INFORMATION: Mr. Fred Eiland, Press Officer, Telephone: (202) 376-3155.

Delores Harris,

Administrative Assistant; Office of the Secretariat.

Corrections

Federal Register
Vol. 55, No. 202
Thursday, October 18, 1990

This section of the FEDERAL REGISTER contains editorial corrections of previously published Presidential, Rule, Proposed Rule, and Notice documents. These corrections are prepared by the Office of the Federal Register. Agency prepared corrections are issued as signed documents and appear in the appropriate document categories elsewhere in the issue.

DEPARTMENT OF COMMERCE

International Trade Administration

[A-122-605, et al.]

Initiation of Anti-Circumvention Inquiry on Antidumping Duty Orders on Color Picture Tubes From Canada A-122-605, et al.

Correction

In notice document 90-20093 beginning on page 34950, in the issue of Monday, August 27, 1990, make the following correction:

On page 34950, in the third column, in the **EFFECTIVE DATE:**, "August 24, 1990." should read "August 27, 1990."

BILLING CODE 1505-01-D

FARM CREDIT ADMINISTRATION

12 CFR Parts 613, 614, 615, 616, 618, and 619

RIN 3052-AA84

Eligibility and Scope of Financing; Loan Policies and Operations; Funding and Fiscal Affairs, Loan Policies and Operations, and Funding Operations; Coordination; General Provisions; Definitions

Correction

In the correction to rule document 90-13862 appearing on page 28511 in the issue of Wednesday, July 11, 1990, item 20 should have begun "On page 24863".

BILLING CODE 1505-01-D

FEDERAL EMERGENCY MANAGEMENT AGENCY

44 CFR Part 67

Final Flood Elevation Determinations; Alabama et al.

Correction

In rule document 90-18279 beginning on page 31837, in the issue of Monday, August 6, 1990, make the following correction:

On page 31838, in the first column, in the table, under "California", and the heading "Napa County" etc., in the first line of the fourth entry, "downstream" should read "upstream".

Part II

Department of Labor

Occupational Safety and Health Administration

29 CFR Part 1926

Concrete and Masonry Construction Safety Standards; Lift-Slab Construction Operations; Final Rule

DEPARTMENT OF LABOR

Occupational Safety and Health Administration

29 CFR Part 1926

[Docket No. S-3018]

RIN 1218-AA20

Concrete and Masonry Construction Safety Standards; Lift Slab Construction Operations

AGENCY: Occupational Safety and Health Administration (OSHA), U.S. Department of Labor.

ACTION: Final rule.

SUMMARY: This rule revises the Occupational Safety and Health Administration's (OSHA) Safety Standards for Lift Slab Construction Operations. This rulemaking updates specific requirements for lift-slab construction operations that were incorporated by reference in the existing standard from the American National Standards Institute's (ANSI) Safety Requirements for Concrete Construction and Masonry Work, ANSI A10.9–1970, and adds new requirements to provide additional protection for workers engaged in lift-slab construction operations. This revision eliminates ambiguities caused by incorporating the ANSI standard by reference and strengthens the lift-slab requirements by eliminating weaknesses or gaps in coverage that existed through the reference to the outdated ANSI standard.

EFFECTIVE DATE: This final rule shall become effective December 17, 1990.

ADDRESSES: In compliance with 28 U.S.C. 2112(a), the Agency designates for receipt of petitions for review of the standard, the Associate Solicitor for Occupational Safety and Health, Office of the Solicitor, room S–4604, U.S. Department of Labor, 200 Constitution Avenue NW., Washington, DC 20210.

FOR FURTHER INFORMATION CONTACT: Mr. James Foster, U. S. Department of Labor, Occupational Safety and Health Administration, Office of Information and Consumer Affairs, room N3647, 200 Constitution Avenue NW., Washington, DC 20210, Telephone (202) 523–8151.

SUPPLEMENTARY INFORMATION:

I. Background

Congress amended the Contract Work Hours Standards Act (40 U.S.C. 327 *et seq.*) in 1969 by adding a new section 107 (40 U.S.C. 333) to provide employees in the construction industry with a safer work environment and to reduce the frequency and severity of construction accidents and injuries. The amendment, commonly known as the Construction Safety Act (Pub. L. 91–54; August 9, 1969), significantly strengthened employee protection by providing for occupational safety and health standards for employees of the building trades and construction industry who worked on Federal and Federally-financed or Federally-assisted construction projects. Accordingly, the Secretary of Labor issued Safety and Health Regulations for Construction in 29 CFR part 1518 (36 FR 7340, April 17, 1971) pursuant to section 107 of the Contract Work Hours and Safety Standards Act.

The Occupational Safety and Health Act (OSH Act) (84 Stat. 1590; 29 U.S.C. 651 *et. seq.*), which was enacted by Congress in 1970, authorized the Secretary of Labor to adopt established Federal standards issued under other statutes, including the Construction Safety Act, as occupational safety and health standards. Accordingly, under section 6(a) of the OSH Act (36 FR 10466, May 29, 1971), the Secretary of Labor adopted the Construction Standards which were issued under the Construction Safety Act in 29 CFR part 1518. These Safety and Health Regulations for Construction, part 1518, were redesignated as part 1926 at the end of 1971 (36 FR 25232, December 30, 1971). The standard entitled Concrete, Concrete Forms, and Shoring, §§ 1926.700 through 1926.702, was adopted as an OSHA standard as part of this process. OSHA revised that standard—except for the section on lift-slab operations—on June 16, 1988 (53 FR 22612), based on an earlier proposal. The 1988 revision changed the title of Subpart Q to Concrete and Masonry Construction and added several sections (now §§ 1926.700 to 1926.706). The existing requirements for lift-slab operations—incorporated by reference from Section 11 of the ANSI A10.9–1970 standard—are located in § 1926.705.

The revision to the lift-slab requirements in OSHA's subpart Q began on September 16, 1985, when OSHA proposed to revise its construction industry safety standard addressing concrete and masonry construction (50 FR 37543). One section of this 1985 proposal on subpart Q contained requirements specific to lift-slab construction operations. Following the publication of the proposal, there was a period for receiving written comments which ended on December 16, 1985, and a public hearing was held in Washington, DC on June 17–18, 1986. The record on that proposal closed on December 8, 1986. From that point on, no further information could be entered into the rulemaking docket for consideration by OSHA in preparing a final rule, without a formal reopening of the record.

After the record closed, a tragic accident occurred in Bridgeport, Connecticut. On April 23, 1987, a building under construction collapsed, killing 28 workers and injuring many others. The collapse caused the highest death toll from a workplace accident in the United States since 51 employees were killed in 1978 during construction of a cooling tower at Willow Island, West Virginia. The Bridgeport building that collapsed was being erected using the lift-slab method of construction. After the collapse, it was apparent to OSHA that there would be a new body of information forthcoming and a multitude of questions about this unique method of construction. The use of the lift-slab method was very limited, accounting for only a small percentage—probably less than one percent—of all construction activity in the United States.

Some of that information would come from the OSHA accident investigation. OSHA conducted an investigation of the accident with the assistance of the National Bureau of Standards (NBS) (now called the National Institute of Standards and Technology) of the U.S. Department of Commerce. The NBS presented their findings in a report released in September 1987. In that report, "Investigation of L'Ambiance Plaza Building Collapse in Bridgeport, Connecticut, NBSIR 87–3640" (Ex. 34), NBS concluded the following:

> The most probable cause of the collapse was determined to be loss of support at a lifting jack in the west tower during placement of an upper level package of three floor slabs. The loss of support was likely due to excessive deformation of the lifting angle in a shearhead followed by a lifting nut slipping off the lifting angle of the shearhead. The postulated failure mechanism was duplicated in laboratory experiments. The local failure propagated as loads were redistributed. The remaining jack rods along column line E supporting the package of floor slabs slipped off the lifting angles and the slabs failed in flexure and shear. These slabs fell causing the lower level slabs to fail. (p. iii).

To ensure that the subpart Q rulemaking record adequately reflected the best available information on lift-slab construction, OSHA decided to withhold the on-going revision of the lift-slab section in subpart Q until it could reopen the record for the limited purpose of seeking additional information on lift-slab construction. The rulemaking on the remainder of the 1985 proposed revision to subpart Q was

completed as a final rule on June 18, 1988 (53 FR 22612). OSHA reopened the record on September 15, 1988, with the publication of a proposed rule that addressed just the hazards of lift-slab construction (53 FR 35972). Interested parties were given until November 14, 1988, to submit comments pertaining to the proposal. The notice of proposed rulemaking also informed the public of the opportunity to request an informal public hearing on the proposal. Subsequently, OSHA received a request for an extension of the comment period. OSHA published a notice in the Federal Register on November 8, 1988 (53 FR 45102) announcing that it was extending the period for comments and hearing requests until December 14, 1988. During that comment period, OSHA received another request to extend the comment period further and to allow ample opportunity for a complete and full response to the proposed provisions and the specific issues raised in the proposal. Once again, OSHA agreed and issued a notice in the Federal Register of December 13, 1988 (53 FR 50038), announcing that it was extending the period for written comments and requests for a hearing until February 12, 1989. Thus, the written comment period for this new proposal lasted 5 months.

Although only one comment to the record on lift-slab construction was received when the standard was first proposed for revision in 1985, and no testimony was presented on the topic at OSHA's 1986 public hearing, there were 26 written comments received in response to the 1988 proposed rule. In addition, two requests for a hearing were received. In response to the requests, OSHA held a public hearing in Washington, DC on June 29–30, 1989, to hear testimony on the proposed rule. Much of that testimony, like some of the written comment, did not relate directly to the merits of the proposed rule, but instead related to various theories as to why commenters felt the L'Ambiance Plaza in Bridgeport collapsed; or why they felt the NBS Report was incorrect; or why OSHA was wrong for proposing what they thought were "new" standards. While all of this information is in the rulemaking record, little of it will be discussed in this preamble because it does not address matters under consideration in this rulemaking. That is, the proposal addressed lift-slab construction operations, not the validity of the NBS Report.

By the time of the scheduled hearings, with the majority of the comments in the record, it was apparent that many of the commenters thought that OSHA did not have any requirements in effect for lift-slab construction operations at the time of the Bridgeport accident and that the proposal contained all "new" requirements. In the opening statement for the public hearing, OSHA made it clear that this was not the case. (Tr. 1–12 and Ex. 44). In particular, OSHA stated that it had not proposed any new requirements based specifically on the NBS Report. OSHA also noted that most of the proposed requirements were essentially the same as the requirements that the Agency had been enforcing since 1971. However, OSHA had proposed to change some provisions to reflect revisions made by ANSI in 1983 when that organization updated its ANSI A10.9–1970 standard—the standard that OSHA had previously adopted by reference in 1971 and which OSHA herein refers to as its "existing" standard.

In preparation for the proposed rule, OSHA met with its Advisory Committee on Construction Safety and Health (ACCSH) to discuss a draft of the lift-slab proposal. The ACCSH made three recommendations at their March 30, 1988, meeting, and those recommendations were discussed in the proposed rulemaking. (A copy of the transcript of that discussion can be found at Exhibit 35–2.) First, ACCSH recommended that OSHA include the building columns among the items that must be designed with a safety factor of at least 2.5. ACCSH was referring to the current ANSI standard that requires "* * * the threaded rods and other members that transmit loads to the jacks shall have a minimum factor of safety of at least 2.5."

Second, ACCSH recommended revising draft paragraph (a) by supporting a motion put forth by the ACCSH representative from the Building and Construction Trades Department of the AFL–CIO. That motion was to require the "Lift-slab operations to be designed, planned, and supervised by a professional engineer or architect, licensed in the state where the work is being performed."

The final recommendation was expressed when ACCSH members discussed their views with regard to employees working under loads, including working under slabs which were not yet secured. The ACCSH members passed a motion which stated that, as a general rule, they did not endorse employees working under any loads.

In the preamble to the proposed rule, OSHA invited commenters to compare the lift-slab construction technique with other building techniques. OSHA summarizes the resulting discussion here, by first setting forth an excerpt from the National Bureau of Standards report, *Investigation of L'Ambiance Plaza Building Collapse in Bridgeport, Connecticut (NBSIR 87–3640)* (Ex. 34) in which the lift-slab method was described as follows:

> In the lift-slab method of construction, floor and roof slabs are cast one on top of the other at ground level. The floors are usually two-way post-tensioned flat plates of either regular or lightweight concrete. After post-tensioning, the slabs are lifted to their positions by hydraulic jacks and are secured to the columns. (p. 1).

NBS also said that "By casting the slabs at ground level, lift-slab construction can eliminate 90 percent of the formwork required for cast-in-place and reduce labor requirements. Cost savings and speed of construction are two primary advantages claimed for lift-slab construction" (Ex. 34, p. 1).

In cast-in-place construction, formwork is used to support the weight of freshly placed concrete and it continues to provide support until the concrete has achieved the strength necessary to support itself and all superimposed loads. Under subpart Q workers are not prohibited from working in buildings under such loads during the time that the concrete is gaining its strength. However, OSHA does require in § 1926.703(a)(1) that the "Formwork shall be designed, fabricated, erected, supported, braced and maintained so that it will be capable of supporting, without failure, all vertical and lateral loads that may reasonably be anticipated to be applied to the formwork." Further, OSHA states in § 1926.703(a)(1) that employers who follow sections 6 and 7 of the ANSI A10.9–1983 standard will be deemed to be in compliance with the formwork requirements. The ANSI standard prescribes that allowable loads on formwork components are to be based on a factor of safety, which is usually 2.5, but can be as high as 3, depending on the type of shoring used.

In contrast, in the lift-slab method of construction, OSHA proposed to continue the existing requirement that workers not be permitted to work under slabs which have not been secured, nor under slabs that have been secured if other slabs on upper levels are being lifted (a process termed "jacking operations"). Of course, OSHA did not intend that this requirement apply to the workers who are essential to the task of controlling the jacking operations and securing the slabs.

The proposed provision to keep nonessential employees out of the building ranked as the most

controversial provision in the proposed rule. In fact, according to one lift-slab contractor, prior to the L'Ambiance Plaza collapse, it was common practice, worldwide, for even nonessential employees to work in buildings being constructed by the lift-slab method during jacking operations as long as the floor slab immediately above the employees had been secured. (Ex. 35–2, p. 150). This means that some floor slabs were "suspended on the jacks" while nonessential employees were working below. A failure of any component of the jacking system, not unlike a failure of the formwork system in cast-in-place construction, could result in other components being overloaded or in the dropping of a suspended floor which could, in turn, result in total collapse of the building. Such failures have occurred in both cast-in-place and in the lift-slab method of construction. As OSHA stated in the proposed rule, though, it has limited data on total building failures where the lift-slab method of construction was used. Indeed, OSHA is aware of only one lift-slab-constructed building failure since 1971, the year OSHA came into existence. That, of course, is the 1987 L'Ambiance Plaza failure. Published materials, however, describe several other types of failures (where the lift-slab method was used) that occurred in the years 1952, 1954, 1956, 1961, and 1962. (Reference: Feld, Jacob, *Construction Failure*. John Wiley & Sons, Inc., New York; 1968) (Ex. 35–1).

Further discussion on the proposed prohibition was made by a representative of Texstar Construction Corporation when he addressed the ACCSH Committee on March 30, 1988 (Ex. 35–2, p. 150). The representative stated:

> Another very important area of disagreement is our position that other trades be allowed to work inside a building under secured slabs while lifting is in progress on upper floors. This has been the normal practice around the world and really is not different that what is normal practice of other structural methods. Similar conditions exist on multi-story, cast-in-place concrete frames, during the pouring and curing of an upper floor.

Further in his comments, he said that:

> On precast frames or masonry frames, the same thing applies during the erection of those precast members. On steel frames, during the erection of the steel members and the pouring of the decks up above, workmen are allowed to do their trades below. We really do not see why our method should be restrained in the way proposed, from competing with other structural systems.

He concluded by comparing the risks of precast with lift-slab construction, remarking that, "* * * some of the precast members are very, very heavy and very large on multi-story buildings; there are trades working below. God forbid one lets go, there is going to be a catastrophe, there is no question about it * * *." (Ex. 35–2, p. 154).

This statement prompted OSHA to ask for public comment in the proposed rule on whether or not employees working on precast or cast-in-place sites are exposed to the same type of hazard that is being addressed here for the lift-slab technique. Several commenters responded to the questions and their comments are discussed elsewhere in this preamble, under Issue #12.

Finally, OSHA would like to express its appreciation for the cooperation, assistance, and comments from all those who have participated in this rulemaking effort. In particular, OSHA acknowledges the assistance of Mr. Peter Vanderklaauw of Liftplate International, Inc., who welcomed the OSHA standards-writing team to visit a construction site while lifting was in progress, to allow first-hand observation of the hazards associated with the construction technique and see how one contractor addressed those hazards. OSHA also acknowledges the contributions of those in the engineering community who came together, sometimes at their own time and expense, to investigate the Bridgeport disaster and to make recommendations to OSHA and to other standards-making bodies (e.g., building code committees) in an effort to prevent the recurrence of such incidents. As OSHA stated in its closing remarks at the hearing, the Agency believes a final rule can be promulgated that provides a level of protection needed to ensure the safety of workers as intended by Congress, without taking away the livelihood of the very workers it seeks to protect (Ex. 44 and Tr. 6/29/89, p. 1–21).

II. Summary and Explanation of the Final Rule

The following discussion summarizes each of the provisions in the final rule and explains how they differ from the proposal and the existing rule. The discussion also includes an explanation of how the Agency arrived at its final decision.

OSHA requested comments on several specific issues in the preamble of the proposed rule (53 FR 35976) and in the hearing notice (53 FR 50038). All of these issues, and the comments received on them, are discussed in conjunction with the appropriate provisions of this final rule. Issues raised in the proposal that did not affect a provision in the final rule are discussed at the end of the discussion of the final rule provisions.

In general, this final rule differs from many of the final rules issued by OSHA in that currently it directly affects the operation of only two construction contractors in the United States and a small percentage of all the employees engaged in construction work. (Ex. 37, p. 35978). Additionally, OSHA recognizes that use of the lift-slab method of construction prevents employee exposure to some hazards that typically exist when other construction methods are used—methods such as steel construction, cast-in-place construction, and precast concrete construction. For example, these other construction methods require more work to be done at elevated locations, thereby exposing workers to fall hazards. (Tr. 6/30/89, pp. 2–185 to 186). (Note: The U.S. Department of Labor, based on data from the Bureau of Labor Statistics, lists falls as one of the leading causes of traumatic occupational death, accounting for 8% of all occupational fatalities in 1986. Data from NIOSH shows that from 1980–1985, falls represented about 10% of all traumatic occupational deaths for which a cause was identified and are one of the major causes of injuries to construction workers.) While OSHA currently has a rulemaking activity underway to address fall hazards in construction (Subpart M—Fall Protection) (51 FR 42718), it does not have rulemaking underway to address the hazards of collapse that may be associated with methods of construction other than lift-slab. In this rule, OSHA addresses the need to provide structural integrity to address the hazard of collapse.

The protection afforded by providing structural integrity may also need to be addressed where other construction techniques are being used and OSHA intends to investigate that need. Specifically, OSHA intends to gather information on issues such as the need to require contractors to address "structural integrity" of all structures while they are being built; the role of the general contractor versus that of the subcontractors; the need to ensure lateral stability during construction; and the need for on-site supervision at all construction sites.

Many of the written comments and testimony at the public hearing indicated a willingness among contractors, the engineering community, and other concerned individuals and organizations to work with OSHA to explore these important construction issues further. An example of this willingness to cooperate was evidenced at the hearing when James Hinckley, a licensed professional engineer with

James M. Hinckley Associates, made seven recommendations to OSHA for improving safety to employees. One of his recommendations was that an overlap of responsibilities between the owner, the architect, the engineer, the construction manager and the contractors be encouraged. Another was that complete investigations be made of collapses, and that the information be made available for use by architects/engineers and other professionals so that they can learn from failures "* * * so that each one of these things need not accept the loss of life, in its harsh reality, without being able to garner from that experience something that will improve the construction industry as a whole." (Tr. 6/30/89, pp. 2–138 to 2–140). Mr. Hinckley's investigation of the L'Ambiance collapse lead him to several conclusions, one of which was that rotation of the footings had occurred. Perhaps by way of example, he added, "I would like to get the word out not to put footings on top of reconstructed shotrock and fill, especially in the presence of a ground water situation." (Id. p. 2–141).

Additional evidence of forthcoming cooperation surfaced on cross examination when Mario Suarez commented to Hinckley that "I certainly want to congratulate you for your seven points of consideration for the future because I think that should be the concern of the engineering profession right now." (Tr. 6/30/89, p. 2–149). In the same vein, Professor Vanderklaauw of Liftplate International asked Matthew Burkart, the Chairman of the ANSI A10 Committee, if ANSI was being discriminatory in its rules with regard to keeping workers out of the building on lift-slab projects but not other concrete projects. Burkart responded that he was testifying with regard to the Committee's interpretation of the lift-slab provision only, but he added that it "might be worthy of consideration for the committee or another committee that is addressing reinforced concrete or other types of lifting or concreting operations" (Tr. 6/29/89, pp. 1–208 to 1–209).

Hinckley put it best when he said, "I think now would be an excellent time for the government to get involved to support this effort [for enhancing quality in construction] and with, certainly, their resources, which are far greater than any of those in the industry, to make a real difference." (Id. p. 2–141).

Section 1926.700(b) Definitions

OSHA proposed to add two terms to the definitions section of Subpart Q—Concrete and Masonry Construction. These terms, "jacking operation" and "qualified designer," are discussed below.

"*Jacking operation.*" In paragraph (b)(9) of § 1926.700, OSHA is adding a definition for the term "jacking operation." OSHA used this term in the proposed rule and defined it to mean the task of lifting a slab (or groups of slabs, sometimes referred to as a "package" or "pick") vertically from one location to another, e.g., from the casting location to a temporary (parked) location, or from a temporary location to another temporary location, or to the final location of the slabs in the structure. The definition in the final rule is identical to the definition in the proposal. The existing rule did not contain a definition for the term "jacking operation."

OSHA did not receive any comments on the proposed definition. The Agency believes that the term, as applied to this standard, is approximately defined for its use and that no further revision to the definition is necessary in this final rule.

"*Qualified designer.*" In the NPRM, OSHA proposed to define the term "qualified designer" because the term was used both in the proposed requirements for lift-slab operations and in the previously promulgated formwork requirements of the cast-in-place section of subpart Q (§ 1926.703(b)(8)(i)). OSHA did not define the term in the previously promulgated section of subpart Q because, as used in the formwork section, its meaning is clear. However, when OSHA proposed to use the term again in the lift-slab section, it was decided that the term should be defined in the new proposed rulemaking.

While there was no objection to the definition of "qualified designer," there was substantive objection to OSHA's use of that term in the standard. That objection was sufficiently supported in the rulemaking record, and OSHA has decided not to use the term "qualified designer" in the final rule. (See detailed discussion below, under § 1926.705(a), for the reasons why OSHA is not using the term "qualified designer".) Therefore, since the meaning of the term is clear in the formwork section, and the term will not appear in the final lift-slab section, there is no longer a need to define the term. Hence, the term "qualified designer" is not carried forth to the final rule.

Section 1926.705 Lift-Slab Operations

Section 1926.705 of the final rule contains specific requirements for lift-slab construction operations. Employers who have employees exposed to the hazards of lift-slab construction operations must comply with these specific requirements as well as the general requirements for all concrete construction contained in other sections of Subpart Q—Concrete and Masonry Construction in 29 CFR part 1926.

Paragraph (a) of the final rule requires that lift-slab operations be designed and planned by a registered professional engineer who has experience in lift-slab construction. It also requires that the employer implement all such designs and plans; that the designs and plans include detailed instructions and sketches indicating the prescribed method of erection; and that the plans and designs include provisions to ensure lateral stability of the structure while it is being constructed.

The language in the final rule varies from that used in the proposed rule in several ways. First, the term "qualified designer," which was used in the proposed rule, is replaced by the phrase "registered professional engineer, who has experience in lift-slab construction." Second, an obligation for the employer to ensure lateral stability of the structure during construction has been added to this provision.

In the NPRM, OSHA proposed that a *qualified designer* design and plan the lift-slab operations. That language was based on a provision for lift-slab operations in the latest ANSI standard for Concrete and Masonry Work, ANSI A10.9–1983, § 10.2. In proposing the language used in the 1983 ANSI standard, OSHA noted that it was different from the language used in the ANSI A10.9–1970 standard, which OSHA currently incorporates by reference. In particular, the 1970 ANSI standard prescribes that a qualified professional engineer or architect (rather than a "qualified designer" as prescribed in the 1983 ANSI standard) design and plan lift-slab operations. When OSHA discussed this proposed provision with the members of the ACCSH at their March 1988 meeting, the ACCSH recommended that OSHA use the term "professional engineer or architect registered in the state where the work is being done" instead of the term "qualified designer." ACCSH did not discuss why they believed that employees would be afforded a greater level of safety if OSHA adopted their phrase and did not propose the language of the most recent national consensus standard. (Ex. 35–2). Where a national consensus standard is in place, OSHA often uses that language in its proposed rules, with modifications as are considered necessary and appropriate. OSHA recognizes that national consensus standards, such as those developed by organizations like ANSI, represent the views of labor, industry,

and state and Federal governments, and that the consensus standards are usually a reflection of current industry practice and sound engineering principles. Evidence of this viewpoint can be found in the OSH Act itself, which states the following:

> Whenever a rule promulgated by the Secretary differs substantially from an existing national consensus standard, the Secretary shall, at the same time, publish in the Federal Register a statement of the reasons why the rule as adopted will better effectuate the purposes of this Act than the national consensus standard. [Section 6(b)(5)].

OSHA's proposed language for the provision in paragraph (a) reflected consideration of the 1988 ANSI consensus standard. However, since ACCSH recommended that OSHA require a professional engineer or architect, licensed in the state where the work was to be done, to be responsible for designing and planning lift-slab operations, instead of a *qualified designer*, OSHA raised a specific issue on this concern. In particular, in Specific Issue 1, OSHA asked the following questions: "Would employees be afforded a greater level of protection if OSHA revised this provision to require the work to be done by an 'engineer' or 'architect'." If so, OSHA asked, "What particular classification of engineer would afford the appropriate level of protection (e.g., structural, registered professional engineer)."

OSHA further explained in the proposal that, in addition to the ACCSH's recommendation pertaining to the substitution of the term professional engineer or architect for *qualified designer*, the ACCSH had also recommended that the provision be expanded so that the professional engineer or architect would be required to "supervise" the lift-slab operations.

Also in connection with paragraph (a), OSHA asked questions in Specific Issue #5 regarding the need to add requirements for the employer to address lateral stability during the construction phase. The comments and testimony addressing the proposed provision and the two specific issues related to this provision are discussed below.

Fifteen of the 26 written comments received on the proposal addressed this issue of engineer/architect versus qualified designer. Texstar Construction Corporation identified proposed provision (a) as one to which they objected when they requested a public hearing on the proposed rule (Ex. 38–15). In particular, Texstar stated that "The proposed rulemaking should be revised to read as follows: All lift-slab details shall be reviewed and approved by the architect/engineer of record and incorporated into the structural drawings. These drawings shall include details of erection and instruction regarding the prescribed lifting sequence." Texstar added that use of this language would insure an adequate check and balance system so as to insure a safe workplace for the employee. Texstar repeated this statement at the hearing (Tr. 6/30/89, p. 2–172).

A review of the record indicates that commenters varied widely in their positions on the proposed paragraph (a) provision. For example, David Wonder (P.E. and Chief Engineer for Texstar Construction Corporation, representing his own professional views) (Ex. 38–7) stated, "I agree with the wording qualified designer as having to plan and design the lift-slab operations." Wonder also stated that "The particular details associated with lift-slab are not familiar to most engineers and there is no single engineer which is both familiar with these details and is registered in each state that lift-slab is used." Wonder further noted that the Engineer of Record (EOR) is required to be licensed in the state for which the work is to be done and that the EOR should be sent all designs, details and lifting sequences for review and approval. On the issue of supervision, Wonder indicated that he agreed in principle to having the EOR or his representative oversee compliance with the structural drawings. But he added that ". . . singling out of the lift-slab method for this regulation seems politically motivated since other catastrophic failures have occurred with other types of construction methods, and no such requirement exists for them." (Id., p. 2). This position was expressed many times in the written comments and at the public hearing by other interested individuals. (Exs. 38–12, 38–14, 38–17, 38–20, 38–21, and 38–25). In his concluding remarks, Wonder cautioned OSHA that such a requirement, applicable only to lift-slab construction, would allow different levels of safety for different construction methods because "other types of construction would have more relaxed safety regulations." (Ex. 38–7).

Texstar Construction Corporation (Ex. 38–17), through their attorney David Turlington, made similar comments on this issue of qualified designer versus engineer/architect. He noted that "Employees would not be afforded a greater level of protection by requiring a specific classification of engineer or architect." Texstar noted that current industry practice required the use of "qualified designer." Like Wonder, Texstar (apparently in reference to the ACCSH recommendation that lifting operations be "supervised" by the professional engineer or architect who designs and plans the lifting operation) also objected to singling out lift-slab construction for inspection and recommended that all construction projects with building costs in excess of $1 million have jobsite inspection by a qualified inspector who would be selected by the design team (architect/engineer).

On the other hand, Donald Rubatino, a Registered Structural Engineer (Ex. 38–16), commented that "Licensed structural engineers should be involved in all lift-slab designs." Then, Rubatino went on to say, "I do not believe that a licensed engineer on the job during lifting would serve any useful purpose as the lead people during the lifting are generally far more aware of potential problems."

OSHA received the following comment from a practicing civil and structural engineer registered in several states—Dean P. Ratti (Ex. 38–19):

> Classic contractual arrangements between Owner-Architect/Engineer clearly prohibit the engineer from involvement in the means, methods, techniques, sequences, or construction procedures, or for safety precautions and programs, in that these are solely the responsibility of the Contractor under his contract with the Owner.

Mr. Ratti further commented that "It would seem more prudent to require qualification by direct experience with the technique ahead of local registration (which does not guarantee qualification for an operation as specialized as the lift-slab method)."

The National Society of Professional Engineers (NSPE) (Ex. 38–3), which represents 75,000 engineers and engineering students, commented that they oppose "any legislation or regulations which make engineers responsible for the action of others not under their direct supervision and control." NSPE further commented:

> Under provisions of contract, language, and court decision developed through many years and supported by engineers, architects, contractors, and owners, it is the contractor who has responsibility for controlling construction methods, means and safety. We, therefore, oppose the existing rule, the OSHA proposed change in language, and the Advisory Committee recommended changes as they relate to issue 1.
>
> NSPE would encourage the OSHA to incorporate language in the draft standard which would require the *contractor* to either retain the services of a licensed professional engineer or to maintain a licensed professional engineer on staff who possesses the necessary technical competence and expertise on issues of job site safety and construction methodology.

Finally, NSPE noted their preference for the term "registered professional

engineer" instead of the proposed term "qualified designer."

Another commenter, Joseph Cooke, P.E. (Ex. 38–23), stated that "We concur with OSHA in that the provision of requiring work to be done by a licensed professional engineer specializing in structures be used to plan and design any lift-slab project," noting that the construction workers deserve the safety afforded by having the aspects of lift-slab construction reviewed and modified if necessary by an individual who has the expertise in this field. Mr. Cooke also indicated his thoughts that the technical knowledge needed for lift-slab analysis would not normally be required of the architectural profession and that the engineer should be independent of the owner and project contractors. Mr. Cooke expressed support for requiring that the engineer be licensed in the state where the work is to be done. He noted that the conditions of construction differ in each state and that qualified engineers can easily obtain registration in other states. He supported his position with the following statement:

> State laws allow the registration of independent engineers as a protection to the people in that state and as such without circumventing the responsibilities of each state, these provisions should allow that the engineer responsible for the final design of the lift-slab construction be registered in the state of that construction and be responsible to the people of that state. (Id.).

Lastly, Mr. Cooke noted his objection to use of an engineer to "supervise" the work. Like other commenters, Mr. Cooke noted that supervision is a responsibility of the contractor. He did, however, believe it appropriate for the engineer to document the procedures to be used throughout the construction and expressed his support for requiring the engineer to visit the project on an interim basis to review contractor compliance with the criteria.

Another commenter, Mario Suarez, P.E. (Ex. 38–21), noting his acceptance of the proposed language in § 1926.705(a), stated that "The substitution of professional engineer licensed in the state where the work is to be done for qualified designer would afford a comparable level of protection to employees." Mr. Suarez, like Texstar and David Wonder, suggested that all designs, plans and/or details and procedures be submitted to the engineer of record for review and approval. He also agreed with the ACCSH recommendation regarding inspection (supervision of the lifting operation), but only if it applied to all construction projects (not just lift-slab) with a cost "greater than, say $1 million."

Michael Kennedy, writing on behalf of the Associated General Contractors of America (AGC) (Ex. 38–22), indicated that OSHA's proposal for a qualified designer was redundant and unnecessary. More specifically, Mr. Kennedy stated that "Current construction industry practices, and state and local building codes require a registered professional engineer to approve and stamp all structural drawings." Kennedy also commented that Connecticut and Texas, where engineering supervision is required for certain construction operations, have experienced a number of problems, some of which he lists in his written comments.

Michael Fraioli, President, Lift Frame Builders, Inc., (Ex. 38–1) commented that any competent registered engineer could design a lift-slab building and that the engineer of record should be on the jobsite conducting inspections.

NIOSH (Ex. 38–4) agreed with ACCSH on the use of the phrase "professional engineer or architect, licensed in the state where the work is to be done" instead of "qualified designer."

Representing Brown and Root, Inc., Charles Darnell (Ex. 38–6), commented that a professional structural engineer should plan and design the project and a civil or structural engineer should supervise the lift-slab operations.

Further comments on Issue #1 were received from Charles Hawkins, from the Associated Builders and Contractors, Inc. (ABC) (Ex. 38–26), who felt that architects and engineers should have the responsibility for planning and designing a safe lift-slab operation, noting that these are the professionals with the experience and qualifications. With regard to supervision of the lift-slab projects, Mr. Hawkins disagreed with ACCSH's recommendation and pointed to the superintendent or project supervisor, "* * * someone who is involved in the job and familiar with the details of a construction job site," as the person who should be responsible for the duty of supervision.

Joseph L. Hoffman, (Ex. 38–24), who noted in his comments that he was a member of a team of professional structural engineers engaged to study the L'Ambiance incident on behalf of Texstar, agreed with the use of the term "qualified designer" in § 1926.705(a). Mr. Hoffman stated that the term was appropriate and more than adequate, particularly since the term was well defined in the proposal. Supporting his comment, Mr. Hoffman made the observation that lift-slab construction requires specialized knowledge, yet registration can be obtained by professional engineers or architects without this specialized knowledge. Finally, Hoffman commented that "No other construction system requires the supervision of a professional engineer."

Doug Nunnelly of Diversified Design and Construction (Ex. 38–25) commented that the term "qualified designer" is meaningless, stating that "All state and local codes require that all structural design work be under the supervision of a registered professional engineer or architect." He also expressed his view that inspection is more adequate than supervision and that lift-slab construction should not be singled out for more specific inspection.

Finally, Mr. Peter Vanderklaauw, President of Liftplate International, Inc. (Ex. 38–20), suggested that the words "experienced in lift-slab construction" be used instead of "licensed in the state where work would be done." Mr. Vanderklaauw noted that the proposed language could require a lift-slab contractor to hire an inexperienced professional (to be in compliance with the OSHA standard); that is, one who is licensed in that state but who has no experience with the lift-slab method of construction and that "OSHA should recognize that an inexperienced professional is liable to cause more harm than good."

The testimony presented at the public hearing on Issue #1 and paragraph (a) of § 1926.705 echoes the written comments discussed above. Although the technical arguments for both terms are well stated, there is no clear discussion of the benefits to worker safety to be gained by requiring a qualified designer instead of a registered professional engineer or vice versa. In fact, since all states require that building plans be approved by the Engineer of Record (EOR) (who must be licensed in the state where the work is being done) it might at first appear, as Mr. Nunnelly said, that the requirement proposed by OSHA would be meaningless (Ex. 38–25). However, OSHA's requirement pertains to the lift-slab operation only. It is the Agency's intent that the lift-slab contractor be responsible for the lift-slab operations at the construction site. OSHA observes that the general contractor (who probably is not the lift-slab contractor) is generally responsible for the entire structure and the Engineer of Record is a representative of the owner or of the general contractor, not the lifting contractor. Therefore, it would appear that the recommendations that OSHA place responsibility for worker safety matters on the EOR, when it is known that the EOR will not be in the employ of the lifting contractor, would not provide adequate protection. OSHA

observes that the Agency's jurisdiction is based upon the employer/employee relationship.

OSHA has carefully and thoroughly evaluated all of the comments and testimony on this provision. There were a number of questions asked in regard to this provision and a number of recommendations appear in the record on several issues related to the language in the final rule. Rather than respond to every comment made, OSHA will highlight the substantive comments on various issues and discuss its views on those issues, specifically those that led to changes or amendments to the proposed language.

First, while many commenters noted support for the term "qualified designer," they also supported requiring the engineer of record to have some responsibility for reviewing the work of the qualified designer. OSHA does not believe this is an acceptable solution, since it would split the responsibilities for worker safety and could inadvertently place responsibilities on persons who are not in a position to control employee exposures to hazards; thus, OSHA questions the potential benefit to worker safety with this solution.

Additionally, the record shows that some of the commenters who objected to the term "qualified designer" pointed out that the definition proposed by OSHA limits the contractor to using only those individuals who had experience or knowledge regarding lift-slab construction. The commenters who objected expressed the belief this limitation is unfair and pointed out that lift-slab construction is within the scope of any professional engineer's ability, so OSHA should not have such a restriction. For these reasons discussed above, neither "qualified designer" nor "engineer of record" is used in the final rule.

Further, the record does not support using the term "architect." OSHA notes that it requested comment in the NPRM on the use of the term "architect," since that term is used in the ANSI A10.9–1970 standard which OSHA currently enforces. In particular, in section 11.2, the ANSI standard prescribes that a qualified professional engineer or "architect" design and plan the lift-slab operations. Additionally, ACCSH recommended that OSHA use the term "professional engineer or architect, registered in the state" in paragraph (a) in lieu of the term "qualified designer." However, there was very limited discussion or reference to the use of the term architect. Only one comment was received and that commenter remarked that the technical knowledge needed for lift-slab would not ordinarily be knowledge possessed by architects. OSHA notes that it did not propose to use the term "architect" and the record lacks evidence to support the ACCSH recommendation to revise the provision to require architects to design and plan lift-slab construction operations. OSHA further notes that this provision addresses only the planning and designing of the lift-operation, not the planning and designing of the building. Thus, the failure to include the term "architect" in the final provision does not preclude architects from designing buildings. Therefore, the term "architect" is not used in the final rule provision.

Thus, there is only one term that was mentioned in the proposed paragraph that remains for discussion—registered professional engineer. The record fully supports requiring that a registered professional engineer design and plan the lift-slab operations. The ACCSH suggestion that the requirement in paragraph (a) be expanded so that the registered professional engineer would also be required to "supervise" the lift-slab operation, however, is not supported by the record. The record does not support requiring the employer to hire a registered professional engineer to perform supervisory duties. The record indicates that if such a requirement were to be imposed for all methods of construction, not just on projects where the lift-slab method of construction is being used, that support would be forthcoming. OSHA observes that employers are currently required to "supervise" operations at the construction site (29 CFR 1926.16–.20) and this is usually accomplished through the employer's designated "competent person." The issue here is whether or not such responsibilities should be designated specifically to a "registered professional engineer." OSHA has determined that at this time there is insufficient support to add a new requirement for onsite supervision by the registered professional engineer. OSHA notes that commenters used the term "inspection" interchangeably with "supervision" in commenting on the ACCSH recommendation.

Commenters Ratti and Vanderklaauw (Exs. 38–19 and 38–20), suggested that instead of requiring the engineer to be licensed in the state where the work is being done, OSHA should require the engineer to have experience in lift-slab construction. Similarly, as stated above, Joseph Cooke (Ex. 38–23) said that the engineer used for the lift-slab project should be someone who specializes in planning and designing those structures and cited worker safety as a reason. However, Cooke also strongly supported the need for registration in the state where the work is being done. And, finally, there was the comment by Joseph Hoffman (Ex. 38–24), who expressed the same concern that Professor Vanderklaauw did, that lift-slab construction requires specialized knowledge, yet registration can be obtained without that knowledge.

After careful and complete consideration of the record, OSHA has decided that the term Registered Professional Engineer (RPE) is the appropriate term to be used in the final rule, and that the RPE must have experience in lift-slab construction. The language of the final rule is consistent with recognized industry practice. Additionally, while it cannot be proven conclusively, it appears from the written comments and from the hearing testimony that the engineering profession holds its members to standards that go beyond even that for which OSHA has responsibility in the workplace. Thus, because of the complexity inherent in lift-slab operations, OSHA believes a higher level of safety will be afforded workers if it requires a Registered Professional Engineer to be responsible for planning and designing lift-slab operations. As mentioned above, both of the lift-slab contractors currently operating in the United States have a Professional Engineer on staff who is registered in one or more jurisdictions, further evidencing the importance of their role in lift-slab construction. The record does not provide any evidence that employees would be afforded a greater level of safety if the professional engineer is required to be registered in the state where the work is being performed. Therefore, OSHA has not included that portion of the ACCSH recommendation. And, as stated above, the record lacks support for a requirement that the registered professional engineer also be required to *supervise* the lift-slab operations.

The final portion of the provision in paragraph (a) requires the registered professional engineer to consider lateral stability and to incorporate provisions in the lift-slab plans and specifications to ensure lateral stability of the structure during construction. This is a new requirement and OSHA believes it will further the safety and health of workers at lift-slab construction sites.

OSHA raised a specific issue (Issue #5) asking whether or not specific requirements for lateral stability should become a part of the final rule and how employers currently addressed lateral stability.

The response to Issue #5 demonstrated that OSHA needed to include a requirement for the employer to address lateral stability in the final rule. However, the response in the record did not support an OSHA "specification" requirement that would prescribe how to achieve lateral stability. Many of the commenters noted that building codes already address lateral stability and that the engineer of record is responsible for incorporating lateral stability requirements in the building plans and specifications (Exs. 38–7, 38–12, 38–17, 38–18, and 38–25). OSHA notes that while it is true that the building codes address lateral stability of the "finished" or completed structure, building codes may not address hazards associated with the failure to ensure lateral stability during construction and the effect on the safety of employees performing the construction work. OSHA's intent was to address the need to add a specific requirement prescribing that the employer ensure lateral stability during the construction phase.

Commenting more directly on the issue of lateral stability during the construction phase was Mario Suarez, (Ex. 38–21), who noted that "Lateral stability requirements are an important part of any Building Code." He also stated that "They (the building codes) have to be complied with at all times, during all stages of erection as well as in the finished structure." Again, though, Mr. Suarez noted that the responsibility belongs to the Engineer of Record who would review and approve the erection contractor designs. Mr. Suarez, like other commenters (Exs. 38–7 and 38–25) noted that such a requirement should not be applicable to lift-slab contractors only. Texstar's comments (Ex. 38–17) were similar to those of Mr. Suarez.

On the other hand, Joseph Hoffman (Ex. 38–24) commented that he "* * * strongly recommends that such a requirement be incorporated. The responsibility for determining such stability should be placed on a specially trained design engineer(s) engaged by the Lifting Contractor." He further noted that the person who designs the system is the individual who should state the stability requirements during lifting, just as the Engineer of Record states the requirements for the slabs, columns and foundations, etc. in their final state of use. OSHA agrees with the comments and recommendations expressed by Mr. Hoffman and echoed by Mr. Joseph Cooke (Ex. 38–23), who added that lateral stability "* * * plays an important part of the design of any building particularly the lift slab project." OSHA believes workers will be afforded an appropriate level of safety by requiring the registered professional engineer who designs and plans the lift-slab operation to also address the need for lateral stability. The Agency believes this information is critical and must be communicated to the contractor. Consequently, this information is required to be included in the plans and specifications along with the other information required by the paragraph (a) provision. Therefore, based on the comments discussed above, OSHA promulgates paragraph (a) as revised.

Paragraph (b) of the final rule requires that jacks (lifting units) be marked to indicate the rated capacity established by the manufacturer. This is an existing requirement, found in § 1926.305(a)(1), which applies to all jacks used in construction activities. OSHA did not propose any substantive revision to this provision, but simply proposed to repeat it in the lift-slab operations section so that all requirements unique to lift-slab construction operations would appear in the same section of the construction safety and health standards. OSHA believes it is necessary for employers to ensure that each jack has the rated capacity marked so there will be no question as to what loads can be placed on the jacks.

There were no comments on this provision and OSHA promulgates paragraph (b) unchanged from the proposed rule, except that in recognition of industry nomenclature, the term "lifting units" has been added to the text as an alternative term for the term "jacks."

Paragraph (c) of the final rule requires that jacks (lifting units) not be loaded beyond the rated capacity established by the manufacturer. This, too, is an existing requirement from § 1926.305(a)(1), and was proposed to be repeated in the lift-slab section for the same reasons as explained in the discussion of paragraph (b) above. Again, OSHA did not propose any substantive revision to the existing requirement.

OSHA received one comment on the proposed provision. Rubatino Engineering (Ex. 38–16) commented that the "Jacking capacity of jacks definitely should not be exceeded" and noted that it is standard practice for safety concerns as well as maintenance. There were no other comments on this provision. OSHA believes the provision is appropriate as proposed, except the term "lifting units" has been added to the text for the reason discussed in paragraph (b) above. Therefore, OSHA promulgates paragraph (c) as revised.

Paragraph (d) of the final rule requires that jacking equipment be capable of supporting at least two and one-half times the load to be applied during lifting operations and that the jacking equipment not be overloaded. OSHA identifies components of the jacking equipment as the threaded rods, lifting attachments, lifting nuts, hook-up collars, T-caps, columns, shearheads, and footings, as well as any other load bearing component which is used to carry out the lifting operation(s).

The final rule differs from the proposed rule. In the NPRM, OSHA proposed the following:

> Jacking equipment shall not be overloaded and the threaded rods and other members (such as but not limited to the following: jacks and other lifting units, lifting angles, lifting nuts, hook-up collars, T-caps, shearheads, columns, and footings) that transmit loads to the jacks shall be capable of supporting at least two and one-half times the load to be applied.

The proposed language was developed by using both the ANSI A10.9–1970 and the ANSI A10.9–1983 standard that contained a similar provision. OSHA clarified the provision by identifying shearheads, columns, and footing as other members of the jacking equipment. These three components were not specifically mentioned in the ANSI standards but in a written interpretation to OSHA (Ex. 38–3) ANSI identified shearheads, columns, and footings as "other members" for the purposes of applying their standard.

Because there was controversy surrounding this provision, OSHA raised two special issues, Issue #2 and Issue #4, to ask specific questions on the following: how to word the provision; what components should be included in the provision; and, how OSHA should identify those components.

In response to the comments and testimony received on the paragraph (d) provision and on Issues #2 and #4, OSHA has rewritten paragraph (d) for the final rule. The final rule differs from the proposed rule in several ways. First, it defines and clarifies which members are considered to be jacking equipment for the purposes of the provision. Specifically, the provision has been reworded to identify components by name and to state that if the load being lifted is supported by components other than those mentioned by name, those other components must also be capable of supporting two and one-half times the load that will bear on them during jacking operations.

OSHA received two comments on issue #4 that provided the impetus to require that "all load-bearing components added to the structure for the purpose of carrying out the lifting operations" as "other members" that should be able to support two and one-half times the load applied to them during lifting operations. NIOSH (Ex. 38–4) suggested that the language of the standard specifying minimum standards for jacking equipment refer to "load bearing components" of the lifting system and David Wonder (Ex. 38–7), suggested that the provision include the sentence, "This equipment is to include all components of the jacking system, which have been added to the structure, temporarily or permanently, for the sole purpose of lifting." While OSHA does not agree with the use of the term "sole" purpose of lifting, it does see merit in Mr. Wonder's suggested revision in terms of clarity. Therefore, OSHA has relied on the suggestion of Mr. Wonder in its revision.

Other clarifications were made to resolve other commenter concerns. For example, many commenters felt that OSHA was attempting to rewrite the building codes which have provisions that specify safety factors or "load factors." OSHA observes that while it is true that many building codes specify such factors, they apply only to finished structures. Further, those codes were not developed with specific emphasis on worker safety which is, of course, OSHA's primary concern. OSHA recognizes that while a structure is being constructed, it is most vulnerable to forces that can cause it to collapse, causing injury or death of the workers. Thus, OSHA's requirements first define the hazards associated with lift-slab operations and then specify solutions to control or eliminate those hazards.

OSHA believes additional clarification is achieved by explaining that the jacking equipment must be capable of supporting two and one-half times the "load being lifted during jacking operations" which makes it clear that the 2.5 factor applies to the load that the equipment will actually be lifting at any one time. OSHA believes that some individuals thought the 2.5 factor applied to all the live and dead loads of the structure, including some loads not being lifted. For the purpose of this provision, once the load (floor slabs) has been secured, it is considered to be "off the jacking equipment."

OSHA observes that compliance with local building codes may, in some cases, also put the contractor in compliance with the provision of this paragraph (d). However, compliance with this paragraph does not, in any manner, relieve the contractor from compliance with any other codes that may be required by state or local authorities having jurisdiction over the construction activity. OSHA further recognizes that columns, footings, and shearheads must also be designed using load factors associated with the completed structure which are specified by building codes. Thus, it may be necessary for the contractor to perform calculations sufficient to determine that the concerns of both OSHA and the local building code have been met.

Many commenters (Exs. 38–1, 38–7, 38–12, 38–17, 38–21, 38–22, 38–23, and 38–25) argued that OSHA should not include columns, shearheads, and footings because these members are designed in accordance with other codes, such as ACI, AISC, PTI, etc. However, as mentioned before, these codes pertain to the completed structure, whereas OSHA's requirement pertain to the loads being lifted during jacking operations. Thus, the commenters arguments do not address the merits of the provision and do not justify removal of columns, shearheads, and footings from the provision. OSHA is well aware that hazards facing construction workers during the building phase are different than the building code concerns for a completed, stable structure. OSHA's efforts are directed at ensuring that appropriate protection is afforded the workers during lifting operations, while the structure is being built.

In the proposed rule, OSHA indicated that it was aware of the controversy associated with this particular provision. OSHA also noted that this provision appeared in section 11.3.1 of the ANSI A10.9–1970 standard for Concrete and Masonry Work (incorporated by reference in existing § 1926.705) and was continued in the 1983 ANSI A10.9 standard in section 10.3.1. OSHA also noted that it had asked ANSI for an interpretation of this provision, asking them in particular, whether or not their standard required the building columns, shearheads and footings to be subject to the 2.5 safety factor. The ANSI Committee responsible for the standard clarified through correspondence to OSHA (see Ex. 35–3) and through oral testimony at the OSHA hearing on lift-slab operations (Tr. 6/29/89, pp. 1–199 to 1–223) that it was their intent to include the columns, shearheads and footings as "other members" for the purpose of their provision. In particular, Mr. Matthew Burkart, Chairman of the ANSI A10 Committee, presented testimony at the hearing in which he indicated that the proposed OSHA standard basically was the same as the ANSI standard and that OSHA's standard was consistent with ANSI's interpretation of what has been there since at least 1970. Mr. Burkart explained that the 2.5 safety factor was in the standard primarily to protect the workers who had to be under the slab during jacking operations. He further stated "For that reason and for those purposes, we feel that the 2.5 is a minimum requirement. The only logical interpretation of the items to be included in the lifting arrangement includes the columns and the footings and whatever else is sustaining loads during the time it's being lifted." Mr. Burkart added that ANSI realized the A10.9 standard presented different design criteria than what might be used for the permanent part of the structure but that their concern, like OSHA's, is with the temporary structure: "* * * if the column is used as a support, it becomes part of the temporary structure and should meet the safety requirements for the workers that are being exposed to this area."

Additional testimony was presented at the hearing from Dr. Neil Hawkins (Tr. 6/29/89, pp. 1–153 to 1–199) who testified that he did not believe the requirements for a 2.5 factor of safety on jacking equipment should include columns, footings or shearheads, while acknowledging that it was appropriate for jacks, lifting angles, and lifting nuts. Dr. Hawkins argued that it was not appropriate for columns, footings and shearheads since the design conditions for those items are governed by the standards of AISC and ACI. He also said, "It is already customary practice to use a factor of safety of three for calculating the allowable bearing pressure on soils or rocks below footings and for such soils or rocks the primary concern is usually not bearing capacity but the possibility of excessive settlement or rotation of the footing." (Id.)

Several commenters, including David Wonder, P. E. and Chief Engineer for Texstar (Ex. 38–7), stated that shearheads serve a dual purpose in lift-slab construction in that they are a "lifting component" as well as a member of the completed structure. OSHA believes these comments further evidence the need to include shearheads in this provision since they play a role in the "lifting" phase.

Texstar Construction Corporation also testified at the public hearing (Tr. 6/30/89, pp. 2–173) restating their written comments (Ex. 38–15), which argued against the need to include columns,

shearheads, and footings in the paragraph (d) provision. Texstar representatives noted that various codes set forth design criteria for these three elements and thus there is no need for OSHA to issue a different requirement. Again, OSHA notes that the organizations mentioned by Texstar—the American Concrete Institute (ACI) Building Code Requirements for Reinforced Concrete (ACI 318), the American Institute of Steel Construction (AISC), and the Post-Tensioning Institute (PTI) develop codes and specifications primarily with the finished structure in mind, while OSHA is concerned with the structure during the time it is being built. None of the codes mentioned were developed solely for the purpose of protecting the safety and health of workers during the construction phase.

Texstar also commented that the term "lifting attachment" should be used in lieu of "lifting angles" because other types of attachments were used and the term "lifting attachment" would encompass all types of lifting devices (Ex. 38–15 and Tr. 6/30/89, pp. 2–174 and 2–251).

Finally, Texstar's testimony (Tr. 6/30/89, p. 2–174) indicated their agreement with the application of the 2.5 to lifting items other than columns, shearheads and footings. They reasoned that "These lifting items are not specifically covered by a national consensus standard, and therefore, provide a safe workplace by requiring this higher factor of safety."

After reviewing these comments, OSHA believes that there was some misunderstanding of the proposal. Many commenters appeared to believe that OSHA was requiring jacking equipment to be capable of supporting 2.5 times the load factors calculated for the completed structure, particularly since columns, shearheads, and footings were considered jacking equipment in the rule. OSHA further believes it was that misunderstanding that led to the multitude of comments opposing the provision. In the opening statement (Ex. 44) of the public hearing, OSHA clarified its position that the Agency's intent was that the jacking equipment be capable of supporting 2.5 times the load that would be on the equipment during lifting and the negative comments diminished markedly. This is evidenced by the lack of testimony on the subject as compared to the substantial written comments received prior to the public hearing. In the final rule, OSHA has revised the language of this provision to make it clear that the "applied load" means the load being lifted. Once the load is secured (either temporarily or permanently) and "off the jack," that load is no longer an "applied load" for the purpose of this provision. OSHA wishes to emphasize that this standard is directed at lifting operations carried out during construction of the building and, again, nothing in this standard is to be construed to mean that compliance with local building codes is being changed or affected in any manner.

After full and complete consideration of all of the comments and testimony on the proposed provision in paragraph (d) and Issues #2 and #4, OSHA promulgates paragraph (d) as revised.

Paragraph (e) of the final rule requires that lifting units be installed and designed so that they will neither lift nor continue to lift when their rated capacity is exceeded. This requirement is essentially the same as the proposed and the existing requirement found in section 11.3.2 of the ANSI A10.9–1970 standard, and is also essentially the same as section 10.3.2 of the most current ANSI standard, A10.9–1983. There were no written comments or oral testimony presented with regard to this provision. OSHA believes the provision is appropriate as proposed and promulgates paragraph (e) as proposed except, as discussed above, that the term "lifting units" is used in conjunction with the term "jacks."

Paragraph (f) of the final rule requires that lifting units used in lift-slab construction be equipped with a safety device that will enable the lifting units to support the load in any position in the event any lifting unit malfunctions and loses its lifting ability. The final rule provision is essentially the same as the proposed requirement and the existing requirement in § 1926.305(b)(1). It is also essentially the same as both a provision in section 11.3.3 of the ANSI A10.9–1970 standard and to section 10.3.3 of the updated ANSI A10.9–1983 standard. The difference between the final rule requirement and the proposed and existing ANSI standard is that the term "lifting units" has been added for the reasons discussed above.

In the 1988 proposed rule, OSHA noted that it had received one comment on the 1985 proposed rule that pertained to this provision. That comment, from the Washington Metropolitan Area Construction Safety Association (WMACSA) (Ex. 14–29), suggested that OSHA add a requirement to install a safety device as required by this paragraph. WMACSA supported the need for this provision by pointing out that the ANSI A10.9 standard contained such a provision in its lift-slab section.

As OSHA observed in the 1988 proposed rule, and as stated above, the existing requirement in § 1926.305(b)(1), which is nearly identical to the ANSI requirement, already addresses this hazard. However, because OSHA believes it is important to locate all provisions unique to lift-slab construction in the same section of its regulations, it proposed that this provision and another provision specifically related to lift-slab lifting units in § 1926.305(b)(2) be relocated to the lift-slab operations section of the Concrete and Masonry Construction Standards. These two provisions are identified as paragraphs (f) and (h) of this final rule. There were no written comments or oral testimony presented on the proposed relocations. Therefore, OSHA promulgates paragraph (f) as proposed, except for the addition of the term "lifting units," which appears in the final rule provision.

Paragraphs (g), (h), and (i) of the final rule contain requirements that are essentially the same as the proposed provisions. They are also essentially the same as the existing requirements in section 11.4 of the ANSI A10.9–1970 standard, except that in paragraph (i), OSHA is requiring that the operator of the controls be experienced in lifting operations and experienced with the lifting equipment being used. The provisions in the final rule are also essentially the same as the provisions in Section 10.4 of the ANSI A10.9–1983 standard, except as noted above. In addition, in the ANSI document the three requirements are combined in one paragraph; whereas they are in separate paragraphs in this final rule. Also, as discussed above, paragraph (h) of the final rule contains essentially the same requirement as the existing provision in § 1926.305(b)(2). The intent of these requirements is to prevent subjecting the slab to stresses beyond the engineered limits. OSHA observes that a failure in the slab could result in collapse of the building which most likely would be accompanied by injury and death of workers.

Paragraph (g) requires the employer to synchronize lifting (jacking) operations in a manner that will ensure all points at which the slab is supported are kept within ½ inch of that needed to maintain the slab in a level position.

In the 1985 proposed rule, OSHA proposed a requirement very similar to this requirement, but it did not receive any comments in response to that proposal. However, there was a single written comment on the provision in paragraph (g) of the 1988 proposal. Regarding paragraph (g), NIOSH (Ex. 38–4) inquired of OSHA as to whether it would be appropriate for OSHA to add

the phrase "a component specifying a minimum linear horizontal displacement in which the ¼-inch vertical distortion of the slab may be allowed" to this provision. Based on the evidence in the record, OSHA does not believe such a specification would provide any additional protection to the safety and health of lift-slab workers. Further, OSHA does not believe it would be practical to set a single specification limit which could be used on every structure that might be built using the lift-slab method. Further, such determinations are more appropriately the responsibility of the contractor who must determine how to meet the requirement of this provision for the structure being built under his or her control.

Paragraph (h) requires that where leveling is automatically controlled, the employer must install a device to stop the operation when the one-half inch leveling tolerance is exceeded or where there is a malfunction in the lifting (jacking) system.

Paragraph (i) requires that where leveling is maintained by manual controls, the employer must locate such controls in a central location and have a competent person attend the controls while lifting is in progress. Further, paragraph (i) contains new language which requires the competent person to be experienced in lifting operations and with the lifting equipment being used, in addition to meeting the criteria listed in the definition of a "competent person" in § 1926.32(f). The new language has been added to the final rule in response to a comment from Texstar Construction Corporation. That comment is discussed in more detail below.

In paragraph (i), OSHA proposed that a "competent person" be required to attend the controls while lifting is in progress and the leveling is maintained by manual controls. In the proposed rule, OSHA observed that the 1970 ANSI standard prescribed that a "trained operator" attend the controls, whereas the 1983 ANSI A10.9 standard prescribes that a "qualified person" attend the controls. OSHA observes that the term "competent person" is used in many provisions of the construction safety and health standards to describe the minimum level of experience and authority needed to provide an acceptable level of safety for workers. OSHA defines the term competent person in § 1926.32(f) to mean "one who is capable of identifying existing and predictable hazards in surroundings or working conditions which are unsanitary, hazardous, or dangerous to employees, and who has authorization to take prompt corrective measures to eliminate them." The Agency maintains its belief that a competent person, as defined in § 1926.32(f), is the appropriate term to use to describe the qualification of the person who attends the control.

At the hearing, Texstar testified on paragraph (i) of the 1988 proposal, and recommended that the language of the proposed provision be modified to require that the competent person have experience in the lifting operation and with the lifting equipment in use (Tr. 6/30/89, p. 2–176). OSHA agrees with Texstar and notes that it would enhance worker safety to require the operator of the control to have experience not only in lifting operations but with the specific equipment being used. OSHA also notes, as discussed in paragraph (a) above, that others have indicated they find merit in requiring work to be performed by persons who have experience in the lift-slab construction technique. For these reasons, OSHA has amended the language of proposed paragraph (i).

Therefore, based on the record and for the reasons discussed above, OSHA promulgates paragraphs (g) and (h) essentially unchanged from the proposal, and paragraph (i) as revised.

Paragraph (j) of the final rule requires the employer to limit the maximum number of manually controlled jacks on one slab to a number that will permit the operator to maintain the slab level within the specified one-half inch tolerance of paragraph (g). Paragraph (j) further prescribes that the number of jacks cannot exceed 14. This provision is essentially the same as the proposed provision, except that OSHA has set a limit of 14 jacks. The final rule provision is similar to a provision in section 11.3.4 of the ANSI A10.9–1970 standard, and also to the provision in section 10.3.4 of the ANSI A10.9–1983 standard. Both of the ANSI standards specify that the number of jacks shall not exceed 14. ANSI further prescribes that in no event should the number be too great to permit the operator to maintain the slab level within specified tolerances.

However, in keeping with OSHA's efforts to develop more performance-oriented standards, OSHA proposed to revise the existing requirement to eliminate the specific number "14" and instead require the employer to limit the number of jacks on one slab to a number that will permit the operator to maintain the slab level within specified tolerances. The Agency notes that it is unaware of the reasons why both the 1970 and 1983 ANSI standards specify the number 14 since, as OSHA stated in the proposed rule (53 FR 35975), it believes that common industry practice is to operate all jacks automatically, except in limited situations such as when setting wedges. During the wedge-setting phase, automatic jacking operations may cease while individual jacks are operated manually, as needed, to complete the wedge setting operation. This process normally involves the manual control of only one or two jacks at a time.

OSHA invited comments on whether or not it should continue to specify the maximum number of jacks as do the ANSI standards. Specifically, OSHA asked if employee safety would be enhanced if OSHA specified a maximum number of jacks that could be used on one slab. OSHA also questioned whether "14" was the appropriate number and, if not, what was the appropriate number and what were the reasons for recommending a number that differs from ANSI.

In response to the proposed provision, Texstar Construction Corporation (Ex. 38–15) listed this provision as one to which it objected in its request for a public hearing and supported ANSI's maximum of 14 jacks. Specifically, Texstar said that it had extensive experience in the operation of manually controlled jacks and it was their opinion that it is necessary to limit the number of jacks so as to ensure the proper monitoring of the lifting rate. Texstar further stated that "Exceeding the maximum of 14 jacks per console limits the ability of the operators to visually and physically control the console and the lifting process." (Id. p. 4).

This provision was also the subject of testimony at the public hearing. In particular, Professor Peter Vanderklaauw, President of Liftplate International, Inc., and a lift-slab contractor, stated that he disagreed with Texstar's comment that the number of jacks should be limited to 14 (Tr. 6/30/89, pp. 2–58 to 2–59). Professor Vanderklaauw said he thought the number of manually controlled jacks should be limited to seven. In support of his recommendation, he explained that "to operate 14 jacks by hand within reasonable tolerances, say ⅛ an inch, to us is extremely difficult. But it all depends on how fast the slab is being lifted." As an example, Professor Vanderklaauw noted that at 1 inch per minute, an operator could manipulate six or seven jacks by hand and that at half that speed, maybe it would be possible to operate 14 jacks. Professor Vanderklaauw concluded by pointing out that most jacking operations exceed 1 inch per minute. Later in the hearing (Tr. 6/30/89, pp. 2–260 to 2–262),

Professor Vanderklaauw questioned the Texstar panel about their comment on the number of manually controlled jacks and asked Texstar if they agreed that speed has a lot to do with the controllability of 14 jacks. Texstar responded that they had their own equipment in mind when they commented that the number of manually controlled jacks should be limited to 14. They suggested that another provision might be more appropriate for someone else's equipment. Professor Vanderklaauw's response was that the requirement is "Texstar specific" and it should be deleted or appropriately modified.

Based on a careful examination of the comments and testimony presented at the hearing, OSHA has decided to retain the provision in performance language but to set a limit of 14 on the maximum number of jacks that can be manually operated. OSHA believes the language of the final rule appropriately addresses the concerns raised by Professor Vanderklaauw, in that it requires the employer to determine how many jacks an operator can control and still be able to maintain the slab level with specified tolerances. OSHA agrees with Professor Vanderklaauw that the number of jacks the operator can manipulate depends on the rate of lift. Additionally, OSHA finds inadequate information in the record to specify a lower number as the maximum number of jacks that can be operated manually. However, the evidence in the record is sufficient to set an upper limit on the number of jacks that can be operated manually. OSHA emphasizes, however, that the employer must make a determination as to how many jacks can safely be operated after first considering the lifting operations, the equipment, and the operator of the equipment involved in the lift.

Based on the foregoing discussion, OSHA promulgates paragraph (j) as revised.

Paragraph (k) of the final rule requires the employer to prohibit employees, except those essential to the jacking operation, from being in the building while any lifting operation is taking place, unless the building/structure has been reinforced sufficiently to ensure its integrity during erection. The final rule defines the phrase "reinforced sufficiently to ensure its integrity" to mean that a registered professional engineer, independent of the engineer who designed and planned the lifting operation has determined that if there is a loss of support at any jack location, that loss will be confined to that jack location and the structure as a whole will remain stable. Such determination can be made by the independent registered professional engineer's own engineering analysis or through the independent engineer's review and approval of the engineering analysis which was performed by the registered professional engineer who designed and planned the lifting operation—see paragraph (a) of this section. In the final rule, paragraph (k) also prohibits, without exception, allowing nonessential employees to be immediately below a slab while it is being lifted. Finally, the provision clarifies that a lifting operation begins when a slab (or group of slabs) is lifted and ends when such slabs are secured with either temporary or permanent connections. An appendix to paragraph (k) describes one method that can be used to comply with the "structural integrity" provision of this paragraph.

The provisions in paragraph (k) of the final rule differ from both the proposed and existing rules. OSHA anticipated significant reaction to the proposed provision and, therefore, raised a specific issue in the proposed rule. In Issue #11, OSHA asked a series of questions in an effort to develop a complete record on the proposed prohibition. Specifically, OSHA asked for alternative solutions to its proposed prohibition of nonessential employees in the building/structure during jacking operations; for information on the need to identify, by job function, those workers who are "essential" to the jacking operation; and for a recommended distance away from the building/structure that nonessential employees should be during jacking operations if they are not permitted inside.

As anticipated, OSHA received substantial written comment and oral testimony on the proposed rule and the specific issue. That comment and testimony has led to a revision of the provision as originally proposed.

NIOSH suggested that OSHA consider a safety factor which was greater than 2.5 as a possible alternative to the proposed requirement to prohibit nonessential employees from being in the building during jacking operations. In particular, they suggested that if OSHA increased the safety factor to a higher number that employees should be allowed to work in the building while jacking operations are in progress. NIOSH was referring, of course, to the proposed requirement in paragraph (d) that jacking equipment be capable of supporting 2.5 times the load applied to it. NIOSH did not give a specific safety factor in their suggestion. However, their suggestion was explored at the public hearing during cross-examination. In particular, Dr. Neil Hawkins was asked to comment on the alternative recommended by NIOSH. He responded that:

> . . . you might say if I went to 10 on the jacks rods and the lifting nuts and so on . . . but I don't think that it ever will be. You know, it's rather like saying we're never going to have an oil tanker spill. A lot of things are caused by human error and we get to a certain level of safety represented by holding the stresses in the rods. In my opinion . . . (Tr. 6/29/89, pp. 1–184 to 1–185).

OSHA interprets these comments to show that Dr. Hawkins did not agree that imposing high safety factors would necessarily render the worksite safe. He did, however, indicate that additional steel in the slabs might be the alternative to the prohibition. (Tr. 6/29/89, p. 1–185).

The proposed paragraph was based on a provision contained in the lift-slab operations section of both the 1970 and 1983 versions of the ANSI A10.9–1970 standard on Concrete and Masonry Work. In the proposed rule, OSHA discussed that ANSI had provided to OSHA a written interpretation of two key provisions of the A10.9 requirements. One of those provisions was the provision originally proposed in paragraph (k). The ANSI interpretation stated that their provision means that no one is permitted anywhere below any slab being jacked, except employees who are essential to the jacking operation or to secure the slabs, nor are employees permitted to work below lower floor slabs that are secured temporarily or permanently while any upper floor slab is being jacked (ANSI interpretation—Ex. 35–3).

At the public hearing, Mr. Matthew Burkart, Chairman of the ANSI A10 Committee, confirmed the written interpretation when he stated (Tr. 6/29/89, pp. 1–203 to 1–207) that ANSI has always contended that people should be out from under the slab when it is being jacked because it is the most hazardous time during the lift-slab operation. He further testified that "No one had presented information to the committee since 1970 that there is a less hazardous way to go about the operation * * *" and therefore, ANSI maintained that people should be out from underneath the slab whenever the jacking operation is in progress. Under cross-examination, (Tr. 6/29/89, p. 1–207), Mr. Burkart clarified that "out from under the slab" meant "out of the building." Mr. Burkart also stated that the ANSI committee that developed the OSHA-adopted provision had representation from the American Concrete Institute and the

American Institute of Architects, as well as several engineers who represented public and government interests. He also stated that Texstar Construction Corporation made a presentation to the full ANSI Committee before it undertook a discussion of the provision and voted on the interpretation that was provided to OSHA. (Id. p. 1–206).

Other commenters and witnesses contended that OSHA was unfairly singling out the lift-slab construction method for more stringent regulation than any other method of construction, such as precast concrete placement, cast-in-place work, and steel erection. In particular, as discussed above, some participants noted that there are other methods of construction that expose the worker to a much greater probability of being injured or killed in a building collapse. (See testimony of Dr. Neil Hawkins, Tr. 6/29/89, pp. 1–60 to 1–161). Indeed, at the hearing Joseph Hoffman, a professional engineer, testified in the strongest terms that "* * * a much more dangerous construction situation is high-rise precast slab on bearing wall construction. It's a very unstable structure, very, very, unstable, and requires a great deal of bracing and a great deal of control." Mr. Hoffman went on to relate that he had served as the Engineer of Record on a 25-story, bearing-wall job and "* * * every single trade in the world [was] working on that job before they hit the 20th floor." In his testimony, he expressed his view that this type of construction was far more dangerous than lift-slab construction. (Tr. 6/30/89, pp. 2–61 to 2–92). Other witnesses emphasized the danger of precast concrete structures, saying that OSHA had not prohibited—or even proposed to prohibit—workers from being in the building while the precast members were being placed. (Tr. 6/30/89, pp. 2–5 to 2–260).

Texstar Construction Corporation, in their prehearing submission (Ex. 58), recommended that paragraph (k) be amended to require that certain criteria be satisfied before nonessential employees would be permitted in the building while jacking operations were taking place. One of the criteria was that:

> Bottom reinforcement be required in both directions in the slab column strips sufficient to enhance the transfer of load and increase the integrity of the structure. The amount of such reinforcement shall conform with recommendations provided by ACI [American Concrete Institute] and the PTI [Post-Tensioning Institute] unless engineering analysis shows lower values are appropriate. For the purpose of this section a minimum amount of at least two bars in each direction shall be continuous or spliced at the support. These bars shall pass over, thru or be attached to the shearhead. (p. 7)

Texstar stated that their recommended requirement was consistent with section 13.4.8.5 of the proposed revision to the ACI's Building Code Requirements for Reinforced Concrete (ACI 318–83, Revised 1986). The recommendation of Texstar's was referred to as the "integrity steel" concept at the hearing and was suggested by Texstar as an alternative to the OSHA proposed requirement which would have prohibited, without exception, allowing nonessential employees in the building during lifting operations.

Texstar commented that the primary goal of the recommended language was to provide for "unsurpassed worker safety" either by removing employees from the hazard or by providing extra means to enhance the structural integrity of the structure. (Id. p. 8). Finally, Texstar added that "Under no circumstances is any employee (except those essential to the lifting operations) to be allowed directly underneath the slab that is being lifted while the actual jacking operation is taking place." (Id.).

A review of the American Concrete Institute's Building Code Requirements for Reinforced Concrete (ACI 318–89) and Commentary (ACI 318R–89) reveals that the engineering community has emphasized the need to provide structural integrity, but has not specifically dealt with structural integrity of lift-slab constructed buildings. However, the commentary for the ACI building codes states:

> *R7.13—Requirements for structural integrity.* Experience has shown that the overall integrity of a structure can be substantially enhanced by minor changes in detailing of reinforcement. It is the intent of this section of the Code to improve the redundancy and ductility in structures so that in the event of damage to a major supporting element or an abnormal loading event, the resulting damage may be confined to a relatively small area and the structure will have a better chance to maintain overall stability.

The need for structural integrity is also addressed in the American National Standard—Minimum Design Loads for Buildings and Other Structures, ANSI A58.1–1982, which reads as follows:

> *Section 1.3—General Structural Integrity.* Through accident or misuse, structures capable of supporting safely all conventional design loads may suffer local damage, that is, the loss of load resistance in an element or small portion of the structure. In recognition of this, buildings and structural systems shall possess general structural integrity, which is the quality of being able to sustain local damage with the structure as a whole remaining stable and not being damaged to an extent disproportionate to the original local damage. The most common method of achieving general structural integrity is through an arrangement of the structural elements that gives stability to the entire structural system, combined with the provision of sufficient continuity and energy absorbing capacity (ductility) in the components and connections of the structure to transfer loads from any locally damaged region to adjacent regions capable of resisting these loads without collapse.

Dr. Neil Hawkins, in his testimony (Tr. 6/29/89, pp. 1–161), also directed comments to the prohibition in proposed paragraph (k). He recommended that for "comparability with competitive forms of construction," if the 2.5 factor were applied to all jacking equipment, then "* * * nonessential employees should be allowed below a slab that is permanently anchored or adequately temporarily anchored during jacking operations for the slabs above that so anchored."

On cross examination, Dr. Hawkins discussed the American Concrete Institute (ACI) Code and subsequently commented that "* * * integrity steel is steel placed in the bottom of the slab through the column * * *" (Tr. 6/29/89, 1–185). He further explained that in the case of a lift-slab, it would have to be bottom steel in the slab which would pass through the shearhead region or over the ends of the shearhead arms or be spliced to the steel coming out of the shearheads. Hawkins further explained that through calculations, one can determine how to reinforce a structure to keep the structure from collapsing if the support of a column is lost. In his post-hearing comment (Ex. 66), Dr. Hawkins further elaborated and suggested that paragraph (k) of the proposed rule be revised to read as follows:

> No employee (except those essential to the jacking operation) shall be permitted in the building while any jacking is taking place unless continuous bottom steel is provided in every slab and in both directions through every wall or column head area. The amount of bottom steel shall be established by assuming loss of support at a given lifting jack and then determining the steel necessary to carry, by catenary action over the span between surrounding supports, the slab service dead load plus any service dead loads likely to be acting on the slab during jacking * * * (Ex. 66, p. 2).

Dr. Hawkins defined "column head area" as the distance between lines that are one and one half times the thickness of the slab or drop panel and those lines are located outside opposite faces of the

outer edges of the shearhead sections (Id.) (See Figure 1).

Dr. Hawkins' proposed language received support from several other hearing participants, including Professor Peter Vanderklaauw, President, Liftplate International, Inc. (Ex. 67) who commented, "We want you to know that, although our company is not seriously affected by the rule not to permit employees in the building while jacking is taking place, we wholeheartedly support Dr. Hawkins' suggested revisions." Professor Vanderklaauw provided several reasons for Liftplate's support, including his comment that "We agree that integrity steel at the bottom of the slab, when properly designed, will indeed prevent progressive collapse and provide sufficient risk prevention." He added that "The application of integrity steel is a very logical engineering solution." Once again, Professor Vanderklaauw noted that the provisions of paragraph (k) should "* * * apply to all types of construction where heavy concrete slabs are being worked at higher levels." (Id.).

Mario Suarez, a participant at the hearing and a professional engineer, (Ex. 66) also supported Dr. Hawkins' post-hearing comment. However, Mr. Suarez suggested that while OSHA should follow the general recommendations made by Dr. Hawkins and state a general, performance type requirement, OSHA should "* * * let the specific code requirement be written by ACI Committee 318." (Id.).

Another area of concern to OSHA was how to identify those workers who would be considered "essential" and thus permitted in the building during jacking operation. However, the commenters concentrated their efforts on their opposition to the overall provision and did not, in general, comment on this specific concern. Thus, due to the limited amount of input to the record, the final rule does not identify, either by title or task, those workers who are essential to the lifting operation. Instead, appropriate compliance guidelines will be developed and compliance officers will have to determine at the time of an inspection, whether or not the workers in the building are essential to ensure that the lifting operation is accomplished safely.

Upon examination and evaluation of the record evidence in this matter, OSHA has determined that there is a reasonable alternative to its proposed prohibition of nonessential employees being in the building during jacking operations. That alternative is for the structure to be reinforced to ensure its integrity as described above. As brought forth in the record, and as supported by both the ACI 318 Building Code and the ANSI A58.1–1982 standard, OSHA agrees in principle with the recommendation made by Texstar Construction Corporation and supported by other expert commenters as discussed above.

OSHA also believes that the individual who makes the determination regarding structural integrity should be a registered professional engineer for the same reasons discussed in paragraph (a) above, and that person must make an independent engineering analysis or review the analysis performed by the registered professional engineer who designed and planned the lifting operation. OSHA observes that the benefits to worker safety and health to be gained by having a registered professional engineer perform certain tasks, which have been discussed at length under paragraph (a) also have application here, and are supported by the record. OSHA also notes that the use of peer review is an accepted practice within the engineering profession as a technique that promotes quality in design organizations and their services. In fact, at the hearing, during cross examination, Mario Suarez in response to a question on responsibilities of various engineers associated with a project, noted that having another qualified professional involved would not be a problem for him. (Tr. 6/30/89, p. 2–9). Published literature indicates that peer reviews are always performed by persons independent of the subject of review—in this case, the lift-slab project. (See *Quality in the Constructed Project*, Chapter 13 titled, "Peer Review." Volume 1, Preliminary Edition of the Manual of Professional Practice.) Because the lift-slab construction process is unique and not well documented in engineering texts and manuals, OSHA believes that peer review of plans and specifications is necessary to achieve an acceptable level of safety.

Therefore, to provide an appropriate level of safety to the workers, OSHA is requiring review by a registered professional engineer who is independent of the lift-slab designer/planner. This independent review may be made in advance of construction on the basis of lift-slab plans and specifications. Additionally, OSHA agrees with Mr. Suarez that the requirement should be written to state the desired performance; namely, reinforcement to ensure the integrity of the building, without specifying exactly how the employer is to comply with the requirement. However, to assist employers, OSHA has described at least one method of compliance in Appendix A to this section. The method described in the Appendix substantially reflects the recommendations made by Dr. Neil Hawkins.

OSHA acknowledges the role organizations such as the American Concrete Institute play in setting design criteria and promoting "structural integrity." Through such organizations, OSHA believes there exists the appropriate guidance for engineers to determine how to maintain the structural integrity of a building as required by paragraph (k).

Based on the preceding discussion, OSHA promulgates paragraph (k) as revised.

Paragraph (1) requires that all wedges be secured before the lifting rods are released at each column location and that when temporary connections are being made, the wedges shall be secured by tack welding, or an equivalent method of securing the wedges, to prevent them from falling out of position.

The final rule in paragraph (1) is essentially the same as the proposed provision, except that it has been rewritten to express the meaning of the rule more clearly. The change responds to comments made by Liftplate International and Texstar Construction Corporation (Exs. 38–15 and 38–20). At the hearing, Professor Peter Vanderklaauw of Liftplate International expressed concern that OSHA's proposed provision was very specific in that it only recognized tack welds as the proper method of securing wedges to keep them from falling out (Tr. 6/30/89, pp. 2–265 to 2–267). OSHA disagrees with this comment as the proposed rule did contain the phrase "or an equivalent method of securing." Nevertheless, OSHA has reworded the provision to state more clearly that employers do not have to tack weld, but if another method of securing the wedges is chosen, that method must be equal to tack welding in its ability to secure the wedge. In this regard, OSHA has determined that the use of chicken wire or tape to secure wedges is unacceptable. The provision is only directed at temporary connections because the lifting plans will specify the details for permanent connections, including any permanent weld on the wedges. The intent is to keep the wedges in position so they will not fall out. It is OSHA's position that if the wedges were to fall out, the slab could lose support at the location where the wedge was dislodged, and that loss of support could cause the slab to deflect, possibly with serious

consequences. In addition, OSHA proposed this requirement because it is aware of at least one incident where a lift-slab contractor inserted all the wedges, lowered the load onto the wedges, then released all the lifting rods to prepare for the next "pick" and not one single wedge had been tack welded or otherwise secured. OSHA believes this is an unsafe practice and has demonstrated its serious concern through the issuance of citations for such action.

Another point raised by Texstar Construction Corporation (Ex. 3–15 and Tr. 6/30/89, p. 2–182), was that wedges should be tack-welded *after* the load has been transferred from the jacks, rather than *before* the load is transferred from the jacks as the proposed rule required. OSHA agrees that load transfer from the jacks to the wedges could break the tack weld and that the language of the proposed rule needs to be changed. OSHA's intent is to require completion of the welding task at each column location before the lifting rods are released. The final rule has been rewritten to state clearly that the wedges must be secured before releasing the rods at that column location, regardless of whether it is a temporary or permanent connection.

In cross-examination at the hearing, Texstar Construction Corporation indicated that they ". . . keep the lifting nuts within an eighth of an inch of the lifting attachment so that they are still . . . in contact with that lifting angle." Additionally, when asked specifically about the lifting rods and whether they too were within an eighth of an inch, Mr. C. Geckler, Vice President of Texstar, stated "Well, just the fact that they're only released about an eighth of an inch, they can't move very far." (Tr. 6/30/89, p. 2–202). When questioned about the ability to support the slab if something went wrong [such as if a wedge fell out], Texstar's representative Russillo stated "So if, as you said, something were to go wrong, the slab would come down an eighth of an inch and re-engage into the rod with the nut. See, it's the rod." Finally, the record is clear when C. Geckler responded, "The tack welding is done. The person who is installing the wedges moves from that location to another location. Then the rods are lowered down." (Tr. 6/30/89, pp. 2–251 to 2–253).

After reviewing these comments, OSHA believes the revised language addresses the concerns of the commenters and also makes OSHA's intent more clear. Therefore, OSHA promulgates paragraph (l) as revised.

Paragraph (m) requires that all welding on temporary and permanent connections be performed by certified welders who are familiar with the welding requirements specified in the lift-slab plan and specifications. This paragraph is a new requirement and is identical to the proposed paragraph.

Comments and testimony in the record revealed that only certified welders are used. There were no objections to OSHA's codification of what is usual and customary practice in the industry. OSHA observes that certification can be demonstrated by possession of a certificate from a licensing board or school which certifies that the employee has demonstrated the ability to perform the type of welding required for the building/structure under construction. OSHA suggests that employers determine the welder's familiarity with the welding requirements specified in the lift-slab plans and specifications before permitting the welder to perform any welding tasks.

In connection with this provision, OSHA raised Specific Issue #14, under which the Agency asked a number of questions relating to the requirement to use only certified welders for structural welding tasks. OSHA noted that it was aware that current practice was to hire only certified welders for critical welding tasks and asked how welders demonstrate such certification. In response, several commenters indicated support for the proposed provision that certified welders be required for structural welding (Exs. 38–4, 38–7, 38–17, 38–21, and 38–23). Only one commenter (Ex. 38–26) actually responded to the concerns of how to determine certification.

Liftplate International, Inc. (Ex. 38–20), commented that they used certified welders as a matter of routine but that temporary welds are made only to keep wedges in place and have no structural value. In addition, they stated that if OSHA finalized the requirement, it should apply to other types of construction as well. While several commenters noted that welder qualification tests are set forth by the American Welding Society (AWS), the AWS does not conduct the tests nor issue certification cards. Charles Hawkins commenting on behalf of Associated Builders and Contractors, Inc. (ABC) (Ex. 38–28), stated that ABC supported the proposed requirement regarding certified welders for critical welds and noted that OSHA was correct in thinking that the industry practice was to hire only certified welders. ABC also made the following comment:

> To the extent that there is a confusion as to which certification should control, ABC recommends the American Society for Testing and Materials (ASTM) certification. In many cases the design and specifications will indicate an ASTM-grade weld is necessary. Relying on the ASTM certification would simplify this question and be consistent with practices already in place. (Id. p. 3).

Based on the evidence and information in the record, OSHA has decided that it will not specify, in the final rule, how the welder should certify his ability to perform the welds as required in the lift-slab plans and specifications. However, at the time of an inspection, OSHA may require the employer to demonstrate that only certified welders are welding connections. For example, such certification can be demonstrated by producing evidence, such as a welder's certification card, that the welder has been certified by a state or local testing laboratory who complies with the testing procedures set forth by the American Welding Society (AWS) or that the welder has a certification card from the American Society for Testing and Materials (ASTM) as recommended by ABC. Therefore, it will be up to the employers to make sure that welders hired by them are certified in accordance with the requirements of a recognized organizations such as the ones named above. Therefore, OSHA promulgates paragraph (m) unchanged from the proposed rule.

Paragraph (n) of the final rule requires that load transfer from the lifting units to building columns not be executed until the welds on the column shear plates are cooled to air temperature. The requirement in the final rule is identical to the proposed requirement, except that the term "lifting units" has been inserted along with the term "jacks."

There were no written comments or oral testimony presented in support of or in opposition to this requirement. In the cross-examination of Texstar Construction Corporation at the public hearing, it was revealed that this provision had little or no bearing on their operation because the weld blocks are fabricated as part of the column and not added in the field (Tr. 6/30/89, pp. 2–266 to 2–269). OSHA believes the requirement is appropriate as proposed and is, therefore, promulgating paragraph (n) without change from the proposal, for the reasons stated in the NPRM (53 FR 35978).

Paragraph (o) of the final rule requires the employer to secure lifting units to the building columns so that the lifting units will not become dislodged or dislocated. This is a new requirement, added as a result of evidence submitted

in the record which substantiated the need for the provision. In Specific Issue #10 of the NPRM, OSHA asked for comment on the current industry practice and on the need to add such a provision to the standard.

Several commenters responded that measures are now being taken to prevent the lifting units from falling off the columns. In particular, Texstar (Ex. 38–17) noted that current industry practice provides that certain safeguards be followed. For examples, they noted that on certain types of shearheads, the rods are blocked and on other shearheads the key hole is now designed to lock the nut centering sleeve in place. (Id. p. 5). They also provided a chart to show the forces necessary to dislodge jacks under load. (Id. Ex. 4). David Wonder (Ex. 38–7) stated that ". . .there is virtually no chance of failure of the lifting assembly" and noted that the lifting rods "act as high bolts to secure the jack to the top of the column." Mario Suarez, (Ex. 38–21), referring to jacks falling off columns, stated "This should probably not be a problem." Doug Nunnelly (Ex. 38–25) of Diversified Design noted that ". . .the installation of the jacks by their lifting contractors has never presented the problem of a jack becoming dislodged." Mr. Cooke (Ex. 38–23) noted his belief that the amount of movement that can take place is questionable, but noted if OSHA was going to consider anything, it should be that the jacks or lifting devices should be secured so they will not become dislodged or dislocated. This was the language suggested by OSHA in the NPRM. Mr. Hoffman (Ex. 38–24) objected to the use of the word "secure" as "too imprecise" but did not suggest an alternative word.

OSHA believes the record supports the usefulness of requiring the employer to take positive action to ensure that jacks/lifting units are secured. However, the exact method of securing the jacks will be left up to the employer and not specified by OSHA. The Agency is aware, however, that at least one manufacturer offers a collar that is now in use for one type of jack. It is OSHA's belief that employee safety will be enhanced if measures are taken to prevent jacks from becoming dislodged or dislocated and possibly falling onto employees. The Agency notes that one method of lifting involves mounting jacks to the top of the columns. Thus, workers would face the risk that a jack could fall off the column and onto them. The record shows that this risk is not adequately addressed by existing standards nor is voluntary action—current industry practice—adequate to address the risk. OSHA believes the risk to workers will be eliminated if employers comply with the new provisions in paragraph (o). Therefore, OSHA is promulgating paragraph (o).

Paragraph (p) of the final rule requires the employer to use some method to ensure that the lifting rods do not slip out of position. Measures may include any type of locking or blocking devices that prevent the rods from accidental release. This is a new requirement, added as a result of information and evidence submitted to the record in response to Specific Issue #15. In that issue, OSHA asked if employers should be required to institute measures such as the use of locking nut caps, wedges or boards to ensure that the rods and nuts cannot slip out of position. OSHA also asked if such methods were now being used. The Agency noted that it was raising the question because in its report on the Bridgeport disaster, the NIST (formerly NBS) concluded that the rods slipped off the lifting angle.

In response, Texstar (Ex. 38–17) responded that they had redesigned the lifting angle to lock the rod in the keyhole and that other types of shearheads would be blocked in place. Mario Suarez (Ex. 38–21) commented that "* * * locking of the lifting rod nut in the shearhead is certainly an improvement and should be required."

On the other hand, Mr. Cooke (Ex. 38–23) noted that "The proposed suggestions of locking nut caps, wedges or boards would become extremely inconvenient in the field * * *"

OSHA believes that the record contains convincing evidence for adding a requirement to secure the lifting rods in position and prevent them from slipping or moving, since such slipping or moving could result in a subsequent loss of support at that column location. Such loss of support could have catastrophic consequences. Therefore, OSHA is promulgating this requirement in paragraph (p).

III. Discussion of Specific Issues Raised in the Proposed Rule But Not Discussed Above

Issue #1. Comments received in response to this issue (Engineer/Architect vs Qualified Designer) are discussed above along with other comments on § 1926.705(a).

Issue #2. Comments received in response to this issue (2.5 Safety Factor) are discussed above along with other comments on § 1926.705(d).

Issue #3. In this issue, OSHA asked if requiring the employer to prepare a certification record would increase employee safety. The Agency explained that a certification record would be signed by the employer and indicate the name of the person or organization who had determined that the jacking equipment was capable of supporting two and one-half times the load on it during lifting and the date when such determination was made.

In response, OSHA received several comments ranging from "Calibration data and material certification should be required by the PSE" (Brown & Root, Ex. 38–6) to "No benefit would come from requiring more paperwork" from David Wonder, an Engineer with Texstar (Ex. 38–7). Some commenters appeared to support a requirement for certification, as long as it only applied to what they termed "lifting equipment" (in other words, not to columns, footings, or shearheads). They added that this would not, however, provide additional safety to the workers (Exs. 38–17, 38–21, and 38–25). Charles Hawkins of the Associated Builders and Contractors, Inc. was concerned about paperwork burdens associated with the certification record, and then suggested that OMB review the proposed requirement (Exs. 38–26). In response, OSHA notes that OMB exempts certification records from their review under the Paperwork Reduction Act and, therefore, OMB approval would not be necessary. (See 5 CFR part 1320).

Professor Vanderklaauw of Liftplate International (Ex. 38–20) agreed that such a requirement would increase paperwork and he stated that it would do little to increase safety. He also stated that if such a provision was finalized, it should apply to cranes, hoists and construction elevators as well as lift-slab equipment. OSHA notes that it does currently require employers to prepare a certification record of tests and inspections performed on critical components of cranes and hoisting machinery.

Finally, Marshall Long, of Lift Slab International, testified at the public hearing that he would be willing to certify that whatever equipment he sold would meet the 2.5 requirement; however, he also acknowledged that he did not supply all the equipment used by all lift-slab contractors.

OSHA notes that preparation of a certification record as envisioned in this issue, would necessitate the certifier to know the loads that would be applied to the equipment. OSHA does not believe that the supplier could prepare such a certification at the time of the sale of equipment that would be used many times on many different jobs involving varying loads.

After careful review of the record, OSHA is not convinced that requiring a

certification record would lead to increased safety and, therefore, has not included a provision in the final rule to require such a certification. OSHA expects, however, that at the time of inspection, the employer will be able to provide necessary evidence that the equipment complies with the load requirement in paragraph (d).

Issue #4. The comments received in response to this issue (rewording proposed § 1926.705(d) to identify jacking equipment) are discussed above along with other comments received on § 1926.705(d).

Issue #5. The comments received in response to this issue (lateral stability) are discussed above along with other comments received on § 1926.705(a).

Issue #6. In this issue, OSHA solicited information on the need to require employers to maintain the building plumb during jacking operations, and asked what was the current industry practice. All five commenters who responded on this issue stated that the American Institute for Steel Construction sets the criteria for building plumbness and that industry practice is to follow their requirements (Exs. 38–7, 38–17, 38–21, 38–24, and 38–25).

Based on the information and evidence in the record, OSHA has decided that no new provisions are needed to address plumbness of the building during construction. As the commenters have noted, standard industry practice dictates compliance with criteria established by organizations such as AISC and ACI. OSHA has no reason to believe that industry practice will change and, therefore, does not believe any additional benefit to worker safety and health will result if additional provisions are added to the lift-slab standard.

Issues #7 and #8. In these issues, OSHA requested comment on the need to include new requirements to address access and egress during the construction of buildings where the lift-slab method of construction is being used.

Several commenters responded that there is no reason to believe that any special requirements are needed to address access and egress of buildings under construction by the lift-slab method and that there is no difference, in terms of the need to address access and egress, between buildings using the lift-slab method and those using, for example, precast concrete. (See Exs. 38–21, 38–24, and 38–25). Texstar (Ex. 38–17) commented that "Ladders are provided at all times. During lifting they are secured so as to slide on the slab edge. . Either stairs or semi-permanent ladders are installed when slabs are put in final position." David Wonder, an Engineer from Texstar, (Ex. 38–7) questioned OSHA's rationale and replied that "It is not logical to think that any specific regulation concerning access and egress could cover the wide variety of buildings that are built using lift-slab." He further noted that stairways are erected following the "critical path."

After careful evaluation of the record, OSHA has determined that there are no special needs regarding access and egress that require additional OSHA requirements. OSHA believes that its current rulemaking efforts for Subpart X—Stairways and Ladders will sufficiently address any hazard that may confront workers at lift-slab construction sites.

Issue #9. In this issue, OSHA asked about substituting the term "lifting units" for the term "jacks," or if it was commonly understood that the term "jacks" included other equipment.

In response, Brown and Root and Diversified Design (Exs. 38–6 and 38–25) commented that the term "jacks" is commonly understood. Two other commenters suggested that OSHA use the term "jacks" together with the phrase "other lifting devices" (Exs. 38–23 and 38–24). Texstar (Ex. 38–17) said the term "jack" is considered to mean the complete lifting unit, and that the term "lifting unit" could be more descriptive of a system using more than one jack with a common base or crosshead. They added that "The term jacking unit might be more descriptive." Mario Suarez (Ex. 38–21) responded that "Either way seems to be adequate." OSHA agrees with Mr. Suarez' comment. Because of the lack of clear support in the record for one term over the other, OSHA will use both terms—jacks and lifting units—to avoid any possible misunderstanding.

Issue. #10. The comments received in response to this issue (securing jacks to the columns) are discussed above along with other comments on new § 1926.705(o).

Issue #11. The comments received in response to this issue (working under the slab) are discussed above, along with other comments on § 1926.705(k).

Issue #12. In this issue, OSHA asked if there was a need to revise other requirements in the Construction Safety and Health Standards (Part 1926) to prohibit workers from being in buildings while precast members were being positioned and secured or while cast-in-place concrete was being cured. OSHA notes that this issue was raised in response to a comment made by a representative from Texstar at the March 30–April 1, 1988, ACCSH meeting. (Ex. 35–2). In his comment, he pointed out the dangers to workers when those methods of construction were being used, and asked why OSHA had not seen the need to regulate the hazard [workers being in the buildings and under the loads] where these other construction methods were used. As OSHA indicated earlier in this document, it intends to gather information on hazards associated with other construction methods.

OSHA received several comments which offered thought-provoking ideas in response to this issue. NIOSH (Ex. 38–4) commented that they were in support of an extension of the scope of the proposed requirement—to prohibit nonessential employees from being in the building—to cover cast-in-place concrete construction techniques. They explained that "The workers are at similar risk in both lift-slab and cast-in-place construction when allowed to work beneath a load that has not been permanently fixed in place and adequately cured."

T. W. Graham, Jr., with the Ceco Corporation (Ex. 38–10), commented, "No, the Construction Safety and Health Standards as they relate to cast-in-place concrete should not be revised due to the following reasons." Mr. Graham then listed several provisions in the existing Concrete and Masonry Construction Standard; namely, § 1926.703 (a)(1), (b)(8)(i), and (e)(1) and (2) that require the employer to take specific action to ensure that formwork (which includes shores and reshores) will support the loads on it without failure. Ceco further commented that cast-in-place concrete was significantly different from lift-slab and precast concrete construction techniques and pointed out the hazards presented by jacking operations or the movement and placement of large and heavy structural members. (Id.).

Marshall Long, P.E., President of International Lift Slab Corporation (Ex. 38–11) noted that "It is significant that for 39 years the lift-slab method of construction had not caused a single fatality, whereas conventional building methods had resulted in over 50,000 deaths during the same period of time." Mr. Long concluded with the statement that "International Lift Slab Corp. therefore rejects the need for imposing restraints on the lift-slab method of construction which are not also applied to all methods of construction." This latter statement was echoed by other commenters (Exs. 38–7, 38–17, 38–20, 38–21, 38–23, and 38–25).

Christopher Saccone, P. E. (Ex. 38–12), commented that "If this standard is to

be adopted for lift-slab construction, it should most certainly apply to cast-in-place and precast systems. The hazards are the same." John McGlenn, P.E., Vice President of Kramer, Chin & Mayo, Inc. (Ex. 38–14), also supported the need for uniformity and consistency and noted that "Rules should be developed in a manner so that they achieve uniformity with other components of the industry. For example, structural steel, precast concrete and lift-slab construction rules should all be promulgated in a consistent manner."

At the hearing, Texstar presented their recommended alternative of "integrity steel" to the proposed prohibition of nonessential workers in the building and noted that "We also feel that this form of enhanced structural integrity should be required on all forms of construction and not just the lift-slab method. If workers' safety is truly the issue, then workers on all types of building construction should enjoy the same level of safety assurance" (Tr. 6/30/89 p. 2–161).

As noted in the proposed rule, this issue was raised to generate information for future use, and no provisions can be added to the final rule on lift-slab construction operations to address hazards associated with other forms of construction. However, based on the comments and testimony received on this issue, OSHA plans to gather more information. Some of the concerns to be explored more fully include the risk to workers who remain in buildings/structures: (1) While precast members are being lifted, positioned, and secured; (2) while structural steel is being lifted, positioned, and secured overhead; and (3) while the concrete is achieving strength in cast-in-place structures; and (4) the risk to workers who remain in structures while any other method of construction is being used.

OSHA wishes to make it clear that the issue of consistency between lift-slab construction and other construction methods does not remove the need for OSHA to take action at this time on the issues raised in this lift-slab rulemaking.

Issue #13. In this issue, OSHA stated that the National Institute of Standards and Technology (NIST) (formerly known as the National Bureau of Standards) has recommended that OSHA specify fracture toughness values for rods used in lift-slab construction. NIST noted that such values are presently specified for steels used in other areas. OSHA then solicited information on whether it should specify such values and what those values should be.

Three parties submitted substantive comments—Texstar Construction Corporation, David Wonder, P.E. (Chief Engineer for Texstar), and Mario Suarez (Exs. 38–7, 38–17, and 38–21). Mr. Wonder expressed disagreement with trying to specify a specific toughness value and added that "Furthermore, assigning a safety factor above and beyond the normal values would be more than adequate to ensure safety," in apparent support of § 1926.705(d) of the proposed rule. Proposed paragraph (d) required that lifting equipment (which includes the rods) be capable of supporting 2.5 times the load to be applied, and Wonder implied that the provision would be, to use his words, "more than adequate to ensure safety." Texstar noted that "The NBS recommendation for testing of rods is not necessarily accepted as the proper test," and added that "The application of the 2.5 safety factor used in the lifting rods should be more than adequate." Mario Suarez, while acknowledging the need to subject rods to testing and quality control procedures, stated that "Quality control procedures on the production of the lifting rods may contain, but do not necessarily have to, toughness requirements."

At the hearing, in response to cross-examination, Dr. Neil Hawkins was asked to comment on the need for fracture toughness requirements in the rule. Dr. Hawkins responded that although he was not an expert in fracture toughness, he did not think it would be necessary to specify fracture toughness values, noting all of the things specified in the proposal and the 2.5 safety factor on the jacking equipment.

In conclusion, OSHA finds that the record provided very little information on this issue and did not demonstrate that a need exists for OSHA to promulgate a new requirement. Furthermore, NIST did not suggest a recommended value nor did they appear at the public hearing. Thus, OSHA was unable to solicit further information on the need to regulate in this area or the potential benefit to worker safety and health. Therefore, OSHA has decided not to specify fracture toughness values for rods.

Issue #14 and #15. The comments received in response to these issues (certified welders) and (locking and blocking of rods) led to new requirements in the final rule and are discussed above under §§ 1926.705 (o) and (p) respectively.

In the hearing notice OSHA raised two other issues that were not discussed above. One issue presented questions about the costs of the proposed standard and is discussed in Section IV—Regulatory Impact—below. The other issue was related to post-tensioning of slabs when the lift-slab method of construction is used. In particular, OSHA stated in the hearing notice that it had received a comment from a Professional Engineer, Frank X. LoSacco, who stated that when the lift-slab method of construction is being used, the *primary* method of reinforcing the slabs should not be the unbonded post-tensioning method. Mr. LoSacco suggested that OSHA add a provision to the final rule which would require the post-tensioning elements to be fully bonded when the post-tensioning method of reinforcement is used [for lift-slab construction].

Mr. LoSacco testified at the public hearing, and explained why he believed that the use of unbonded post-tensioning method of reinforcement caused the total failure at L'Ambiance Plaza. He stated that this method of reinforcement should never be used in the lift-slab method, primarily because the tendons cannot be placed through the steel columns on which the slabs "ride" and must instead be placed around the column, leaving unsupported areas at the column (Tr. 6/29/89, pp. 1–22 to 1–41). On cross-examination, Mr. LoSacco revealed that he had determined almost immediately (within days of the collapse) through visual inspection of the collapse site, that it was the use of the unbonded method of post-tensioning that led to the loss of structural integrity and subsequently, to the total collapse of the building. Using wooden beads, strung on a cord, Mr. LoSacco presented a demonstration to show how, in his opinion, support was lost. (The demonstration was videotaped and can be found at Ex. 45B).

There was no other support presented at the hearing or through written comment for the provision recommended by Mr. LoSacco. In fact, over half of the hearing participants, including engineers Vanderklaauw, Hawkins, Suarez, Russillo, Hinckley, and Freyermuth attempted to elicit further information from Mr. LoSacco, through cross examination, to debate the technical merits of his proposal. (Tr. 6/29/89, pp. 1–54 to 1–106). In each of these instances, Mr. LoSacco repeated his statement that many lives were lost because the unbonded method of post-tensioning had been used. During this questioning period, Mr. LoSacco clarified for the record, that the theory discussed was his own and was not known to be supported by any other engineer.

Mr. Freyermuth subsequently presented testimony stating that there was no technical evidence anywhere to indicate that any type of slab reinforcement would have had any

positive effect in reducing the extent of the L'Ambiance collapse. He further testified that:

> Without clear and convincing evidence supported by a broad base of engineering opinion and experience such as exists in the development of all national technical building code provisions and which has been partially reviewed in this testimony in favor of the use of unbonded tendons in lift-slab construction, there is considered to be no basis for the proposed exclusion of the use of unbonded tendons in lift-slab construction nor the requirement that bonded post-tensioning tendons should be bonded, grouted, prior to lifting of the slab. (Tr. 6/29/90, p. 1–127).

Mr. Freyermuth's testimony was accompanied with documentary evidence, including an article entitled "Structural Integrity of Buildings Constructed With Unbonded Tendons" which presented case studies of laboratory tests and construction incidents or accidents that have demonstrated the capability of unbonded tendons and structures containing unbonded tendons in resisting abnormal or catastrophic loadings. (Ex. 47). He also presented other exhibits to demonstrate the general suitability of unbonded tendons for use on lift-slab construction in preference to other means of reinforcement and to support his testimony with regard to the "very dependable performance of unbonded tendons under the catastrophic conditions of the L'Ambiance Plaza lift-slab building collapse" (Tr. 6/29/90, pp. 1–106—1–128).

Mario Suarez (Ex. 63) expressed his opposition to the recommendation by Mr. LaSocco when he commented that the recommendation had "* * * no technical justification whatsoever and negates a history of more than 30 years of successful use in buildings of all kinds, comprising approximately two billion square feet of floor framing reinforced with unbonded tendons." Mr. Suarez also stated that during their investigation of the L'Ambiance disaster, they observed hundreds of unbonded post-tensioning tendons and their anchorages after the collapse. He said the performance of the tendons as the reinforcing means in the structure was "excellent." Specifically, he noted that as a result of their inspection they concluded that the tendons

> * * * withstood the catastrophic loading condition involved in the collapse without failure of the casting, the wedge grips, or the stand within the area being held by the grips. (Id. p. 2).

He further expressed what he termed "our strong opinion" that no rule should be established limiting or banning the use of unbonded post-tensioning tendons in lift-slab construction or any other method of building construction. (Id. p. 2).

Upon evaluation of the evidence and testimony submitted on this issue, OSHA has determined that, at this time, there is no sound technical basis on which it can prohibit the use of unbonded post-tensioning as the primary method of ⅛reinforcement where the lift-slab construction technique is to be used. The record contains sufficient evidence to demonstrate that unbonded post-tensioning has been used with success. Further, the record indicates that use of this method of reinforcement has not been shown to reduce the level of safety for workers, and that no demonstrable benefit to the worker will result if OSHA were to adopt the language suggested by Mr. LoSacco. Therefore, without further information or evidence to demonstrate that workers are at risk, OSHA has determined that there is no need to regulate the method of reinforcing in structures where the lift-slab method of construction is being utilized.

IV. Regulatory Impact, Regulatory Flexibility and Environmental Impact Assessments

A. Introduction

The Occupational Safety and Health Administration (OSHA) has prepared this Final Regulatory Impact Assessment (RIA) in compliance with Executive Order 12291 and the Regulatory Flexibility Act of 1980 Public Law 96–353, 94 Stat. 1164 (5 U.S.C. 601 et seq.). In this Assessment, OSHA has determined that the revised lift-slab provisions of the Concrete and Masonry Standard are technologically and economically feasible and that the environmental impacts of the amendments are not significant. As the net effect of this Standard amendment is less than $100 million, this regulatory action does not constitute a "major rule".

B. Industry Profile

The lift-slab construction technique has been used in over 50 different countries since its development in 1948 for construction of a wide range of building types: medium and high rise housing, offices, warehouses, hotels, schools and hospitals. The total worldwide volume constructed using this method is estimated to exceed half a billion square feet. Other than the L'Ambiance Plaza collapse in Bridgeport, Connecticut on April 23, 1987, OSHA is aware of no fatal accidents involving this construction technique.

Lift-slab methods can be more economical than cast-in-place methods, particularly for buildings where the framing is similar on all floors. With lift-slab, forms are required only on the outside of the edge of the slab. Because the floor and roof slabs are all cast at ground level and jacked into position, the lift slab technique eliminates 90 percent of the formwork required for cast-in-place methods and reduces labor requirements. Cost savings and speed of construction are two primary advantages claimed for lift-slab construction particularly in areas with high labor costs.

Texstar is the company involved in a considerable volume of lift-slab construction, having completed about 800 buildings on 614 projects over the course of the 39 years (as of 1989) that they have used this technology [1]. These buildings have accounted for approximately 64 million square feet of lifted slab. Most recently, Texstar has been lifting about 2 million square feet of lift-slab per year on about 20 buildings in 10–15 projects. Of these projects, 40 percent are residential (apartments, condominiums, hotels, etc.) 50 percent are office buildings, 5 percent are parking structures and 5 percent are specialty buildings. Texstar represents 90 percent of the 5- to 20- story range lift-slab market [1].

Liftplate International, a Florida construction company, has erected a number of 2 and 3 story buildings and is the only other company known to OSHA to do actual lifting in the United States. Liftplate International has been in business for thirteen years with an annual volume of 750,000 square feet or the equivalent of 10 five-story buildings. They employ few but highly skilled workers and a typical lifting crew would consist of 4 workers compared with 15 to 16 on cast-in-place building technique. They lift a five story building in two weeks [3].

The two systems currently used by these respective companies vary primarily in the type of equipment and materials and their arrangement for the lifting operations. This difference in turn determines the maximum height of the building. For example, Liftplate International erects columns that are the full height of the building before lifting the concrete slabs; therefore, limiting overall building height to 10 stories [8]. Also, the jacking equipment is mounted on the side of the column initially at the ground level [3]. On the other hand, Texstar uses a series of three story column extensions allowing for taller

buildings. Their jacking equipment is mounted on the top of each column [2]. As construction progresses, another column is added, requiring the jack to be repositioned at the top of the newly spliced column.

The lift-slab method of construction constitutes a small fraction of all construction projects in the U.S. Although published estimates of the amount have ranged from between 3 and 10 percent of all commercial projects, these estimates appear too high. Based on data indicating the amount of floor space constructed by Texstar and Liftplate International, the lift-slab technique accounts for less than one percent of the 1,004 million square feet of commercial and industrial space construction during 1987 [1,3]. Although for certain building types and in certain regions the lift-slab method enjoys a cost advantage over other methods, its relatively small market share is primarily explained by lack of familiarity on the part of owners, designers and contractors. The lift-slab method of construction has declined in popularity over the years, accounting for no more than one percent of all construction. This decline is attributed to the fact that at one time lift-slab held a sharp cost advantage due to the relatively costly nature of formwork; but, in the intervening years, innovative formwork systems such as flying forms and whole floor systems, have declined in cost and become more widely used.

C. Costs

The final rule governing lift-slab construction contains provisions addressing elements of construction safety concerning: the integrity of the structure at design and erection stages; equipment utilized; and employees. Most of the provisions of the standard are existing requirements in the American National Standards Institute, ANSI, publication A10.9–1983, and are the same as the ANSI A10.9–1970 provisions referenced in OSHA's original Concrete and Masonry standard. There has been no indication from either industry or OSHA compliance staff that these requirements are other than current industry practice. Consequently, total industry costs of compliance were estimated on the basis of one major provision: prohibition of non-essential employees from working while slabs are being lifted.

The major change in the standard is the provision that prohibits all employees, except those doing the lifting or making connections, from being in a structure while slabs are being lifted unless a registered professional engineer other than the engineer who designed and planned the lifting operation, has determined that the structure has been reinforced sufficiently that a loss of support at any jack location will not result in total collapse of the structure. OSHA has determined that this alternative to its proposed prohibition of nonessential employees being in the building during jacking operations would provide the same level of employee safety. The overall integrity of the structure can be substantially enhanced by minor changes in detailing of reinforcement.

Without consideration of this alternative, it would be no longer cost effective to use the lift-slab technique for buildings of more than four stories. Officials from Texstar have estimated that the imposition of this provision without the option of hiring an engineer would result in the loss of 75 percent of their business [4]. Texstar's income statements from 1984 to 1988 reflect a direct correlation between percent of profit and the percent of revenue attributed to the construction of 5 or more story buildings. In their analysis of the effect of the imposition of this provision, Texstar estimated that it will result in an incremental cost to the general contractor due to the delay equivalent to the slab lifting period. This increase in time necessary to complete the project would incur additional equipment rental charges, interest payments, and overhead charges that would reduce profits by 50 percent and consequently, would make successful bidding by a lift slab contractor impossible [6]. Texstar indicated that since the L'Ambiance incident, they have only been involved in 1 to 4 story buildings and that they have already reduced their workforce from 24 to 7 employees as a result of this dropoff in business [1].

Contrary to the potential problem faced by Texstar, Liftplate International has indicated that this requirement would have absolutely no impact on their business or their ability to compete for jobs [3]. This firm primarily builds structures of 3 to 4 stories, where they lift for a week to a week-and-a-half and finish before the other trades enter.

It is, therefore, most likely that the alternative allowed by the provision would be selected for buildings over 4 stories. The cost of this alternative includes the engineer's cost (i.e. time required to analyze plans to determine structural integrity) and the material costs for reinforcement, if required. Based on information supplied during the public hearings, it was indicated that the engineer's rate would vary depending on the size of the structure and what the engineer requests for his services. Texstar testified that it would cost $500 to have an engineer analyze the plans to determine its structural integrity [1]. Of the 1.5 million to 2.5 million square footage completed annually, Texstar erects 0.9 million square feet of 5 or more story buildings or an average of 8 buildings [4]. If establishments decide to use the alternative of hiring an engineer, OSHA estimates total annual compliance cost for engineer's time under this provision would be $4,000.

Moreover, if employers choose the option provided for insuring structural integrity during erection, bottom steel may be required to prevent progressive collapse following a local loss of support. One method to comply with this provision is for the employer to ensure that bottom steel is provided in every slab and in both directions through every wall or column head area. The amount of steel shall be established by assuming loss of support at a given lifting jack and then determining the steel necessary to carry the slab service dead load plus any service dead loads likely to be acting on the slab during jacking. The cost for providing for the structural integrity of the building—the added steel—is estimated to increase costs of the lift-slab operation by about $0.35 per square foot [1]. For the erection of 0.9 million square feet per year, this translates to an additional cost of $315,000 annually. Therefore, total annual cost for this provision would be $319,000.

In the Preliminary Regulatory Analysis an estimate was made of the cost of keeping all nonessential employees out of the building. This was done from the perspective of the potential added cost to building owners. Lift-slab's cost advantage, although variable by region and size of building, averages about $2 per square foot [5]. If 75 percent of Texstar's current volume of business shifts to other construction methods in the future, this would translate into an increased annual cost of $1.4 million (0.9 million sq. ft. x .75 x $2) to 5 or more story building owners. OSHA does not believe, however, that firms will choose to keep non-essential employees out of the buildings when a lower cost alternative is available.

In addition to the provision noted above, there are new provisions in the revised standard that are different from the existing standard but for which there are no additional compliance costs. The standard requires that the registered professional engineer consider lateral stability and incorporate provisions in the lift-slab plans and specifications to

ensure lateral stability of the structure during construction. Design requirements for lateral stability are established by AISC and local building codes using safety factors that are universally accepted [12]. OSHA believes that "lateral stability" is already addressed in the plans and specifications developed for the lift-slab operations and, therefore, is a common industry practice and would not incur additional costs.

A second requirement in the revised rule addresses the loading of jacking equipment. It basically provides clarifications that the 2.5 safety factor applies to all jacking equipment, including columns, footings and shearheads in addition to the actual jacks, lifting angles, lifting nuts, etc. Apparently the existing requirement had not been interpreted by everyone to include columns, footings and shearheads. Both companies currently doing lifting have indicated that their components now meet the 2.5 safety factor for all listed items [8,9]. This provision therefore has been determined to be current industry practice and no costs of compliance are anticipated.

The requirements for welding include provisions that wedges be secured at each column location by tack welding or an equivalent method of securing the wedges when making temporary connection to support slabs, and that all welding connections be performed by certified welders. Both Texstar and Liftplate International testified that the welds are so critical to the overall integrity of the structure that well qualified welders are essential. They indicated that they use tack welding to secure the wedges and that they use only welders with papers which means that they use only certified welders [3,11].

Another addition to the standard is the requirement for securing jacks to building columns to prevent them from being dislodged or dislocated. Several commenters in the public hearings noted that measures are being taken to prevent jacks from falling off the columns. In particular, Texstar indicated that current industry practice provides certain safeguards to prevent jacks from being dislodged [6]. OSHA is also aware that at least one manufacturer offers a collar that is now in use for one type of jack [11].

The requirement that load transfer from lifting units to building columns not be executed until the welds on the column shear plates are cooled to air temperature has been recognized by the two lifting companies as a requirement for an outdated practice, not often used today, and one which would have no bearing on their current operations [1,3]. The provision that lifting rods not slip out of position so that a positive connection is provided between the lifting rods and attachments is a new requirement to prevent components from disengaging during lifting operations. Texstar indicated that since the L'Ambiance incident, they have redesigned the lifting angle to lock the rods and therefore they are in compliance with this requirement [6].

Another change in the standard is the requirement limiting the number of jacks manually controlled by one operator to a number which will permit the operator to maintain the slab level within the ½ inch tolerance. The existing provision limited the number of jacks operated by one person to 14. Texstar indicated that exceeding the maximum of 14 jacks would diminish the ability of the operator to visually and physically control the lifting process [11]. Therefore, OSHA believes that this modification would not affect the lift-slab companies in any way nor is it substantially different from the existing requirement.

All of the remaining provisions in the standard are existing requirements in the current ANSI A10.9 standard and there has been no indication from industry that these requirements are other than current industry practice. Therefore, the total annual cost of coming into compliance with the revised standard would be $19,000.

D. Benefits

The uncertainty surrounding the risks associated with the lift-slab construction technique makes it difficult to estimate the benefits that would be attributable to the changes in the standard. The only fatal lift-slab related accident known to occur over the 39 years (as of 1989) the method has been in use is the 1987 L'Ambiance Plaza collapse which resulted in the death of 28 workers. OSHA believes that the deaths associated with this accident could have been prevented if the changes in the final standard had been in effect at the time of the accident and, of course, that compliance with the standard had taken place.

Some of the hazards that workers are exposed to while performing lift-slab operations are the same as those found in conventional cast-in-place techniques. Texstar has indicated that lift-slab is a safe method as reflected by their worker's compensation experience modifier of 0.81 over the thirteen-year period from 1976 to 1987 [4]. For the same period, a total of 114 occupational injuries were recorded of which only 21 (18 percent of total "lift-slab" occupational injuries) were serious enough for the injured worker to lose worktime or to have experienced restricted work activity, or both. These cases resulted in a total injury incidence rate of 25.8 per 100 full-time workers. Of this, there was an incidence rate of 10.6 lost workdays per 100 full-time workers as compared with a rate of 142.2 lost workdays per 100 full-time workers for all of the construction industry during 1988 [4,7]. Moreover, Liftplate International has indicated that in their thirteen years of operation they have had no recordable injuries or fatalities related to lift-slab activities.

These company records do not represent the total risk picture for lift-slab operations because they do not account for fatalities and injuries to employees of other firms working on the same construction site. Of the 28 workers killed in the L'Ambiance Plaza accident, there were 7 carpenters, 7 ironworkers, 7 laborers, 3 plumbers, 1 electrician, 1 operating engineer, 1 bricklayer and 1 supervisor [8]. Texstar had only 17 employees on site and of these, 8 were killed and 2 injured. The lift-slab disaster is one of the five worst concrete building collapses over the past 15 years which involved considerable loss of life. This ranking is grossly disproportionate to the market share for this type of construction activity.

Nevertheless, industry commenters vigorously contend that restricting the availability of lift-slab methods would serve to increase the level of work-related risk by forcing workers who work on lift-slab jobs at ground level to be exposed to the more severe hazards associated with erecting formwork systems at heights. For example, in January 1988, two workers were killed and two were seriously injured when the topping lift pulled free of the boom on a mobile crane carrying formwork lumber to the second level of a building under construction. According to newspaper accounts, the lift-slab method had reportedly been considered for this project but was rejected due to safety concerns following the L'Ambiance failure.

In an ongoing analysis of structural failures, John Loss at the University of Maryland's Architectural and Engineering Performance Information Center has looked at many structural failures covering the period 1965 to present and has found none that involve the lift-slab method of construction. He states that "all construction is unsafe" and that "during construction the buildings are in their most critically unstable mode".

OSHA analyzed all the data in the record and found that all fatalities and injuries resulting from the L'Ambiance collapse are related to work practices which can be reduced by compliance with the standard while remaining cost effective. OSHA expects that the standard will enhance work safety by significantly reducing worker exposure to potentially catastrophic incidents. An annual estimate of fatalities avoided is not possible however since the L'Ambiance collapse provides the only data point. It can be stated that similar accidents with their associated fatalities will not occur in the future if firms comply with the revised standard.

Other Economic Effects

Environmental Impacts

The rule has been reviewed in accordance with the requirements of the National Environmental Policy Act (NEPA) of 1969 (42 U.S.C. 4231 *et. seq.*), the Regulations of the Council on Environmental Quality (CEQ) (40 CFR Part 1500), and OSHA's DOLNEPA Procedures (29 CFR Part 11).

The OSHA standard contains provisions for work practices and procedures to enhance safety in the workplace. The provisions of the standard focus on eliminating the possibility of accidents or injuries by means of work practices and procedures and proper use and handling of equipment. Consequently, no impact is foreseen on air, water, or soil quality, plant or animal life, the use of land or aspects of the environment. Therefore, the Assistant Secretary of OSHA has determined that the provisions of this standard will have no significant environmental effects.

Regulatory Flexibility Certification

Although the establishments that will be most affected by this revised regulation are best described as small businesses, only two firms will be significantly impacted. Therefore, OSHA has determined that this regulation, if promulgated, will not have a significant economic impact on a substantial number of small entities.

V. OMB Approval under the Paperwork Reduction Act.

There are no collections of information in this section. Therefore, approval by OMB under the Paperwork Reduction Act is not necessary.

VI. State Plan Requirements

The 25 states with their own OSHA-approved occupational safety and health plans must adopt a comparable standard within 6 months of the publication date of the final rule or show OSHA why there is no need for action, e.g. because an existing standard covering this area is already "at least as effective" as the revised Federal standard. These states are: Alaska, Arizona, California, Connecticut (for state and local government employees only), Hawaii, Indiana, Iowa, Kentucky, Maryland, Michigan, Minnesota, Nevada, New Mexico, New York (for state and local government employees only), North Carolina, Oregon, Puerto Rico, South Carolina, Tennessee, Utah, Vermont, Virginia, Virgin Islands, Washington and Wyoming.

VII. Federalism

The Final Rule has been reviewed in accordance with Executive Order 12612 (52 FR 41685; October 30, 1987) regarding Federalism. The Order requires that agencies, to the extent possible, refrain from limiting state policy options, consult with states prior to taking any actions that would restrict state policy options, and take such actions only when there is clear constitutional authority and the presence of a problem of national scope. The Order provides for preemption of state law only if there is a clear Congressional intent for the agency to do so. Any such preemption is to be limited to the extent possible.

Section 18 of the Occupational Safety and Health Act (OSH Act), expresses Congress' clear intent to preempt state laws relating to issues with respect to which Federal OSHA has promulgated occupational safety and health standards. Under the OSH Act, a state can avoid preemption only if it submits, and obtains Federal approval of a plan for the development of such standards and their enforcement. Occupational safety and health standards developed by such Plan States must, among other things, be at least as effective in providing safe and healthful employment and places of employment as the Federal standards. Where such standards are applicable to products distributed or used in interstate commerce, they may not unduly burden commerce and must be justified by compelling local conditions, *see* section 18(c)(2).

The Federal standard on lift-slab construction operations addresses hazards which are not unique to any one state or region of the country. Nonetheless, states with occupational safety and health plans approved under Section 18 of the OSH Act will be able to develop their own state standards to deal with any special problems which might be encountered in a particular state. Moreover, because this standard is written in general, performance-oriented terms, there is considerable flexibility for state plans to require, and for affected employers to use, methods of compliance which are appropriate to the working conditions covered by the standard.

In brief, this Final Rule addresses a clear national problem related to occupational safety and health in the construction industry. Those states which have elected to participate under Section 18 of the OSH Act are not preempted by this standard, and will be able to address any special conditions within the framework of the Federal Act while ensuring that the state standards are at least as effective as that standard.

Authority

This document was prepared under the direction of Gerard F. Scannell, Assistant Secretary of Labor for

Occupational Safety and Health, U.S. Department of Labor, 200 Constitution Avenue, NW., Washington, DC 20210.

Accordingly, pursuant to sections 4, 6(b) and 8(c) of the Occupational Safety and Health Act of 1970 (29 U.S.C. 653, 655, 657), section 107 of the Contract Work Hours and Safety Standards Act (40 U.S.C. 333), Secretary of Labor's Order No. 1–90 (55 FR 9033) and 29 CFR part 1911, 29 CFR part 1926 is amended as set forth below.

Signed at Washington, DC, this 12th day of October, 1990.

Gerard F. Scannell,

Assistant Secretary of Labor.

Part 1926 of title 29 of the Code of Federal Regulations is amended as follows:

PART 1926—[AMENDED]

Subpart I—Tools—Hand and Power

1. The authority citation for subpart I of part 1926 is revised to read as follows:

Authority: Sec. 107, Contract Work Hours and Safety Standards Act (Construction Safety Act) (40 U.S.C. 333); Secs. 4, 6 and 8 Occupational Safety and Health Act of 1970 (29 U.S.C. 653, 655, and 657); Secretary of Labor's Order No. 12–71 (36 FR 8754), 8–76 (41 FR 25059), 9–83 (48 FR 35736), or 1–90 (55 FR 9033), as applicable; and 29 CFR part 1911.

§ 1926.305 [Amended]

2. By amending § 1926.305 to remove and reserve paragraph (b).

Subpart Q—Concrete and Masonry Construction

3. The authority citation for subpart Q of part 1926 is revised to read as follows:

Authority: Sec. 107, Contract Work Hours and Safety Standards Act (Construction Safety Act) (40 U.S.C. 333); Secs. 4, 6 and 8 Occupational Safety and Health Act of 1970 (29 U.S.C. 653, 655, and 657); Secretary of Labor's Order No. 12–71 (36 FR 8754), 8–76 (41 FR 25059), 9–83 (48 FR 35736), or 1–90 (55 FR 9033), as applicable; and 29 CFR part 1911.

4. By amending § 1926.700 to add a new paragraph (b)(9) to read as follows.

§ 1926.700 Scope, application and definitions applicable to this subpart.

* * * * * *

(b) * * *

(9) *Jacking operation* means the task of lifting a slab (or group of slabs) vertically from one location to another (e.g., from the casting location to a temporary (parked) location, or from a temporary location to another temporary location, or to its final location in the structure), during the construction of a building/structure where the lift-slab process is being used.

5. By revising § 1926.705 to read as follows:

§ 1926.705 Requirements for lift-slab construction operations.

(a) Lift-slab operations shall be designed and planned by a registered professional engineer who has experience in lift-slab construction. Such plans and designs shall be implemented by the employer and shall include detailed instructions and sketches indicating the prescribed method of erection. These plans and designs shall also include provisions for ensuring lateral stability of the building/structure during construction.

(b) Jacks/lifting units shall be marked to indicate their rated capacity as established by the manufacturer.

(c) Jacks/lifting units shall not be loaded beyond their rated capacity as established by the manufacturer.

(d) Jacking equipment shall be capable of supporting at least two and one-half times the load being lifted during jacking operations and the equipment shall not be overloaded. For the purpose of this provision, jacking equipment includes any load bearing component which is used to carry out the lifting operation(s). Such equipment includes, but is not limited, to the following: threaded rods, lifting attachments, lifting nuts, hook-up collars, T-caps, shearheads, columns, and footings.

(e) Jacks/lifting units shall be designed and installed so that they will neither lift nor continue to lift when they are loaded in excess of their rated capacity.

(f) Jacks/lifting units shall have a safety device installed which will cause the jacks/lifting units to support the load in any position in the event any jack/lifting unit malfunctions or loses its lifting ability.

(g) Jacking operations shall be synchronized in such a manner to ensure even and uniform lifting of the slab. During lifting, all points at which the slab is supported shall be kept within 1/2 inch of that needed to maintain the slab in a level position.

(h) If leveling is automatically controlled, a device shall be installed that will stop the operation when the ½inch tolerance set forth in paragraph (g) of this section is exceeded or where there is a malfunction in the jacking (lifting) system.

(i) If leveling is maintained by manual controls, such controls shall be located in a central location and attended by a competent person while lifting is in progress. In addition to meeting the definition in § 1926.32(f), the competent person must be experienced in the lifting operation and with the lifting equipment being used.

(j) The maximum number of manually controlled jacks/lifting units on one slab shall be limited to a number that will permit the operator to maintain the slab level within specified tolerances of paragraph (g) of this section, but in no case shall that number exceed 14.

(k)(1) No employee, except those essential to the jacking operation, shall be permitted in the building/structure while any jacking operation is taking place unless the building/structure has been reinforced sufficiently to ensure its integrity during erection. The phrase "reinforced sufficiently to ensure its integrity" used in this paragraph means that a registered professional engineer, independent of the engineer who designed and planned the lifting operation, has determined from the plans that if there is a loss of support at any jack location, that loss will be confined to that location and the structure as a whole will remain stable.

(2) Under no circumstances, shall any employee who is not essential to the jacking operation be permitted immediately beneath a slab while it is being lifted.

(3) For the purpose of paragraph (k) of this section, a jacking operation begins when a slab or group of slabs is lifted and ends when such slabs are secured (with either temporary connections or permanent connections).

(4) Employers who comply with appendix A to § 1926.705 shall be considered to be in compliance with the provisions of paragraphs (k)(1) through (k)(3) of this section.

(l) When making temporary connections to support slabs, wedges shall be secured by tack welding, or an equivalent method of securing the wedges to prevent them from falling out of position. Lifting rods may not be released until the wedges at that column have been secured.

(m) All welding on temporary and permanent connections shall be performed by a certified welder, familiar with the welding requirements specified in the plans and specifications for the lift-slab operation.

(n) Load transfer from jacks/lifting units to building columns shall not be executed until the welds on the column shear plates (weld blocks) are cooled to air temperature.

(o) Jacks/lifting units shall be positively secured to building columns so that they do not become dislodged or dislocated.

(p) Equipment shall be designed and installed so that the lifting rods cannot slip out of position or the employer shall institute other measures, such as the use of locking or blocking devices, which will provide positive connection between the lifting rods and attachments and will prevent components from disengaging during lifting operations.

Appendix to §1926.705—Lift-Slab Operations

(This Appendix is non-mandatory.)

In paragraph 1926.705(k), OSHA requires employees to be removed from the building/structure during jacking operations unless an independent registered professional engineer, other than the engineer who designed and planned the lifting operation, has determined that the building/structure has been sufficiently reinforced to insure the integrity of the building/structure. One method to comply with this provision is for the employer to ensure that continuous bottom steel is provided in every slab and in both directions through every wall or column head area. (Column head area means the distance between lines that are one and one half times the thickness of the slab or drop panel. These lines are located outside opposite faces of the outer edges of the shearhead sections—See Figure 1). The amount of bottom steel shall be established by assuming loss of support at a given lifting jack and then determining the steel necessary to carry, by catenary action over the span between surrounding supports, the slab service dead load *plus* any service dead and live loads likely to be acting on the slab during jacking. In addition, the surrounding supports must be capable of resisting any additional load transferred to them as a result of the loss of support at the lifting jack considered.

Part III

Environmental Protection Agency

40 CFR Part 414

Organic Chemicals, Plastics and Synthetic Fibers Category Effluent Limitations Guidelines, Pretreatment Standards, and New Source Performance Standards; Proposed Rule

BEST COPY AVAILABLE

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 414

[FRL-3808-4]

Organic Chemicals, Plastics and Synthetic Fibers Category Effluent Limitations Guidelines, Pretreatment Standards, and New Source Performance Standards

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: EPA proposes several amendments to 40 CFR part 414, which limits effluent discharges to waters of the United States and the introduction of pollutants into publicly owned treatment works by existing and new sources in the organic chemicals, plastics, and synthetic fibers (OCPSF) point source category. EPA agreed to propose one of the amendments in a settlement agreement with W.R. Grace & Company (Grace), Koppers Company, Inc. (Koppers), E.I. DuPont de Nemours & Company (DuPont), and the Chemical Manufacturers Association (CMA). The agreement partially settled a dispute between those petitioners and EPA that was the subject of a petition for judicial review of the final OCPSF regulation promulgated by EPA on November 5, 1987 (52 FR 42522). The proposed amendment allows regulatory authorities to establish alternative cyanide limitations and standards based on best professional judgment for elevated levels of non-amenable cyanide that result from the unavoidable complexing of cyanide at the process source of cyanide-bearing waste streams.

As a result of separate negotiations with CMA and DuPont during the OCPSF litigation, EPA agreed to propose amendments to: (1) Allow regulatory authorities to establish alternative metals limitations and standards to accommodate low background levels of metals in non-"metal-bearing waste streams" that result from corrosion of construction materials or from contamination of raw materials, (2) specify in 40 CFR part 414 the method for determining five-day biochemical oxygen demand (BOD_5) and total suspended solids (TSS) effluent limitations for direct discharge plants that manufacture products in more than one subcategory, and (3) correct listing errors in appendices A and B of part 414.

Finally, as a result of additional EPA reviews of part 414 including those associated with evaluating various Category Determination Requests related to the applicability of the OCPSF regulations submitted pursuant to 40 CFR 403.6(a), EPA is proposing amendments to: (1) Revise the applicability sections of the Other Fibers, Thermoplastic Resins, and Thermosetting Resins Subcategories to correspond to the rulemaking record technical data and analyses, (2) delete one product and two product groups from coverage by this regulation, and (3) move the coverage of two products and one product group from the Bulk Organic Chemicals Subcategory (§ 414.70) to the Specialty Organic Chemicals Subcategory (§ 414.80).

After addressing comments received in response to this proposal, EPA intends to promulgate a final rule.

DATE: Comments on this proposal must be received by November 19, 1990.

ADDRESSES: Send comments to or obtain technical information from George M. Jett, Project Officer, Chemicals Branch, Industrial Technology Division (WH-552), Environmental Protection Agency, 401 M Street, SW., Washington, DC 20460, Attention ITD Docket Clerk, Organic Chemicals, Plastics, and Synthetic Fibers Industry (WH-552). The supporting information and all comments on this proposal will be available for inspection and copying at the EPA Public Information Reference Unit, Room 2404 (EPA Library Rear) PM-213.

FOR FURTHER INFORMATION CONTACT: George M. Jett at (202) 382-7151.

I. Legal Authority

The amendments to 40 CFR part 414 described in this notice are proposed under authority of sections 301, 304, 306, 307, 308, and 501 of the Clean Water Act (the Federal Water Pollution Control Act Amendments of 1972, as amended (33 U.S.C. 1251 et seq.)), also referred to as "the Act."

II. Background

A. Prior Regulation and Litigation

EPA promulgated a regulation on November 5, 1987, establishing effluent limitations guidelines and standards for the OCPSF point source category based on the best practicable control technology currently available ("BPT"), the best available technology economically achievable ("BAT"), new source performance standards ("NSPS") for direct dischargers, and pretreatment standards for existing and new source indirect dischargers ("PSES" and "PSNS," respectively) (52 FR 42522; 40 CFR part 414, subparts A through J). The regulation initially controlled the discharge of 63 toxic and 3 conventional pollutants. The technology bases for these limitations and standards include steam stripping, chemical precipitation, chemical oxidation, activated carbon, biological treatment, and chemically assisted clarification.

Twenty-eight industry petitioners, comprised of trade associations and individual companies, and the Natural Resources Defense Council (NRDC) challenged this regulation in several circuits of the U.S. Court of Appeals. The consolidated cases were assigned to the Fifth Circuit Court of Appeals. The petitioners raised approximately 63 separate issues.

On March 30, 1989, the Fifth Circuit issued a decision that upheld the regulations against all industry challenges and all but two challenges brought by NRDC. With respect to two challenges brought by NRDC, the Court remanded the regulation to EPA for further rulemaking to determine whether the rule should be made more stringent in certain respects, but left the rule in effect pending further rulemaking. *Chemical Manufacturers Association* v. *Environmental Protection Agency*, 870 F.2d 177 (5th Cir. 1989).

Six petitioners or groups of petitioners filed petitions for rehearing on about 16

BEST COPY AVAILABLE

issues. On October 10, 1989, the Court granted rehearing in part and remanded two parts of the regulations to EPA for further rulemaking proceedings (885 F.2d 253 (5th Cir. 1989)). The first and more significant part consists of the effluent limitations for 19 of the 20 pollutants in BAT Subcategory 2 (40 CFR 414.101) that were based upon in-plant biological treatment technology. (The court left in effect the limitation for acrylonitrile that was based upon this technology.) This aspect of the remand in effect also remands the new source performance standards for these 19 pollutants for discharges that are subject to 40 CFR 414.101 limitations. In addition, it remands the PSES and PSNS standards for 13 pollutants that were based upon the remanded BAT Subcategory 2 limitations. The second remanded part of the regulation consists of limitations and standards for pollutants discharged from three metal-bearing waste streams that EPA had erroneously listed in part 414, appendix A.

In response to the Court's decision, EPA revoked on June 29, 1990 (55 FR 26691) the remanded limitations and standards and deleted two of the three metal-bearing waste streams remanded by the Court. The third metal-bearing waste stream had previously been deleted on June 29, 1989 (54 FR 27351). The Agency has initiated technical studies as a basis for future re-proposal of these deleted limitations and standards.

B. Partial Settlement Agreement

On March 29, 1989, petitioners Grace, Koppers, DuPont, and CMA and respondent EPA entered into a Partial Settlement Agreement which resolved all issues raised by these petitioners with respect to EPA's decision not to list any complexed-cyanide wastestreams in 40 CFR 414 appendix B. EPA agreed to propose specific preamble language and specific amendments to the OCPSF regulation and solicit comments regarding these proposed amendments.

C. Other Negotiations and Review of the OCPSF Regulation

During litigation of the OCPSF regulation, petitioners CMA and DuPont and respondent EPA achieved an understanding with respect to several issues. On June 22, 1988, EPA agreed to propose several regulatory changes which would: (1) Allow regulatory authorities to establish limitations and standards for incidental sources of metals in non-"metal-bearing wastestreams;" (2) modify appendix A to delete the listing of five wastestreams that were incorrectly listed as cyanide-bearing wastestreams and delete three lead-bearing wastestreams that contain complexed-lead; and (3) publish one technical amendment to the regulation to include the BPT production-proportioning formula that was set forth in the October 1987 OCPSF Development Document (page IX–10).

In addition, as the result of many questions by permit writers, control authorities, and individual companies related to the applicability of the OCPSF regulation, including Category Determination Requests submitted under the provisions of 40 CFR 403.6(a), EPA has carefully reviewed the general applicability of each subcategory as well as the corresponding product and product group listings for each subcategory. Based on these reviews, EPA is proposing corrections to the general applicability of three subcategories to reflect the rulemaking record and analyses, to delete one product and two product groups from coverage by this regulation, and to move the coverage of two products and one product group from the Bulk Organic Chemicals Subcategory (§ 414.70) to the Specialty Organic Chemicals Subcategory (§ 414.80).

III. Proposed Amendments to the OCPSF Point Source Category Regulations

A. Total Cyanide Limitations

The limitations for total cyanide contained in the OCPSF final rule (40 CFR part 414) are based on alkaline chlorination data from the metal finishing industry (see the discussion in 52 FR 42541, November 5, 1987). As recognized in the Development Document underlying the metal finishing limitations, alkaline chlorination "focuses upon oxidizing the cyanide which is amenable to chlorination" (see page VII–128 of the June 1983 "Development Document for Effluent Limitations Guidelines and Standards for the Metal Finishing Point Source Category," EPA 440/1–83/091). Cyanide not amenable to chlorination due to complexing with other compounds may not be treatable by alkaline chlorination. For this reason, the metal finishing regulations contain "amenable cyanide" limitations that may be used as an alternative to total cyanide limitations (see e.g., 40 CFR 433.13(b)).

During the OCPSF rulemaking, several commenters argued that the proposed cyanide limitations should be applied to amenable cyanide (i.e., non-complexed cyanide) only. However, EPA was not aware of specific data demonstrating that the actual levels of complexing, at the product/process sources of cyanide where treatment technology could be installed, would interfere with the ability of plants within the OCPSF industry to meet the total cyanide limitations. On the other hand, end-of-pipe data from some industry plants do show evidence of cyanide complexing.

One of the issues raised by several petitioners in the OCPSF litigation was the unachievability of the total cyanide limitations for certain OCPSF cyanide-bearing waste streams due to complexing with other compounds. EPA has reviewed this issue carefully and agrees with petitioners that cyanide complexing could interfere with the ability of several OCPSF plants to comply with the total cyanide limitations for certain waste streams. However, the type, degree and relative importance of cyanide complexing may vary among different product/processes. Therefore, plants with significant levels of complexed cyanide will differ in their ability to achieve the total cyanide limitations, and those plants which cannot achieve such limitations for particular waste streams may need to use different types of technologies and may be able to achieve different limitations. Thus the proposed rule would allow the permit writer (for direct dischargers) or control authority (for indirect dischargers) to establish alternate total or amenable cyanide limits for waste streams that cannot, due to complexing at the end-of-the-process source (i.e., prior to commingling with other waste streams or corroded piping downstream from the process), achieve the total cyanide limits set forth in the OCPSF rule. For purposes of this definition, "end-of-the-process source" is the earliest point at which cyanide destruction can be economically and technologically achieved.

EPA considered addressing the issue of complexed cyanide-bearing waste streams by listing those product/process waste streams determined by EPA to contain significant levels of complexed cyanide, but EPA believes that leaving that determination to the permit writer or control authority can better take into account the differences among complexed-cyanide-bearing waste streams.

Available information indicates that cyanide complexing, although somewhat limited, does exist in the OCPSF industry. Moreover, minor amounts of complexing due to modest amounts of complexing agents may not preclude compliance with the promulgated total cyanide limitations. Therefore, the proposed amendment requires the permit writer or control authority to assess the relevant information concerning the degree of complexing

and the extent to which it impacts the ability to achieve the limitations and to set forth such findings in writing; for direct dischargers, the analysis will be contained in the permit fact sheet. This will assure that the specific cases where significant cyanide complexing precludes compliance with the limitations can be appropriately addressed by the permit writer or control authority, while the limitations will continue to apply in all other cases.

B. Incidental Sources of Metals

The final rule contains concentration-based effluent limitations and standards for chromium, copper, lead, nickel and zinc. The limitations are applied only to the flows discharged from "metal-bearing process wastewater," defined in the regulation to consist of discharges from the product/processes listed in Appendix A to Part 414 (Non-Complexed Metal-Bearing Waste Streams and Cyanide-Bearing Waste Streams) plus any additional process wastewater streams identified by the permitting or control authority on a case-by-case basis as "metal-bearing" based upon a determination—(1) That such streams contain significant amounts of the pollutants identified above and that (2) the combination of such streams, prior to treatment, with the appendix A waste streams will result in substantial reduction of these pollutants (see e.g., §§ 414.75 and 414.91). As noted in § 414.11(f), discharges of chromium, copper, lead, nickel, and zinc in "complexed metal-bearing waste streams," listed in appendix B to part 414, are not subject to the requirements of part 414. The permitting or control authority will establish appropriate metals limitations and standards on a case-by-case basis for the discharges listed in appendix B [52 FR 42543].

The regulations proposed in March 1983 (48 FR 11828) and the July 1985 notice of availability of new information and request for comments (50 FR 29068), which both set forth end-of-pipe concentration limitations for nine metals, were severely criticized by industry commenters. They argued that most priority pollutant metals are not present in significant quantities in OCPSF wastewater. They also argued that to the extent that EPA found metals in OCPSF wastewater, these pollutants resulted not from OCPSF processes but rather from non-process wastewater or due to their presence in intake waters. The Agency agreed with their conclusions that the OCPSF rule should regulate only those metals present in OCPSF process wastewater as a result of the process use of the metals, applying the limits to that wastewater only (see 52 FR 42542–43).

Therefore, the final regulation established concentration-based limitations for five metals that apply only to the process wastewater discharges listed in Appendix A or otherwise identified as "metal-bearing." The permit writer or control authority shall establish metal mass limitations or standards for each individual plant by summing the flows of "metal-bearing wastewater" and multiplying it by the concentration limitation for each of the five metals (see e.g., §§ 414.25(b) and 414.26(b)) . Compliance can be monitored in-plant or, after accounting for dilution by non-"metal-bearing" process wastewater and nonprocess wastewater, at the outfall (52 FR 42542–43).

However, the final regulation provides no authority for the permit writer or control authority to establish allowances for unavoidable low background levels of metals in non-"metal-bearing process waste streams" which may be present due to corrosion of construction materials or from contamination of raw materials.

Successful operation of chemical manufacturing facilities and proper maintenance of equipment depend on the appropriate selection of construction materials to resist corrosion. However, in some chemical processing environments, the effects of corrosion cannot be prevented. They can only be minimized through the proper selection of corrosion-resistant materials of construction.

Many corrosion-resistant materials commonly used to fabricate chemical processing plants contain chromium, copper, lead, nickel, and zinc. For example, many steel alloys containing various amounts of nickel, copper, and chromium are used to construct strong, heat-resistant pipes and vessels. Copper and its alloys—brasses (copper-zinc), bronzes (copper-tin), and cupronickels—are commonly used in chemical manufacturing where heat and electrical conductivity are important factors. Cupronickels are often used to construct heat-exchanger tubing. Vessels constructed of steel with a bonded lining of lead are sometimes specified for high temperature, fluctuating temperature, or vacuum operating conditions. Also, some chemical process equipment contains steel pipes and valves with internal lead cladding or copper heating coils with external lead cladding. The wear and tear of some chemical manufacturing processes, induced by concurrent mechanical and chemical or electrochemical action, may result in low concentrations of these metals in product/process wastewater which may in some instances be at measurable levels.

Furthermore, other non-process sources such as raw material contamination may also unavoidably result in low concentrations of these metals in process wastewater which may in some instances be at measurable levels. Commercial or industrial grades of chemical feedstocks and solvents commonly contain 0.5 percent (5,000 mg/l) or more of impurities. These impurities, which may include metals, are often unavoidable due to the operating characteristics of commercial chemical manufacturing plants. (see pages V–49 to V–89 of the October 1987, "Development Document for Effluent Limitations Guidelines and Standards for the Organic Chemicals, Plastics and Synthetic Fibers Point Source Category," EPA 440/1–87/009)

The proposed amendment described below does not apply to intake water contamination which is already accommodated in 40 CFR 122.45(g) for the direct dischargers and 40 CFR 403.15 for the indirect dischargers.

EPA proposes to amend the OCPSF rule to allow permit writers and control authorities in appropriate circumstances to provide allowances for metals that are incidentally contributed by non-process related sources such as corrosion and contamination of raw materials. The proposal restricts such allowances to situations where actual sampling data demonstrates the presence of metals resulting from such incidental sources, rather than allowing reliance on mere assertions or "estimates" that such metals are being discharged as the result of such sources. This assures that increased metals discharge allowances will not be authorized without an adequate basis. Moreover, any case-by-case metals allowances would be based on the permit writer's or control authority's best professional judgment (BPJ). In no event would the permit authorize exceedance of the concentrations demonstrated to be in the wastestream, and the limitations also could not exceed the regulatory limits established in the regulation for metal-bearing wastestreams. (For zinc, the regulatory limits which may not be exceeded are those appearing in the tables in §§ 414.25, 414.35, 414.91, and 414.101, not the higher alternative limits for rayon fiber manufacture by the viscose process and acrylic fiber manufacture by the zinc chloride/solvent process set forth in footnote 2 to each of these tables.)

The proposed amendment also requires the permit writer or control authority to assess the relevant information concerning the plant operating conditions that generate the background levels of metals and the basis for the BPJ limits and to set forth such findings in writing. For direct dischargers, the analysis will be contained in the permit fact sheet; control authorities will make a comparable record of their determinations for indirect dischargers. This will ensure that specific sources of metals, such as poor plant maintenance (e.g., leaking heat exchangers) and inappropriate materials of construction (e.g., use of mild steel in corrosive chemical environments where stainless steel or plastic materials of construction may be more suitable), are not a basis for metals allowances.

The Agency is also considering issuing guidance or promulgating standards that accommodate background levels of metals, if present at measurable levels, in non-"metal-bearing waste streams." The guidance or standards would be based on the assessment, outlined below, of OCPSF field sampling metals data gathered during the Agency's verification and 12-plant sampling efforts.

Chromium, copper, lead, nickel, and zinc data are available from 41 facilities in the OCPSF data base. Background levels of metals at these facilities have been determined after deletion of data from plants with process sources of metals such as catalysts or raw materials or from plants with non-process sources of metals such as zinc or chromium from algaecides or scale inhibitors. Other editing rules include deletion of a plant data set for a metal if all reported values are below the analytical minimum level ("not detected") or if fewer than three values are above the analytical minimum level. If a plant was sampled more than once, then the most recent data set is used in the analysis. Based on these editing criteria, the long-term average background levels listed below reflect the median of plant averages:

Pollutant	Concentration (ppb)
Chromium	132
Copper	23
Lead	114
Nickel	258
Zinc	57

The Agency requests daily data and supporting information regarding background levels of chromium, copper, lead, nickel, and zinc in OCPSF process wastewater that do not include contributions from "metal-bearing" process and non-process waste streams and contaminated intake water. The supporting documentation should contain such items as the analytical methods including the quality assurance/quality control documentation and analytical method minimum detection levels; identification of the sampling point on a block diagram; listings of all sources of wastewater at the sampling point including each OCPSF product/process; and a complete explanation of the source(s) of each metal including raw material assay sheets.

C. Revisions to Appendices A and B of 40 CFR 414

1. Cyanide-Bearing Waste Streams

One petitioner commented that five isocyanate processes associated with the manufacture of hexamethylene diisocyanate, methylene diphenylisocyanate, tolylene diisocyanate, polyurethane resins, and polyurethane fibers (Spandex) were incorrectly listed among the 42 cyanide-bearing wastestreams listed in appendix A to part 414. The petitioner stated that the five isocyanate processes were not known to use cyanide and isocyanates cannot produce cyanide, except through combustion.

These five wastestreams were originally listed as cyanide-bearing wastestreams based on information provided in responses to the 1983 OCPSF Section 308 Questionnaire—at least one manufacturer of these product/processes affiliated cyanide with the process. However, based on a reassessment of the process chemistry, the Agency agrees that cyanide is not associated with these product/processes and proposes to delete these five wastestreams from the appendix A list of cyanide-bearing wastestreams. The diisocyanate and polyurethane manufacturing processes are not primary sources of wastewater because water must be rigorously excluded from the chemical processes. To maintain water-free processing equipment, manufacturers would not use water washes for cleaning. However, these processes could be an indirect source of wastewater through, for example, the discharge from a caustic scrubber used to capture isocyanate-laden emissions from the polyurethane process. The isocyanates captured by the scrubber would react with the water to form carbon dioxide and amines, not cyanide.

2. Non-Complexed Metal-Bearing Waste Streams

As noted in item II.A above, several petitioners in the OCPSF litigation also noted that the listing of tetraethyl lead and tetramethyl lead waste streams as appendix A non-complexed metal-bearing waste streams contradicted other public record information which correctly characterizes tetraethyl and tetramethyl lead waste streams as containing complexed lead (see pages VII–21 to 22 of the October 1987 "Development Document for Effluent Limitations Guidelines and Standards for the Organic Chemicals, Plastics, and Synthetic Fibers Point Source Category," EPA 440/0–87/009). During the litigation, EPA reviewed this issue and agreed that these waste streams contain complexed lead and, therefore, should be moved from appendix A (Non-Complexed Metal-Bearing Waste Streams) to appendix B (Complexed Metal-Bearing Waste Streams). In response to the Fifth Circuit remand in *Chemical Manufacturers Association* v. *EPA*, 885 F.2d 253 (5th Cir. 1989), EPA deleted the tetraethyl lead and tetramethyl lead waste streams from appendix A (55 FR 26691, June 29, 1990). Today, EPA proposes to add these waste streams to the appendix B listing of Complexed Metal-Bearing Waste Streams.

D. BOD_5 and TSS Limitations

Since promulgation of the regulations, members of the public have expressed concern that the BPT and NSPS portions of the OCPSF regulation do not include provisions that describe how to apportion BOD_5 and TSS concentration limitations for different subcategories to a multi-subcategory plant. They were concerned that permit writers may fail to use a production-proportioning approach as directed by the preamble (52 FR 42533, column 3; November 5, 1987), and as set forth in formulas and a detailed example in Section IX (pages IX–9 to IX–12) of the October 1987 "Development Document for Effluent Limitations Guidelines and Standards for the Organic Chemicals, Plastics and Synthetic Fibers Point Source Category" (EPA 440/1–87/009). To avoid any potential confusion on the matter, EPA proposes to add a paragraph to the applicability section of the regulation (§ 414.11) that mandates use of the production-proportioning formula for derivation of limitations for facilities with production in two or more subcategories.

Pursuant to this formula, any existing or new source direct discharge point source subject to two or more of

subparts B through H must achieve BOD_5 and TSS discharges not exceeding the quantity (mass) determined by multiplying the total OCPSF process wastewater flow subject to subparts B through H times the OCPSF production-proportioned BOD_5 and TSS concentration limitations. The plant-specific production-proportioned concentration limitation is derived by summing the products of the OCPSF production-proportion for each subcategory and the applicable subcategorical limitation.

E. Revisions to the Applicability of 40 CFR Part 414

1. Correction of Subparts C, D and E Applicability Sections

The applicability sections of the Other Fibers, Thermoplastic Resins, and Thermosetting Resins Subcategories (subparts C, D and E, respectively) are defined in terms of four- and five-digit Standard Industrial Classification (SIC) codes. However, these sections, as presently promulgated, incorrectly restrict the applicability of the subcategory limitations and standards only to the wastewater discharges from the manufacture of the specific products and product groups listed in §§ 414.30, 414.40, and 414.50. For the reasons summarized below, the applicability sections for these three SIC-code-based subcategories should be based on SIC code definitions alone; the lists of products and product groups do not contain all of the products included in the subcategorization analysis, the cost of compliance engineering analysis, and the economic impact analysis and should serve only as illustrations of the principal products and product groups within the SIC codes covered by the subcategories.

The Agency's October 1983 Clean Water Act Section 308 Survey (OMB Control Number 2040-0043)—the primary source of production information in the OCPSF rulemaking record—generally collected production and related technical and economic information based on SIC codes with selected production and technical information based on individual products and product groups. In general, only those respondents that were primary manufacturers of OCPSF products (i.e., OCPSF products comprised one-half or more of the weight of the plant's total production) reported individual product and product group information, and only for those products that comprised more than one percent of total plant production (part II, question B01). Aggregated information for the remaining OCPSF products were grouped using five-digit SIC codes (part II, question B03). Respondents that were secondary manufacturers of OCPSF products (i.e., OCPSF products comprised less than one-half of the weight of the plant's total production) reported aggregated production information grouped by eight-digit Census product SIC codes (part I, question 9).

The subcategorization analyses established the applicability of each subcategory. The data collection activities and the subsequent subcategorization analyses were designed to include all products and product groups within the five SIC codes of the OCPSF industry—SIC 2821 (Plastic Materials, Synthetic Resins, and Nonvulcanizable Elastomers, further subdivided into SIC 28213 and SIC 28214 for the thermoplastic resins and thermosetting resins, respectively), SIC 2823 (Cellulosic Man-Made Fibers), SIC 2824 (Synthetic Organic Fibers, Except Cellulosic), SIC 2865 (Cyclic Crudes and Intermediates, Dyes, and Organic Pigments), and SIC 2869 (Industrial Organic Chemicals, Not Elsewhere Classified). The applicability sections of the Commodity, Bulk, and Specialty Organic Chemicals subcategories (subparts F, G, and H, respectively) which cover the organic chemicals segment of the industry (SIC codes 2865 and 2869) correctly reflect the subcategorization analysis. Subpart F and G cover specified SIC 2865 and 2869 chemicals, while subpart H operates as a "catch-all," regulating all other SIC 2865 and 2869 organic chemicals not specifically covered by subparts F and G. However, as stated above the applicability sections to subparts C, D, and E incorrectly limit coverage to the specifically listed products and product groups. To accurately reflect the subcategorization analysis, the applicability sections of the plastics and synthetic fibers subcategories should be amended to cover all of the products included within SIC codes 2821 (28213 and 28214), 2823, and 2824 (except for cases where the general applicability provisions of § 414.11 modify such coverage).

The proposed amendments to the Other Fibers, Thermoplastic Resins, and Thermosetting Resins subcategories correct the applicability sections to accurately reflect the supporting analyses in the rulemaking record.

2. Deletion of Specific Products

The Agency proposes to delete one erroneous thermoplastic resin product listing (cellulose sponge) under § 414.40 and two erroneous bulk organic chemical product listings (sodium salts of dithiophosphates, and wax emulsions and dispersions) under § 414.70. These amendments are the result of extensive Agency review of the applicability of the OCPSF regulation prompted by several OCPSF litigation issues and the evaluation of Category Determination Requests submitted by several Industrial Users and POTWs as provided by 40 CFR 403.6(a).

i. Cellulose sponge (and cellophane), classified under SIC 3079 as Miscellaneous Plastics Products, were initially considered OCPSF products because the cellulosic resin raw material for both products was produced by the viscose process—a situation analogous to rayon fiber manufacture by the viscose process (SIC 2823). However, during the course of assessing public comments and developing the final OCPSF rulemaking data base of 939 plants, the Agency deleted cellophane (52 FR 42524; November 5, 1987) and intended to delete cellulose sponge from coverage as OCPSF products. Even though cellulose sponge, cellophane, and rayon use regenerated cellulose as a raw material, each product uses a different combination of additional raw materials and unit processes to manufacture the final product for sale in different markets. The OCPSF technical, cost, and economic impact data gathering efforts did not focus on manufacturing activities under SIC 3079. As a result EPA lacks cost and economic information from plants that report cellulose sponge production under SIC 3079. Even though the applicability section of the OCPSF regulation, § 414.11, provides for coverage of products classified by SIC codes 2821, 2823, 2824, 2865, and 2869 only, the Agency erroneously left the cellulose sponge listing in subpart D. Cellulose sponge is not listed by any plant in the final OCPSF data base.

ii. Dithiophosphate sodium salts are industrial inorganic chemicals, listed under SIC 2819, that were incorrectly listed as subpart G bulk organic chemical products. Consequently EPA is deleting the dithiophosphate sodium salts product group from subpart G.

iii. Wax emulsions and dispersions, which are formulated products, were incorrectly listed as subpart G bulk organic chemical products. The final regulations apply to wastewater discharges from the manufacture of OCPSF product/processes (40 CFR 414.11(a)). OCPSF manufacture consists of chemical syntheses such as esterification and oxidation and chemical engineering processes such as distillation and extraction. In contrast,

the regulation does not apply to the formulation of chemical products, such as wax emulsions and dispersions, through blending and mixing operations (54 FR 27351).

3. Transfer of Specific Product Listings

The Agency proposes to transfer the citric acid, aspirin, and fatty acid listings from the Bulk Organic Chemicals Subcategory (§ 414.70) to the Specialty Organic Chemicals Subcategory (§ 414.80). Like the proposed deletions in section III.E.2, above, these amendments are the result of extensive Agency review of the applicability of the OCPSF regulation prompted by several OCPSF litigation issues and the evaluation of Category Determination Requests submitted by several Industrial Users and POTWs as provided by 40 CFR 403.6(a).

Individual SIC 2865 and 2869 organic chemical products and product groups were assigned to the commodity, bulk, and specialty organic chemical subcategories based on total United States production volume of each product or group. The Commodity Organic Chemicals Subcategory includes products produced nationally in amounts greater than or equal to one billion pounds per year. The Bulk Organic Chemicals Subcategory includes products produced nationally in amounts less than one billion but more than 40 million pounds per year. The Specialty Organic Chemicals Subcategory includes products produced nationally in amounts less than or equal to 40 million pounds per year. (52 FR 42531–32; November 5, 1987) For the reasons described below, the Agency believes that most of the citric acid, aspirin, and fatty acids manufacture is excluded from coverage by the OCPSF regulation. Therefore, these products are more appropriately covered by the Specialty Organic Chemicals Subcategory.

i. Citric acid, listed under SIC 2869, is produced commercially by mycological fermentation using crude sugar solutions or extracted from citrus fruits and from pineapple wastes. However, under 40 CFR 414.11(e), the OCPSF regulations are not applicable to the manufacture of organic chemical compounds by fermentation processes or solely by extraction from plant and animal raw materials. Moreover, citric acid production is regulated by the Fermentation Products Subcategory of the Pharmaceutical Manufacturing regulation, 40 CFR part 439. Because the Agency is not aware of any significant commercial citric acid production through chemical synthesis by OCPSF plants, such production should not be included in the Bulk Organic Chemicals Subcategory. The Agency therefore proposes to regulate any chemical synthesis or by-product recovery of citric acid under the Specialty Organic Chemicals Subcategory.

ii. Aspirin or acetyl salicylic acid may be classified under more than one SIC code depending on its end use. Medicinal grade aspirin is included under SIC 2833 Medicinal Chemicals and Botanical Products (as a medicinal grade salicylic acid derivative) and regulated under the Chemical Synthesis Subcategory of the Pharmaceutical Manufacturing Regulations, 40 CFR part 439. Under the provisions of 40 CFR 414.11(d), medicinal grade aspirin manufacture is not regulated by the OCPSF regulation because previously promulgated regulations apply.

Since the Agency is not aware of any significant industrial grade aspirin production reported under SIC 2869, it is proposing to regulate industrial grade aspirin production under the Specialty Organic Chemicals Subcategory, rather than the Bulk Organic Chemicals Subcategory.

iii. Fatty acids may be classified under more than one SIC code depending on the source of raw materials or manufacturing process. The Agency did not include fatty acids derived from natural materials, classified under SIC 2899, as an OCPSF product group in its section 308 data gathering efforts because these fatty acids were outside of the scope of the study. However, higher-molecular weight, synthetic fatty acids are included in SIC 2869 and are thus within the scope of the OCPSF regulation.

Today, the Agency is clarifying that coverage of the OCPSF regulation does not include the fatty acids listed under SIC 2899—Chemicals and Chemical Preparations, Not Elsewhere Classified. Like some OCPSF products, these fatty acids are synthetically derived from naturally occurring raw materials. They are generally derived from animal, marine, and plant fats and oils by hydrolysis—a chemical reaction in which water reacts with another substance to form two or more new substances. Despite these similarities, the OCPSF technical, cost, and economic impact data gathering efforts did not focus on manufacturing activities under SIC 2899. As a result EPA lacks cost and economic information from plants that report fatty acid production under SIC 2899.

Moreover, under 40 CFR 414.11(d), the OCPSF regulations are not applicable if previously promulgated regulations apply. A significant portion of the fatty acid manufacture classified under SIC 2899 is already regulated by the Fatty Acid Manufacturing by Fat Splitting Subcategory of the Soap and Detergent Manufacturing regulations, 40 CFR part 417. The provisions of this subcategory "are applicable to discharges resulting from the splitting of fats to fatty acids by hydrolysis and the subsequent processing of the fatty acids (e.g., refining and hydrogenation) to produce a suitable feed material for manufacture of soap by fatty acid neutralization" (40 CFR 417.20).

Since synthetically derived fatty acids, such as branched chain synthetic aliphatic monocarboxylic acids, are classified under SIC 2869 and since the Agency is not aware of any significant fatty acid production reported under SIC 2869, the Agency proposes to regulate synthetic fatty acids under the Specialty Organic Chemicals Subcategory rather than the Bulk Organic Chemicals Subcategory.

IV. Solicitation of Technical Data and Comment on These Proposed Amendments

EPA invites and encourages public participation in this rulemaking. The Agency asks that any alleged deficiencies in the record of this proposal be identified with specificity and requires that suggested revisions or corrections be supported by relevant data and information.

V. Executive Order 12291

Executive Order 12291 requires EPA and other agencies to perform regulatory analyses of major regulations. Major rules are those which impose a cost on the economy of $100 million or more annually or have certain other economic impacts. This regulation is not a major rule because it merely clarifies the applicability of the regulation, corrects listing errors and establishes flexibility in implementing an existing regulation by allowing regulatory authorities to accommodate site specific factors relating to complexed-cyanide and unavoidable background levels of metals in non-metal-bearing waste streams. Today's proposed amendments do not impose significant new requirements; thus, they meet none of the criteria of a major rule as set forth in section 1(b) of the Executive Order. This rule was submitted to the Office of Management and Budget for review.

VI. Regulatory Flexibility Analysis

The Regulatory Flexibility Act, 5 U.S.C. 601 et seq., requires EPA and other agencies to prepare an initial regulatory flexibility analysis for all

proposed regulations that have a significant impact on a substantial number of small entities. No regulatory flexibility analysis is required, however, where the head of the Agency certifies that the rule will not have a significant economic impact on a substantial number of small entities. Based on the reasons discussed in the preceding paragraph, I hereby certify, pursuant to 5 U.S.C. 605(b), that this regulation will not have a significant impact on a substantial number of small entities.

VII. Paperwork Reduction Act

In accordance with the Paperwork Reduction Act of 1980, 44 U.S.C. 3500 et seq., EPA must submit a copy of any rule that contains a collection-of-information requirement to the Director of the Office of Management and Budget for review and approval. This proposal contains no additional information-collection requirements beyond those already required by 40 CFR part 403 and 40 CFR part 122, and therefore the Paperwork Reduction Act is not applicable.

List of Subjects in 40 CFR Part 414

Organic chemicals manufacturing, plastics manufacturing, synthetic fibers manufacturing, water pollution control, water treatment and disposal.

Dated: October 9, 1990.

William K. Reilly,

Administrator.

For the reasons set out in the preamble, 40 CFR part 414 is proposed to be amended as set forth below.

PART 414—ORGANIC CHEMICALS, PLASTICS, AND SYNTHETIC FIBERS

1. The authority citation for part 414 continues to read as follows:

Authority: Secs. 301, 304, 306, 307, and 501, Pub. L. 92-500, 86 Stat. 816, Pub. L. 95-217, 91 Stat. 1566, Pub. L. 100-4, 101 Stat. 7 (33 U.S.C. 1311, 1314, 1316, 4317, and 1361).

2. 40 CFR 414.11 is proposed to be amended by adding paragraphs (g), (h), and (i) to read as follows:

§ 414.11 Applicability.

* * * * *

(g) *Non-amendable Cyanide.* Discharges of cyanide in "cyanide-bearing waste streams" (listed in appendix A to this part) are not subject to the cyanide limitations and standards of this part if the permit writer or control authority: (1) Determines that the cyanide limitations and standards are not achievable due to elevated levels of non-amenable cyanide (i.e., cyanide that is not oxidized by chlorine treatment) that result from the unavoidable complexing of cyanide at the process source of the cyanide-bearing waste stream and (2) establishes an alternative total cyanide or amenable cyanide limitation that reflects the best available technology economically achievable. The determination must be based upon a review of relevant engineering, production, and sampling and analysis information, including measurements of both total and amenable cyanide in the waste stream. An analysis of the extent of complexing in the waste stream, based on the foregoing information, and its impact on cyanide treatability shall be set forth in writing and, for direct dischargers, be contained in the fact sheet required by 40 CFR 124.8.

(h) *Allowances for non-metal-bearing waste streams.* Discharge limitations for chromium, copper, lead, nickel, and zinc or discharge standards for lead and zinc may be established for waste streams not listed in appendix A and not otherwise determined to be "metal-bearing waste streams" if the permit writer or control authority determines that the wastewater metals contamination is due to unavoidable background levels from sources such as corrosion of construction materials or contamination of raw materials. (Intake water contamination is not subject to this paragraph. Rather it is subject to the provisions of 40 CFR 122.45(g) for direct dischargers and 40 CFR 403.15 for indirect dischargers.) The determination must be based upon a review of relevant plant operating conditions, process chemistry, engineering, and sampling and analysis information. An analysis of the sources and levels of the metals, based on the foregoing information, shall be set forth in writing; for direct dischargers, the analysis shall be contained in the fact sheet required by 40 CFR 124.8. For direct dischargers, the permit writer may establish limitations for chromium, copper, lead, nickel, and zinc for non-"metal-bearing waste streams" between zero (0) and the concentrations of such metals present in the wastestreams, but not to exceed the applicable limitations contained in §§ 414.91 and 414.101. (For zinc, the applicable limitations which may not be exceeded are those appearing in the tables in §§ 414.91 and 414.101, not the alternative limitations for rayon fiber manufacture by the viscose process and the acrylic fiber manufacture by the zinc chloride/solvent process set forth in footnote 2 to each of these tables.) For indirect dischargers, the control authority may establish standards for lead and zinc for non-"metal-bearing waste streams" between zero (0) and the concentration of such metals present in the wastestreams, but not to exceed the applicable standards contained in §§ 414.25, 414.35 414.45, 414.55, 414.65, 414.75, and 414.85. (For zinc, the applicable standards which may not be exceeded are those appearing in the tables in the above referenced sections, not the alternative standards for rayon fiber manufacture by the viscose process set forth in footnote 2 to the table in § 414.25, or the alternative standards for acrylic fiber manufacture by the zinc chloride/solvent process set forth in footnote 2 to the table in § 414.35.)

(i) *BOD_5 and TSS limitations for plants with production in two or more subcategories.* Any existing or new source direct discharge point source subject to two or more of subparts B through H must achieve BOD_5 and TSS discharges not exceeding the quantity (mass) determined by multiplying the total OCPSF process wastewater flow subject to subarts B through H times the following "OCPSF production-proportioned concentration": For a specific plant, let w_j be the proportion of the plant's total OCPSF production in subcategory j. Then the plant-specific production-proportioned concentration limitations are given by:

$$\text{Plant } BOD_5 \text{ Limit} = \sum_{j=B}^{} (w_j)(BOD_5 \text{ Limit}_j) \text{ and}$$

$$\text{Plant TSS Limit} = \sum_{i=B}^{H} (w_i)(\text{TSS Limit}_i).$$

The "BOD_5 $Limit_i$" and "TSS $Limit_i$," are the respective subcategorical BOD_5 and TSS Maximum for Any One Day or Maximum for Monthly Average limitations.

3. In appendix A to part 414 under the heading "Cyanide" the following entries are removed:

Hexamethylene diisocyanate/ Hexamethylene diamine (1,6-Diaminohexane) + phosgene,
Methylene Diphenylisocyanate (MDI)/ Phosgenation of methylene dianiline from Aniline + Formaldehyde,
Polyurethane resins/Diisocyanate + Polyoxyalkylene glycol,
Polyurethane fibers (Spandex)/ Polyoxyalkylene glycol + Tolylene diisocyante + dialkylamine," and
Tolylene diisocyanate (isomeric mixture)/ Tolylene diamines + Phosgene

4. Appendix B to part 414 is proposed to be amended by adding the following entries under the heading "lead"

Tetraethyl lead/Alkyl halide + sodium-lead alloy" and "Tetramethyl lead/Alkylhalide + sodium-lead alloy"

§§ 414.21, 414.31, 414.41, 414.51, 414.61, 414.71 and 414.81 [Amended]

5. In each of §§ 414.21, 414.31, 414.41, 414.51, 414.61, 414.71 and 414.81, the first sentence which reads "Except as provided in 40 CFR 125.30 through 125.32, any existing point source subject to this subpart must achieve discharges not exceeding the quantity (mass) determined by multiplying the process wastewater flow subject to this subpart times the concentration listed in the following table." is revised to read "Except as provided in 40 CFR 125.30 through 125.32, and in 40 CFR 414.11(i) for point sources with production in two or more subcategories, any existing point source subject to this subpart must achieve discharges not exceeding the quantity (mass) determined by multiplying the process wastewater flow subject to this subpart times the concentration listed in the following table."

6. Section 414.30 is proposed to be amended by revising the first sentence to read as follows:

§ 414.30 Applicability, description of the other fibers subcategory.

The provisions of this subpart are applicable to the process wastewater discharges resulting from the manufacture of products classified under SIC 2823 cellulosic man-made fibers, except Rayon, and SIC 2824 synthetic organic fibers including those fibers and fiber groups listed below."

7. Section 414.40 is proposed to be amended by revising the first sentence and by removing the entry for "Cellulose Sponge" from the list to read as follows:

414.40 Applicability description of the thermoplastic resins subcategory.

The provisions of this subpart are applicable to the process wastewater discharges resulting from the manufacture of the products classified under SIC 28213 thermoplastic resins including those resins and resin groups listed below. * * *

8. Section 414.50 is proposed to be amended by revising the first sentence to read as follows:

§ 414.50 Applicability, description of the thermosetting resins subcategory.

The provisions of this subpart are applicable to the process wastewater discharges resulting from the manufacture of the products classified under SIC 28214 thermosetting resins including those resins and resin groups listed below. * * *

§ 414.70 [Amended]

9. Section 414.70(a) is proposed to be amended by removing the entries "Citric Acid" and "Fatty Acids".

§ 414.70 [Amended]

10. Section 414.70(c) is proposed to be amended by removing the entry for "Aspirin".

§ 414.70 [Amended]

11. Section 414.70(e) is proposed to be amended by removing entries "Dithiophosphates, Sodium Salt" and "* Waxes, Emulsions—Dispersions".

Part IV

Department of Transportation

Federal Aviation Administration

14 CFR Part 39

Airworthiness Directives; Pratt and Whitney (PW) PW4000 Series Turbofan Engines; Final Rule

DEPARTMENT OF TRANSPORTATION

14 CFR Part 39

[Docket No. 90-ANE-27; Amdt. 39-6783]

Airworthiness Directives; Pratt and Whitney (PW) PW4000 Series Turbofan Engines

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule, request for comments.

SUMMARY: This amendment adopts a new airworthiness directive (AD), applicable to PW4000 series turbofan engines, which requires a one-time eddy current inspection of the low pressure turbine (LPT) shaft. This amendment is prompted by the finding of 15 LPT shafts with cracks located between 23 and 44 inches from the aft end. This condition, if not corrected, could result in LPT shaft failure causing total loss of engine thrust and inflight shutdown.

DATES: Effective October 18, 1990.

Comments for inclusion in the docket must be received on or before November 21, 1990.

The incorporation by reference of certain publications listed in the regulation is approved by the Director of the Federal Register as of October 18, 1990.

ADDRESSES: Submit comments in duplicate to the FAA, New England Region, Office of the Assistant Chief Counsel, Attention: Rules Docket No. 90-ANE-27, 12 New England Executive Park, Burlington, Massachusetts 01803, or deliver in duplicate to Room 311 at the above address.

Comments may be inspected at the above location between the hours of 8:00 a.m. and 4:30 p.m., Monday through Friday, except federal holidays.

The applicable engine manufacturer's service bulletin may be obtained from Pratt & Whitney, Publications Department, P.O. Box 611, Middletown, Connecticut 06457. This information may be examined at the FAA, New England Region, Office of the Assistant Chief Counsel, Room 311, 12 New England Executive Park, Burlington, Massachusetts 01803.

FOR FURTHER INFORMATION CONTACT: Mr. Chris Gavriel, Aerospace Engineer, Engine Certification Branch, ANE-141, Engine Certification Office, Engine & Propeller Directorate, Aircraft Certification Service, FAA, 12 New England Executive Park, Burlington, Massachusetts 01803; telephone (671) 273-7054.

SUPPLEMENTARY INFORMATION: This action is prompted by a report of a cracked LPT shaft identified during engine assembly after the shaft had undergone magnetic particle inspection, and by reports of 14 additional cracked shafts identified during a special inspection program established to determine the scope of the problem. One of the 14 cracked shafts was found on an engine in service. Review of available information indicates that the cracks had occurred during the quenching process along a specific section of the shaft inside diameter (ID) bore. These cracks were not detected in all instances during the subsequent magnetic particle inspection. The special inspection program, in combination with a review of the manufacturing records, has also indicated that certain shaft heat codes may have been more likely to develop cracks during the quenching process. For this reason, this AD requires an eddy current inspection of certain LPT shafts by October 31, 1990, and certain other LPT shafts that need to be inspected by December 31, 1990. The LPT shafts requiring inspection by December 31, 1990, are outside the population of LPT shaft heat codes found to contain cracks to date, however, they have been subjected to the same manufacturing process that induced the cracks and cannot be excluded as a potentially suspect population. Inclusion of the population of shafts requiring inspection by December 31, 1990, in this AD, without any further public notice, is due to the following reasons. This additional population of potentially suspect shafts is large (approximately 290), and timely execution and completion of this program requires initiation of the inspection program for these shafts concurrently with the population of shafts required to be inspected by October 31, 1990. Further, any delay in incorporation of this inspection program may result in a very short compliance interval. In addition, based on inspection findings the compliance schedule may be subject to further modification. For these reasons, incorporation of the requirement to complete the inspections of all LPT shafts before December 31, 1990, in this AD is justified in order to minimize the duration of the inspection program and reduce the exposure of revenue service engines to operation with potentially cracked LPT shafts. This condition, if not corrected, could result in LPT shaft failure causing total loss of engine thrust and inflight shutdown.

The FAA has reviewed and approved Pratt & Whitney Alert Service Bulletin (ASB) No. PW4ENG 72-328, dated September 28, 1990, which describes the eddy current inspection procedure.

Since this condition is likely to exist or develop in other engines of the same type design, this AD requires a one-time eddy current inspection of the ID bore of the LPT shaft, in accordance with the ASB previously described.

Since this condition will result in a total loss of engine thrust and inflight shutdown should an LPT shaft fail, there is a need to minimize the exposure of revenue service engines to operation with potentially cracked LPT shafts. Therefore, safety in air transportation requires adoption of this regulation without prior notice and public comment. In addition, based on the above and the need to inspect certain LPT shafts prior to October 31, 1990, a situation exists that requires the immediate adoption of this regulation. Therefore, it is found that notice and public procedure are impracticable, and good cause exists for the adoption of the amendment without public comment, and good cause exists for making this amendment effective in less than 30 days.

Although this action is in the form of a final rule, which involves an emergency and, thus, was not preceded by notice and public procedure, interested persons are invited to submit such written data, views, or arguments as they may desire regarding this AD. Communications should identify the docket number and be submitted in duplicate to the FAA, New England Region, Office of the Assistant Chief Counsel, Attention: Rules Docket No. 90-ANE-27, 12 New England Executive Park, Burlington, Massachusetts 01803. All communications received by the deadline date indicated above will be considered by the Administrator and the AD may be changed in light of comments received.

The regulations adopted herein will not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, in accordance with Executive Order 12612, it is determined that this final rule does not have sufficient federalism implications to warrant the preparation of a Federalism Assessment.

The FAA has determined that this regulation is an emergency regulation and that it is not considered to be major under Executive Order 12291. It is impracticable for the agency to follow the procedures of Executive Order 12291 with respect to this rule since the rule must be issued immediately to correct an unsafe condition in aircraft. It has been determined further that this action

involves an emergency regulation under DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979). If it is determined that this emergency regulation otherwise would be significant under DOT Regulatory Policies and Procedures, a final regulatory evaluation will be prepared and placed in the Rules Docket (otherwise, an evaluation is not required). A copy of it, if filed, may be obtained from the Rules Docket.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, the Federal Aviation Administration amends 14 CFR part 39 of the Federal Aviation Regulations as follows:

PART 39—[AMENDED]

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 1354(a), 1421 and 1423; 49 U.S.C. 106(g) (Revised Pub. L. 97-449, January 12, 1983); and 14 CFR 11.89.

§ 39.13 [Amended]

2. Section 39.13 is amended by adding a new airworthiness directive (AD) to read as follows:

Pratt & Whitney: Applies to Pratt & Whitney (PW) PW4050, PW4052, PW4056, PW4060, PW4060A, PW4152, PW4156, PW4158, and PW4460 turbofan engines installed on, but not limited to, Boeing 747, Boeing 767, Airbus A300, and Airbus A310 type aircraft.

Compliance required as indicated, unless previously accomplished.

To prevent a low pressure turbine (LPT) shaft failure that can cause a total loss of thrust and inflight shutdown, accomplish the following:

(a) Conduct a one-time eddy current inspection of the inner diameter bore surface of the LPT shaft, between 23 and 44 inches forward of the aft end, in accordance with the Accomplishment Instfuctions of PW Alert Service Bulletin (ASB) No. PW4ENG 72-328, dated September 28, 1990, for LPT shafts installed on engines identified by serial number in Table 2 of the ASB, prior to October 31, 1990.

(b) Conduct a one-time eddy current inspection of the inner diameter bore surface of the LPT shaft, between 23 and 44 inches forward of the aft end, in accordance with the Accomplishment Instructions of PW ASB No. PW4ENG 72-328, dated September 28, 1990, for LPT shafts installed in engines identified by serial number as follows, excluding those shafts subject to the requirements of (a) above, prior to December 31, 1990.

Engine model	Engine serial number
PW4050	P724201 through P724208, inclusive.
PW4052	P723701 through P723706, inclusive.
PW4056	P717501 through P717696, inclusive, except P717662.
PW4060	P724101 through P724184, inclusive.
PW4060A	P724501 through P724606, inclusive.
PW4152	P717701 through P717775, inclusive.
PW4156	P717201 through P717206, inclusive.
PW4158	P724001 through P724078, inclusive.
PW4460	P723601 through P723628, inclusive.

(c) Remove from service, prior to further flight, LPT shafts found cracked during inspections conducted in accordance with (a) or (b) above.

(d) LPT shafts which have been previously inspected in accordance with PW Special Instruction 70F-90, dated September 14, 1990, are in compliance with this AD.

(e) Aircraft may be ferried in accordance with the provisions of FAR 21.197 and 21.199 to a base where the AD can be accomplished.

(f) Upon submission of substantiating data by an owner or operator through an FAA Airworthiness Inspector, an alternate method of compliance with the requirements of this AD or adjustments to the compliance times specified in this AD may be approved by the Manager, Engine Certification Office, ANE-140, Engine & Propeller Directorate, Aircraft Certification Service, FAA, 12 New England Executive Park, Burlington, Massachusetts 01803.

The eddy current inspections of the LPT shafts shall be done in accordance with the following PW document:

Document number	Page number	Issue/ revision	Date
PW ASB PW4ENG 72-328.	All	Original	9/28/90

This incorporation by reference was approved by the Director of the Federal Register in accordance with 5 U.S.C. 522(a) and 1 CFR part 51. Copies may be obtained from Pratt & Whitney, Publications Department, P.O. Box 611, Middletown, Connecticut 06457. Copies may be inspected at the Regional Rules Docket, Office of the Assistant Chief Counsel, FAA, New England Region, 12 New England Executive Park, Room 311, Burlington, Massachusetts 01803, or at the Office of the Federal Register, 1100 L Street, NW., Room 8301, Washington, DC 20571.

This amendment becomes effective on October 18, 1990.

Issued in Burlington, Massachusetts, on October 12, 1990.

Jack A. Sain,

Manager, Engine and Propeller Directorate, Aircraft Certification Service.

LIST OF PUBLIC LAWS

Last List October 17, 1990

This is a continuing list of public bills from the current session of Congress which have become Federal laws. It may be used in conjunction with "P L U S" (Public Laws Update Service) on 523–6641. The text of laws is not published in the Federal Register but may be ordered in individual pamphlet form (referred to as "slip laws") from the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402 (phone 202–275–3030).

H.R. 1343/Pub. L. 101–425
Department of Energy Metal Casting Competitiveness Research Act of 1990. (Oct. 15, 1990; 104 Stat. 915; 5 pages) Price: $1.00

H.R. 2372/Pub. L. 101–426
Radiation Exposure Compensation Act. (Oct. 15, 1990; 104 Stat. 920; 7 pages) Price: $1.00

S. 2888/Pub. L. 101–427
To redesignate The National System of Interstate and Defense Highways as The Dwight D. Eisenhower System of Interstate and Defense Highways. (Oct. 15, 1990; 104 Stat. 927; 1 page) Price: $1.00

Public Laws

are now available for the 101st Congress, 2nd Session, 1990

Pamphlet prints of public laws, often referred to as slip laws, are the initial publication of Federal laws upon enactment and are printed as soon as possible after approval by the President. Legislative history references appear on each law. Subscription service includes all public laws, issued irregularly upon enactment, for the 101st Congress, 2nd Session, 1990.

(Individual laws also may be purchased from the Superintendent of Documents, Washington, DC 20402-9328. Prices vary. See Reader Aids Section of the Federal Register for announcements of newly enacted laws and prices).

Guide to Record Retention Requirements

in the Code of Federal Regulations (CFR)

GUIDE: Revised January 1, 1989
SUPPLEMENT: Revised January 1, 1990

The GUIDE and the SUPPLEMENT should be used together. This useful reference tool, compiled from agency regulations, is designed to assist anyone with Federal recordkeeping obligations.

The various abstracts in the GUIDE tell the user (1) what records must be kept, (2) who must keep them, and (3) how long they must be kept.

The GUIDE is formatted and numbered to parallel the CODE OF FEDERAL REGULATIONS (CFR) for uniformity of citation and easy reference to the source document.

Compiled by the Office of the Federal Register, National Archives and Records Administration.

Order from Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402–9325.

Superintendent of Documents Publication Order Form

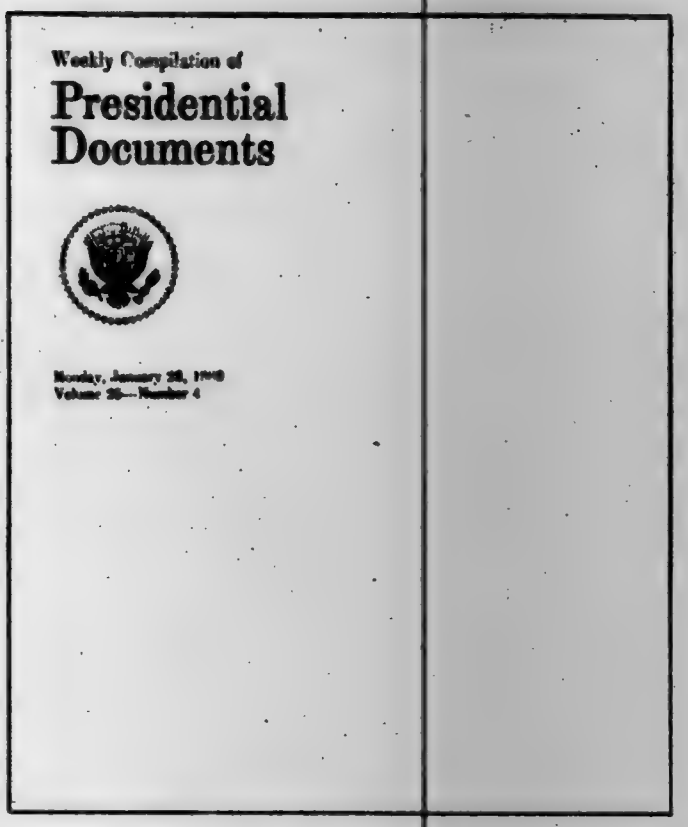
The authentic text behind the news

The Weekly Compilation of **Presidential Documents**

Administration of George Bush



This unique service provides up-to-date information on Presidential policies and announcements. It contains the full text of the President's public speeches, statements, messages to Congress, news conferences, personnel appointments and nominations, and other Presidential materials released by the White House.

The Weekly Compilation carries a Monday dateline and covers materials released during the preceding week. Each issue contains an Index of Contents and a Cumulative Index to Prior Issues.

Separate indexes are published periodically. Other features include lists of acts approved by the President, nominations submitted to the Senate, a checklist of White House press releases, and a digest of other Presidential activities and White House announcements.

Published by the Office of the Federal Register, National Archives and Records Administration.

The Federal Register

Regulations appear as agency documents which are published daily in the **Federal Register** and codified annually in the **Code of Federal Regulations**

The **Federal Register**, published daily, is the official publication for notifying the public of proposed and final regulations. It is the tool for you to use to participate in the rulemaking process by commenting on the proposed regulations. And it keeps you up to date on the Federal regulations currently in effect.

Mailed monthly as part of a **Federal Register** subscription are: the LSA (List of CFR Sections Affected) which leads users of the **Code of Federal Regulations** to amendatory actions published in the daily **Federal Register**; and the cumulative **Federal Register** Index.

The **Code of Federal Regulations** (CFR) comprising approximately 196 volumes contains the annual codification of the final regulations printed in the **Federal Register**. Each of the 50 titles is updated annually.

Individual copies are separately priced. A price list of current CFR volumes appears both in the **Federal Register** each Monday and the monthly LSA (List of CFR Sections Affected). Price inquiries may be made to the Superintendent of Documents, or the Office of the Federal Register.

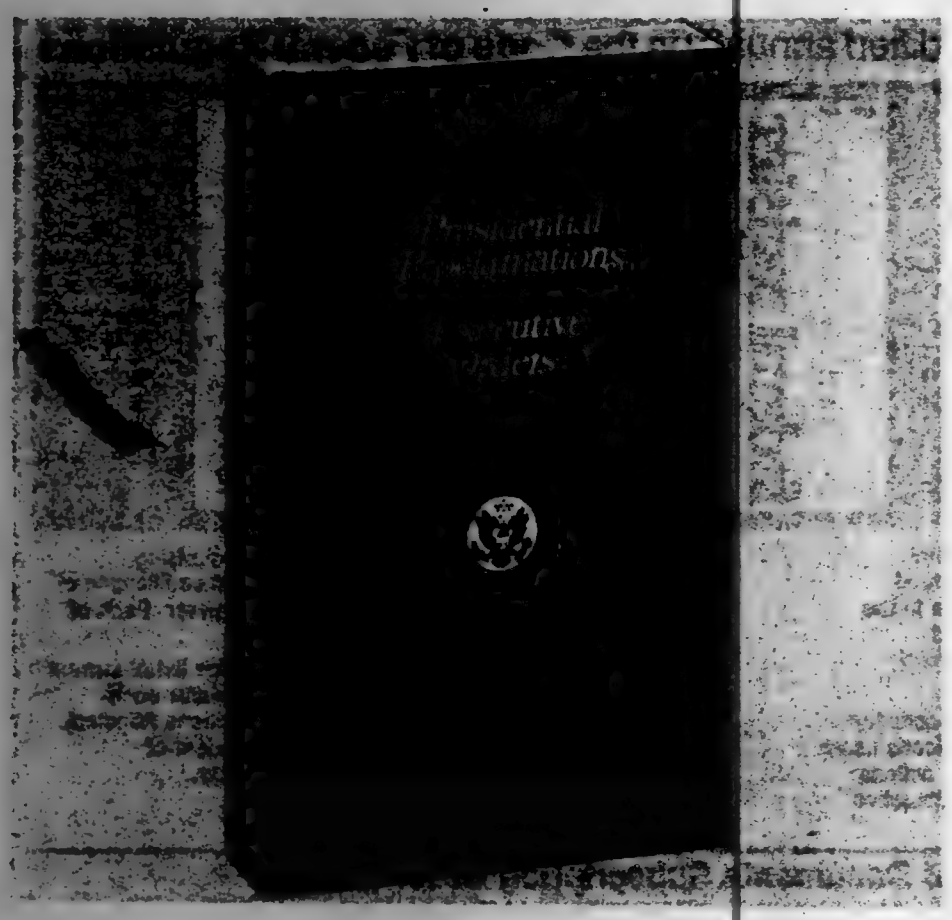
New edition .... Order now !



For those of you who must keep informed about Presidential Proclamations and Executive Orders, there is a convenient reference source that will make researching these documents much easier.

Arranged by subject matter, this edition of the *Codification* contains proclamations and Executive orders that were issued or amended during the period April 13, 1945, through January 20, 1989, and which have a continuing effect on the public. For those documents that have been affected by other proclamations or Executive orders, the codified text presents the amended version. Therefore, a reader can use the *Codification* to determine the latest text of a document without having to "reconstruct" it through extensive research.

Special features include a comprehensive index and a table listing each proclamation and Executive order issued during the 1945–1989 period—along with any amendments—an indication of its current status, and, where applicable, its location in this volume.

FEDERAL REGISTER Published daily, Monday through Friday, (not published on Saturdays, Sundays, or on official holidays), by the Office of the Federal Register, National Archives and Records Administration, Washington, DC 20408, under the Federal Register Act (49 Stat. 500, as amended; 44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). Distribution is made only by the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402.

The Federal Register provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders and Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress and other Federal agency documents of public interest. Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless earlier filing is requested by the issuing agency.

The seal of the National Archives and Records Administration authenticates this issue of the Federal Register as the official serial publication established under the Federal Register Act. 44 U.S.C. 1507 provides that the contents of the Federal Register shall be judicially noticed.

The Federal Register will be furnished by mail to subscribers for $340 per year in paper form; $195 per year in microfiche form; or $37,500 per year for the magnetic tape. Six-month subscriptions are also available at one-half the annual rate. The charge for individual copies in paper or microfiche form is $1.50 for each issue, or $1.50 for each group of pages as actually bound, or $175.00 per magnetic tape. Remit check or money order, made payable to the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402, or charge to your GPO Deposit Account or VISA or Mastercard.

There are no restrictions on the republication of material appearing in the Federal Register.

How To Cite This Publication: Use the volume number and the page number. Example: 55 FR 12345.

Title 3—

The President

Proclamation 6286 of October 17, 1990

National Drug-Free Schools and Communities Education and Awareness Day, 1990

By the President of the United States of America

A Proclamation

Our Nation's efforts to eliminate the scourge of illicit drug use and trafficking—efforts made in cooperation with other countries and conducted at all levels of law enforcement—have begun to bear fruit. In many parts of the United States today cocaine is harder to find, more expensive, and less pure than it was one year ago. Drug cartels that once seemed invincible have seen their operations significantly disrupted. Last month, new survey research released by the Partnership for a Drug Free America confirmed a trend already observed in other surveys and government indicators: a turn away from drugs in American attitudes and behavior, especially among young people, fewer of whom are using drugs than at any time since 1979. Such progress accentuates the importance of maintaining a strong, united front among government officials, law enforcement personnel, parents, educators, and business and community leaders as we wage the war against drugs.

Although we have made important advances in the struggle to reclaim our schools and communities from the deadly influence of drug dealers, we know that there is still much work to do. Each day the news brings grim reminders of the violence and despair caused by substance abuse. Illicit drug use and its consequences affect Americans of every age, every region, every race, and every walk of life. The toll in terms of health care costs and other economic losses is enormous. The toll in terms of personal suffering and wasted human potential is incalculable.

The high price imposed on our society by drugs underscores the need for education and other efforts aimed at prevention. We must teach young Americans about the dangers of experimenting with drugs, and we must refuse to tolerate in our communities the merchants of death who deal them. Because children learn by example, we must also ensure that our own lives reflect strong values, respect for the law, and a sense of personal responsibility and concern for others.

Securing a drug-free future for every American school and community will require the personal commitment and sustained cooperation of parents, students, teachers, law enforcement personnel, members of the clergy, elected officials, and business and community leaders. On this occasion, let us renew our determination to promote policies, educational programs, and activities designed to deter drug use, and let us reaffirm our commitment to helping drug-addicted individuals in need of rehabilitation.

The Congress, by Senate Joint Resolution 304, has designated October 17, 1990, as "National Drug-Free Schools and Communities Education and Awareness Day" and has authorized and requested the President to issue a proclamation in observance of this day.

NOW, THEREFORE, I, GEORGE BUSH, President of the United States of America, do hereby proclaim October 17, 1990, as National Drug-Free Schools and Communities Education and Awareness Day. I urge all Americans and their elected representatives at every level of government to observe this day with appropriate programs, ceremonies, and activities.

IN WITNESS WHEREOF, I have hereunto set my hand this seventeenth day of October, in the year of our Lord nineteen hundred and ninety, and of the Independence of the United States of America the two hundred and fifteenth.

George Bush

Federal Register
Vol. 55, No. 203
Friday, October 19, 1990

This section of the FEDERAL REGISTER contains regulatory documents having general applicability and legal effect, most of which are keyed to and codified in the Code of Federal Regulations, which is published under 50 titles pursuant to 44 U.S.C. 1510.
The Code of Federal Regulations is sold by the Superintendent of Documents. Prices of new books are listed in the first FEDERAL REGISTER issue of each week.

DEPARTMENT OF AGRICULTURE

Office of the Secretary

7 CFR Part 1

Appearance of USDA Employees as Witnesses in Judicial or Administrative Proceedings

AGENCY: Office of the Secretary, USDA.
ACTION: Final rule.

SUMMARY: This document establishes procedures governing the appearance of USDA employees as witnesses in order to testify or produce official documents in judicial or administrative proceedings.

EFFECTIVE DATES: October 19, 1990.

FOR FURTHER INFORMATION CONTACT: Robert L. Siegler, Deputy Assistant General Counsel, Research and Operations Division, Office of the General Counsel, United States Department of Agriculture, Washington, DC 20250–1400, (202) 447–6035.

SUPPLEMENTARY INFORMATION: At present, USDA has an internal directive (Departmental Regulation 1530–1) that sets forth procedures governing the appearance of USDA employees as witnesses in order to testify or produce official documents in administrative or judicial proceedings. In addition, as part of its regulations relating to the Freedom of Information Act, USDA has a section relating to compulsory process (7 CFR 1.21). Finally, there is currently no regulation that specifically provides the conditions under which USDA will prohibit its employees who have received subpoenas from testifying as to matters that arise out of their employment with USDA, where the United States is not a party to the proceeding. This rule consolidates the provisions contained in 7 CFR 1.21 and in Departmental Regulation 1530–1, and adds provisions that provide the conditions under which employees may testify in judicial or administrative proceedings where their testimony arises out of their employment with USDA.

This rule relates to internal agency management. Therefore, pursuant to 5 U.S.C. 553, notice of proposed rulemaking and opportunity for comment are not required, and this rule may be made effective less than 30 days after publication in the Federal Register. Further, since this rule relates to internal agency management, it is exempt from the provisions of Executive Order No. 12291. Finally, this action is not a rule as defined by the Regulatory Flexibility Act, Public Law No. 96–354, and, thus, is exempt from the provisions of that Act.

List of Subjects in 7 CFR Part 1

Administrative practice and procedures; Witnesses.

PART 1—ADMINISTRATIVE REGULATIONS

Accordingly, part 1, title 7, Code of Federal Regulations is amended as follows:

1. The authority citation for part 1 continues to read as follows:

Authority: 5 U.S.C. 301, unless otherwise noted.

2. Section 1.21 is removed.

3. A new subpart K is added to read as follows:

Subpart K—Appearance of USDA Employees as Witnesses in Judicial or Administrative Proceedings.

Sec.

1.210 Purpose.
1.211 Definitions.
1.212 General.
1.213 Appearance as a witness on behalf of the United States.
1.214 Appearance as a witness on behalf of a party other than the United States where the United States is not a party.
1.215 Subpoenas duces tecum for USDA records in judicial or administrative proceedings in which the United States is not a party.
1.216 Appearance as a witness or production of documents on behalf of a party other than the United States where the United States is a party.
1.217 Witness fees and travel expenses.
1.218 Penalty.

Authority: 5 U.S.C. 301

§ 1.210 Purpose.

This subpart sets forth procedures governing the appearance of USDA employees as witnesses in order to testify or produce official documents in judicial or administrative proceedings when such appearance is in their official capacity or arises out of or is related to their employment with USDA. These regulations do not apply to appearances by USDA employees as witnesses in judicial or administrative proceedings which are purely personal or do not arise out of or relate to their employment with USDA. This subpart also does not apply to Congressional requests or subpoenas for testimony or documents.

§ 1.211 Definitions.

(a) *Administrative proceeding* means any proceeding pending before any federal, state, or local agency and undertaken for the purpose of the issuance of any regulations, orders, licenses, permits, or other rulings, or the adjudication of any matter, dispute, or controversy.

(b) *Appearance* means testimony or production of documents the request for which arises out of an employee's official duties with USDA or relates to his or her employment with USDA. For the purpose of this subpart, an appearance also includes an affidavit, deposition, interrogatory, or other required written submission.

(c) *Judicial proceeding* means any case or controversy pending before any federal, state, or local court.

(d) *Travel expenses* means the amount of money paid to a witness for reimbursement for transportation, lodging, meals, and other miscellaneous expenses in connection with attendance at a judicial or administrative proceeding.

(e) *USDA* means the United States Department of Agriculture.

(f) *USDA agency* means an organizational unit of USDA whose head reports to an official within the Office of the Secretary of Agriculture.

(g) *Valid summons, subpoena, or other compulsory process* means an order that is served properly and within the legal authority and the jurisdictional boundaries of the court or administrative agency or official that has issued it.

(h) *Witness fees* means the amount of money paid to a witness as

compensation for attendance at a judicial or administrative proceeding.

§ 1.212 General.

No USDA employee may provide testimony or produce documents in a judicial or administrative proceeding unless authorized in accordance with this subpart.

§ 1.213 Appearance as a witness on behalf of the United States.

An employee of USDA may appear as a witness on behalf of the United States in any judicial or administrative proceeding without the issuance of a summons, subpoena, or other compulsory process. Employees should obtain permission for such an appearance from their immediate supervisor unless the USDA agency or General Counsel has issued instructions providing otherwise.

§ 1.214 Appearance as a witness on behalf of a party other than the United States where the United States is not a party.

(a) An employee of USDA served with a valid summons, subpoena, or other compulsory process demanding his or her appearance, or otherwise requested to appear on behalf of a party other than the United States in a judicial or administrative proceeding in which the United States is not a party, shall promptly notify the head of his or her USDA agency of the existence and nature of the order compelling his or her appearance, or of the document requesting his or her attendance. He or she shall also specify, if that is known, the nature of the judicial or administrative proceeding and the nature of the testimony or documents requested.

(b)(1) An employee of USDA served with a valid summons, subpoena, or other compulsory process, or requested to appear as a witness on behalf of a party other than the United States in a judicial or administrative proceeding in which the United States is not a party, may appear only if such appearance has been authorized by the head of his or her USDA agency, with the concurrence of the General Counsel, based upon a determination that such an appearance is in the interest of USDA.

(2) An employee of USDA requested to appear as a witness on behalf of a party other than the United States in a judicial or administrative proceeding in which the United States is not a party, without the service of a valid summons, subpoena, or other compulsory process, may appear only if such appearance has been authorized by the head of his or her USDA agency and approved by the appropriate Assistant Secretary, Under Secretary or other general officer, and by the General Counsel, based upon a determination that such an appearance is in the interest of USDA.

(c) Unless an appearance is authorized as provided in paragraphs (b)(1) or (b)(2) of this section, the employee shall appear at the stated time and place (unless advised by the General Counsel or his or her designee that the summons, subpoena, or other process was not validly issued or served), produce a copy of these regulations and respectfully decline to provide any testimony. As appropriate, the General Counsel or his or her designee will request the assistance of the Department of Justice or of a United States Attorney, in the case of a judicial proceeding; or of the official or attorney representing the United States, in the case of an administrative proceeding, to represent the interests of the employee and USDA.

(d) If there is any question regarding the validity of a summons, subpoena, or other compulsory process, an employee shall contact the Office of the General Counsel for advice.

(e)(1) In determining whether the employee's appearance is in the interest of USDA, authorizing officials should consider the following:

(i) what interest of USDA would be promoted by the employee's testimony;

(ii) whether an appearance would result in an unnecessary interference with the duties of the USDA employee;

(iii) whether an employee's testimony would result in the appearance of improperly favoring one litigant over another.

(2) The considerations listed in paragraph (e)(1) of this section are illustrative and not exhaustive.

§ 1.215 Subpoenas duces tecum for USDA records in judicial or administrative proceedings in which the United States is not a party.

(a) Subpoenas duces tecum for USDA records in judicial or administrative proceedings in which the United States is not a party shall be deemed to be requests for records under the Freedom of Information Act and shall be handled pursuant to the rules governing public disclosure under subpart A of this part.

(b) Whenever a subpoena duces tecum compelling the production of records is served on a USDA employee in a judicial or administrative proceeding in which the United States is not a party, the employee, after consultation with the General Counsel or his or her designee, shall appear in response thereto, respectfully decline to produce the records on the grounds that it is prohibited by this section and state that the production of the records involved will be handled in accordance with subpart A of this part.

§ 1.216 Appearance as a witness or production of documents on behalf of a party other than the United States where the United States is a party.

(a) An employee of USDA served with a valid summons, subpoena, or other compulsory process demanding his or her appearance, or otherwise requested to appear or produce documents on behalf of a party other than the United States in a judicial or administrative proceeding in which the United States is a party, shall promptly notify the head of his or her USDA agency and the General Counsel or his or her designee of the existence and nature of the order compelling his or her appearance, or of the document requesting his or her appearance. He or she shall also specify, if that is known, the nature of the judicial or administrative proceeding and the nature of the testimony or documents requested.

(b)(1) Except as provided in paragraph (b)(2) of this section, an employee of USDA only may appear as a witness or produce records on behalf of a party other than the United States in a judicial or administrative proceeding in which the United States is a party if such appearance or production has been ordered by the service on the employee of a valid summons, subpoena, or other compulsory process issued by a court, administrative agency, or other official authorized to compel his or her appearance.

(2) An employee requested to appear as a witness or produce records on behalf of a party other than the United States in a judicial or administrative proceeding in which the United States is a party, without being served a valid summons, subpoena, or other compulsory process, may appear or produce records only if such appearance or production has been authorized by a representative of the Department of Justice, the United States Attorney, or other counsel who is representing the United States in the case of a judicial proceeding; or by the official or attorney representing the United States, in the case of an administrative proceeding.

(c) The head of the USDA agency shall consult with the General Counsel or his or her designee as to whether there are grounds to oppose the employee's attendance or production of documents and, if so, whether to seek to quash the summons, subpoena, compulsory process, or to deny authorization under paragraph (b)(2) of this section.

(d) As appropriate, the General Counsel or his or her designee will request the assistance of the Department of Justice, a United States Attorney, or other counsel representing the United States, in the case of a judicial proceeding; or of the official or attorney representing the United States, in the case of an administrative proceeding, to represent the interest of the employee and USDA.

(e) If there is any question regarding the validity of a summons, subpoena, or other compulsory process, an employee shall contact the Office of the General Counsel for advice.

§ 1.217 Witness fees and travel expenses.

(a) Any employee of USDA who attends a judicial or administrative proceeding as a witness in order to testify or produce official documents on behalf of the United States is entitled to travel expenses in connection with such appearance in accordance with the Agriculture Travel Regulations.

(b) An employee of USDA who attends a judicial or administrative proceeding on behalf of the United States is not entitled to receive fees for such attendance.

(c) An employee of USDA who attends a judicial or administrative proceeding on behalf of a party other than the United States when such appearance is in his or her official capacity or arises out of or relates to his or her employment with USDA is entitled to travel expenses in accordance with the Agriculture Travel Regulations to the extent that such expenses are not paid for by the court, agency, or official compelling his or her appearance or by the party on whose behalf he or she appears.

(d) An employee of USDA who attends a judicial or administrative proceeding on behalf of a party other than the United States when such appearance is in his or her official capacity or arises out of or relates to his or her employment with USDA is required to collect the authorized fees for such service and remit such fees to his or her USDA agency.

§ 1.218 Penalty.

An employee who testifies or produces records in a judicial or administrative proceeding in violation of the provisions of this regulation shall be subject to disciplinary action.

Done this 12th day of October, 1990, at Washington, DC.

Clayton Yeutter,

Secretary of Agriculture.

BILLING CODE 3410-01-M

Animal and Plant Health Inspection Service

7 CFR Part 319

[Docket No. 89-191]

Apricots, Nectarines, Peaches, and Plums From Chile

AGENCY: Animal and Plant Health Inspection Service, USDA.

ACTION: Final rule.

SUMMARY: We are amending the Fruits and Vegetables regulations to relieve restrictions on the importation of stonefruit (apricots, nectarines, peaches, and plums) from Chile. This change will allow these fruits to be imported under multiple safeguards, including inspection in Chile, but without mandatory treatment. This action is necessary to help ensure that untreated fruits can be imported without significant risk of introducing insect pests into the United States.

EFFECTIVE DATE: November 19, 1990.

FOR FURTHER INFORMATION CONTACT: Mr. Frank Cooper, Senior Operations Officer, Port Operations, PPQ, APHIS, USDA, room 632, Federal Building, 6505 Belcrest Road, Hyattsville, MD 20782, 301-436-8645.

SUPPLEMENTARY INFORMATION:

Background

The regulations in 7 CFR 319.56 (the regulations) prohibit or restrict the importation of fruits and vegetables into the United States because of the risk that the fruits or vegetables could introduce insect pests that could damage domestic plants.

Apricots, nectarines, peaches, and plums (referred to below as stonefruit) from Chile present a risk of introducing various insect pests, including *Proeulia* spp., *Leptoglossus chilensis*, *Megalometis chilensis*, *Naupactus xanthographus*, *Listroderes subcinctus*, and *Conoderus rufangulus*. These pests do not normally feed on stonefruit, but may be present in shipments of stonefruit as "hitchhiking" pests.

Under current § 319.56-2m, these fruits may be imported from Chile only after they have undergone an approved methyl bromide treatment to destroy insects known to attack them or to be associated with them as hitchhikers.

We published in the Federal Register on July 13, 1989 (54 FR 29566-29569, Docket No. 88-176), a proposal to amend the regulations by allowing stonefruit from Chile to be imported without mandatory treatment, if the stonefruit is imported in accordance with a preclearance program involving inspections of the stonefruit in Chile and other requirements designed to ensure the stonefruit is free of insect pests.

Clearance for export to the United States will involve inspection, safeguards, treatments, and other procedures required by the regulations. Clearance activities will be performed under the direction of Animal and Plant Health Inspection Service (APHIS) inspectors in Chile, and will include inspections by APHIS inspectors, or by inspectors of the national plant protection service of Chile in the presence of APHIS inspectors. These activities, to determine the eligibility of the fruit for shipment to the United States, are called preclearance to distinguish them from similar inspections, treatments, and other procedures performed by APHIS inspectors at ports of arrival in the United States.

The proposal solicited comments to be submitted by September 11, 1989. We received a total of 30 written comments during the comment period. Four comments opposed the proposed rule, 7 comments supported the proposed rule as it was written, and 19 comments generally supported the proposed rule but suggested changes to its provisions. Comments received on the proposed rule and our responses to them are discussed below.

We are adopting the provisions of the proposed rule, with certain changes discussed below, for the reasons set forth in the proposal and in this supplementary information section.

Comments and Responses

Comment: The regulations attempt to be too specific in implementing what is essentially a trial program that will need fine-tuning as participants adjust to it. Technical aspects such as minimum lot size, sample sizes and sampling procedures, and administrative details should be negotiated and resolved annually in an operational agreement, rather than specified in the regulations.

Response: No change was made in response to this comment; however, note that minimum lot size requirements have been eliminated in response to another comment discussed below. We believe that the regulations contain specific requirements only to the degree necessary to meet legal requirements and to support enforcement and operational feasibility. If the regulations did not contain specific references to matters such as sample sizes and sampling procedures, the interested public could not analyze and comment on the rule in any meaningful way, operational planning for implementing

the stonefruit program would suffer from the lack of data, and enforcement actions would always be open to argument. We agree that future experience gained from implementing the stonefruit program may show that some technical aspects need adjustment. If this occurs, we will propose to change the regulations to reflect better standards.

Comment: The proposal states that if a shipment is rejected because preclearance inspections find a plant pest for which there is an authorized treatment, the shipment may be exported to the United States after it undergoes treatment for the pest in Chile. The rule should be changed to allow such shipments to be treated for the pest either in Chile or upon arrival in the United States.

Response: No change was made in response to this comment. We believe that allowing shipments known to be infested with plant pests to move to the United States for treatment unacceptably increases the risk of introducing plant pests into the United States, especially since treatment is readily available in Chile, and we do not plan to allow treatment upon arrival as a routine practice. Note that proposed § 319.56–2s(g) allows the Administrator to allow inspection and/or treatment upon arrival in extraordinary or emergency situations.

Comment: The procedure for selecting cartons of fruit for the preclearance inspection sample should be changed. Instead of selecting cartons for inspection randomly from the entire inspection unit (from multiple pallets), select 1 pallet randomly and inspect the number of cartons from that pallet necessary to ensure 95 percent probability of detecting 3 percent infestation. The packing and palletization process is sufficiently random to ensure than any pallet will have the same level of infestation as any other pallet.

Response: No change was made in response to this comment. We do not have data to support the claim that packing and palletization is sufficiently random to ensure that any randomly selected pallet will make a good sample. Good statistical practice suggests that taking the sample randomly from the entire inspection unit will result in a more reliable sample.

Comment: The sample size of cartons of fruit selected for preclearance inspections should be calculated to allow detection of a 1 percent infestation level with 99 percent confidence, not a 3 percent infestation with 95 percent confidence. The proposed standard allows too great a risk that infestations may not be detected by the preclearance inspections.

Response: No change was made in response to this comment. The suggested sample size would present too great a drain on inspection resources by requiring inspection of a far greater number of fruit from each inspection unit. The sample size proposed in the regulations is sufficient to prevent the introduction of pests with a reliability comparable to the entry requirements for many other articles imported from many countries.

Comment: The proposal states that preclearance for an article will be terminated for the remainder of the shipping season if inspections show the rate of infestation for that article exceeds 20 percent calculated on any consecutive 14 days of actual inspections. The rule should be changed to terminate preclearance for an article when the level of rejection over 14 days exceeds 25 percent, not 20 percent.

Response: No change was made in response to this comment. Our analysis of pest risk concerns and our experience inspecting fruits and vegetables from many sources indicate that a 20 percent infestation rate is the appropriate level at which preclearance should be terminated for an article, and is a standard that growers and shippers can readily meet. The commenter submitted no data in support of this suggestion to lower this standard to a 25 percent infestation rate, and we continue to believe the proposed 20 percent rate is consistent with the preclearance program goals.

Comment: The rule should be changed to terminate preclearance for an article when the level of rejection over 14 days exceeds 10 percent, not 20 percent. The proposed rule is too lenient in this standard.

Response: No change was made in response to this comment. Our analysis of pest risk concerns and our experience inspecting fruits and vegetables from many sources indicate that a 20 percent infestation rate is the appropriate level at which preclearance should be terminated for an article, and is a standard that growers and shippers can readily meet. The commenter submitted no data in support of this suggestion to change this standard to a 10 percent infestation rate, and we continue to believe the proposed 20 percent rate is consistent with the preclearance program goals.

Comment: The rule should eliminate the minimum lot size for inspection units (5,000 cartons for maritime shipments and 350 cartons for air shipments). The minimum size requirements will cause hardship to small growers and shippers.

Response: We proposed the minimum lot sizes for maritime and air shipments to allow efficient use of the services of APHIS and Servicio Agricola Y Ganadero (SAG) inspectors. Our reasoning was that inspecting a small shipment of stonefruit takes nearly as long as inspecting a large shipment, and therefore a minimum lot size seemed necessary to maximize the amount of stonefruit that could be inspected under this program. We recognize that minimum lot sizes may cause some growers and shippers to forego exporting small shipments under this program, and we have consulted further with APHIS and SAG personnel in Chile concerning the operational difficulties of meeting the demand for inspection services. Based on their workload projections, we have determined that for the foreseeable future, inspector resources should be adequate to meet the demands for inspection of stonefruit in Chile regardless of lot size, and therefore we are removing the minimum lot size requirement from § 319.56–2s(d). If the number of small stonefruit shipments submitted for inspection increases to the point of causing operational difficulties in the future, we may propose to establish minimum lot sizes.

Comment: As an alternative to participating in preclearance, shippers should be allowed to choose to fumigate their shipments as in the past, rather than submit them for preclearance.

Response: We agree, and are making the requested change. Allowing shippers to choose between fumigation and preclearance, which are both effective programs for Chilean stonefruit, could maximize the flexibility available to shippers and importers without increasing the risk of introducing plant pests into the United States. Therefore, this final rule will retain language in § 319.56–2m that authorizes fumigation as an approved treatment for stonefruit from Chile. The proposed rule would have deleted this language and would have made preclearance the only approved procedure for persons seeking to import Chilean stonefruit.

Comment: The proposed rule calls for a trust fund agreement between APHIS and SAG, under which SAG agrees to pay to APHIS at the start of each shipping season all estimated costs to be incurred by APHIS in providing preclearance services that season. The rule should allow the trust fund agreement to be made between APHIS and any agent of the Chilean Government that is authorized to enter

into such agreements. Due to the internal procedures of the Chilean Government, an entity other than SAG may be best qualified to manage the funds collected for the program and make payment to APHIS.

Response: Recently developed policy changes within APHIS dictate that such trust fund agreements must be intergovernmental in nature. Section 607(a) of the Foreign Assistance Act (21 U.S.C. 2357) (Act) provides that agencies of the United States Government must enter into reimbursement agreements with the governments of friendly countries. The United States Department of State has authorized APHIS to participate in a preclearance program under the Act to enable fruits, vegetables, and nursery products to be inspected before shipment to the United States. This authorization requires the exporting country's national plant protection service to enter into a trust fund agreement to establish a preclearance program.

However, we agree that entities other than SAG may be involved in collecting and managing funds for the agreement, if SAG makes arrangements for such services. The proposed rule requires SAG to sign the agreement and make the seasonal payments to APHIS, but does not preclude SAG from using an exporters' association or other agent to assist in collecting and managing the funds. Therefore, no change was made in response to this comment.

Comment: In proposed § 319.56–2s(b), the trust fund agreement requires advance payment to APHIS of all estimated costs for providing preclearance services during a shipping season. It would be better to continue the type of payment schedule used for other services in the past, e.g., payment in advance of receipt of services, but on a monthly schedule rather than one payment for an entire shipping season. Also, the trust fund agreement calls for APHIS to return at the end of the shipping season any funds it receives in excess of actual costs incurred during that shipping season. It may be more convenient for exporters and the Chilean Government to apply those amounts to the next shipping season, rather than having them returned.

Response: We agree, and are making the suggested changes. Trust fund agreement payments may be made, in advance of receipt of services, on a schedule agreed upon between APHIS and the agent administering the trust fund. Any excess funds at the end of the shipping season will be returned by APHIS upon request, and if return is not requested, the funds will be applied to services during the next shipping season.

Comment: The rule should include provisions for significant back-up inspections of precleared articles upon arrival in the United States, and should terminate preclearance for any article that arrives with a live pest.

Response: No change was made in response to this comment. APHIS has the legal authority to inspect any imported fruits, including precleared articles from Chile, upon their arrival in the United States, and APHIS may choose to inspect some precleared shipments upon arrival to monitor the effectiveness of the preclearance program. However, a main point of preclearance is that the inspections conducted in Chile are comparable in effectiveness to inspection at the port of entry in the United States. We do not believe that it is necessary to include in the regulations requirements for specified levels of essentially duplicative inspections at the time of arrival of precleared articles.

Comment: Why doesn't the proposal require detection of pests at the Probit 9 level? Is there sound research data to support a lower level of detection being adequate?

Response: Probit 9 at the 95 percent confidence level is used as a measure of effectiveness for the development of a treatment for shipments known to be infested. Inspection, such as the preclearance inspection required by this rule, is conducted to determine the presence or absence of infestation.[1] It would be an inappropriate use of statistical methods to apply Probit 9 standards useful in treatment studies to the study of the effectiveness of an inspection program. In the case of Chilean stonefruit, an inspection system which detects infestation at the 3 percent level with a 95 percent confidence level was determined to be effective, based on studies of a wide variety of inspection levels used for agricultural commodities at U.S. ports in recent years.

Comment: How would the regulations protect against introduction of numerous internal and external feeders found in Chile but not in California?

Response: External feeders would be readily visible during the required preclearance inspection, and infested shipments would not be allowed import until they were treated with the appropriate Plant Protection and Quarantine Treatment Manual treatment for the pest. All the internal feeders that are known to attack stonefruit in the areas shipping fruit under this program leave evidence of their attack on the surface of the fruit, which would be readily detected during preclearance inspections. We believe the requirements of this rule, in conjunction with the requirements of all other applicable APHIS regulations concerning exotic pests, will serve to prevent the introduction into California of exotic pests.

Comment: What safeguards will be used to protect shipments from infestation between preclearance and loading for shipment?

Response: We do not believe that specific safeguards need to be added to this rule, in view of the existing safeguards in place at Chilean ports and the proximity of the inspection sites to the means of conveyance. The inspection sites are located at the seaport and at the airport within a few hundred yards of the vessels or aircraft, so there is minimal opportunity for infestation during movement from the inspection site to the vessel or aircraft. Also, SAG enforces the following types of safeguards for both inspected and treated fruit loaded at airports and seaports. All shipments are completely covered with tarpaulins, or enclosed in containers or sealed trucks, during movement from the inspection or treatment facility to the vessel or aircraft. All such movements are supervised by SAG or USDA personnel. Between inspection or treatment and loading, all inspected shipments are held only in holding areas approved and supervised by SAG or USDA. An additional safeguard that can be applied if needed is the opportunity for APHIS to inspect shipments at the port of arrival in the United States.

Executive Order 12291 and Regulatory Flexibility Act

We are issuing this rule in conformance with Executive Order 12291, and we have determined that it is not a "major rule." Based on information compiled by the Department, we have determined that this rule will have an effect on the economy of less than $100 million; will not cause a major increase in costs or prices for consumers, individual industries, Federal, State, or local government agencies, or geographic regions; and will not cause a significant adverse effect on competition, employment, investment, productivity, innovation, or on the

[1] Information on APHIS studies concerning Probit 9 standards and their use compared to statistical standards for inspection activities may be obtained by writing to the Administrator, c/o Port Operations, Plant Protection and Quarantine, Animal and Plant Health Inspection Service, U.S. Department of Agriculture, room 635, Federal Building, 6505 Belcrest Road, Hyattsville, MD 20782.

ability of United States-based enterprises to compete with foreign-based enterprises in domestic or export markets.

Based on interest expressed in importing stonefruit from Chile, we anticipate that the annual average of approximately 60,000 metric tons of stonefruit imported from Chile will increase by a small percentage as a result of adopting this rule. The average import figure of 60,000 metric tons was derived by averaging the weight of stonefruit from Chile imported over the past several years, because the total weight of stonefruit imported from Chile varies greatly from year to year (often by 20 percent or more) due to harvest conditions, market prices, and other factors. By comparison, stonefruit production in the United States was approximately 1,411,000 metric tons in 1986, the most recent year for which complete statistics are available.

Although there are many small business entities in the United States that grow, pack, or sell stonefruit, we do not believe this rule will have a significant economic impact on them because the volume of Chilean fruit expected to be imported is relatively low and the Chilean fruit would compete equally in the market place with U.S.-produced stonefruit. Importers of precleared Chilean stonefruit will probably realize a small savings for each unit of stonefruit imported, because the cost of importing unfumigated stonefruit under the preclearance program is expected to be slightly less than the cost of importing fumigated stonefruit. This may result in a slight decrease in the price of imported Chilean stonefruit, which would be beneficial to the U.S. consumer. Importers of Chilean stonefruit also import a variety of other fruits and vegetables, and importations of the Chilean stonefruit constitute a small portion of their total importations.

This rule will cause some loss of income to U.S. fumigation companies that fumigate imported Chilean stonefruit. Currently, fumigation of imported Chilean stonefruit is performed by a few large companies with many other sources of business, such as fumigation of other articles and fumigation of homes and buildings. The loss of income due to reduction in the amount of Chilean stonefruit fumigated each year will be a very small percentage of the total income of each of these companies.

Under these circumstances, the Administrator of the Animal and Plant Health Inspection Service has determined that this action will not have a significant economic impact on a substantial number of small entities.

Executive Order 12372

This program/activity is listed in the Catalog of Federal Domestic Assistance under No. 10.025 and is subject to Executive Order 12372, which requires intergovernmental consultation with State and local officials. (See 7 CFR part 3015, subpart V.)

Paperwork Reduction Act

This rule contains no information collection or recordkeeping requirements under the Paperwork Reduction Act of 1980 (44 U.S.C. 3501 *et seq.*).

List of Subjects in 7 CFR Part 319

Agricultural commodities, Fruit, Imports, Plant diseases, Plant pests, Plants (Agriculture), Quarantine, Transportation.

PART 319—FOREIGN QUARANTINE NOTICES

Accordingly, 7 CFR part 319 is amended as follows:

1. The authority citation for part 319 continues to read as follows:

Authority: 7 U.S.C. 150dd, 150ee, 150ff, 151–167; 7 CFR 2.17, 2.51, and 371.2(c).

2. In "Subpart-Fruits and Vegetables," a new section, § 319.56–2s, is added to read as follows:

§ 319.56–2s Administrative instructions governing the entry of apricots, nectarines, peaches, and plums from Chile.

(a) *Importations allowed.* Pursuant to § 319.56(c), the Administrator has determined that apricots, nectarines, peaches, and plums may be imported into the United States from Chile in accordance with this section and other applicable provisions of this subpart, as an alternative to importation in accordance with § 319.56–2m.

(b) *Trust fund agreement.* Except as provided in § 319.56–2m or in paragraph (g) of this section, apricots, nectarines, peaches, and plums may be imported only if the plant protection service of Chile [Servicio Agricola Y Ganadero, referred to in this section as SAG], has entered into a trust fund agreement with the Animal and Plant Health Inspection Service [APHIS] for that shipping season. This agreement requires SAG to pay in advance all estimated costs incurred by APHIS in providing the preclearance prescribed in paragraph (d) of this section. Payment of costs will be made on a monthly or other schedule designated by APHIS, but payment must be made for each preclearance service before APHIS provides the service. These costs will include administrative expenses incurred in conducting the preclearance services; and all salaries (including overtime and the federal share of employee benefits), travel expenses (including per diem expenses), and other incidental expenses incurred by the inspectors in providing these services. The agreement requires SAG to deposit certified or cashier's checks with APHIS for the amount of these costs, as estimated by APHIS based on projected shipment volumes and cost figures from previous inspections. The agreement further requires that, if the deposit is not sufficient to meet all costs incurred by APHIS, SAG must deposit with APHIS a certified or cashier's check for the amount of the remaining costs, as determined by APHIS, before the inspections will be completed. The agreement also requires that, in the event of unexpected end-of-season costs, SAG must deposit with APHIS a certified cashier's check sufficient to meet such costs as estimated by APHIS, before any further preclearance services will be provided. If the amount SAG deposits during the shipping season exceeds the total costs incurred by APHIS in providing preclearance services, the difference will be returned to SAG by APHIS at the end of the shipping season upon request, or otherwise will be applied to preclearance services for the next shipping season.

(c) *Responsibilities of Servicio Agricola Y Ganadero.* SAG will ensure that:

(1) Apricots, nectarines, peaches, or plums are presented to APHIS inspectors for preclearance in their shipping containers at the shipping site for preclearance as prescribed in paragraph (d) of this section.

(2) Apricots, nectarines, peaches, and plums presented for inspection are identified in shipping documents accompanying each load of fruit that identify the packing shed where they were processed and the orchards where they were produced; and this identity is maintained until the apricots, nectarines, peaches, or plums are released for entry into the United States.

(3) Facilities for the inspections prescribed in paragraph (d) of this section are provided in Chile at an inspection site acceptable to APHIS.

(d) *Preclearance inspection.* Preclearance inspection will be conducted in Chile under the direction of APHIS inspectors. An inspection unit will consist of a lot or shipment from which a statistical sample is drawn and examined. An inspection unit may represent multiple grower lots from

different packing sheds. Apricots, nectarines, peaches, or plums in any inspection unit may be shipped to the United Sates only if the inspection unit passes inspection as follows:

(1) Inspectors will examine, fruit by fruit, the contents of the cartons which were selected based on a sampling scheme established for each inspection unit. An APHIS inspector will designate which cartons to inspect in each inspection unit to ensure that units infested at a level of 3 percent or more will be identified with a confidence level of 95 percent.

(i) If the inspectors find evidence of any plant pest for which a treatment authorized in the Plant Protection and Quarantine Treatment Manual is available, fruit in the inspection unit will remain eligible for shipment to the United States if the entire inspection unit is treated for the pest in Chile. However, if the entire inspection unit is not treated in this manner, or if a plant pest is found for which no treatment authorized in the Plant Protection and Quarantine Treatment Manual is available, the entire inspection unit will not be eligible for shipment to the United States.

(ii) Apricots, nectarines, peaches, and plums precleared for shipment to the United States as prescribed in this paragraph will not be inspected again in the United States except as necessary to ensure that the fruit has been precleared and for occasional monitoring purposes.

(e) *Termination of preclearance programs.* Shipments of apricots, nectarines, peaches, and plums will be individually evaluated regarding the rates of infestation of inspection units of these articles presented for preclearance. The inspection program for an article will be terminated when inspections determine that the rate of infestation of inspection units of the article by pests listed in paragraph (f) of this section exceeds 20 percent calculated on any consecutive 14 days of actual inspections (not counting days on which inspections are not conducted). Termination of the inspection program for an article will require mandatory treatment in Chile, prior to shipment to the United States, of shipments of the article for the remainder of that shipping season. If a preclearance inspection program is terminated with Chile, precleared fruit in transit to the United States at the time of termination will be spot-checked by APHIS inspectors upon arrival in the United States for evidence of plant pests referred to in paragraph (f) of this section.

(f) *Plant pests; authorized treatments.*

(1) Apricots, nectarines, peaches, or plums from Chile may be imported into the United States only if they are found free of the following pests or, if an authorized treatment is available, they are treated for the pest under the supervision of an APHIS inspector: *Proeulia* spp., *Leptoglossus chilensis*, *Megalometis chilensis*, *Naupactus xanthographus*, *Listroderes subcinctus*, and *Conoderus rufangulus*, and other insect pests that the Administrator has determined do not exist, or are not widespread, in the United States.

(2) Authorized treatments are listed in the Plant Protection and Quarantine Treatment Manual. The Plant Protection and Quarantine Treatment Manual is incorporated by reference. For the full identification of this standard, see § 300.1 of this chapter. "Materials incorporated by reference."

(g) *Inspection in the United States.* Notwithstanding provisions to the contrary in paragraphs (c) and (d) of this section, the Administrator may, in emergency or extraordinary situations, allow apricots, nectarines, peaches, or plums imported under this section to be inspected at a port of arrival in the United States, in lieu of a preclearance inspection of fumigation in Chile, under the following conditions:

(1) The Administrator is satisfied that a unique situation exists which justifies a limited exception to mandatory preclearance;

(2) The Administrator has determined that inspection and/or treatment can be accomplished at the intended port of arrival without increasing the risk of introducing insect pests into the United States;

(3) The entire shipment of apricots, nectarines, peaches, or plums must be offloaded and moved, under the supervision of APHIS inspectors, to an enclosed warehouse, where inspection and treatment facilities are available.

(4) The Administrator must determine that a sufficient number of inspectors are available at the port of arrival to perform the services required.

(5) The method of sampling and inspection will be the same as prescribed in paragraph (d) of this section for preclearance inspections.

Done in Washington, DC, this 10th day of October 1990.

James W. Glosser,

Administrator, Animal and Plant Health Inspection Service.

[FR Doc. 90-24764 Filed 10-18-90; 8:45 am]

BILLING CODE 3410-34-M

Animal and Plant Health Inspection Service

9 CFR Part 78

[Docket No. 90-161]

Validated Brucellosis-Free States

AGENCY: Animal and Plant Health Inspection Service, USDA.

ACTION: Interim rule.

SUMMARY: We are amending the brucellosis regulations concerning the interstate movement of swine by removing New Jersey from the list of validated brucellosis-free States. We have determined that New Jersey no longer meets the criteria for classification as a validated brucellosis-free State. This action imposes certain restrictions on the interstate movement of breeding swine from New Jersey.

EFFECTIVE DATE: Interim rule effective October 19, 1990. Consideration will be given only to comments received on or before December 18, 1990.

ADDRESSES: To help ensure that your comments are considered, send an original and three copies to Chief, Regulatory Analysis and Development, PPD, APHIS, USDA, room 866, Federal Building, 6505 Belcrest Road, Hyattsville, MD 20782. Please state that your comments refer to Docket Number 90-161. Comments received may be inspected at USDA, room 1141, South Building, 14th and Independence Avenue SW., Washington, DC, between 8 a.m. and 4:30 p.m., Monday through Friday, except holidays.

FOR FURTHER INFORMATION CONTACT: Dr. Delories M. Lenard, Senior Staff Veterinarian, Swine Diseases Staff, VS, APHIS, USDA, room 735, Federal Building, 6505 Belcrest Road, Hyattsville, MD 20782, (301) 436-7767.

SUPPLEMENTARY INFORMATION:

Background

Brucellosis is a contagious disease affecting animals and man, caused by bacteria of the genus *Brucella*. The brucellosis regulations contained in 9 CFR part 78 (referred to below as the regulations) prescribe conditions for the interstate movement of cattle, bison and swine.

Under the swine brucellosis regulations, States, herds, and individual animals are classified according to their brucellosis status. Interstate movement requirements for animals are based upon the disease status of the herd, or State from which the animal originates.

We are amending § 78.43 of the regulations, which lists validated

brucellosis-free States, by removing new Jersey from the list. Validated brucellosis-free status is based on a State having:

(1) The necessary authorities for classification as a validated brucellosis-free State for swine;

(2) No known focus of swine brucellosis at the time of validation and completion of one of several methods of surveillance; or no diagnosed case of swine brucellosis in the 12-month period preceding the classification, and a statistical analysis of the combined results of certain tests that indicate the testing is equivalent to either complete herd testing or slaughter surveillance during a period chosen by the State; and

(3) Certification by the appropriate State animal health official, the Veterinarian in Charge and the Deputy Administrator.

The regulations provide that the Administrator may amend § 78.43 to reclassify States as validated brucellosis-free States or to remove States from the status when a determination has been made that the States do or do not meet the standards of a validated brucellosis-free State. The regulations also provide that in the case of any reclassification to a lower status or removal of validated brucellosis-free status, the State animal health official of the State involved will be notified and given an opportunity to be heard prior to the reduction of status.

The State of New Jersey has notified us they have discovered five herds infected with swine brucellosis. Based on this information, New Jersey no longer meets the criteria for classification as a validated brucellosis-free State. The State Veterinarian for New Jersey has been notified of the prospective removal of New Jersey from validated brucellosis-free status and has declined a hearing on the matter. Therefore, we are removing New Jersey from the list of validated brucellosis-free States in § 78.43. This action will impose certain restrictions on the interstate movement of breeding swine from New Jersey.

Immediate Action

James W. Glosser, Administrator of the Animal and Plant Health Inspection Service, has determined that there is good cause for publishing this interim rule without prior opportunity for public comment. Immediate action is warranted to prevent the interstate spread of swine brucellosis from New Jersey.

Since prior notice and other public procedures with respect to this interim rule are impracticable and contrary to the public interest under these circumstances, there is good cause under 5 U.S.C. 553 to make it effective upon publication. We will consider comments received within 60 days of publication of this interim rule in the **Federal Register**. After the comment period closes, we will publish another document in the **Federal Register**, including a discussion of any comments we receive and any amendments we are making to the rule as a result of the comments.

Executive Order 12291 and Regulatory Flexibility Act

We are issuing this rule in conformance with Executive Order 12291, and we have determined that it is not a "major rule." Based on information compiled by the Department, we have determined that this rule will have an effect on the economy of less than $100 million; will not cause a major increase in costs or prices for consumers, individual industries, Federal, State, or local government agencies, or geographic regions; and will not cause a significant adverse effect on competition, employment, investment, productivity, innovation, or on the ability of United States-based enterprises to compete with foreign-based enterprises in domestic or export markets.

For this action, the Office of Management and Budget has waived the review process required by Executive Order 12291.

Herd owners in New Jersey will be affected by this action. The termination of validated brucellosis-free status will mean that breeding swine must be tested for brucellosis prior to being allowed to move from New Jersey. Approximately 90 sows will be tested for brucellosis annually in order to be eligible for interstate movement from New Jersey at an average cost to the seller of $4.75 per test. Using these numbers, we estimate that the testing requirement will result in an approximate cost of $427.50 for swine herd owners in New Jersey. Of the approximately 3,000 swine herd owners nationwide who regularly ship breeding swine interstate, 20 herd owners regularly ship breeding swine interstate from New Jersey. All 20 herd owners would be considered small entities.

Under these circumstances, the Administrator of the Animal and Plant Health Inspection Service has determined that this action will not have a significant economic impact on a substantial number of small entities.

Paperwork Reduction Act

This rule contains no information collection or recordkeeping requirements under the Paperwork Reduction Act of 1980 (44 U.S.C. 3501 *et seq.*).

Executive Order 12372

This program/activity is listed in the Catalog of Federal Domestic Assistance under No. 10.025 and is subject to Executive Order 12372, which requires intergovernmental consultation with State and local officials. (See 7 CFR part 3015, subpart V.)

List of Subjects in 9 CFR Part 78

Animal diseases, Brucellosis, Cattle, Hogs, Quarantine, Transportation.

Accordingly, we are amending 9 CFR part 78 as follows:

PART 78—BRUCELLOSIS

1. The authority citation for part 78 continues to read as follows:

Authority: 21 U.S.C. 111–114a–1, 114g, 115, 117, 120, 121, 123–126, 134b, 134f; 7 CFR 2.17, 2.51, and 371.2(d).

§ 78.43 [Amended]

2. Section 78.43 is amended by removing "New Jersey".

Done in Washington, DC, this 16th day of October 1990.

James W. Glosser,

Administrator, Animal and Plant Health Inspection Service.

[FR Doc. 90–24765 Filed 10–18–90; 8:45 am]

BILLING CODE 3410-34-M

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. 90–NM–12–AD; Amdt. 39–6775]

Airworthiness Directives; Airbus Industrie Model A300–B2, A300–B2K, and A300–B4 Series Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This amendment adopts a new airworthiness directive (AD), applicable to Airbus Industrie Model A300–B2, A300–B2K, and A300–B4 series airplanes, which requires repetitive visual or high frequency eddy current inspections to detect cracks in the upper skin and spar web joining parts of the trimmable horizontal stabilizer (THS), and repair, if necessary. This amendment is prompted by reports that cracks have been found on the THS center box rear upper skin outboard of Rib 3 and in the rear spar web joining

part. This condition, if not corrected, could result in reduced structural capability of the horizontal stabilizer.

EFFECTIVE DATE: November 21, 1990.

ADDRESSES: The applicable service information may be obtained from Airbus Industrie, Airbus Support Division, Avenue Didier Daurat, 31700 Blagnac, France. This information may be examined at the FAA, Northwest Mountain Region, Transport Airplane Directorate, 1601 Lind Avenue SW., Renton, Washington.

FOR FURTHER INFORMATION CONTACT: Mr. Greg Holt, Standardization Branch, ANM-113; telephone (206) 227-2140. Mailing address: FAA, Northwest Mountain Region, Transport Airplane Directorate, 1601 Lind Avenue SW., Renton, Washington 98055-4056.

SUPPLEMENTARY INFORMATION: A proposal to amend part 39 of the Federal Aviation Regulations to include a new airworthiness directive, applicable to Airbus Industrie Model A300-B2, A300-B2K, and A300-B4 series airplanes, which requires repetitive visual or high frequency eddy current inspections to detect cracks in the upper skin and spar web joining parts of the trimmable horizontal stabilizer (THS), and repair, if necessary, was published in the Federal Register on March 7, 1990 (55 FR 8148).

Interested persons have been afforded an opportunity to participate in the making of this amendment. Due consideration has been given to the comments received.

One commenter supported the rule.

The commenter also noted that the proposed rule did not incorporate the options specified in the service bulletin for stop drilling the ends of a crack, and cold expanding the stop drill holes when the crack length is between certain limits. The commenter suggested that the rule be revised to permit this action as a temporary measure. The FAA concurs and has revised the final rule to provide for optional interim actions that can be performed if cracking is found within certain limits. These optional actions vary depending upon the type of initial inspection performed. The FAA has determined that accomplishing these interim actions will have no adverse affect on safety.

Paragraph D. of the final rule has been revised to specify the current procedure for submitting requests for approval of an alternate means of compliance.

After careful review of the available data, including the comments noted above, the FAA has determined that air safety and the public interest require the adoption of the rule with the changes noted above. The FAA has determined that this change will neither increase the economic burden on any operator, nor increase the scope of the rule.

It is estimated that 11 airplanes of U.S. registry will be affected by this AD, that it will take approximately 14 manhours per airplane to accomplish the required actions, and that the average labor cost will be $40 per manhour. Based on these figures, the total cost impact of the AD on U.S. operators is estimated to be $6,160.

The regulations adopted herein will not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, in accordance with Executive Order 12612, it is determined that this final rule does not have sufficient federalism implications to warrant the preparation of a Federalism Assessment.

For the reasons discussed above, I certify that this action (1) is not a "major rule" under Executive Order 12291; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979); and (3) will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act. A final evaluation has been prepared for this action and is contained in the regulatory docket. A copy of it may be obtained from the Rules Docket.

List of Subjects in 14 CFR Part 39

Aircraft, Air transportation, Aviation safety, Safety.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, the Federal Aviation Administration amends 14 CFR part 39 of the Federal Aviation Regulations as follows:

PART 39—[AMENDED]

1. The authority citation for part 39 continues to read as follows:

Authority. 49 U.S.C. 1354(a), 1421 and 1423; 49 U.S.C. 106(g) (Revised Pub. L. 97-449, January 12, 1983); and 14 CFR 11.89.

§ 39.13 [Amended]

2. Section 39.13 is amended by adding the following new airworthiness directive:

Airbus Industrie: Applies to all Model A300-B2, A300-B2K, and A300-B4 series airplanes, certificated in any category. Compliance is required as indicated, unless previously accomplished.

To prevent reduced structural capability of the horizontal stabilizer, accomplish the following:

A. Perform a visual inspection of the upper skin and spar web joining parts of the trimmable horizontal stabilizer (THS), in accordance with either the "preferred" or "alternative" method as described in Airbus Industrie Service Bulletin A300-55-0035, dated September 11, 1989, as follows:

1. For airplanes that have accumulated less than 11,000 landings, perform the initial inspection within 1,000 landings after the effective date of this AD, or prior to the accumulation of 11,400 landings, whichever occurs first.

2. For airplanes that have accumulated 11,000 or more landings, but less than 18,000 landings, perform the initial inspection within 400 landings after the effective date of this AD, or prior to the accumulation of 18,300 landings, whichever occurs first.

3. For airplanes that have accumulated 18,000 or more landings, perform the initial inspection within 300 landings after the effective date of this AD.

B. If the "preferred inspection method" (THS support fitting removed), as specified in Airbus Industrie Service Bulletin A300-55-0035, dated September 11, 1989, is used to accomplish the inspection required by paragraph A. of this AD, proceed as follows:

1. If a crack indication is found in the top integral skin, accomplish the following:

a. If the crack extends to the outer box top skin, repair prior to further flight in a manner approved by the Manager, Standardization Branch, ANM-113. Perform repetitive inspections at intervals approved by the Manager, Standardization Branch, ANM-113.

b. If the crack does not extend to the outer box top skin, and there is no crack in the joining part, prior to further flight, accomplish either subparagraph (1) or (2), below:

(1) Revise the FAA-approved Airplane Flight Manual (AFM) to impose the operational limits specified in the service bulletin for Vmo/Mmo and CCI, and install placards showing these limits in a prominent position in the cockpit until a permanent repair is made. Thereafter, repeat the inspection every 350 landings. Stop drill the ends of the crack and cold-expand the stop drill holes when the crack length is between the limits specified in the service bulletin; or

(2) Repair in accordance with the service bulletin. After repair, conduct repetitive high frequency eddy current (HFEC) inspections of the visible area of the integral top skin and the reinforcing plate web finger areas at intervals not to exceed 7,500 landings.

c. If the crack does not extend to the outer box top skin, and a crack is detected in the joining part, repair prior to further flight, in accordance with the service bulletin. After repair, conduct repetitive HFEC inspections at intervals not to exceed 7,500 landings, in accordance with the service bulletin.

2. If no crack indication is found in the top integral skin, accomplish the following:

a. If no crack indication is found in the joining part, repeat the inspection required by paragraph A. of this AD at intervals not to exceed 6,000 landings.

b. If a crack indication is found in the joining part, repair prior to further flight, in a manner approved by the Manager, Standardization Branch, ANM-113. After

repair, conduct repetitive HFEC inspections at intervals not to exceed 7,500 landings, in accordance with the service bulletin.

C. If the "alternative inspection method" (THS support fitting installed), as specified in Airbus Industrie Service Bulletin A300–55–0035, dated September 11, 1988, is used to accomplish the inspection required by paragraph A. of this AD, proceed as follows:

1. If a crack indication is found in the top integral skin, accomplish the following:

a. If the crack extends to the outer box top skin, repair prior to further flight in a manner approved by the Manager, Standardization Branch, ANM–113.

b. If the crack does not extend to the outer box top skin, remove the THS support fitting and inspect the joining part using an HFEC inspection technique, in accordance with the service bulletin.

(1) If the joining part is cracked, repair prior to further flight, in accordance with the service bulletin. After repair, conduct repetitive HFEC inspections at intervals not to exceed 7,500 landings, in accordance with the service bulletin.

(2) If the joining part is not cracked, prior to further flight, accomplish either subparagraph (a) or (b), below:

(a) Revise the FAA-approved Airplane Flight Manual (AFM) to impose the operational limits specified in the service bulletin for Vmo/Mmo and CCI, and install placards showing these limits in a prominent position in the cockpit until permanent repair is made. Thereafter, repeat the inspection every 350 landings. Stop drill the ends of the crack and cold-expand the stop drill holes when the crack length is between the limits specified in the service bulletin; or

(b) Repair in accordance with the service bulletin. After repair, conduct repetitive HFEC inspections at intervals not to exceed 7,500 landings, in accordance with the service bulletin.

2. If no crack indication is found in the top integral skin, repeat the inspection required by paragraph A. of this AD at intervals not to exceed 1,700 flights.

D. An alternate means of compliance or adjustment of the compliance time, which provides an acceptable level of safety, may be used when approved by the Manager, Standardization Branch, ANM–113, FAA, Transport Airplane Directorate.

Note. The request should be submitted directly to the Manager, Standardization Branch, ANM–113, and a copy sent to the cognizant FAA Principal Inspector (PI). The PI will then forward comments or concurrence to the Manager, Standardization Branch, ANM–113.

E. Special flight permits may be issued in accordance with FAR 21.197 and 21.199 to operate airplanes to a base in order to comply with the requirements to this AD.

All persons affected by this directive who have not already received the appropriate service documents from the manufacturer may obtain copies upon request to Airbus Industrie, Airbus Support Division, Avenue Didier Daurat, 31700 Blagnac, France. These documents may be examined at the FAA, Northwest Mountain Region, Transport Airplane Directorate, 1601 Lind Avenue SW., Renton, Washington.

This amendment becomes effective November 21, 1990.

Issued in Renton, Washington, on October 4, 1990.

Darrell M. Pederson,

Acting Manager, Transport Airplane Directorate, Aircraft Certification Service.

[FR Doc. 90–24779 Filed 10–18–90; 8:45 am]

BILLING CODE 4910–13–M

---

14 CFR Part 39

[Docket No. 90–NM–190–AD; Amdt. 39–6781]

Airworthiness Directives; Airbus Industrie Model A320–231 Series Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This amendment adopts a new airworthiness directive (AD), applicable to all Airbus Industrie Model A320–231 series airplanes, which requires repetitive visual inspections to detect cracks in the rear engine mount barrel nuts, and replacement, if necessary; and a daily torque check of the nuts, and retorquing, if necessary. This amendment is prompted by several reports of cracked rear engine mount barrel nuts on in-service airplanes. This condition, if not corrected, could result in reduced structural integrity of the rear engine support structure and loss of the engine.

EFFECTIVE DATE: November 5, 1990.

ADDRESSES: The applicable service information may be obtained from Airbus Industrie, Airbus Support Division, Avenue Didier Daurat, 31700 Blagnac, France. This information may be examined at the FAA, Northwest Mountain Region, Transport Airplane Directorate, 1601 Lind Avenue, SW., Renton, Washington.

FOR FURTHER INFORMATION CONTACT: Mr. Greg Holt, Standardization Branch, ANM–113; telephone (206) 227–2140. Mailing address: FAA, Northwest Mountain Region, Transport Airplane Directorate, 1601 Lind Avenue SW., Renton, Washington 98055–4056.

SUPPLEMENTARY INFORMATION: The Direction Générale de l'Aviation Civile (DGAC), which is the airworthiness authority of France, in accordance with existing provisions of a bilateral airworthiness agreement, has notified the FAA of an unsafe condition which may exist on all Airbus Industrie Model A320–231 series airplanes. There have been several reports of fatigue cracks on the rear engine mount barrel nuts found on in-service airplanes. This condition, if not corrected, could result in reduced structural integrity of the rear engine support structure and loss of the engine.

Airbus Industrie has issued Operator Information Telex ST/999.0085/90, dated April 3, 1990, which describes procedures for repetitive visual inspections to detect cracks in the rear engine mount barrel nuts, and replacement, if necessary. Airbus Industrie has also issued Operator Information Telex ST/999.0087/90, dated April 4, 1990, which describes procedures for a daily torque check of the rear engine mount bolts, and retorquing, if necessary. These telexes reference International Aero Engine Service Bulletin No. V2500–NAC–71–0071, Revision 3, dated March 30, 1990, for additional instructions. The French DGAC has classified the Airbus operator information telexes as mandatory, and has issued Airworthiness Directive 90–079–009(B) addressing this subject.

This airplane model is manufactured in France and type certificated in the United States under the provisions of § 21.29 of the Federal Aviation Regulations and the applicable bilateral airworthiness agreement.

Since this condition is likely to exist or develop on other airplanes of the same type design registered in the United States, this AD requires repetitive visual inspections to detect cracks in the rear engine mount barrel nuts, and replacement if necessary; and a daily torque check of the rear engine mount bolts, and retorquing, if necessary, in accordance with the Airbus Industrie operator information telexes previously described.

This is considered to be interim action until final action is identified, at which time the FAA may consider further rulemaking.

Since a situation exists that requires immediate adoption of this regulation, it is found that notice and public procedure hereon are impracticable, and good cause exists for making this amendment effective in less than 30 days.

The regulations adopted herein will not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, in accordance with Executive Order 12612, it is determined that this final rule does not have sufficient federalism implications

to warrant the preparation of a Federalism Assessment.

The FAA has determined that this regulation is an emergency regulation and that it is not considered to be major under Executive Order 12291. It is impracticable for the agency to follow the procedures of Executive Order 12291 with respect to this rule since the rule must be issued immediately to correct an unsafe condition in aircraft. It has been determined further that this action involves an emergency regulation under DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979). If it is determined that this emergency regulation otherwise would be significant under DOT Regulatory Policies and Procedures, a final regulatory evaluation will be prepared and placed in the regulatory docket (otherwise, an evaluation is not required). A copy of it, if filed, may be obtained from the Rules Docket.

List of Subjects in 14 CFR Part 39

Aircraft, Air transportation, Aviation safety, Safety.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, the Federal Aviation Administration amends 14 CFR part 39 of the Federal Aviation Regulations as follows:

PART 39—[AMENDED]

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 1354(a), 1421 and 1423; 49 U.S.C. 106(g) (Revised Pub. L. 97-449, January 12, 1983); and 14 CFR 11.89.

§ 39.13 [Amended]

2. Section 39.13 is amended by adding the following new airworthiness directive:

Airbus Industrie: Applies to all Model A320-231 series airplanes, certificated in any category. Compliance is required as indicated, unless previously accomplished.

To detect cracks in the rear engine mount barrel nuts, and to prevent reduced structural integrity of the rear engine support structure, accomplish the following:

A. Within 25 hours time-in-service after the effective date of this AD, and thereafter at intervals not to exceed 700 hours time-in-service, perform a visual inspection of the rear engine mount barrel nuts, in accordance with Airbus Industrie Operator Information Telex (AOT) S999.0085/90, dated April 3, 1990. If a nut is cracked, replace with a new nut, prior to further flight, in accordance with the Operator Information Telex. Following replacement of the nut, continue the visual inspections at intervals not to exceed 700 hours time-in-service in accordance with the AOT.

Note: This Airbus Industrie telex references International Aero Engines (IAE) Service Bulletin No. V2500-NAC-71-0071, Revision 3, dated March 30, 1990, for additional information.

B. On each day that flying occurs, perform a torque check of the rear engine mount bolts in accordance with Airbus Industrie Operator Information Telex (AOT) ST/999.0067/90, dated April 4, 1990. Any bolt which does not meet the appropriate torque limits specified in the AOT must be retorqued prior to further flight.

Note: This Airbus Industrie telex references IAE Service Bulletin No. V2500-NAC-71-0071, Revision 3, dated March 30, 1990, for additional information.

C. Alternate means of compliance or adjustment of the compliance time, which provides an acceptable level of safety, may be used when approved by the Manager, Standardization Branch, ANM-113, FAA, Transport Airplane Directorate.

Note: The request should be submitted directly to the Manager, Standardization Branch, ANM-113, and a copy sent to the cognizant FAA Principal Inspector (PI). The PI will then forward comments or concurrence to the Manager, Standardization Branch, ANM-113.

D. Special flight permits may be issued in accordance with FAR 21.197 and 21.199 to operate airplanes to a base in order to comply with the requirements of this AD.

All persons affected by this directive who have not already received the appropriate service information from the manufacturer may obtain copies upon request to Airbus Industrie, Airbus Support Division, Avenue Didier Daurat, 31700 Blagnac, France. This information may be examined at the FAA, Northwest Mountain Region, Transport Airplane Directorate, 1601 Lind Avenue, SW., Renton, Washington.

This amendment becomes effective November 5, 1990.

Issued in Renton, Washington, on October 10, 1990.

Leroy A. Keith,

Manager, Transport Airplane Directorate, Aircraft Certification Service.

[FR Doc. 90-24780 Filed 10-18-90; 8:45 am]

BILLING CODE 4910-13-M

14 CFR Part 39

[Docket No. 90-NM-105-AD; Amt. 39-6779]

Airworthiness Directives; Boeing Model 767 Series Airplanes Equipped with Pratt and Whitney JT9D-7R4 Engines

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This amendment adopts a new airworthiness directive (AD), applicable to certain Boeing Model 767 series airplanes, which requires replacement of three existing drain tubes and a tee fitting in order to reroute the tee fitting away from the number 3 bearing oil pressure line. This amendment is prompted by reports of oil leaks in the number 3 bearing oil pressure line due to chafing by the adjacent tee fitting from the drain system. This condition, if not corrected, could result in possible engine fires and potential in-flight shutdowns due to oil loss.

EFFECTIVE DATE: November 28, 1990.

ADDRESSES: The applicable information may be obtained from Boeing Commercial Airplane Group, P.O. Box 3707, Seattle, Washington 98124. This information may be examined at the FAA, Northwest Mountain Region, Transport Airplane Directorate, 1601 Lind Avenue, SW., Renton, Washington 98055-4056.

FOR FURTHER INFORMATION CONTACT: Mr. Lanny C. Pinkstaff, Seattle Aircraft Certification Office, Propulsion Branch, ANM-140S; telephone (206) 227-2684. Mailing address: FAA, Northwest Mountain Region, Transport Airplane Directorate, 1601 Lind Avenue, SW., Renton, Washington 98055-4056.

SUPPLEMENTARY INFORMATION: A proposal to amend part 39 of the Federal Aviation Regulations to include an airworthiness directive, applicable to Boeing Model 767 series airplanes, which requires replacement of three existing drain tubes and a tee fitting in order to reroute the tee fitting away from the number 3 bearing oil pressure line, was published in the **Federal Register** on July 19, 1990 (55 FR 29384).

Interested persons have been afforded an opportunity to participate in the making of this amendment. Due consideration has been given to the single comment received. The commenter expressed no objection to the adoption of the proposed rule.

After careful review of the available data, including the comment noted above, the FAA has determined that air safety and the public interest require the adoption of the rule as proposed.

There are approximately 92 Model 767 series airplanes of the affected design in the worldwide fleet. It is estimated that 31 airplanes of U.S. registry will be affected by this AD, that it will take approximately 8 manhours per airplane to accomplish the required actions, and that the average labor cost will be $40 per manhour. Modification parts are available from the manufacturer at a cost of $1,072 per airplane. Based on these figures, the total cost impact of the

BEST COPY AVAILABLE

AD on U.S. operators is estimated to be $43,152.

The regulations adopted herein will not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, in accordance with Executive Order 12612, it is determined that this final rule does not have sufficient federalism implications to warrant the preparation of a Federalism Assessment.

For the reasons discussed above, I certify that this action (1) is not a "major rule" under Executive Order 12291; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979); and (3) will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act. A final evaluation has been prepared for this action and is contained in the regulatory docket. A copy of it may be obtained from the Rules Docket.

List of Subjects in 14 CFR Part 39

Aircraft, Air transportation, Aviation safety, Safety.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, the Federal Aviation Administration amends 14 CFR part 39 of the Federal Aviation Regulations as follows:

PART 39—[AMENDED]

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 1354(a), 1421 and 1423; 49 U.S.C. 106(g) [Revised Pub. L. 97-449, January 12, 1983]; and 14 CFR 11.89.

§ 39.13 [Amended]

2. Section 39.13 is amended by adding the following new airworthiness directive:

Boeing: Applies to Model 767 series airplanes, equipped with Pratt and Whitney JT9D-7R4 engines, as listed in Boeing Alert Service Bulletin 767-71A0057, dated February 22, 1990, certificated in any category. Compliance required within 9 months after the effective date of this AD, unless previously accomplished.

To prevent possible engine fires and potential in-flight engine shutdowns due to oil loss, accomplish the following:

A. Modify the drain system on each engine in accordance with Boeing Alert Service Bulletin 767-71A0057, dated February 22, 1990.

B. An alternate means of compliance or adjustment of the compliance time, which provides an acceptable level of safety, may be used when approved by the Manager, Seattle Aircraft Certification Office (ACO), FAA, Transport Airplane Directorate.

Note: The request should be submitted to the Manager, Seattle ACO, and a copy sent to the cognizant FAA Principal Inspector (PI). The PI will then forward comments or concurrence to the Seattle ACO.

C. Special flight permits may be issued in accordance with FAR 21.197 and 21.199 to operate airplanes to a base in order to comply with the requirements of this AD.

All persons affected by this directive who have not already received the appropriate service information from the manufacturer may obtain copies upon request to Boeing Commercial Airplane Group, P.O. Box 3707, Seattle, Washington 98124. These documents may be examined at the FAA, Northwest Mountain Region, Transport Airplane Directorate, 1601 Lind Avenue, SW., Renton, Washington 98055-4056.

This amendment becomes effective November 26, 1990.

Issued in Renton, Washington, on October 10, 1990.

Darrell M. Pederson,

Acting Manager, Transport Airplane Directorate, Aircraft Certification Service.

BILLING CODE 4910-13-M

---

14 CFR Part 39

[Docket No. 90-NM-190-AD; Amdt. 39-6780]

Airworthiness Directives; McDonnell Douglas Model DC-9-80 Series Airplanes and Model MD-88 Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This amendment adopts a new airworthiness directive (AD), applicable to McDonnell Douglas Model DC-9-81 (MD-81), DC-9-82 (MD-82), DC-9-83 (MD-83), and DC-9-87 (MD-87) series airplanes and Model MD-88 airplanes, which requires inspection of passenger service unit oxygen doors for proper seating, and readjustment, if necessary. This amendment is prompted by reports that passenger service unit oxygen doors have been pushed up past the door seal, which has caused the door to jam. This condition, if not corrected, could result in passenger oxygen not being readily available for use in the event of a cabin decompression.

EFFECTIVE DATE: November 5, 1990.

ADDRESSES: The applicable service information may be obtained from Douglas Aircraft Company, Post Office Box 1771, Long Beach, California 90801, Attn: Business Unit Manager, Technical Publications, C1-HCW (54-60). This information may be examined at the FAA, Northwest Mountain Region, Transport Airplane Directorate, 1601 Lind Avenue, SW., Renton, Washington, or the Los Angeles Aircraft Certification Office, 3229 East Spring Street, Long Beach, California.

FOR FURTHER INFORMATION CONTACT: Robert T. Razzeto, Aerospace Engineer, Los Angeles Aircraft Certification Office, ANM-131L, FAA, Transport Airplane Directorate, 3229 East Spring Street, Long Beach, California 90806-2425; telephone (213) 988-5355.

SUPPLEMENTARY INFORMATION: One operator of McDonnell Douglas Model DC-9-80 series and MD-88 airplanes reported that 41 of 56 passenger service unit (PSU) oxygen doors failed to open during a PSU oxygen door inspection and test. McDonnell Douglas surveyed 4 other operators and found that, during PSU oxygen door tests, up to 30 PSU oxygen doors failed to open. Investigation revealed that latch-side corners of PSU oxygen doors had been pushed up past the door seal, which caused the seal to become trapped between the PSU oxygen door and the PSU panel. This interference caused the PSU oxygen doors to remain closed after door release activation was initiated. This condition, if not corrected, could result in passenger oxygen not being readily available for use after cabin decompression.

The FAA has reviewed and approved McDonnell Douglas Service Bulletin A25-315, Revision 1, dated August 24, 1990, which describes procedures for inspection for proper seating of the PSU oxygen door, and readjustment, if necessary. A modification is described which involves installation of two door stops for each PSU oxygen door to prevent the oxygen door being pushed up past the seal.

Since this situation is likely to exist or develop on other airplanes of the same type design, this AD requires repetitive inspection of the PSU oxygen door, and readjustment, if necessary, in accordance with the service bulletin previously described. Accomplishment of the modification described in the service bulletin is considered terminating action for the repetitive inspection requirements of the AD.

Since a situation exists that requires immediate adoption of this regulation, it is found that notice and public procedure hereon are impracticable, and good cause exists for making this amendment effective in less than 30 days.

This is considered interim action. The FAA may consider further rulemaking to require additional corrective action to ensure that Model DC-9 passenger service unit doors will not fail to open when activated.

The regulations adopted herein will not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, in accordance with Executive Order 12612, it is determined that this final rule does not have sufficient federalism implications to warrant the preparation of a Federalism Assessment.

The FAA has determined that this regulation is an emergency regulation and that it is not considered to be major under Executive Order 12291. It is impracticable for the agency to follow the procedures of Order 12291 with respect to this rule since the rule must be issued immediately to correct an unsafe condition in aircraft. It has been determined further that this action involves an emergency regulation under DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979). If it is determined that this emergency regulation otherwise would be significant under DOT Regulatory Policies and Procedures, a final regulatory evaluation will be prepared and placed in the regulatory docket (otherwise, an evaluation is not required). A copy of it, if filed, may be obtained from the Rules Docket.

List of Subjects in 14 CFR Part 39

Aircraft, Air transportation, Aviation safety, Safety.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, the Federal Aviation Administration amends 14 CFR part 39 of the Federal Aviation Regulations as follows:

PART 39—[AMENDED]

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 1354(a), 1421 and 1423; 49 U.S.C. 106(g) (Revised) Pub. L. 97-449, January 12, 1983); and 14 CFR 11.89.

§ 39.13 [Amended]

2. Section 39.13 is amended by adding the following new airworthiness directive:

McDonnell Douglas: Applies to Model DC-9-81 (MD-81), DC-9-82 (MD-82), DC-9-83 (MD-83), and DC-9-87 (MD-87) series airplanes and Model MD-88 airplanes, certificated in any category. Compliance required as indicated, unless previously accomplished.

To prevent passenger service unit (PSU) oxygen doors from being jammed closed, accomplish the following:

A. Within 45 days after the effective date of this AD, and thereafter at intervals not to exceed 45 days, inspect all PSU oxygen doors for proper closure in accordance with Paragraph 2 of the Accomplishment Instructions, Phase I, of McDonnell Douglas Alert Service Bulletin A25-315, Revision 1, dated August 24, 1990. If any PSU oxygen door does not close properly, prior to further flight, readjust the door in accordance with Phase I of Paragraph 2 of the Accomplishment Instructions of the service bulletin.

B. Accomplishment of the modification specified in Phase II of Paragraph 2 of the Accomplishment Instructions of McDonnell Douglas Alert Service Bulletin A25-315, Revision 1, dated August 24, 1990, constitutes terminating action for the repetitive inspections required by paragraph A of this AD.

C. An alternate means of compliance or adjustment of the compliance time, which provides an acceptable level of safety, may be used when approved by the Manager, Los Angeles Aircraft Certification Office (ACO), FAA, Transport Airplane Directorate.

Note: The request should be submitted directly to the Manager, Los Angeles ACO, and a copy sent to the cognizant FAA Principal Inspector (PI). The PI will then forward comments or concurrence to the Los Angeles ACO.

D. Special flight permits may be issued in accordance with FAR 21.197 and 21.199 to operate airplanes to a base in order to comply with the requirements of this AD.

All persons affected by this directive who have not already received the appropriate service information from the manufacturer may obtain copies upon request to Douglas Aircraft Company, Post Office Box 1771, Long Beach, California 90801, Attn: Business Unit Manager, Technical Publications, C1-HCW (54-60). This information may be examined at the FAA, Northwest Mountain Region, Transport Airplane Directorate, 1601 Lind Avenue, SW., Renton, Washington, or the Los Angeles Aircraft Certification Office, 3229 East Spring Street, Long Beach, California.

This amendment becomes effective November 5, 1990.

Issued in Renton, Washington, on October 10, 1990.

Leroy A. Keith,

Manager, Transport Airplane Directorate, Aircraft Certification Service.

[FR Doc. 90-24782 Filed 10-18-90; 8:45 am]

BILLING CODE 4910-13-M

14 CFR Part 71

[Airspace Docket No. 90-ANM-9]

Revocation of Compulsory Reporting Point; Montana

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This action revokes the CHARL Intersection as a compulsory reporting point. CHARL Intersection is located between Mullan Pass and Great Falls, MT, on Federal Airway V-120. The FAA has determined that this intersection is no longer needed as a compulsory reporting point but will be useful as a noncompulsory reporting point.

EFFECTIVE DATE: 0901 u.t.c., December 13, 1990.

FOR FURTHER INFORMATION CONTACT: Alton D. Scott, Airspace and Obstruction Evaluation Branch (ATP-240), Airspace-Rules and Aeronautical Information Division, Air Traffic Rules and Procedures Service, Federal Aviation Administration, 800 Independence Avenue, SW., Washington, DC 20591; telephone: (202) 267-9252.

The Rule

This amendment to part 71 of the Federal Aviation Regulations (14 CFR part 71) revokes CHARL Intersection as a compulsory reporting point. CHARL Intersection is located between Mullan Pass and Great Falls, MT, on Federal Airway V-120. The FAA has determined that this intersection is no longer needed as a compulsory reporting point but will be useful as a noncompulsory reporting point. This action will result in an increase to the minimum en route altitude on V-120. This action improves air safety and aids air traffic controllers.

I find that notice and public procedure under 5 U.S.C. 553(b) are unnecessary because this action is a miner technical amendment in which the public would not be particularly interested. Section 71.203 of part 71 of the Federal Aviation Regulations was republished in Handbook 7400.6F dated January 2, 1990.

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore—(1) is not a "major rule" under Executive Order 12291; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a

regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that will only affect air traffic procedures and air navigation, it is certified that this rule, when promulgated, will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 71

Aviation safety, Compulsory reporting point.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me, part 71 of the Federal Aviation Regulations (14 CFR part 71) is amended, as follows:

PART 71—DESIGNATION OF FEDERAL AIRWAYS, AREA LOW ROUTES, CONTROLLED AIRSPACE, AND REPORTING POINTS

1. The authority citation for part 71 continues to read as follows:

Authority: 49 U.S.C. 1348(a), 1354(a), 1510; Executive Order 10854; 49 U.S.C. 100(g) (Revised Pub. L. 97-449, January 12, 1983); 14 CFR 11.69.

§ 71.203 [Amended]

2. § 71.203 is amended as follows:

CHARL [Removed]

Issued in Washington, DC, on October 12, 1990.

Harold W. Becker,

Manager, Airspace-Rules and Aeronautical Information Division.

BILLING CODE 4910-13-M

---

14 CFR Part 71

[Airspace Docket No. 90-ASO-14]

Revision of Control Zone, Charlotte, NC

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This amendment revises the Charlotte, NC, control zone. A new standard instrument approach procedure (SIAP) has been developed to serve Runway 23 based on the Charlotte VHF Omnidirectional Range/Distance Measuring Equipment (VOR/DME). Additional controlled airspace is required for protection of instrument flight rules (IFR) aircraft executing this SIAP. Ordinarily, an arrival area extension would be added to the existing control zone. However, there are existing extensions north, northeast, and southwest of the control zone. Rather than add another arrival area extension, this action will encompass the numerous extensions by enlarging the basic control zone from a 5-mile radius to a 7-mile radius of the Charlotte/Douglas International Airport. This will provide the necessary controlled airspace for protection of all existing and proposed IFR aeronautical operations. Additionally, a minor correction is made in the latitude/longitude coordinates of the airport.

EFFECTIVE DATE: 0901 u.t.c., December 13, 1990.

FOR FURTHER INFORMATION CONTACT: James G. Walters, Airspace Section, System Management Branch, Air Traffic Division, Federal Aviation Administration, P.O. Box 20636, Atlanta, Georgia 30320; telephone (404) 763-7646.

SUPPLEMENTARY INFORMATION:

History

On July 31, 1990, the FAA proposed to amend part 71 of the Federal Aviation Regulations (14 CFR part 71) to revise the Charlotte, NC, control zone (55) FR (31065). Rather than add another arrival area extension to the control zone, in order to provide airspace protection for a recently developed SIAP serving Runway 23, this action would enlarge the existing zone from a 5-mile radius to a 7-mile radius of the Charlotte/Douglas International Airport. Also, a minor correction would be made in the latitude/longitude coordinates of the airport. Interested parties were invited to participate in this rulemaking proceeding by submitting written comments on the proposal to the FAA. No comments objecting to the proposal were received. This amendment is the same as that proposed in the notice. Section 71.171 of part 71 of the Federal Aviation Regulations was republished in FAA Handbook 7400.6F dated January 2, 1990.

The Rule

This amendment to part 71 of the Federal Aviation Regulations revises the Charlotte, NC, control zone. The radius of the zone is increased from 5 to 7 miles of the Charlotte/Douglas International Airport to accommodate a new SIAP to runway 23. Also, a minor correction is made in the latitude/longitude coordinates of the airport.

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore, (1) is not a "major rule" under Executive Order 12291; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that will only affect air traffic procedures and air navigation, it is certified that this rule will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 71

Aviation safety, Control zones.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me, part 71 of the Federal Aviation Regulations (14 CFR part 71) is amended, as follows:

PART 71—DESIGNATION OF FEDERAL AIRWAYS, AREA LOW ROUTES, CONTROLLED AIRSPACE, AND REPORTING POINTS

1. The authority citation for part 71 continues to read as follows:

Authority: 49 U.S.C. 1348(a), 1354(a), 1510; Executive Order 10854; 49 U.S.C. 100(g) (Revised Public Law 97-449, January 12, 1983); 14 CFR 11.69.

§ 71.171 [Amended]

2. Section 71.171 is amended as follows:

Charlotte, NC [Revised]

Within a 7-mile radius of Charlotte/Douglas International Airport (latitude 35°12'52" N, longitude 80°56'37" W).

Issued in East Point, Georgia, on September 20, 1990.

Don Cass,

Acting Manager, Air Traffic Division, Southern Region.

[FR Doc. 90-24784 Filed 10-18-90; 8:45 am]

BILLING CODE 4910-13-M

---

14 CFR Part 71

[Airspace Docket No. 90-AEA-12]

Modify Control Zone and Transition Area; Lancaster, PA

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This notice amends the effective hours of the Lancaster, PA, Control Zone and updates the geographic coordinates of the Lancaster, PA, Control Zone. and 700 foot Transition Area to reflect the actual geographic position of the Lancaster Airport, Lancaster, PA, upon which the Control Zone and Transition Area is

based. This action is necessary due to the extension of the operating hours of the Lancaster Air Traffic Control Tower from 2200 to 2230 local.

EFFECTIVE DATE: 0901 U.T.C. December 13, 1990.

FOR FURTHER INFORMATION CONTACT: Mr. Curtis L. Brewington, Airspace Specialist, System Management Branch, AEA-530, Federal Aviation Administration, Fitzgerald Federal Building # 111, John F. Kennedy International Airport, Jamaica, New York 11430; telephone: (718) 917-0857.

SUPPLEMENTARY INFORMATION:

The Rule

The purpose of these amendments to §§ 71.171 and 71.181 of part 71 of the Federal Aviation Regulations is to extend the operating hours of the Lancaster, PA, Control Zone by thirty minutes from 2200 to 2230 local. Additionally, the geographic position of the Lancaster Airport used in the Lancaster, PA, Control Zone and 700 foot Transition Area descriptions is being updated to reflect the actual location of the airport. The physical dimensions of the controlled airspace will remain unaltered by this change. Sections 71.171 and 71.181 of part 71 of the Federal Aviation Regulations were republished in FAA Handbook 7400.6F, January 2, 1990. Since the FAA finds that the public would not be interested in commenting, I find that notice and public procedure under 5 U.S.C. 553(b) are unnecessary and contrary to the public interest.

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. Therefore, this regulation: (1) Is not a "major rule" under Executive Order 12291; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that will only affect air traffic procedures and air navigation, it is certified that this rule will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 71

Aviation safety, Control zones, Transition areas.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me, part 71 of the Federal Aviation Regulations (14 CFR part 71) is amended as follows:

PART 71—DESIGNATION OF FEDERAL AIRWAYS, AREA LOW ROUTES, CONTROLLED AIRSPACE, AND REPORTING POINTS

1. The authority citation for part 71 continues to read as follows:

Authority: 49 U.S.C. 1348(a), 1354(a), 1510; Executive Order 10854; 49 U.S.C. 106(g) (Revised Pub. L. 97-449, January 12, 1983); 14 CFR 11.69.

2. Section 71.171 is amended as follows:

Lancaster, PA [Amended]

§ 71.171 [Amended]

Change the coordinates of the Lancaster Airport, Lancaster, PA from "40°07'16"N." to "40°07'18"N.";

Change the last sentence to read as follows:

"The Control Zone is effective during the specific dates and times established in advance by a Notice to Airmen. The effective dates and times will thereafter be continuously published in the Airport/Facility Directory."

§ 71.181 [Amended]

3. Section 71.181 is amended as follows:

Lancaster, PA [Amended]

Change the coordinates of the Lancaster Airport, Lancaster, PA from "40°07'16"N." to "40°07'18"N.";

Issued in Jamaica, New York, on September 21, 1990.

Gary W. Tucker,

Manager, Air Traffic Division.

14 CFR Part 71

[Airspace Docket No. 90-ASO-15]

Amendment to Transition Area, Orlando, FL

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This amendment updates the latitude/longitude coordinate position of the Orlando International Airport. When the third parallel runway was constructed, the geographic position (GP) of the airport was recalculated. The GP had shifted approximately ⅛ mile to the east. This action realigns the transition which is centered on the GP coordinates of the Orlando International Airport.

EFFECTIVE DATE: 0901 U.T.C., December 13, 1990.

FOR FURTHER INFORMATION CONTACT: James G. Walters, Airspace Section, System Management Branch, Air Traffic Division, Federal Aviation Administration, P.O. Box 20636, Atlanta, Georgia 30320; telephone (404) 763-7646.

SUPPLEMENTARY INFORMATION:

History

On August 14, 1990, the FAA proposed to amend part 71 of the Federal Aviation Regulations (14 CFR part 71) to update the latitude/longitude coordinates for the Orlando International Airport (55 FR 33136). With construction of the third parallel runway, the GP of the airport shifted approximately ⅛ mile to the east. Since the transition area is centered on the GP, the transition area would be realigned accordingly. Interested parties were invited to participate in this rulemaking proceeding by submitting written comments on the proposal to the FAA. No comments objecting to the proposal were received. Section 71.181 of part 71 of the Federal Aviation Regulations was republished in FAA Handbook 7400.F, dated January 2, 1990.

The Rule

This amendment to part 71 of the Federal Aviation Regulations updates the geographic position coordinates of the Orlando International Airport and realigns the transition area which is centered on the airport.

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore, (1) is not a "major rule" under Executive Order 12291; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979; and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that will only affect air traffic procedures and air navigation, it is certified that this rule will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 71

Aviation safety, Transition areas.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me, part 71 of the Federal Aviation Regulations (14 CFR part 71) is amended, as follows:

PART 71—DESIGNATED OF FEDERAL AIRWAYS, AREA LOW ROUTES, CONTROLLED AIRSPACE, AND REPORTING POINTS

1. The authority citation for part 71 continues to read as follows:

Authority: 49 U.S.C. 1348(a), 1354(a), 1510; Executive Order 10854; 49 U.S.C. 106(g) (Revised Public Law 97-449, January 12, 1983); 14 CFR 11.69.

§ 71.181 [Amended]

2. Section 71.181 is amended as follows:

Orlando, FL [Amended]

By amending the coordinates for Orlando International Airport to read, "(lat. 28°25'43"N., long. 81°18'58"W)."

Issued in East Point, Georgia, on October 2, 1990.

Don Case,

Acting Manager, Air Traffic Division, Southern Region.

[FR Doc. 90-24791 Filed 10-18-90; 8:45 am]

BILLING CODE 4910-13-M

14 CFR Part 71

[Airspace Docket No. 90-AGL-11]

Alteration of Transition Area; Greenwood, IN

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: The nature of this action is to alter the existing Greenwood, IN, transition area to accommodate a new NDB Runway 36 Standard Instrument Approach Procedure (SIAP) to Greenwood Municipal Airport, Greenwood, IN, and change the airport name from Skyway to Greenwood Municipal. The intended effect of this action is to ensure segregation of the aircraft using approach procedures under instrument flight rules from other aircraft operating under visual flight rules in controlled airspace.

EFFECTIVE DATE: 0901 U.T.C., February 7, 1991.

FOR FURTHER INFORMATION CONTACT: Douglas F. Powers, Air Traffic Division, System Management Branch, AGL-530, Federal Aviation Administration, 2300 East Devon Avenue, Des Plaines, Illinois 60018, telephone (312) 694-7568.

SUPPLEMENTARY INFORMATION:

History

On Thursday, August 9, 1990, the Federal Aviation Administration (FAA) proposed to amend part 71 of the Federal Aviation Regulations (14 CFR part 71) to alter a transition area airspace near Greenwood, IN (55 FR 32444).

Interested parties were invited to participate in this rulemaking proceeding by submitting written comments on the proposal to the FAA. No comments objecting to the proposal were received.

Except for editorial changes, this amendment is the same as that proposed in the notice. Section 71.181 of part 71 of the Federal Aviation Regulations was republished in Handbook 7400.6F dated January 2, 1990.

The Rule

This amendment to part 71 of the Federal Aviation Regulations alters the designated transition area airspace near Greenwood, IN. The transition area is being modified to accommodate a new NDB Runway 36 SIAP to Greenwood Municipal Airport, Greenwood, IN. The modification to the existing airspace will consist of a 4.5-mile width each side of the 180° bearing from the airport, extending from the 6.5-mile radius area to 8.5 miles south of the airport.

The development of a new SIAP requires that the FAA alter the designated airspace to insure that the procedure will be contained within controlled airspace. The minimum descent altitude for the procedure may be established below the floor of the 700-foot controlled airspace.

Aeronautical maps and charts will reflect the defined area which will enable other aircraft to circumnavigate the area in order to comply with applicable visual flight rules requirements.

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore—(1) is not a "major rule" under Executive Order 12291; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that will only affect air traffic procedures and air navigation, it is certified that this rule when promulgated, will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 71

Aviation safety, Transition areas.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me, part 71 of the Federal Aviation Regulations (14 CFR part 71) is amended, as follows:

PART 71—[AMENDED]

1. The authority citation for part 71 continues to read as follows:

Authority: 49 U.S.C. 1348(a), 1354(a), 1510; Executive Order 10854; 49 U.S.C. 106(g) (Revised Pub. L. 97-449, January 12, 1983); 14 CFR 11.69.

§ 71.181 [Amended]

2. Section 71.181 is amended as follows:

Greenwood, IN [Revised]

That airspace extending upward from 700 feet above the surface within a 6.5-mile radius of Greenwood Municipal Airport (lat. 39°37'53" N., long. 86°05'16" W.); within 4.5 miles each side of the 180° bearing from the airport, extending from the 6.5-mile radius to 8.5 miles south of the runway 36 arrival threshold, excluding that portion which overlies the Indianapolis, IN, transition area.

Issued in Des Plaines, Illinois, on October 3, 1990.

Teddy W. Burcham,

Manager, Air Traffic Division.

14 CFR Part 71

[Airspace Docket No. 90-AGL-13]

Alteration of VOR Federal Airways

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This amendment alters the descriptions of VOR Federal Airways V-128 and V-246 by renumbering the airway segment of V-128, located between the Dubuque, IA, very high frequency omnidirectional radio range and tactical air navigational aid (VORTAC) and the Janesville, WI, VORTAC, to V-246. This action will eliminate ambiguity regarding air traffic control (ATC) holding clearance on V-128 southwest of the Janesville VORTAC.

EFFECTIVE DATE: 0901 U.T.C., December 13, 1990.

FOR FURTHER INFORMATION CONTACT: Jesse B. Bogan, Jr., Airspace and Obstruction Evaluation Branch (ATP-240), Airspace-Rules and Aeronautical Information Division, Air Traffic Rules and Procedures Service, Federal Aviation Administration, 800 Independence Avenue, SW., Washington, DC 20591; telephone: (202) 267-9253.

The Rule

The purpose of this amendment to part 71 of the Federal Aviation Regulations (14 CFR part 71) is to amend the descriptions of VOR Federal Airways V–128 and V–246 by renumbering the airway segment of V–128 between the Dubuque, IA, VORTAC and the Janesville, WI, VORTAC to V–246. This action will eliminate the confusion regarding ATC holding clearance on V–128. When pilots are cleared to hold on V–128 southwest of the Janesville VORTAC, ambiguity exists because there are two segments of V–128 southwest of the Janesville VORTAC. In order to eliminate this confusion, one of two segments of V–128 southwest of the Janesville VORTAC is being renumbered as V–246. This action makes no change in the configuration of controlled airspace. Accordingly, I find that notice and public procedure under 5 U.S.C. 553(b) are unnecessary because this action is a minor technical amendment in which the public would not be particularly interested. Section 71.123 of part 71 of the Federal Aviation Regulations was republished in Handbook 7400.6F dated January 2, 1990.

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore—(1) is not a "major rule" under Executive Order 12291; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that will only affect air traffic procedures and air navigation, it is certified that this rule, will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 71

Aviation safety, VOR federal airways.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me, part 71 of the Federal Aviation Regulations (14 CFR part 71) is amended, as follows:

PART 71—DESIGNATION OF FEDERAL AIRWAYS, AREA LOW ROUTES, CONTROLLED AIRSPACE AND REPORTING POINTS

1. The authority citation for part 71 continues to read as follows:

Authority: 49 U.S.C. 1348(a), 1354(a), 1510; Executive Order 10854; 49 U.S.C. 106(g) (Revised Pub. L. 97–449, January 12, 1983); 14 CFR 11.69.

§ 71.123 [Amended]

2. Section 71.123 is amended as follows:

V–128 [Amended]

By removing the words "From Dubuque, IA; Janesville, WI;" and substituting the words "From Janesville, WI; via"

V–246 [Amended]

By removing the words "From Dubuque, IA, via" and substituting the words "From Janesville, WI; via Dubuque, IA;"

Issued in Washington, DC, on October 9, 1990.

Harold W. Becker,

Manager, Airspace-Rules and Aeronautical Information Division.

BILLING CODE 4910–13–M

---

14 CFR Part 73

[Airspace Docket No. 90–ASO–13]

Amend Controlling Agency for Restricted Area R–3701A; Kentucky

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This action changes the controlling agency for Restricted Area R–3701A Fort Campbell, KY, from the FAA to the United States Army. The lateral and vertical dimensions of the restricted area lie entirely within the airspace delegated to Fort Campbell Approach Control.

EFFECTIVE DATE: 0901 u.t.c., December 13, 1990.

FOR FURTHER INFORMATION CONTACT: Mike Ostapiej, Military Operations Program Office (ATM–420), Office of Air Traffic System Management, Federal Aviation Administration, 800 Independence Avenue, SW., Washington, DC 20591; telephone (202) 267–7655.

The Rule

This amendment to part 73 of the Federal Aviation Regulations changes the controlling agency for Restricted Area R–3701A, Fort Campbell, KY, from FAA, Memphis ARTCC to United States Army, Fort Campbell Army Air Field Army Radar Approach Control. The lateral and vertical dimensions of the restricted area lie within the airspace delegated to Fort Campbell Approach Control; therefore, this action enhances airspace management. Because this action does not affect the airspace configuration, I find that notice and public procedure under 5 U.S.C. 553(b) are unnecessary because this action is a minor technical amendment in which the public would not be particularly interested. Section 73.37 of part 73 of the Federal Aviation Regulations was republished in Handbook 7400.6F dated January 2, 1990.

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore—(1) is not a "major rule" under Executive Order 12291; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that will only affect air traffic procedures and air navigation, it is certified that this rule, when promulgated, will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 73

Aviation safety, Restricted areas.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me, part 73 of the Federal Aviation Regulations (14 CFR part 73) is amended, as follows:

PART 73—SPECIAL USE AIRSPACE

1. The authority citation for part 73 continues to read as follows:

Authority: 49 U.S.C. 1348(a), 1354(a), 1510, 1522; Executive Order 10854; 49 U.S.C. 106(g) (Revised Pub. L. 97–449, January 12, 1983); 14 CFR 11.69.

§ 73.37 [Amended]

2. Section 73.37 is amended as follows:

R–3701A Fort Campbell, KY [Amended]

By removing the present Controlling agency and substituting the following:

Controlling agency. U.S. Army, Fort Campbell Army Air Field Army Radar Approach Control.

Issued in Washington, DC, on October 12, 1990.

Harold W. Becker,

Manager, Airspace-Rules and Aeronautical Information Division.

[FR Doc. 90–24792 Filed 10–16–90; 8:45 am]

BILLING CODE 4910–13–M

14 CFR Part 75

[Airspace Docket No. 90-AWA-4]

Establishment of Jet Routes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This amendment establishes new Jet Routes J-571, J-572, J-574, J-576, and J-577 located in the northwest portion of the United States. The establishment of these jet routes is the result of a request from Transport Canada and coincides with changes in the Canadian airspace structure. This action improves traffic flow during transborder operations and supports that request.

EFFECTIVE DATE: 0901 u.t.c., December 13, 1990.

FOR FURTHER INFORMATION CONTACT: Alton D. Scott, Airspace and Obstruction Evaluation Branch (ATP-240), Airspace-Rules and Aeronautical Information Division, Air Traffic Rules and Procedures Service, Federal Aviation Administration, 800 Independence Avenue, SW., Washington, DC 20591; telephone: (202) 267-9252.

SUPPLEMENTARY INFORMATION:

History

On May 22, 1990, the FAA proposed to amend part 75 of the Federal Aviation Regulations (14 CFR part 75) to establish new Jet Routes J-571, J-572, J-574, J-576, and J-577 located in the northwest portion of the United States (55 FR 18352). Interested parties were invited to participate in this rulemaking proceeding by submitting written comments on the proposal to the FAA. One comment was received from the Air Transport Association of America (ATA). ATA concurred with this proposal. Except for editorial changes, this amendment is the same as that proposed in the notice. Section 75.100 of part 75 of the Federal Aviation Regulations was published in Handbook 7400.6F dated January 2, 1990.

The Rule

This amendment to part 75 of the Federal Aviation Regulations establishes new Jet Routes J-571, J-572, J-574, J-576, and J-577 located in the northwest portion of the United States. This amendment is at the request of Transport Canada to support airway changes in the Canadian airspace structure. This action improves traffic flow during transborder operations and will reduce controller workload.

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore—(1) is not a "major rule" under Executive Order 12291; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that will only affect air traffic procedures and air navigation, it is certified that this rule will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 75

Aviation safety, Jet routes.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me, part 75 of the Federal Aviation Regulations (14 CFR part 75) is amended, as follows:

PART 75—ESTABLISHMENT OF JET ROUTES AND AREA HIGH ROUTES

1. The authority citation for part 75 continues to read as follows:

Authority: 49 U.S.C. 1348(a), 1354(a), 1510; Executive Order 10854; 49 U.S.C. 106(g) (Revised Pub. L. 97-449, January 12, 1983); 14 CFR 11.69.

§ 75.100 [Amended]

2. Section 75.100 is amended as follows:

J-571 [New]

From Williston, ND; to Brandon, MB, Canada. The airspace within Canada is excluded.

J-572 [New]

From Glasgow, MT; to Swift Current, SK, Canada; The airspace within Canada is excluded.

J-574 [New]

From Glasgow, MT; to Lethbridge, AB, Canada. The airspace within Canada is excluded.

J-576 [New]

From Glasgow, MT; to Medicine Hat, AB, Canada. The airspace within Canada is excluded.

J-577 [New]

From Minot, ND; to Lumsden, SK, Canada. The airspace within Canada is excluded.

Issued in Washington, DC, on October 12, 1990.

Harold W. Becker,

Manager, Airspace-Rules and Aeronautical Information Division.

BILLING CODE 4910-13-M

14 CFR Part 75

[Airspace Docket No. 90-AGL-9]

Alteration of Jet Route J-213 and Establishment of Jet Route J-526

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This amendment alters the description of J-213 by deleting that portion of J-213 between the Louisville, KY, VORTAC and the Beckley, WV, VORTAC; and establishes J-526 between the Louisville, KY, VORTAC and the Beckley, WV, VORTAC. This action eliminates computer processing problems and air traffic control ambiguity associated with flight plans which contain the route J-213/J-8 or J-8/J-213.

EFFECTIVE DATE: 0901 u.t.c, December 13, 1990.

FOR FURTHER INFORMATION CONTACT: Jesse B. Bogan, Jr., Airspace and Obstruction Evaluation Branch (ATP-240), Airspace-Rules and Aeronautical Information Division, Air Traffic Rules and Procedures Service, Federal Aviation Administration, 800 Independence Avenue, SW., Washington, DC 20591; telephone: (202) 267-9253.

SUPPLEMENTARY INFORMATION:

History

On July 31, 1990, the FAA proposed to amend part 75 of the Federal Aviation Regulations (14 CFR part 75) to amend the description of J-213 and establish J-526 (55 FR 31068). The problem is that J-8 and J-213 merge at two points, thereby creating flight planning and air traffic control communication problems in understanding which of the two points is being referenced. This action eliminates the problem of the two intersecting points. Interested parties were invited to participate in this rulemaking proceeding by submitting written comments on the proposal to the FAA. No comments objecting to the proposal

were received. Except for editorial changes, this amendment is the same as that proposed in the notice. Section 75.100 of part 75 of the Federal Aviation Regulations was republished in Handbook 7400.6F dated January 2, 1990.

The Rule

This amendment to part 75 of the Federal Aviation Regulations renumbers a segment of J–213 between the Louisville, KY, VORTAC and the Beckley, WV, VORTAC. That section of J–213 between Louisville, KY, and Beckley, WV, is deleted, reestablished, and numbered as J–526. The problem is that J–8 and J–213 merge at two points, Finks interesection and the Louisville VORTAC. When air traffic controllers at Indianapolis, IN, Air Route Traffic Control Center encounter flight plans which contain the route J–8/J–213 or J–213/J–8, they are unable to ascertain at which point an aircraft on the flight plan will join with J–213 or J–8. Also, flight plans containing J–8/J–213 or J–213/J–8 are difficult to process in the air traffic computer processing system because the airways intersect at two points. This action eliminates the problem of the airways intersecting at two points and the problems associated with that.

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore—(1) is not a "major rule" under Executive Order 12291; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that will only affect air traffic procedures and air navigation, it is certified that this rule will not have a signficant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 75

Aviation safety, Jet routes.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me, part 75 of the Federal Aviation Regulations (14 CFR part 75) is amended, as follows:

PART 75—ESTABLISHMENT OF JET ROUTES AND AREA HIGH ROUTES

1. The authority citation for part 75 continues to read as follows:

Authority: 49 U.S.C. 1348(a), 1354(a), 1510; Executive Order 10854; 49 U.S.C. 106(g) (Revised Pub. L. 97–449, January 12, 1983); 14 CFR 11.69.

§ 75.100 [Amended]

2. Section 75.100 is amended as follows:

J–213 [Revised]

From Armel, VA; via INT Armel 251° and Beckley, WV, 066° radials; to Beckley.

J–526 [New]

14 CFR Part 97

[Docket No. 28348; Amdt. No. 1436]

Standard Instrument Approach Procedures; Miscellaneous Amendments

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This amendment establishes, amends, suspends, or revokes Standard Instrument Approach Procedures (SIAPs) for operations at certain airports. These regulatory actions are needed because of the adoption of new or revised criteria, or because of changes occurring in the National Airspace System, such as the commissioning of new navigational facilities, addition of new obstacles, or changes in air traffic requirements. These changes are designed to provide safe and efficient use of the navigable airspace and to promote safe flight operations under instrument flight rules at the affected airports.

DATES: *Effective:* An effective date for each SIAP is specified in the amendatory provisions.

Incorporation by reference–approved by the Director of the Federal Register on December 31, 1980, and reapproved as of January 1, 1982.

ADDRESSES: Availability of matters incorporated by reference in the amendment is as follows:

For Examination—

1. FAA Rules Docket, FAA Headquarters Building, 800 Independence Avenue, SW., Washington, DC 20591;

2. The FAA Regional Office of the region in which the affected airport is located; or

3. The Flight Inspection Field Office which originated the SIAP.

For Purchase—

Individual SIAP copies may be obtained from:

1. FAA Public Inquiry Center (APA–200), FAA Headquarters Building, 800 Independence Avenue, SW., Washington, DC 20591; or

2. The FAA Regional Office of the region in which the affected airport is located.

By Subscription—

Copies of all SIAPs, mailed once every 2 weeks, are for sale by the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402.

FOR FURTHER INFORMATION CONTACT: Paul J. Best, Flight Procedures Standards Branch (AFS–420), Technical Programs Division, Flight Standards Service, Federal Aviation Administration, 800 Independence Avenue, SW., Washington, DC 20591; telephone (202) 267–8277.

SUPPLEMENTARY INFORMATION: This amendment to part 97 of the Federal Aviation Regulations (14 CFR part 97) establishes, amends, suspends, or revokes Standard Instrument Approach Procedures (SIAPs). The complete regulatory description of each SIAP is contained in official FAA form documents which are incorporated by reference in this amendment under 5 U.S.C. 552(a), 1 CFR part 51, and § 97.20 of the Federal Aviation Regulations (FAR). The applicable FAA Forms are identified as FAA Forms 8260–3, and 8260–4, and 8260–5. Materials incorporated by reference are available for examination or purchase as stated above.

The large number of SIAPs, their complex nature, and the need for a special format take their verbatim publication in the Federal Register expensive and impractical. Further, airmen do not use the regulatory text of the SIAPs, but refer to their graphic depiction on charts printed by publishers of aeronautical materials. Thus, the advantages of incorporation by reference are realized and publication of the complete description of each SIAP contained in FAA form documents is unnecessary. The provisions of this amendment state the affected CFR (and FAR) sections, with the types and effective dates of the SIAPs. This amendment also identifies the airport, its location, the procedure identification and the amendment number.

This amendment to part 97 is effective on the date of publication and contains separate SIAPs which have compliance dates stated as effective dates based on related changes in the National Airspace System or the application of new or revised criteria. Some SIAP amendments may have been previously issued by the FAA in a National Flight Data Center (FDC) Notice to Airmen (NOTAM) as an emergency action of immediate flight safety relating directly to published aeronautical charts. The circumstances which created the need for some SIAP amendments may require making them effective in less than 30 days. For the remaining SIAPs, an effective date at least 30 days after publication is provided.

Further, the SIAPs contained in this amendment are based on the criteria contained in the U.S. Standard for Terminal Instrument Approach Procedures (TERPs). In developing these SIAPs, the TERPs criteria were applied to the conditions existing or anticipated at the affected airports. Because of the close and immediate relationship between these SIAPs and safety in air commerce, I find that notice and public procedure before adopting these SIAPs are unnecessary, impracticable, and contrary to the public interest and, where applicable, that good cause exists for making some SIAPs effective in less than 30 days.

The FAA determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore—(1) is not a "major rule under Executive Order 12291; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. For the same reason, the FAA certifies that this amendment will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

Issued in Washington, DC, on September 28, 1990.

William C. Withycombe,

Acting Director, Flight Standards Service.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me, part 97 of the Federal Aviation Regulations (14 CFR part 97) is amended by establishing, amending, suspending, or revoking Standard Instrument Approach Procedures, effective at 0901 g.m.t. on the dates specified, as follows:

PART 97—[AMENDED]

1. The authority citation for part 97 continues to read as follows:

Authority: 49 U.S.C. 1348, 1354(a), 1421 and 1510; 49 U.S.C. 106(g) (Revised Pub. L. 97-449, January 12, 1983); and 14 CFR 11.49(b)(2).

2. Part 97 is amended to read as follows:

§§ 97.23, 97.25, 97.27, 97.29, 97.31, 97.33, 97.35 [Amended]

By amending: § 97.23 VOR, VOR/DME, VOR or TACAN, and VOR/DME or TACAN; § 97.25 LOC, LOC/DME, LDA, LDA/DME, SDF, SDF/DME; § 97.27 NDB, NDB/DME; § 97.29 ILS, ILS/DME, ISMLS, MLS, MLS/DME, MLS/RNAV; § 97.31 RADAR SIAPs; § 97.33 RNAV SIAPs; and § 97.35 COPTER SIAPs, identified as follows:

Standard Instrument Approach Procedures; Miscellaneous Amendments

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This amendment establishes, amends, suspends, or revokes Standard Instrument Approach Procedures (SIAPs) for operations at certain airports. These regulatory actions are needed because of the adoption of new or revised criteria, or because of changes occurring in the National Airspace System, such as the commissioning of new navigational facilities, addition of new obstacles, or changes in air traffic requirements. These changes are designed to provide safe and efficient use of the navigable airspace and to promote flight operations under instrument flight rules at the affected airports.

DATES: *Effective:* An effective date for each SIAP is specified in the amendatory provisions.

Incorporation by reference—approved by the Director of the Federal Register on December 31, 1980, and reapproved as of January 1, 1982.

ADDRESSES: Availability of matters incorporated by reference in the amendment is as follows:

For Examination—

1. FAA Rules Docket, FAA Headquarters Building, 800 Independence Avenue, SW., Washington, DC 20591;
2. The FAA Regional Office of the region in which the affected airport is located; or
3. The Flight Inspection Field Office which originated the SIAP.

For Purchase—

Individual SIAP copies may be obtained from:

1. FAA Public Inquiry Center (APA-200), FAA Headquarters Building, 800 Independence Avenue, SW., Washington, DC 20591; or
2. The FAA Regional Office of the region in which the affected airport is located.

By Subscription—

Copies of all SIAPs, mailed once every 2 weeks, are for sale by the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402.

FOR FURTHER INFORMATION CONTACT: Paul J. Best, Flight Procedures Standards Branch (AFS-420), Technical Programs Division, Flight Standards Service, Federal Aviation Administration, 800 Independence Avenue, SW., Washington, DC 20591; telephone (202) 267-8277.

SUPPLEMENTARY INFORMATION: This amendment to part 97 of the Federal Aviation Regulations (14 CFR part 97) establishes, amends, suspends, or revokes Standard Instrument Approach Procedures (SIAPs). The complete regulatory description of each SIAP is contained in official FAA form documents which are incorporated by reference in this amendment under 5 U.S.C. 552(a), 1 CFR part 51, and § 97.20 of the Federal Aviation Regulations (FAR). The applicable FAA Forms are identified as FAA Forms 8260-3, 8260-4, and 8260-5. Materials incorporated by reference are available for examination or purchase as stated above.

The large number of SIAPs, their complex nature, and the need for a special format make their verbatim publication in the Federal Register expensive and impractical. Further, airmen do not use the regulatory text of the SIAPs, but refer to their graphic depiction on charts printed by publishers of aeronautical materials. Thus, the advantages of incorporation by reference are realized and publication of the complete description of each SIAP contained in FAA form documents is unnecessary. The provisions of this amendment state the affected CFR (and FAR) sections, with the types and effective dates of the SIAPs. This amendment also identifies the airport, its location, the procedure identification and the amendment number.

This amendment to part 97 is effective on the date of publication and contains separate SIAPs which have compliance dates stated as effective dates based on related changes in the National Airspace System or the application of new or revised criteria. Some SIAP amendments may have been previously issued by the FAA in a National Flight Data Center (FDC) Notice to Airmen (NOTAM) as an emergency action of immediate flight safety relating directly to published aeronautical charts. The circumstances which created the need for some SIAP amendments may require making them effective in less than 30 days. For the remaining SIAPs, an effective date at least 30 days after publication is provided.

Further, the SIAPs contained in this amendment are based on the criteria contained in the U.S. Standard for Terminal Instrument Approach Procedures (TERPs). In developing these SIAPs, the TERPS criteria were applied to the conditions existing or anticipated at the affected airports. Because of the close and immediate relationship between these SIAPs and safety in air commerce, I find that notice and public procedure before adopting these SIAPs are unnecessary, impracticable, and contrary to the public interest and, where applicable, that good cause exists for making some SIAPs effective in less than 30 days.

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore—(1) is not a "major rule under Executive Order 12291; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. For the same reason, the FAA certifies that this amendment will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

Office of the Secretary

32 CFR Part 199

[DoD 6010.8-R]

Civilian Health and Medical Program of the Uniformed Services (CHAMPUS); Cardiac Rehabilitation

AGENCY: Office of the Secretary, DoD.

ACTION: Final rule.

SUMMARY: This final rule amendment revises the DoD Regulation 6010.8-R (32 CFR part 199) by establishing CHAMPUS benefits for cardiac rehabilitation. This final amendment offers coverage under the CHAMPUS program for cardiac rehabilitation when used as a treatment modality following specific cardiac events.

EFFECTIVE DATE: October 9, 1987.

ADDRESSES: Office of the Civilian Health and Medical Program of the Uniformed Services (OCHAMPUS), Office of Program Development, Aurora, CO 80045.

FOR FURTHER INFORMATION CONTACT: Judy Carroll, Office of Program Development, OCHAMPUS, telephone (303) 361-3521.

SUPPLEMENTARY INFORMATION: In FR Doc. 77-7834, appearing in the Federal Register on April 4, 1977 (42 FR 17972), the Office of the Secretary of Defense published its regulation, DoD 6010.8-R, "Implementation of the Civilian Health and Medical Program of the Uniformed Services (CHAMPUS)," as part 199 of this title. 32 CFR part 199 (DoD 6010.8-R) was reissued in the Federal Register on July 1, 1988 (51 FR 24008). In FR Doc. 90-9277 appearing in the Federal Register on April 23, 1990 (55 FR 15246), the Office of the Secretary of Defense published for public comment a notice of proposed rulemaking regarding establishing coverage under the CHAMPUS program for cardiac rehabilitation when used as treatment modality following specific cardiac events. The following summarizes the comments received and the actions taken based on these comments.

Discussion of Comments

We received two (2) public comments in response to the proposed rule to offer CHAMPUS benefits for cardiac rehabilitation. The comments received in response to the proposed rule were very supportive of the decision to expand coverage to include benefits for cardiac rehabilitation following specific cardiac events. A summary of the comments and our responses to them are listed below.

Comment: We commend the DoD for recognizing the appropriateness of cardiac rehabilitation services, and for retroactively extending coverage of these services to coincide with the date of publication of a technology assessment which discussed the safety and efficacy of cardiac rehabilitation by a nationally recognized technology assessment body.

Response: We appreciate your interest in the CHAMPUS program and its beneficiary population. As a recognized national professional organization, we acknowledge your support for extending CHAMPUS coverage for cardiac rehabilitation as being consistent with generally accepted medical practice.

Comment: We support all aspects of the proposed establishment of cardiac rehabilitation services for CHAMPUS beneficiaries. However, we feel consideration should be given to allowing payment for cardiac rehabilitation services rendered in specialized freestanding cardiac rehabilitation clinics. Limitation of cardiac rehabilitation services to only a CHAMPUS authorized hospital may restrict access for certain CHAMPUS beneficiaries.

Response: We do not find this argument persuasive. As a national program, CHAMPUS strives for uniformity and equity in benefits to ensure beneficiary safety. Toward this end, CHAMPUS relies on the existing nationwide infrastructure for accreditation and professional regulatory oversight. With the large variety of freestanding cardiac rehabilitation clinics throughout the country, it is incumbent upon CHAMPUS to seek out national

standards to provide a clear line of demarcation on CHAMPUS requirements. Currently, there is no recognized national accreditation agency for accrediting freestanding cardiac rehabilitation clinics, nor does there appear to be standarized state licensure, or certification procedures in existence which address standards for freestanding cardiac rehabilitation clinics. Since OCHAMPUS does not have the resources to conduct it own accreditation activities, the requirement for national accreditation is at least a minimum assurance that a facility or specialized treatment facility meets some standards of quality.

As stated in the proposed notice, CHAMPUS does not extend benefits for cardiac rehabilitation programs nor the monitoring of any tests while participating in a cardiac rehabilitation program. Although current regulatory provisions allow payment for medically necessary rehabilitation services designed to restore patients to a normal level of functioning following disease or injury, to date, CHAMPUS has not included coverage for cardiac rehabilitation services. The unresolved controversy over the efficacy and medical necessity of treatment, the lack of uniform standards among programs, the lack of national endorsement by a recognized technology assessing group, and the high costs, resulted in an agency decision to exclude coverage for cardiac rehabilitation.

In October 1987, the Diagnostic and Therapeutic Technology Assessment (DATTA) and in August 1988, the Office of Health Technology and Assessment (OHTA) issued reports which indicate that cardiac rehabilitation services are an integral part of the rehabilitation treatment of patients with coronary artery disease; specifically, patients who have had a myocardial infarction (MI), coronary artery bypass graft (CABG), or chronic stable angina pectoris. Additionally, in October 1988, The American College of Physicians published a report entitled "Cardiac Rehabilitation Services" in the *Annals of the Internal Medicine* which endorsed cardiac rehabilitation as appropriate for selected patients after MI, and coronary revascularization, or coronary angioplasty. The article further indicated that, although data was limited, patients with debilitating angina pectoris or symptomatic left ventricular dysfunction may also be candidates for cardiac rehabilitation when these disorders fail to respond to standard medical or surgical interventions. These endorsements further establish cardiac rehabilitation as the standard of care within the medical community and support previous premises that cardiac rehabilitation programs can improve the functional capacity of the heart and thus improve overall health outcome.

Since endorsement of cardiac rehabilitation services by several national technology assessing groups, as an effective treatment modality following certain cardiac events, OCHAMPUS feels that continued denial of cardiac rehabilitation services is inappropriate and no longer supportable under current regulatory provisions and has decided to extend benefits for cardiac rehabilitation services. Implementation of this new benefit is effective October 9, 1987, to coincide with the date the DATTA assessment appeared in the *Journal of the American Medical Association.*

In determining benefit design, the following factors influenced the resultant proposed recommendations for coverage in the proposed rule: (1) Cost, (2) current policies and reimbursement practices and trends of other third party payors, including Medicare, (3) studies which have identified the population best served through cardiac rehabilitation, (4) current and future needs of the CHAMPUS beneficiary population, and (5) current law and regulatory provisions which govern the CHAMPUS program.

The final rule incorporates many of the recommendations made by the previously mentioned national technology assessing bodies. The limits on duration of treatment provide coverage consistent with Medicare and other major third party payors. Provider status is limited to otherwise authorized CHAMPUS participating hospitals based primarily on the fact that relevant professional accreditation programs directed specifically at cardiac rehabilitation programs have not yet been established. The payment methodology is based on a total program concept similar to Medicare's. These limits ensure the expenditure of government funds for medically appropriate treatment found to be medically beneficial while simultaneously controlling government costs. The maximum projected cost of this benefit is 5.8 million dollars during the first full year of benefit coverage. This estimate is based on a user population expected to be afflicted with coronary heart disease. We expect the above projected cost for establishing and maintaining a cardiac rehabilitation benefit will offset some of the costs associated with future medical needs and complications of high risk cardiac patients.

This final rule offers coverage for services now unavailable to the CHAMPUS beneficiary population, but which are available to their civilian counterparts. It is an enhancement of military benefits.

Section 605(b) of the Regulatory Flexibility Act of 1980 (Pub. L. 96-354) requires that each federal agency prepare and make available for public comment, a regulatory flexibility analysis when the agency issues regulations which would have a significant impact on a substantial number of small entities. The Secretary certifies, pursuant to section 605(b) of title 5, United States Code, enacted by the Regulatory Flexibility Act (Pub. L. 96-354), that this regulation amendment will not have a significant economic impact on a substantial number of small businesses, organizations, or government jurisdictions. The final rule will broaden the scope of CHAMPUS benefits by extending benefits to include coverage for cardiac rehabilitation services. It will not involve any significant burden on CHAMPUS beneficiaries or providers of cardiac rehabilitation services. Cost-containment parameters have been built into the final rule. It is not therefore, a "major rule" under Executive Order 12291.

List of Subjects in 32 CFR Part 199

Claims, Handicapped, Health insurance, and Military Personnel.

Accordingly, 32 CFR Chapter I, part 199 is amended reading as follows:

1. The authority citation for part 199 continues to read as follows:

Authority: 10 U.S.C. 1079, 1086, 5 U.S.C. 301.

2. Section 199.4 is amended by adding a new paragraph (e)(18) as follows:

§ 199.4 Basic Program Benefits.

* * * * *

(e) * * *

(18) *Cardiac rehabilitation.* Cardiac rehabilitation is the process by which individuals are restored to their optimal physical, medical, and psychological status, after a cardiac event. Cardiac rehabilitation is often divided into three phases. Phase I begins during inpatient hospitalization and is managed by the patient's personal physician. Phase II is a medically supervised outpatient program which begins following discharge. Phase III is a lifetime maintenance program emphasizing continuation of physical fitness with periodic followup. Each phase includes an exercise component, patient education, and risk factor modification. There may be considerable variation in

program components, intensity, and duration.

(i) *Benefits Provided.* CHAMPUS benefits are available on an inpatient or outpatient basis for services and supplies provided in connection with a cardiac rehabilitation program when ordered by a physician and provided as treatment for patients who have experienced the following cardiac events within the preceding twelve (12) months:

(A) Myocardial Infarction.

(B) Coronary Artery Bypass Graft.

(C) Coronary Angioplasty.

(D) Percutaneous Transluminal Coronary Angioplasty

(E) Chronic Stable Angina (see limitations below).

(ii) *Limitations.* Payable benefits include separate allowance for the initial evaluation and testing. Outpatient treatment following the initial intake evaluation and testing is limited to a maximum of thirty-six (36) sessions per cardiac event, usually provided 3 sessions per week for twelve (12) weeks. Patients diagnosed with chronic stable angina are limited to one treatment episode (36 sessions) in a calendar year.

(iii) *Exclusions.* Phase III cardiac rehabilitation lifetime maintenance programs performed at home or in medically unsupervised settings are not covered.

(iv) *Providers.* A provider of cardiac rehabilitation services must be a CHAMPUS authorized hospital. (Refer to Section 199.6, "Authorized Providers.") All cardiac rehabilitation services must be ordered by a physician.

(v) *Payment.* Payment for outpatient treatment will be based on an all inclusive allowable charge per session. Inpatient treatment will be paid based upon the reimbursement system in place for the hospital where the services are rendered.

(vi) *Implementation Guidelines.* The Director of OCHAMPUS shall issue guidelines as are necessary to implement the provisions of this paragraph.

Department of the Air Force

32 CFR Part 806b

[Air Force Reg. 12-35]

Air Force Privacy Act Program

AGENCY: Department of the Air Force, DOD.

ACTION: Final rule.

SUMMARY: The Department of the Air Force is publishing a final rule for an exempt record system subject to the Privacy Act of 1974, as amended, (5 U.S.C. 552a).

EFFECTIVE DATE: October 19, 1990.

ADDRESSES: Send comments to Mrs. Anne Turner, SAF/AAIA, The Pentagon, Washington, DC 20330-1000. Telephone (202) 697-3491 or Autovon 227-3491.

SUPPLEMENTARY INFORMATION: On August 22, 1990, at 55 FR 34310 of the Federal Register, the Department of the Air Force published an exemption change which added a system manager and expanded the exemption rule to include all system locations to an existing record system. See also 55 FR 34286, August 22, 1990. No comments were received, therefore the Department of the Air Force is adopting the change as part of the final rule.

List of subjects in 32 CFR part 806b

Privacy.

PART 806b—AIR FORCE PRIVACY ACT PROGRAM

For the reasons set forth in the preamble, 32 CFR part 806b is amended as follows:

1. The authority citation for 32 CFR part 806b continues to read as follows:

Authority: Pub. L. 93-579, 88 Stat. 1896 (5 U.S.C. 552a)

2. Section 806b.13 is amended by revising paragraph (a)(5) as follows:

§ 806b.13 General and specific exemptions.

(a) * * *

(5) *System identification and name*—F125 AF A, Correction and Rehabilitation Records.

Exemption—Portions of this system that fall within 5 U.S.C. 552a(j)(2) are exempt from the following provisions of 5 U.S.C. 552a, Sections (c)(3) and (c)(4); (d)(1) through (d)(5); (e)(2) and (e)(3); (e)(4)(G) and (e)(4)(H), (e)(5); (f)(1) through (f)(5); (g)(1) through (g)(5); and (h) of the Act.

Authority—5 U.S.C. 552a(j)(2).

Reason—The general exemption will protect ongoing investigations and protect from access criminal investigation information contained in this record system so as not to jeopardize any subsequent judicial or administrative process taken as a result of information contained in the files.

BILLING CODE 3810-01-M

DEPARTMENT OF TRANSPORTATION

Coast Guard

33 CFR Part 117

[CGD7-90-57]

Drawbridge Operation Regulations; Atlantic Intracoastal Waterway, Florida

AGENCY: Coast Guard, DOT.

ACTION: Final rule.

SUMMARY: At the request of Monroe County, the Coast Guard is changing the regulations governing the operation of the Jewfish Creek drawbridge at Key Largo by permitting the number of openings to be limited during certain periods. This change is being made because periods of peak vehicular traffic have increased. This action will accommodate current needs of vehicular traffic and still provide for the reasonable needs of navigation.

EFFECTIVE DATE: These regulations become effect on November 19, 1990.

FOR FURTHER INFORMATION CONTACT: Ian MacCartney (305) 536-4103.

SUPPLEMENTARY INFORMATION: On July 19, 1990, the Coast Guard published a proposed rule (55 FR 29389) concerning this change with a comment limit date of September 4, 1990. The Commander, Seventh Coast Guard District, also published the change as a Public Notice dated August 17, 1990. In each notice, interested persons were given until September 4, 1990 to submit comments.

Drafting Information

The drafters of this notice are Ian MacCartney, project officer, and Lt. Genelle Tanos, project attorney.

Discussion of Comments

Two comments were received. Both were in favor of the regulation. No other comments were received. The final rule is, therefore, unchanged from the proposed rule published on July 19, 1990.

Federalism

This action has been analyzed in accordance with the principles and

criteria contained in Executive Order 12612, and it has been determined that this rulemaking does not have sufficient federalism implications to warrant the preparation of a Federalism Assessment.

Economic Assessment and Certification

These regulations are considered to be non-major under Executive Order 12291 on Federal Regulation and non-significant under the Department of Transportation regulatory policies and procedures (44 FR 11034; February 26, 1979). The economic impact of this proposal has been found to be so minimal that a full regulatory evaluation is unnecessary. We conclude this because the rule exempts tugs with tows. Since the economic impact is expected to be minimal, the Coast Guard certifies that they will not have a significant impact on a substantial number of small entities.

List of Subjects in 33 CFR Part 117

Bridges.

Regulations

In consideration of the foregoing, part 117 of title 33, Code of Federal Regulations, is amended as follows:

PART—117 DRAWBRIDGE OPERATION REGULATIONS

1. The authority citation for part 117 continues to read as follows:

Authority: 33 U.S.C. 499; 49 CFR 1.46; 33 CFR 1.05–1g.

2. Section 117.261 (qq) is revised to read as follows:

§ 117.261 Atlantic Intracoastal Waterway from St. Marys River to Key Largo.

* * * * *

(qq) *Jewfish Creek, mile 1134, Key Largo.* The draw shall open on signal; except that from 10 a.m. to sunset, Thursday through Sunday and federal holidays, the draw need open only on the hour and half hour.

Dated: October 9, 1990.

Robert E. Kramek,

Rear Admiral, U.S. Coast Guard Commander, Seventh Coast Guard District.

BILLING CODE 4910-14-M

---

33 CFR Part 117

[CGD7-90-54]

Drawbridge Operation Regulations; Atlantic Intracoastal Waterway, FL

AGENCY: Coast Guard, DOT.

ACTION: Final rule.

SUMMARY: At the request of Congressman Tom Lewis, the Coast Guard is revising the regulations governing the PGA Boulevard and Parker bridges at North Palm Beach by permitting the number of openings to be limited during certain periods. This change is being made because it will improve the movement of vehicular traffic in the area. This action will accommodate the current needs of vehicular traffic and still provide for the reasonable needs of navigation.

EFFECTIVE DATE: These regulations become effective on November 19, 1990.

FOR FURTHER INFORMATION CONTACT: Walt Paskowsky, (305) 536–4103.

SUPPLEMENTARY INFORMATION: On June 27, 1990, the Coast Guard published proposed rule (55 FR 26220) concerning this amendment. The Commander, Seventh Coast Guard District, also published the proposal as a Public Notice dated July 13, 1990. In each notice interested persons were given until August 13, 1990, to submit comments.

Drafting Information

The drafters of these regulations are Walter J. Paskowsky, project officer, and Lt. Genelle Tanos, project attorney.

Discussion of Comments

A Supplemental Notice of Proposed Rulemaking was published on June 27, 1990, proposing a seasonal 20 minute opening schedule from November 1 until April 30. Five comments were received. Four commentors, including a large marine industry association, supported the proposed rule. One commentor, representing a local homeowners association, requested staggered annual 30 minute openings. No additional information was presented to justify this proposal. No other comments were received. The Coast Guard has carefully considered the comments and has determined that no new information has been presented which justifies changing the proposed regulations. The final rule is, therefore, unchanged from the proposed rule published on June 27, 1990.

Federalism

This action has been analyzed in accordance with the principles and criteria contained in Executive Order 12612, and it has been determined that the rulemaking does not have sufficient federalism implications to warrant the preparation of a Federalism Assessment.

Economic Assessment and Certification

These regulations are considered to be non-major under Executive Order 12291 on Federal Regulation and nonsignificant under Department of Transportation regulatory policies and procedures. (44 FR 11034; February 26, 1979).

The economic impact has been found to be so minimal that a full regulatory evaluation is unnecessary. We conclude this because the regulations exempt tugs with tows. Since the economic impact is expected to be minimal, the Coast Guard certifies that they will not have a significant impact on a substantial number of small entities.

BILLING CODE 4910-14-M

---

33 CFR Part 117

[CGD7-90-37]

Drawbridge Operation Regulations; Okeechobee Waterway, Florida

AGENCY: Coast Guard, DOT.

ACTION: Final rule.

SUMMARY: At the request of the Lee County Department of Transportation, the Coast Guard is revising the regulations governing the Sanibel Causeway bridge, mile 151 at Punta Rassa by changing the hours of the regulated operations. This change is being made because of the back-to-back openings which are occurring during periods of peak vehicular traffic. This action should accommodate the needs of vehicular traffic and still provide for the reasonable needs of navigation.

EFFECTIVE DATE: These regulations become effective on November 19, 1990.

FOR FURTHER INFORMATION CONTACT: Ian MacCartney (305) 536-4103.

SUPPLEMENTARY INFORMATION: On June 22, 1990, the Coast Guard published proposed rule (55 FR 25676) concerning this amendment with a comment limit date of August 6, 1990. The Commander, Seventh Coast Guard District, also published the proposal as a Public Notice dated July 5, 1990. Comment period was subsequently extended to 15 September 1990.

Drafting Information

The drafters of this notice are Ian MacCartney, project officer, and Lt. Genelle Tanos, project attorney.

Discussion of Comments

Four comments were received. One waterway user objected to any restrictions, stating that strong tidal currents and a lack of maneuvering room makes holding at the bridge unsafe. Two commentors were in favor of the proposal and encouraged even more restrictive opening regulations. Lee County indicated that while using the temporary 15 minute regulations, there were no adverse effects on navigation and vehicles appeared to move smoothly. They also recommended a 30 minute opening schedule from January 1 through April 15. Available data does not support this proposal. No other comments were received. The Coast Guard has carefully considered the comments and has determined that no new information has been presented which justifies changing the proposed regulations. The final rule is, therefore, unchanged from the proposed rule published on June 22, 1990.

Federalism

This action has been analyzed in accordance with the principles and criteria contained in Executive Order 12612, and it has been determined that this rulemaking does not have sufficient federalism implications to warrant the preparation of a Federalism Assessment.

Economic Assessment and Certification

These regulations are considered to be non-major under Executive Order 12291 on Federal Regulation and nonsignificant under the Department of Transportation regulatory policies and procedures (44 FR 11034; February 26, 1979).

The economic impact has been found to be so minimal that a full regulatory evaluation is unnecessary. We conclude this because the rule exempts tugs with tows. Since the economic impact is expected to be minimal, the Coast Guard certifies that they will not have a significant impact on a substantial number of small entities.

BILLING CODE 4910-14-M

---

33 CFR Part 117

[CGD7-90-65]

Drawbridge Operation Regulations; St. Johns River, FL

AGENCY: Coast Guard, DOT.

ACTION: Temporary rule.

SUMMARY: At the request of the State of Florida, the Coast Guard is temporarily changing the regulations governing the operation of three bridges across the St. Johns River at Jacksonville, Florida, the Main Street (US17) Bridge, mile 24.7, the Acosta (SR13) Bridge, mile 24.9 and the Fuller Warren (I10-I95) Bridge, mile 25.4, in order to improve the flow of peak morning commuter traffic. This action accommodates the needs of vehicular traffic and still provides for the reasonable needs of navigation.

EFFECTIVE DATES: These temporary regulations became effective on September 24, 1990 and will terminate on November 23, 1990.

ADDRESSES: Comments regarding this temporary change should be mailed to Commander (oan), Seventh Coast Guard District, Brickell Plaza Federal Building, 909 SE 1st Avenue, Miami, Florida 33131-3050. Any comments received will be available for inspection and copying in the office of the Bridge Administrator located in Room 484, Brickell Plaza Federal Building, 909 S.E. 1st Avenue, Miami, Florida. Documents and comments concerning this regulation may be inspected Monday through Friday between the hours of 7:30 a.m. and 4 p.m.

FOR FURTHER INFORMATION CONTACT: Mr. Gary D. Pruitt (305) 536-4103.

SUPPLEMENTARY INFORMATION: Interested parties submitting written views, comments, data, or arguments should include their names and addresses, identify the bridge, and give reasons for concurrence with or any recommended change to the temporary regulation.

Drafting Information

The drafters of this notice are Mr. Gary Pruitt, Bridge Administration Specialist, project officer, and Lieutenant Genelle G. Tanos, project attorney.

Discussion of Temporary Regulations

This temporary regulation changes only the morning regulated period on weekdays. The bridge presently opens on signal except that the bridge need not open from 7:30 a.m. to 8:30 a.m. Monday through Friday except Federal holidays. The Coast Guard has determined that a

shift of the existing morning regulated period one-half hour earlier at all three bridges will accommodate the change in morning automobile traffic. The problem with the change in peak traffic has been accentuated by revised travel patterns caused by the detour route in place due to the construction of the new Acosta Bridge. All other aspects of the existing regulations remain in full force and effect. Because this is a temporary regulation, it will not appear in the Code of Federal Regulations.

Federalism

This action has been analyzed in accordance with the principals and criteria contained in Executive Order 12612, and it has been determined that the temporary rulemaking does not have sufficient Federalism implications to warrant the preparation of a Federalism Assessment.

Economic Assessment and Certification

This temporary regulation is considered to be non-major under Executive Order 12291 on Federal Regulation and nonsignificant under the Department of Transportation regulatory policies and procedures (44 FR 11034: February 26, 1979). The economic impact of this temporary rule is expected to be so minimal that a full regulatory evaluation is unnecessary. We conclude this because the temporary rule will not change the total amount of time bridges are allowed to be maintained in the closed position. Since the economic impact of the proposal is expected to be minimal, the Coast Guard certifies that it does not have a significant impact on a substantial number of small entities.

List of Subjects in 33 CFR Part 117

Bridges.

Temporary Regulations

In consideration of the foregoing, the Coast Guard has amended part 117 of title 33 Code of Federal Regulations as follows:

Authority: 33 U.S.C. 499; 49 CFR 1.46; 33 CFR 1.05–1(g).

2. For the period between September 24 and November 23, 1990 paragraph (a) of § 117.325 is revised to read as follows:

§ 117.325 St. Johns River.

(a) The draws of the Main Street (US17) Bridge, mile 24.7, the Acosta (SR13) Bridge, mile 24.9 and the Fuller Warren (I10/I95) Bridge, mile 25.4, all at Jacksonville, shall open on signal except that, from 7 a.m. to 8:30 a.m. and 4:30 p.m. to 6 p.m., Monday through Saturday except Federal holidays, the draw need not be opened for the passage of vessels. The draws shall open at any time for vessels in an emergency involving life or property.

* * * * *

Rear Admiral, U.S. Coast Guard, Commander, Seventh Coast Guard District.

[FR Doc. 90-24771 Filed 10-18-90; 8:45 am]

BILLING CODE 4910-14-M

COAST GUARD

33 CFR Part 165

[COTP Jacksonville, FL; Regulation 90-84]

Safety/Security Zone; Naval Submarine Base, Kings Bay, GA

AGENCY: Coast Guard, DOT.

ACTION: Final rule.

SUMMARY: The Coast Guard is establishing a safety zone concurrent with the security zone stipulated in 33 CFR 165.731, specifically, the waters surrounding Naval Submarine Base, Kings Bay, Georgia. The present regulations are also modified to allow the activation of a fixed and moving safety/security zone during the arrival or departure of specified military vessels. It has been necessary to implement these requirements on several previous occassions by emergency rule. The zone is necessary to safeguard the specified military vessel and likewise to protect the boating public from the hazards associated with a large number of vessels operating in restricted waters. Entry into this zone is prohibited unless authorized by the Captain of the Port.

EFFECTIVE DATES: This regulation becomes effective on 25 September 1990. Comments on this regulation must be received on or before 01 December 1990.

ADDRESSES: Comments should be mailed to Commanding Officer, Coast Guard Marine Safety Office, 2831 Talleyrand Avenue, Jacksonville, FL 32206–3497. The comments will be available for inspection and copying at MSO Jacksonville, Room 222. Normal office hours are between 7:30 a.m. and 4:30 p.m., Monday through Friday, except holidays.

FOR FURTHER INFORMATION CONTACT: Lieutenant Mike Maes, Tel: (904) 791–2048.

SUPPLEMENTARY INFORMATION: In accordance with 5 U.S.C. 553, a notice of proposed rulemaking was not published for this regulation and good cause exists for making it effective in less than 30 days for Federal Register publication. Following normal rulemaking procedures was unnecessary in that little or no economic impact is envisioned and no adverse comments are expected concerning the terms of the regulation.

Although this regulation is published as a final rule without prior notice, an opprtunity for public comment is nevertheless desirable to ensure that the regulation is both reasonable and workable. Accordingly, persons wishing to comment may do so by submitting written comments to the office listed under "ADDRESSES" in this preamble. Commenters should include their names and addresses, identify the docket number for the regulations, and give their comments. Based upon comments received, the regulation may be changed.

Drafting Information

The drafters of this regulation are Lieutenant Christopher K. Lockwood, project officer for the Captain of the Port, and Lieutenant G.G. Tanos, project attorney, Seventy Coast Guard District Legal Office.

Discussion of Regulation

The situation requiring this regulation is the continued need to safeguard specified military vessels and to protect the boating public from the special hazards involved while these vessels transit restricted waters. The lack of maneuverability, large wakes, and escort vessels in formation increase the collision risks if spectator craft are allowed within close proximity.

This regulation is issued pursuant to 33 U.S.C. 1225 and 1231 and 50 U.S.C. 191 as set out in the authority citation for all of part 165.

Economic Assessment and Certification

These regulations are considered to be non-major under Executive Order 12291 on Federal Regulation and nonsignificant under Department of Transportation regulatory policies and procedures (44 FR 11034; February 26, 1979).

The economic impact has been found to be so minimal that a full regulatory evaluation is unnecessary. The security zone in the waters surrounding the Naval Submarine Base has been in effect since November 1985 and concurrent safety/security zones have been implemented three times during the past two years in order to provide a safe environment for the transit of U.S. Naval vessels while within restricted waters. The establishment of the permanent and the temporary zones have yet to elicit a complaint based on economic considerations. Only minor delays to mariners are foreseen, just prior to and

during the transit of these vessels. Since the economic impact of these regulations is expected to be minimal, the Coast Guard certifies that they will not have a significant economic impact on a substantial number of persons.

Federalism

This action has been analyzed in accordance with the principles and criteria contained in Executive Order 12612, and it has been determined that the proposed rulemaking does not have sufficient federalism implications to warrant to the preparation of Federalism Assessment.

List of Subjects in 33 CFR Part 165

Harbors, Marine safety Navigation (water), Security measures, Vessels, Waterways.

Final Regulation

In consideration of the foregoing, subpart F of part 165 of title 33, Code of Federal Regulations, is amended as follows:

PART 165—[AMENDED]

1. The authority citation for part 165 continues to read as follows:

Authority: 33 U.S.C. 1225 and 1231; 50 U.S.C. 191; 49 CFR 1.46 and 33 CFR 1.05–1(g), 6.04–1, 6.04–6, and 160.5.

2. Section 165.731 is revised to read as follows:

§ 165.731 Safety/Security Zone: Cumberland Sound, Georgia and St. Marys River Entrance Channel.

(a) *Location.* A permanent safety/security zone is established within the following coordinates, the area enclosed by a line starting at

30°44'55" N, 081°29'29" W; thence to 30°44'55" N, 081°29'26" W; thence to 30°46'35" N, 081°28'16" W; thence to 30°47'02" N, 081°28'04" W; thence to 30°47'21" N, 081°28'06" W; thence to 30°46'00" N, 081°29'42" W; thence to 30°46'07" N, 081°29'58" W; thence to 30°46'55" N, 081°30'25" W; thence to 30°52'15" N, 081°31'08" W; thence to 30°50'16" N, 081°31'30" W; thence to 30°49'58" N, 081°31'45" W; thence to 30°49'58" N, 081°32'05" W; thence to 30°50'12" N, 081°32'17" W; thence following the land based perimeter boundary to the point of origin.

(b) A temporary safety/security zone, when activated by the Captain of the Port, Jacksonville, Florida, encompasses all waters and land from bank to bank within Cumberland Sound and the St. Marys Entrance Channel: the northern extent of this zone starts at the southern tip of Crab Island; lighted buoy number "1" at the mouth of the Amelia River demarks the southern boundary; day marker number "2" at the mouth of the St. Marys River indicates the western boundary; and the eastern boundary extends out to three (3) nautical miles in the Atlantic Ocean, with the zone also encompassing the waters within 1000 yards of the entrance channel east of the jetties.

(c) *Regulations.* (1) The Captain of the Port, Jacksonville, Florida will activate the temporary safety/security zone described in paragraph (b) of this section by issuing a local broadcast notice to mariners.

(2) All persons and vessels in the vicinity of the safety/security zone shall immediately obey any direction or order of the Captain of the Port, Jacksonville, Florida.

(3) The general regulations governing safety and security zones contained in 33 CFR 165.23 and .33 apply. No person or vessel may enter or remain within the designated zones without the permission of the Captain of the Port, Jacksonville, Florida.

(4) This regulation does not apply to persons or vessels operating under the authority of the United States Navy nor to authorized law enforcement agencies.

Dated: September 25, 1990.

R.J. O'Pezio,

Captian, U.S. Coast Guard, Captain of the Port, Jacksonville, FL.

BILLING CODE 4910-14-M

Coast Guard

33 CFR Part 165

[COTP Jacksonville, FL Regulation 90-82]

Safety/ Security Zone Regulations; St. Johns River, Jacksonville, FL

AGENCY: Coast Guard, DOT.

ACTION: Emergency rule.

SUMMARY: The Coast Guard has established a combined safety and security zone around specified military supply vessels while transiting the St. Johns River and while berthed at Blount Island Terminal. This zone is needed to protect boats and onlookers from harm, and to prevent interference with ongoing Department of Defense operations. Entry into this zone is prohibited unless authorized by the Captain of the Port.

EFFECTIVE DATES: This regulation is effective 25 August 1990; it terminates on 11 December 1990.

FOR FURTHER INFORMATION CONTACT: Lieutenant M. Maes, Tel: (904) 791–2648.

SUPPLEMENTARY INFORMATION: In accordance with 5 U.S.C. 553, a notice of proposed rulemaking was not published for this regulation and good cause exists for making it effective in less than 30 days after Federal Register publication. Publishing an NPRM and delaying its effective date would be contrary to the public interest since immediate action is needed to respond to potential hazards which may occur within the water and shore areas involved.

Drafting Information

The drafters of this regulation are Lieutenant Christopher K. Lockwood, project officer for the Captain of the Port, and Lieutenant C.G. Tanos, project attorney, Seventh Coast Guard District Legal Office.

Discussion of Regulation

The circumstances requiring this regulation is the safety of military supply vessels during transit and while berthed at Blount Island. The protection of vital United States assets as well as the safety of unwary boaters and onlookers necessitates the establishment of both a safety and security zone. Only minor delays to mariners is foreseen, mainly during the transit of these vessels.

This regulation is issued pursuant to 33 U.S.C. 1225 and 1231 as set out in the authority citation for all of part 165.

Federalism

This action has been analyzed in accordance with the principles and criteria contained in Executive Order 12612, and it has been determined that the proposed rulemaking does not have sufficient federalism implications to warrant the preparation of a Federalism Assessment.

List of Subjects in 33 CFR Part 165

Harbors, Marine Safety, Navigation

(water), Security measures, Vessels, Waterways.

Regulation

In consideration of the foregoing, subpart C and subpart D of part 165 of title 33, Code of Federal Regulations, is amended as follows:

PART 165—[AMENDED]

1. The authority citation for part 165 continues to read as follows:

Authority: 33 U.S.C. 1225 and 1231; 50 U.S.C. 191; 49 CFR 1.46 and 33 CFR 1.05–1(g), 6.04–1, 6.04–6, and 160.5.

2. A new 165.T0754 is added to read as follows:

§ 165.T0754 Safety/ Security Zone: St. Johns River, Jacksonville, Florida.

(a) *Location.* The water and the land within the following boundaries are established as a safety and security zone during specified conditions:

(1) All waters within 200 yards of Blount Island, Jacksonville, FL and all adjacent land within 100 yards of the island shoreline during staging of Department of Defense equipment and subsequent loading of military supply vessels.

(2) All waters within 200 yards of any specified military supply vessel beginning three nautical miles offshore and during transit of the St. Johns River.

(b) *Effective date.* This regulation becomes effective on 15 August 1990. It terminates on 11 December 1990.

(c) *Regulations:* (1) The COTP Jacksonville will activate this zone or specific portions thereof by means of a locally promulgated broadcast notice to mariners. Once implemented, overtaking or meeting situations are not allowed during specified vessel transits. In accordance with the general regulations governing safety and security zones contained in 33 CFR 165.23 and 165.33 of this part, entry into this zone is prohibited unless authorized by the Captain of the Port Jacksonville, Fl.

(2) This regulation does not apply to authorized law enforcement agencies operating within the security/safety zone.

Dated: August 15, 1990.

R.J. O'Pezio

Captain, U.S. Coast Guard, Captain of the Port, Jacksonville, FL.

Policy and Rules Concerning Rates for Dominant Carriers

AGENCY: Federal Communications Commission [FCC].

ACTION: Final rule

SUMMARY: The Commission has adopted a Second Report and Order implementing for local exchange carriers a form of incentive regulation, referred to as "price cap" regulation. This action results in the replacement of the rate of return regulatory model with one that directly limits rates by means of price caps. The Commission has found that the price cap method of regulation will promote efficiency and innovation, and will benefit consumers more effectively than rate of return regulation.

EFFECTIVE DATE: October 31, 1990. These Final Rules will become effective on less than 30 days' notice pursuant to 5 U.S.C. 553(d)(3).

ADDRESSES: Federal Communications Commission, Washington, DC 20554.

Summary of Second Report and Order

This is a summary of the Commission's Second Report and Order in the Matter of Policy and Rules Concerning Rates for Dominant Carriers, CC Docket No. 87–313, FCC 90–314, released October 4, 1990.

The full text of this Commission decision is available for inspection and copying during normal business hours in the FCC Dockets Branch (room 230), 1919 M Street NW., Washington, DC. The complete text of this decision may also be purchased from the Commission's copy contractor, International Transcription Services, (202) 857–3800, 2100 M Street NW., suite 140, Washington, DC 20037.

1. Introduction

A. Statement of purpose

1. This Report and Order adopts a new system of regulating the interstate common carrier services of the Nation's largest local exchange carriers (LECs). These companies, in providing the critical telecommunications link between a customer's premises and the interexchange networks, have until now been regulated under a "cost-plus" system of regulation, in which rates the LECs can charge for services are based on costs plus a return on invested capital. By our action today, the "cost-plus" system of regulation will be replaced for the largest of the LECs on January 1, 1991, with an incentive-based system of regulation will reward companies that become more productive and efficient, while ensuring that productivity and efficiency gains are shared with ratepayers.

2. In designing an incentive-based system of regulation for the largest LECs, our objective, as with our price caps system for AT&T, is to harness the profit-making incentives common to all businesses to produce a set of outcomes that advance the public interest goals of just, reasonable, and nondiscriminatory rates, as well as a communications system that offers innovative, high quality services. To accomplish this objective, the plan we adopt for LECs modifies the tariff review process to set a ceiling, or cap, on the prices LECs can charge for their interstate offerings. The price cap is subject to an annual adjustment that ensures prices will drop in real, inflation-adjusted terms. LECs that can outperform the productivity level embedded in the annual adjustment mechanism are rewarded with the ability to retain reasonably higher earnings than would be available under the former regulatory system. Depending upon their achieved returns,

their ratepayers share in these earnings. Those LECs able to decrease prices beyond the required level can retain an even greater amount of earnings.

3. Price cap regulation of LECs, as we have designed it, is intended to produce rates within a zone of reasonableness. Higher earnings will be shared with, or returned to, ratepayers. The checks and balances built into the system ensure that, with periodic review and adjustment, price cap regulation can serve as a long term mode of regulation for the LECs subject to it. In this respect, we view price cap regulation no differently than many of the state governments and foreign administrations that have adopted incentive-based regulation for LECs' intrastate operations or their foreign equivalents, as a permanent method of regulation.

4. While the price cap system we adopt for LECs is similar in many respects to the one that we use to regulate AT&T, the differences in the markets involved, the difficulties in designing a single regulatory structure to apply to multiple companies, and a desire to safeguard regulatory programs promoting universal service, have required us at this initial stage to adopt an even more cautious and careful approach to the redesign of our regulatory processes than we did with AT&T. As with the AT&T plan, the LEC price cap system essentially operates through the tariff review process to ensure rates are within the parameters our price cap rules require. However, the LEC system also contains additional safeguards, such as sharing of profits, that represent both a limited departure and logical outgrowth from the AT&T plan. Since the release of the *Notice* in this proceeding in August, 1987, the Commission has collected over 11,000 pages of pleadings in response to three subsequent Notices of Proposed Rulemaking. At each stage in the proceeding, the plan for LEC price caps has evolved in important ways. In this Report and Order, we again modify the plan to respond directly to concerns raised in the record.

B. Rationale for adoption of incentive regulation

5. In the *Second Further Notice*, the Commission articulated a policy judgment that incentive-based regulation is superior to rate of return for the regulation of certain dominant carriers, including local exchange carriers. That policy judgment was based on a comparison of the existing rate of return system with an incentive-based system. In this Report and Order, we reaffirm the basic policy judgment that a properly designed system of incentive regulation will be an improved form of regulation, generating greater consumer benefits, and we refine and further clarify the analysis yielding that conclusion.

6. As stated in the *Second Further Notice*, incentive regulation relies in the first instance on regulating prices. By establishing limits on prices carriers can charge for their services, and placing downward pressure on those limits or "caps," we create a regulatory environment that requires carriers to become more productive. Carriers that can substantially increase their productivity can earn and retain profits at reasonable levels above those we allow for rate of return carriers, although earnings above a certain level are shared or returned. If carriers fail to become more productive, they risk seeing their earnings erode. Rate of return regulation lacks incentives for carriers to become more productive. Under rate of return, carriers are allowed to set their rates based on the costs—investment and expense—of providing a service. Carriers are given fairly wide latitude in the costs they can claim as the basis for their rates. As the Commission stated in the *Further Notice*, in this respect rate of return is akin to a "cost-plus" contract.

7. In the course of debating the relative merits of price cap and rate of return regulation, a number of parties have asked the Commission to consider alternatives to price cap regulation. Several parties ask that we instead focus on ways of improving rate of return regulation. Some commenters unite behind the proposition that regulatory lag is a better alternative than incentive regulation. Although improvement in rate of return methods is one possible course to follow in reforming current regulatory practices, it is not the best approach. We recognize that a number of state regulatory commissions have opted to improve rate of return regulation in redesigning their regulatory structures. Nevertheless, only a few states now continue to regulate intrastate LEC activities pursuant to traditional rate of return practices. The majority of states have authorized significant reforms to their regulatory systems, as part of an effort to improve efficiency incentives, increase flexibility, reduce administrative burdens, and benefit consumers.

8. Despite the strong and growing presence of incentive-based regulation as a means of regulating LECs, a number of parties argue that a price cap plan along the lines advanced in the *Second Further Notice* and in the *Supplemental Notice* should not be adopted. We disagree. In reviewing the arguments concerning specific aspects of the proposed plan, we have made several substantial modifications. With these changes, we believe that the LEC price cap system will operate in the public interest. We therefore decline the invitation of some parties to extend even further the extensive record before us and to renew our study of the issues. In this Order we adopt a set of final rules to begin price cap regulation of LEC interstate access services effective January 1, 1991.

2. Summary of the Plan

A. The Price Cap Index

9. The *Second Further Notice* proposed an interstate access price cap mechanism composed of three elements—a measure of inflation, a productivity offset (together with a Consumer Productivity Dividend of 0.5 percent), and exogenous costs. We retain that basic adjustment mechanism, including the measure of inflation the Commission proposed and a specific list of exogenous cost changes that are generally beyond the control of the companies involved and the product of regulatory decisions. The measure of inflation will be the 45-day estimate of the Gross National Product Price Index (GNP–PI). Exogenous costs are: (1) Cost changes due to changes in the Commission's rules governing separation of costs between the state and interstate jurisdictions; (2) cost changes due to Commission-authorized changes in the Uniform System of Accounts or Generally Accepted Accounting Principles; (3) changes in pooling support obligations (Long Term and Transitional Support); (4) reallocation of regulated and nonregulated costs pursuant to our part 64 rules; (5) the expiration of depreciation reserve deficiency amortizations; and (6) access charges that LECs charge or impute to themselves. Changes in tax laws are not automatically given exogenous treatment, but will be considered on a case-by-case basis.

10. Also as proposed, we decide not to employ the basic cap mechanism for non-traffic sensitive common line services. The mechanism we adopt for common line service embraces the philosophy that local exchange carriers should split the benefits in growth in minutes per line for common line service with their ratepayers. This philosophy balances demand-inducing incentives to improve and diversify network offerings, with the recognition that under rate of

return, carriers have had somewhat limited incentives to influence growth in demand. We modify the prior proposal in response to concerns expressed by commenters that the specific equations used to determine carrier common line rates produced an unintended windfall to carriers. The equations have been revised to ensure that half the benefits of demand growth are reflected in the resulting reductions in carrier common line charges.

11. In addition to removing the unintended windfall created by the prior common line formula, we conclude that the previously proposed 3 percent productivity offset, which included a Consumer Productivity Dividend (CPD) of .5 percent, is too low given the recent performance of the largest LECs in the provision of interstate access. Therefore, for the interstate access activities of the LECs subject to price cap regulation, we will mandate a price cap that requires a higher 3.3 percent producitivity gain each year including the CPD, or if a LEC chooses, a 4.3 percent productivity gain including the CPD. Selection of a higher productivity offset, *i.e.*, lowering prices beyond the mandated level, will permit the LEC to retain a larger share of its earnings.

12. In the *Supplemental Notice*, we observed that short term and long term productivity studies appeared to yield significantly different baseline productivity offsets. We requested comment on whether the two numbers could in fact be reconciled. Despite the numerous corrections and refinements we have made to both studies, a significant gap remains. Using our revised common line cap, the best estimate of a unitary offset in the short term study is a 3.5 percent factor, and the best estimate in the long term study is a 2.1 percent factor.

13. Overall, we feel compelled to recognize the numbers produced by the two studies as representing not specific numerical results, but as likely outcomes within a range of possible values. We do not believe it would be prudent or reasonable to place exclusive weight on either study, or to ignore the evidence each provides. Thus, in setting the productivity offsets, we have selected a conservative minimum figure within the range between the two studies but subject to a tightened no-sharing zone. In our judgment, a baseline productivity offset of 2.8 percent (without the CPD) fairly balances the results of the two studies. We have then adopted a more aggressive baseline productivity factor, 3.8 percent, exceeding the figure produced by the short term study, if a LEC opts to take advantage of a 200 basis point no-sharing zone. We have thus effectively bracketed the results of the short term study, but tempered the minimum required productivity offset (before addition of the CPD) in light of the uncertainty in any short term study and the conservativism suggested by the long term study.

14. We respond in two ways to concerns about the validity of the productivity offset as to the industry as a whole and as to individual LECs. First, we will limit mandatory application of the price cap system to the eight largest LECs—the seven Regional Bell Operating Companies (RBOCs) and General Telephone and Telegraph Company (GTOC). The data we have collected as a basis for our selection of a 3.3 percent productivity offset are directly applicable to these largest carriers. For mid-sized and smaller LECs, price cap regulation will be optional. This decision addresses the concern that mid-sized carriers, those just below the largest eight in size, might not be able to generate productivity gains of the same magnitude as the largest LECs.

15. Our second response to concerns about the validity of applying a single productivity offset to a number of LECs is the adoption of sharing and adjustment devices. The mechanisms we adopt here ensure that ratepayers share further in the benefits a price cap system can produce. If a LEC whose rates are at or below the price cap can outperform the 3.3 percent productivity offset embedded in the price cap, thereby earning a higher profit, the LEC will be entitled to retain all of its earnings up to 100 basis points (or 1 percent) above the 11.25 percent unitary rate of return established for rate of return carriers. When using a 3.3 percent productivity offset to establish prices, LECs must share with their customers 50 percent of their earnings between 100 and 500 basis points (1 to 5 percent) above the 11.25 percent level, and share (or credit their customers with) 100 percent of their earnings above 16.25 percent, or 500 basis points above 11.25 percent. Based on the 11.25 percent rate of return we have selected, this mechanism allows LECs whose productivity performance exceeds the 3.3 percent productivity offset to potentially earn up to an effective equivalent of a maximum 14.25 percent rate of return.

16. If a LEC decides to lower its prices further by using a higher productivity offset of 4.3 percent, the LEC can retain more of its earnings if it subsequently is able to earn higher profits through improved efficiency. In this case, the LEC can retain all of its earnings up to 200 basis points (or 2 percent) above 11.25 percent. LECs would share with their customers 50 percent of their earnings between 200 and 600 basis points (2 to 6 percent) above 11.25 percent, and share 100 percent of their earnings above 17.25 percent, or 600 basis points above 11.25 percent. In electing to lower prices further to a level reflecting a higher 4.3 percent productivity offset, a LEC thus enables itself to reach an effective equivalent of a maximum 15.25 percent rate of return.

17. This sharing mechanism for carriers whose rates are at or below the price cap provides strong financial incentives for carriers to improve productivity to the maximum extent possible, while providing ratepayers with additional upfront benefits of productivity gains in the form of price decreases. If a carrier manages to produce significantly higher returns, those are returned to ratepayers in the form of prospective downward adjustments in the price cap. This plan eliminates certain disincentives posed by the previous plan for an automatic stabilizer device that was proposed to control high earnings of LECs under price caps. Such a stabilizer would have created permanent downward adjustments to the cap each time earnings rose above a specified level. As such, it would have created some of the same disincentives as our present rate of return system—cost padding—in order to avoid triggering the stabilizer. Sharing will be based on total interstate earnings in a base year, and will be implemented by a downward adjustment to the next year's price cap index.

18. We retain a lower end adjustment mechanism with modifications, in order to ensure that the plan automatically corrects itself should our selection of a productivity factor for the industry turn out to be too high for a given company. Should a LEC's earnings drop below the lower end figure established, that LEC is entitled to a prospective automatic upward adjustment to its cap. The lower trigger point will be located 100 basis points (1 percent) below 11.25 percent.

B. Application of the Cap to LEC Services

19. The price cap forms the cornerstone of the new regulatory system, at once protecting ratepayers as a group from high prices and providing carriers with the incentive to increase productivity. However, since a cap on aggregate prices can result in some offerings being priced relatively high, while others are priced relatively low, we adopt further ratepayer protections

BEST COPY AVAILABLE

in the form of baskets, service categories, and pricing bands. Baskets are broad groupings of LEC services, each subject to its own cap. Service categories are subdivisions of baskets. Pricing bands permit prices for service categories to move on a streamlined basis no more than plus or minus 5 percent per year, adjusted for the change in the price cap.

20. Together, the cap and pricing bands form a "no-suspension" zone, within which rates for LEC access services can be changed on a "streamlined" basis, *i.e.*, on 14 days' notice, with a presumption of lawfulness. If filed rates are at a level above or below the pricing bands, or above the cap, more burdensome tariff review requirements are used to evaluate the LECs' rates, and longer notice periods apply.

21. While the baskets continue to be defined by the interstate access structure contained in our part 69 rules, we have decided to expand the number of baskets of services from three to four. The first three baskets will be common line services, traffic sensitive services, and special access services. The fourth basket is created for those LECs that offer interexchange services. As previously proposed, these offerings would have been included in the basket containing special access offerings. Inclusion of these very different services into one basket raised issues concerning the flow-through of exogenous costs that can be solved by separating the interexchange activity from interstate access. Furthermore, since these services compete with the offerings of interexchange carriers, we have decided to apply the productivity factor we use for AT&T: 3 percent, or at the LEC's option and subject to increased sharing of earnings, 4 percent. Since our short term productivity study did not include a separate evaluation of the productivity of these services, we believe it would be ill-advised to apply a higher productivity requirement to the LECs' interexchange offerings than we apply to AT&T.

22. Service categories are used in two of the four baskets to limit streamlined price movements. In the traffic sensitive basket, we create three service categories: (1) Local switching; (2) local transport; and (3) information. Price changes for each of these categories will be limited to plus or minus 5 percent per year, adjusted for changes in the price cap index.

23. In the special access basket, we have decided to modify the service category proposal, reducing the number of categories from nine to four. Our decision is based on consideration of the small, and in some cases, shrinking amount of certain special access services offered by LECs. By grouping similar services together, we believe we have effectively prevented opportunities for the LECs to engage in pricing discrimination or anticompetitive practices. The four categories we adopt are: (1) Voice grade/WATS/metallic/telegraph; (2) audio/video; (3) high capacity/Digital Data Service; and (4) wideband data/wideband analog. Price changes for each of these categories will be limited to plus or minus 5 percent per year, adjusted for changes in the price cap index.

24. No service categories for the common line basket are required because prices for all rate elements except one are governed by our part 69 rules concerning subscriber line charges and the originating common line charge. No service categories for the interstate non-access service basket are mandated because such services represent a relatively small portion of LEC offerings.

25. In response to concerns about recent strategic pricing of high capacity offerings, we will further limit a LEC's ability to move prices of its DS1 and DS3 services. Prices for each of these offerings, which represent a large and rapidly growing portion of the LECs' special access business, will be allowed to move on a streamlined basis no more than plus or minus 5 percent per year, adjusted for changes in the cap. By creating individual subindexes for these services, while placing voice grade services in a separate category, rapid and dramatic movements in the prices for these services are held in check.

26. As proposed, a few LEC services will be excluded from price cap regulation. These services are offered on a one-time or contract basis or otherwise do not lend themselves to an ongoing incentive-based regulatory system. The following LEC services are excluded: (a) Individual case basis (ICB) offerings and special construction services; (b) presubscription charges that LEC's assess when end users change their interexchange carrier, (c) cable television services, (d) air-ground services and packet-switched services; (d) "string" foreign exchange service arrangements, currently grandfathered in existing tariffs; (e) certain LEC offerings to the Federal Government, including those provided in combination with interexchange carriers; and (f) any other contract-type tariff services LECs may provide.

27. In order for a price cap carrier to change its tariffed rates for a particular service under the Commission's streamlined tariff review procedures, the aggregate rates in the relevant basket may not exceed the price cap index (PCI) applicable to that basket. To determine compliance with the limitations imposed by the PCI, carrier rate levels within each basket will, with the exception of the common line basket, be measured through the use of an Actual Price Index (API) that represents the weighted sum of the percentage change in LEC rates in that basket. In each basket other than common line, the API is built up from the smallest price unit—the rate element—and weighted according to the quantity of that rate element sold in a historical base year. The historical base year will be the most recently completed calendar year as of the date of the annual price cap tariff filing. Each time a price cap carrier files rate revisions, that carrier's APIs must be recalculated to show the incremental change, if any, in that carrier's aggregate rates for each basket as a result of those revisions.

28. LECs subject to price cap regulation will use July 1, 1990 rates as a basis for their first price cap filing. Those rates were subject to scrutiny as part of the annual access filing and review process, and have thus recently been retargeted to earn the authorized rate of return. In the companion rate of return item we adopt today, we lower the authorized return. Price cap LECs will be required to flow through the effects of that adjustment to their price cap levels and rates as part of their initial filing. Since the first price cap tariff filings will occur in the middle of an annual tariff cycle, the price cap index incorporated in those filings will not reflect changes in inflation less the productivity offset. Accordingly, PCI levels filed on or before November 1, 1991, will reflect the PCI initial value of 100 on July 1, 1990, adjusted only for any changes in exogenous costs from July 1, 1990, through January 1, 1991.

C. Eligibility

29. Companies that are required to enter price caps, or that volunteer for price caps, are required to do so on an "all or nothing" basis; all operating affiliates, except average schedule affiliates, must enter the price cap system. Our "all or nothing" rule is intended to prevent cost shifting to affiliates that are regulated under rate of return from affiliates that are subject to price caps. In addition, price cap "volunteers" and their affiliates that currently participate in National Exchange Carrier Association pooling arrangements must remove themselves from the pools before entering price caps. To accommodate this requirement, we have slightly modified the exit rules for depooling carriers. We also decide to

permit voluntary elections into caps on an annual basis. A price cap carrier that acquires a non-price cap carrier (other than an average schedule company) will be required to convert the non-price cap carrier to price cap regulation within one year of the effective date of such transaction. However, a price cap LEC that acquires, merges with, or otherwise becomes affiliated with an average schedule company will not be required to convert the average schedule company to price cap regulation although it may elect to do so.

D. Evaluation of Price Cap Tariffs

30. We direct all LECs subject to price cap regulations to submit an annual filing demonstrating compliance with the price cap rules. In that annual filing, each price cap LEC will be required to show that it has correctly adjusted the price cap indexes for each basket, that the actual price index for each basket has been correctly computed and does not exceed the relevant price cap index, and that, where applicable, rates remain with service bands. The annual price cap filing will also reflect any prospective rate adjustments that arise due to the operation of the sharing requirements and any PCI change caused by the operation of the low end adjustment mechanism. Price cap LECs shall make these annual filings on at least 90 days' notice with an effective date of July 1 of each year. Thus, the first annual price cap filing will be due on or before April 2, 1991, with an effective date of July 1, 1991.

31. The tariff review standards we adopt are the same as those we now use for AT&T. Tariff transmittals containing only price changes that are within the cap and pricing bands are filed on short notice. Only those transmittals that contain within-cap and within-band changes to existing services are presumed lawful for tariff review purposes. Anyone seeking a suspension of a within-band, within-cap tariff filing must demonstrate (a) that there is a high probability that the tariff will be found unlawful after investigation; (b) that the suspension will not substantially harm other interested parties; (c) that irreparable injury will result if the tariff filing is not suspended; and (d) that suspension is not otherwise contrary to the public interest.

32. Tariff requirements for other types of filings are also modeled on the AT&T requirements. Any filings that include rate changes below the bands must be accompanied by an average variable cost showing and must be filed on 45 days' notice. Any filings proposing above-band rates are filed on 90 days' notice and must be accompanied by a showing that substantial cause exists to justify an above-band rate. Any above-cap filings are also filed on 90 days' notice and must be accompanied by a detailed cost showing that will enable the Commission to determine compliance with statutory requirements of just and reasonable rates that are not unjustly discriminatory. These latter two types of filings carry with them a heavy burden of justification and a strong likelihood of suspension. New services, defined as those that expand a ratepayer's range of choices, are filed on 45 days' notice and must be accompanied by a showing demonstrating that the new service will generate net revenues for the LEC over a specified period of time. Restructured services, those that simply redefine existing offerings, are also subject to 45-day notice requirements, and are not presumed lawful.

E. Small Company Issues

33. Throughout this proceeding, this Commission has reaffirmed its commitment to a range of programs that provide assistance to small and high cost telephone companies and their subscribers, as well as to low income subscribers generally. These programs, including the Universal Service Fund, Long Term Support, Transitional Support, Link Up America, and Lifeline Assistance share a common purpose: Promoting affordable telephone service throughout the United States. These programs will not be adversely affected by either our adoption of mandatory price cap regulation for the largest LECs or by our decision to make such regulation available to mid-size and smaller LECs on an optional basis. We also reaffirm our commitment to geographic rate averaging. However, several issues of special interest to small telephone companies do appear to require further consideration as we move into price cap regulation. Among those issues are the impact of our regulatory changes on NECA and its pools and the impact of these changes on average schedule companies. Accordingly, we have determined to initiate further proceedings dealing specifically with regulatory issues of concern to small and mid-size LECs. In that proceeding, we intend to develop a better record on whether and in which cases a lower productivity factor may be appropriate for such LECs, whether other regulatory options may be more appropriate for them, as well as other issues affecting small telephone companies and their customers.

3. Monitoring

34. This Commission is committed to assuring the availability of high quality, innovative communications services, and to the development of the telecommunications infrastructure needed to provide these services. While we believe that our price cap plan creates strong incentives for LECs to maintain high quality and to further develop the network, we have decided to expand our monitoring of service quality and infrastructure development. First, we modify and continue our semi-annual RBOC service quality reporting and make it applicable to GTOC. Second, we supplement these reports with the quarterly service report from each price cap carrier that will include data on installation intervals, repair intervals, and blocking percentages. Third, as part of this quarterly filing requirement we will collect data on post-dial delay and switch downtime. If our monitoring shows that service quality has deteriorated, we have the authority to set specific standards and to order carriers to undertake specific investments. To assist us in monitoring the past and future development of infrastructure by LECs subject to price cap regulation, we direct the RBOCs and GTOC to file on an ongoing basis, the network investment data that we required RBOCs to file on a one-time basis in CC Docket No. 89-624, our rate of return proceeding.

35. We recognize that in launching an entirely new system of regulating local exchange carriers, we have a responsibility to monitor is application and results to guard against unintended, unanticipated effects or problems. For example, one effective safeguard against any misallocation of costs between the Federal jurisdiction and state jurisdictions is our use of the ARMIS reports. We also must to consider the information that will necessary for us to conduct the performance review of the price cap program which we expect to begin after no more than three years and to complete by the fourth year of the plan. In light of these needs, we have reviewed our monitoring and data collection capabilities and requirements. In the area of LEC costs, jurisdictional separations, usage, and earnings data, we currently monitor LEC performance using the computerized ARMIS data base and the data derived from Form 492. Based on our review of these reports and their contribution to price cap regulation, we conclude that these reports will adequately provide the information we will need to monitor price cap regulation of the LECs.

36. Our LEC price cap performance review is scheduled to begin after three years of price cap regulation and is to be completed within a year of its commencement. It is calculated to evaluate the system as implemented as well as LEC performance under that system. We chose a review period of several years because we believe that the period must be long enough to allow the effects of incentive regulation to unfold before a scheduled evaluation. We will, however, monitor LEC performance throughout, for indications such as great disparity in rates, declines in service quality, or other signs of system failure that indicate a need for intervention. Should such signs of system failure materialize, we will accelerate our performance review and make whatever corrections or other adjustments as are necessary. Absent such problems, we intend to make no major, systemic adjustments until the conclusion of the scheduled review.

4. Effect of Price Cap Regulation on Other Regulation

37. With regard to the treatment of Open Network Architecture (ONA) under price cap regulation, we conclude that ONA services, and other LEC services that require fundamental changes in the structure of our access charge rules, raise pricing issues that can best be resolved in other proceedings. We therefore defer decisions related to the pricing of ONA services to the pending ONA part 69 proceeding. *See* Amendments of Part 69 of the Commission's Rules Relating to the Creation of Access Charge Subelements for Open Network Architecture, Notice of Proposed Rulemaking, CC Docket No. 89-79, 4 FCC Rcd 3983 (1989). Pricing issues related to other services that require fundamental changes in access charge structure will be resolved in appropriate proceedings as they arise.

38. Notwithstanding our adoption of price cap regulation for local exchange carriers, in a number of key areas we intend to retain existing policies that foster competition and help prevent discrimination in the provision of telecommunications services. These areas include: (1) Existing market and accounting rules, including open entry, equal access, resale and shared use, interconnection, unbundling of tariffed services, and non-structural safeguards where LECs provide enhanced services, as well as the separations rules, the joint cost rules, and the USOA; (2) existing complaint procedures; and (3) the part 63 rules concerning the extension of lines and discontinuation of service. We find that the implementation of price cap regulation for LECs will be enhanced by the continuation of these rules and policies, and that such retention will ensure that our implementation of price cap regulation for interstate access services and interexchange services does not disrupt either our continuing regulation of other interstate services or state regulatory systems.

5. Legal Authority

39. In adopting price cap regulation for AT&T in March 1989, this Commission explained in its *Report and Order* the legal basis for its action. There, we concluded, *inter alia*, that: (1) Substitution of price cap regulation for traditional rate of return regulation was within our authority under the Communications Act; (2) price cap regulation would comply with the Act's requirement that rates be just, reasonable, and non-discriminatory; (3) our no-suspension zone approach to price cap regulation was consistent with the Act and relevant judicial authority; (4) a rate prescription was not required in connection with our use of existing rates; and (5) a *de facto* rate prescription had not been undertaken in connection with our no-suspension zone approach to price cap regulation. Consistent with our tentative conclusion in the *Second Further Notice* that price cap regulation of local exchange carriers is lawful, we conclude that our LEC price cap plan is within our legal authority under the Act, and that it will assure that LEC interstate rates remain just, reasonable, and non-discriminatory.

40. In view of our earlier finding that we have legal authority to adopt a price cap plan for AT&T, the primary basis for our conclusion that also have legal authority to adopt our LEC price cap plan lies in the fact that the LEC plan was derived from the AT&T plan and accordingly shares a number of common elements. Compared with the price cap plan we adopted for AT&T, we have added one additional safeguard to our LEC plan to address concerns that we may not be able to select a productivity figure for the LECs in which we have precisely the same high degree of confidence as we have in the figure chosen for AT&T. That additional safeguard is the sharing mechanism described above. By setting an upper limit on LEC profits and including an additional mechanism to enable ratepayers to share the benefit of certain increases in LEC profits, we further ensure that LEC rates will remain within a zone of reasonableness. We adopt that sharing mechanism pursuant to our general rulemaking authority contained in sections 4(i) and 201–203 of the Act as well as our prescription authority contained in section 205 of the Act. In addition to the sharing mechanism, and under the same authority, we have included in our LEC price cap plan a lower end adjustment mechanism consistent with our obligation to ensure that LEC rates are not confiscatory. We will continue to rely, as we do with AT&T, on the section 204 investigation and section 208 complaint processes as part of our plan to ensure just, reasonable, and non-discriminatory rates.

6. Paperwork Reduction Act

41. On May 11, 1989, after the release of the *Second Further Notice* in this proceeding, the Commission requested that the Office of Management and Budget (OMB) review the proposed information collection requirements for compliance with the Paperwork Reduction Act (PRA). On July 20, 1989, OMB approved the Commission's proposed information collection requirements contained in the *Second Further Notice* on LEC price cap regulations. The Report and Order adopted here contains final rules that modify the reporting requirements proposed in the *Second Further Notice* and approved by OMB.

42. This Order adopts incentive regulation for the LECs, and promulgates final rules to implement such regulation. In connection with this Report and Order, we renew our request for review of Paperwork Reduction Act requirements in light of the modifications here of proposals made in the *Second Further Notice* and the *Supplemental Notice*. The rules for LECs contained herein have been analyzed with respect to the Paperwork Reduction Act of 1980 and found generally to decrease the information collection burden on the public, although some new reporting requirements have been added in three sections of this Report and Order: first, increased service quality reporting, with the addition of data on post dial delay, installation interval, repair intervals, and network blockage; second, increased reporting on infrastructure development, with the addition of the reporting categories established in Common Carrier Docket No. 89-624; and, third, new reporting of excluded services revenues. These modifications in the information collection burden are subject to approval by OMB as prescribed by the Paperwork Reduction Act.

43. As was done in the case of adopting final rules for AT&T, we identify those portions of this *Further Notice* that respond to the eight OMB

concerns raised in response to our *Further Notice*. With respect to the LECs, our response to OMB's concerns can be found in the full text of this Order at: (1) Need for a rate "floor" designating the bottom of the no-suspension zone—pages 95, 135–137; (2) need to band rates by rate element—pages 90–93; (3) need for 90-day review period for above-band rates—pages 129–132; (4) need for identical tariff treatment of AT&T and LEC filings—pages 124–144; (5) burdens of expanding service quality reporting from Tier 1 LECs to all price cap carriers—pages 148–165; (6) election of price caps by LECs—pages 111–117; (7) quantification of administrative savings and identification of changes in reporting requirements—pages 20, 83, 124–144, 148–165; and (8) impact on state regulators—pages 20–24, 165–169.

7. Regulatory Flexibility

44. We certify that the Regulatory Flexibility Act is not applicable to the rule changes we adopt for the LECs in this proceeding. Because of the nature of local exchange and access service, we have concluded that small telephone companies are dominant in their fields of operation and therefore are not small entities as defined by the Regulatory Flexibility Act. *See* MTS and WATS Market Structure, 93 FCC 2d 241, 338–39 (1983). Thus, this Commission is not required by the terms of that Act to apply the formal procedures set forth therein. We are nevertheless committed to reducing the regulatory burdens on small telephone companies whenever possible consistent with our other public interest responsibilities. Accordingly, we have chosen to utilize, on an informal basis, appropriate Regulatory Flexibility Act procedures to analyze the effect of proposed regulations on small telephone companies. In accordance with the provisions of section 605 of that Act, a copy of this certification will be sent to the Chief Counsel for Advocacy of the Small Business Administration at the time of publication of a summary of this Second Report and Order in the **Federal Register**.

45. As part of our analysis of the regulation adopted in this Report and Order, however, this Commission has considered the impact of this Second Report and Order on small telephone companies, *i.e.*, those serving 50,000 or fewer access lines. As a result of our decision to make price cap regulation elective for depooled cost companies other than the RBOCs and GTOC, no small carrier will be forced to change the method by which it is regulated. Small companies that currently file their own cost-based access tariffs are free to remain under rate of return if they decide that rate of return is better suited to their circumstances than is price cap regulation. Small carriers participating in the NECA pools, and for whom NECA files access tariffs, will not be forced to leave the pools as a result of the price cap rules we are adopting in this Report and Order. In addition, nothing in the price cap program would discontinue or impair the variety of programs we have established to provide support to small carriers. These programs, such as our High Cost Fund and long term support mechanisms, continue intact. Furthermore, average schedule companies that are or become affiliated with cost companies that are regulated under price caps would not need to relinquish average schedule, rate of return regulation. We have also determined that, for companies that have not yet begun conversion to equal access, conversion costs are to be treated as exogenous costs under the price cap formula. This determination ensures that small carriers, who are the least likely to have begun equal access conversion, can flow through these costs to their rates should they elect price caps. These regulations, when viewed in their totality, permit small, depooled cost companies to take advantage of the benefits of price cap regulation at their option, while ensuring that the status quo is maintained for small carriers that do not participate in price cap regulation.

8. Conclusion and Ordering Clauses

46. The rules adopted here, establishing tariff filing requirements, the adjustment formulas, and other requirements for price cap regulation, will be effective October 31, 1990, in order to implement the November 1, 1990 filing date and January 1, 1991, tariff effective date. We find good cause to make these rules effective on less than 30 days' notice after publication in the **Federal Register**. *See* 5 U.S.C. 553(d)(3). The January 1, 1991 tariff effective date will provide the earliest and fullest availability of the price cap plan's substantial benefits to the public. The tariff filing ordered here, like traditional tariff filings, relies on information that the carriers collect and compile on a quarterly and annual basis; the tariff year is July 1 to June 30. Our selection of a January 1, 1991, effective date implements an initial half-year period of price cap regulation; this will allow the first full annual filing, to be made 90 days before July 1, 1991, to reflect some initial experience with price cap regulation and the modified filing requirements it establishes, and to apply the formula adjustments discussed herein. Further, the companies that the price cap rules will require to take action within less than 30 days from **Federal Register** publication have been actively involved in the development of these regulations, and are fully supportive of the initiation of price cap regulation as soon as possible. We do not believe it would be appropriate to shorten the review period for this initial price cap filing. The public interest requires an adequate review period to ensure that this Commission and interested parties can fully consider and evaluate the initial submissions of LECs participating in the price cap plan. The 61-day review period we have established, from November 1, 1990, to January 1, 1991, is the minimum period necessary for this comprehensive review and evaluation. Were we to establish an effective date later than October 31, 1990, for the rules defining the tariff filings, we would delay the effectiveness of price cap regulation, and its benefits for ratepayers, until at least July 1, 1991. This would also mean that the first price cap tariff filing would be a full annual filing, and that the application of the adjustment formulas, and the incentives they create, would be delayed for a full year after that filing, or until July 1, 1992.

47. Accordingly, *it is ordered* that, pursuant to sections 4(i), 4(j), 201–205, 303(r), and 403 of the Communications Act of 1934, 47 U.S.C. 154(i), 154(j), 201–205, 303(r), 403, and section 553 of title 5, United States Code, that part 61, part 65, part 69, and §§ 61.3, 61.38, 61.39, 61.41, 61.42, 61.43, 61.44, 61.45, 61.46, 61.47, 61.48, 61.49, 61.58, 65.1, 65.600, 65.701, 65.703; 69.1, 69.3, 69.101, 69.105, 69.111, 69.113, 69.114, and 69.205 of this Commission's Rules, 47 CFR part 61, part 65, and part 69, §§ 61.3, 61.38, 61.39, 61.41, 61.42, 61.43, 61.44, 61.45, 61.46, 61.47, 61.48, 61.49, 61.58, 65.1, 65.600, 65.701, 65.703, 69.1, 69.3, 69.101, 69.105, 69.111, 69.113, 69.114, and 69.205, are amended as set forth below and in appendix B to this Order effective October 31, 1990.

48. *It is further ordered* that authority is delegated to the Chief, Common Carrier Bureau, as specified herein, to effect the decisions set forth above.

49. *It is further ordered* that the Joint Motion for Tentative Decision filed by ADAPSO *et al.* is denied.

List of Subjects

47 CFR Part 61

Communications common carriers, Reporting and recordkeeping requirements, Telephone, Price cap regulation, Price cap tariff filing and review procedures.

47 CFR Part 65

Administrative practice and procedure, Communications common carriers, Price cap regulation, Reporting and recordkeeping requirements, Telephone.

47 CFR Part 69

Communications common carriers, Price cap regulation, Reporting and recordkeeping requirements, Telephone.

For the reasons set forth in the preamble, title 47, parts 61, 65, and 69 of the Code of Federal Regulations are amended as follows:

PART 61—TARIFFS

1. The authority citation for part 61 continues to read as follows:

Authority: Sec. 4, 48 Stat. 1066, as amended; 47 U.S.C. 154. Interpret or apply sec. 203, 48 Stat. 1070; 47 U.S.C. 203.

2. Section 61.3 is amended by revising paragraphs (u), (w), and (x) to read as follows:

§ 61.3 Definitions.

* * * * *

(u) *Price Cap Index* (PCI). An index of costs applying to carriers subject to price cap regulation, which index is calculated for each basket pursuant to §§ 61.44 or 61.45.

* * * * *

(w) *Price cap tariff.* Any tariff filing involving a service that is within a price cap basket, or that requires calculations pursuant to §§ 61.44, 61.45, 61.46, or 61.47.

(x) *Productivity factor.* An adjustment factor used to make annual adjustments to the Price Cap Index to reflect the margin by which a carrier subject to price cap regulation is expected to improve its productivity relative to the economy as a whole.

* * * * *

3. Section 61.38 is amended by revising the last sentence of paragraph (a) to read as follows:

§ 61.38 Supporting information to be submitted with letters of transmittal.

(a) * * * This section (other than the preceding sentence of this paragraph) shall not apply to tariff filings proposing rates for services identified in §§ 61.42 (a), (b), (d), (e), and (g), which filings are submitted by carriers subject to price cap regulation.

* * * * *

4. Section 61.39 is amended by adding the following new sentence at the end of paragraph (a) to read as follows:

§ 61.39 Optional supporting information to be submitted with letters of transmittal for Access Tariff filings effective on or after April 1, 1989, by local exchange carriers serving 50,000 or fewer access lines in a given study area that are described as subset 3 carriers in § 69.602.

(a) * * * This section (other than the preceding sentence of this paragraph) shall not apply to tariff filings proposing rates for services identified in §§ 61.42 (d), (e), and (g), which filings are submitted by carriers subject to price cap regulation.

* * * * *

5. Section 61.41 is revised to read as follows:

§ 61.41 Price cap requirements generally.

(a) Sections 61.42 through 61.49 shall apply as follows:

(1) To dominant interexchange carriers, as specified by Commission order;

(2) To such local exchange carriers as specified by Commission order, and to all local exchange carriers, other than average schedule companies, that are affiliated with such carriers; and

(3) On an elective basis, to local exchange carriers, other than those specified in paragraph (a)(2) of this section, that are neither participants in any Association tariff, nor affiliated with any such participants, except that affiliation with average schedule companies shall not bar a carrier from electing price cap regulation provided the carrier is otherwise eligible.

(b) If a telephone company, or any one of a group of affiliated telephone companies, files a price cap tariff in one study area, that telephone company and its affiliates, except its average schedule affiliates, must file price cap tariffs in all their study areas.

(c) The following rules apply to telephone companies subject to price cap regulation, as that term is defined in § 61.3(v), which are involved in mergers, acquisitions, or similar transactions.

(1) Any telephone company subject to price cap regulation that is a party to a merger, acquisition, or similar transaction shall continue to be subject to price cap regulation notwithstanding such transaction.

(2) Where a telephone company subject to price cap regulation acquires, is acquired by, merges with, or otherwise becomes affiliated with a telephone company that is not subject to price cap regulation, the latter telephone company shall become subject to price cap regulation no later than one year following the effective date of such merger, acquisition, or similar transaction and shall accordingly file price cap tariffs to be effective no later than that date in accordance with the applicable provisions of this part 61.

(3) Notwithstanding the provisions of § 61.41(c)(2) above, where a telephone company subject to price cap regulation acquires, is acquired by, merges with, or otherwise becomes affiliated with a telephone company that qualifies as an "average schedule" company under §§ 69.605 and 69.606, the latter company may, but shall not be obligated to, become subject to price cap regulation.

(d) Local exchange carriers that become subject to price cap regulation as that term is defined in § 61.3(v) of this chapter shall not be eligible to withdraw from such regulation.

6. Section 61.42 is amended by redesignating paragraph (d) as paragraph (g), by revising the first phrase thereof, and by adding new paragraphs (d), (e), and (f) to read as follows:

§ 61.42 Price cap baskets and service categories.

* * * * *

(d) Each local exchange carrier subject to price cap regulation shall establish baskets of services as follows:

(1) A basket for the common line interstate access elements as described in § 69.103, 69.104, 69.105, and 69.115 of this chapter;

(2) A basket for traffic sensitive switched interstate access elements;

(3) A basket for special access services as described in § 69.114 of this chapter; and

(4) to the extent that a local exchange carrier specified in § 61.41(a) (2) or (3) above offers interexchange services that are not classified as access services for the purposes of part 69 of this Commission's Rules, such exchange carrier shall establish a fourth basket for such services.

(e)(1) The traffic sensitive switched interstate access basket shall contain such services as the Commission shall permit or require, including the following service categories:

(i) Local switching as described in § 69.106;

(ii) Information, as described in § 69.109; and

(iii) Transport, as described in §§ 69.111 and 69.112 of this chapter.

(2) The basked for special access services shall contain such services as the Commission shall permit or require, including the following service categories:

(i) Voice grade, WATS, metallic, and telegraph services;

(ii) Audio and video services;

(iii) High capacity and DDS services; and

(iv) Wideband data and wideband analog services.

(f) Each local exchange carrier subject to price cap regulation shall exclude from its price cap baskets such services or portions of such services as the Commission has designated or may hereafter designate by order.

(g) New services, other than those within the scope of paragraphs (c) and (f) of this section, * * *

7. Section 61.43 is amended by revising the first sentence to read as follows:

§ 61.43 Annual price cap filings required.

Carriers subject to price cap regulation shall submit annual price cap tariff filings that propose rates for the upcoming year, that make appropriate adjustments to their PCI, API, and SBI values pursuant to §§ 61.44 through 61.47, and that incorporate the costs and rates of new services into the PCI, API, or SBI calculations pursuant to §§ 61.44(g), 61.45(g), 61.46(b), and 61.47 (b) and (c). * * *

8. Section 61.44 is amended by revising the section heading and first sentences of paragraphs (a) and (b) to read as follows:

§ 61.44 Adjustments to the PCI for Dominant Interexchange Carriers.

(a) Dominant interexchange carriers subject to price cap regulation shall file adjustments to the PCI for each basket as part of the annual price cap tariff filing, and shall maintain updated PCIs to reflect the effect of mid-year access and exogenous cost changes. * * *

(b) Subject to paragraph (d) of this section, adjustments to each PCI of dominant interexchange carriers subject to price cap regulation shall be made pursuant to the following formula: * * *

* * * * *

9. New section 61.45 is added to read as follows:

§ 61.45 Adjustments to the PCI for Local Exchange Carriers.

(a) Local exchange carriers subject to price cap regulation shall file adjustments to the PCI for each basket as part of the annual price cap tariff filing, and shall maintain updated PCIs to reflect the effect of mid-year exogenous cost changes.

(b) Adjustments to local exchange carrier PCIs for the baskets designated in §§ 61.42(d) (2), (3), and (4) shall be made pursuant to the formula set forth in § 61.44(b), and as further explained in §§ 61.44 (e), (f), (g), and (h).

(1) Notwithstanding the value of X defined in § 61.44(b), the X value applicable to the baskets specified in § 61.42(d) (2) and (3) shall be 3.3%, or 4.3% if the carrier so elects.

(2) For the basket specified in § 61.42(d)(4), the value of X shall be 3%, or 4% if the carrier so elects.

(c) Subject to paragraph (e) of this section, adjustments to local exchange carrier PCIs for the basket designated in § 61.42(d)(1) shall be made pursuant to the following formula:

$$PCI_t = PCI_{t-1}[1 + w[(GNP\text{-}PI - X - (g/2))/(1 + (g/2))] + \Delta Z/R]$$

where

GNP–PI = The percentage change in the GNP–PI between the quarter ending six months prior to the effective date of the new annual tariff and the corresponding quarter of the previous year,

X = Productivity factor of 3.3%, or 4.3% if the carrier so elects,

g = The ratio of minutes of use per access line during the base period, to minutes of use per access line during the previous base period, minus 1,

ΔZ = The dollar effect of current regulatory changes when compared to the regulations in effect at the time the PCI was updated to PCI_{t-1}, measured at base period level of operations.

R = Base period quantities for each rate element "i", multiplied by the price for each rate element "i" at the time the PCI was updated to PCI_{t-1},

w = R + ΔZ, all divided by R,

PCI_{t-1} = The new PCI value, and

PCI_{t-1} = The immediately preceeding PCI value.

(d) The exogenous cost changes represented by the term "ΔZ" in the formulas detailed in paragraphs (b) and (c), shall be limited to those cost changes that the Commission shall permit or require.

(1) Subject to further order of the Commission, those exogenous cost changes shall include cost changes caused by

(i) The completion of the amortization of depreciation reserve deficiencies;

(ii) Changes in the Uniform System of Accounts;

(iii) Changes in the Separations Manual;

(iv) Changes to the level of obligation associated with the Long Term Support Fund and the Transitional Support Fund described in § 69.612;

(v) The reallocation of investment from regulated to nonregulated activities pursuant to § 64.901;

(vi) Such tax law changes and other extraordinary exogenous cost changes as the Commission shall permit or require, and

(vii) Retargeting the PCI to the level specified by the Commission for carriers whose base year earnings are below the level of the lower adjustment mark.

(2) Local exchange carriers specified in § 61.41 (a)(2) or (a)(3) shall also make such temporary exogenous cost changes as may be necessary to reduce PCIs to give full effect to any sharing of base period earnings required by the sharing mechanism set forth in the Commission's Second Report and Order in Common Carrier Docket No. 87–313, FCC 90–314, adopted September 19, 1990.

(3) Local exchange carriers specified in § 61.41 (a)(2) or (a)(3) shall, in their annual access tariff filing, recognize all exogenous cost changes attributable to modifications during the coming tariff year in the obligations specified in § 61.45(d)(1)(iv) as well as those changes attributable to alterations in their Subscriber Plant Factor and the Dial Equipment Minutes factor.

(4) Exogenous cost changes shall be apportioned on a cost-causative basis between price cap services as a group, and excluded services shall be further apportioned on a cost-causative basis among the price cap baskets.

(e) The "w[(GNP–PI–X–(g/2))/(1+(g/2))]" component of the PCI formula contained in paragraph (c) shall be employed only in the adjustment made in connection with the annual price cap filing.

(f) The exogenous costs caused by new services subject to price cap regulation must be included in the appropriate PCI calculations under paragraph (c) of this section beginning at the first annual price cap tariff filing following completion of the base period in which such services are introduced.

(g) In the event that a price cap tariff becomes effective, which tariff results in an API value (calculated pursuant to § 61.46) that exceeds the currently applicable PCI value, the PCI value shall be adjusted upward to equal the API value.

(h) To the extent a local exchange carrier elects the higher productivity factor, the election must be made in all baskets.

10. Section 61.46 is amended by revising the first sentence of paragraph (a) and by adding new paragraphs (d), (e) and (f) to read as follows:

§ 61.46 Adjustments to the API.

(a) Except as provided in paragraphs (d) and (e) of this section, in connection with any price cap tariff filing proposing rate changes, the carrier must calculate an API for each affected basket pursuant to the following methodology:

* * * * *

(d) In connection with any price cap tariff proposing changes to rates for services in the basket designated in § 61.42(d)(1), the carrier common line (CCL) charges shall be computed pursuant to the following methodology:

CCL_{xxxx} = CL_{xxxx} * (1 + % change in CL PCI) − $EUCL_{xxxx}$ * 1/(1 + (g/2))

where

CCL_{xxxx} = The sum of each of the proposed Carrier Common Line rates multiplied by its corresponding base period Carrier Common Line minutes of use, divided by the sum of all types of base period Carrier Common Line minutes of use.

CL_{xxxx} = The sum of each of the existing Carrier Common Line rates multiplied by its corresponding base period Carrier Common Line minutes of use plus each existing End User Common Line (EUCL) rate multiplied by its corresponding base period lines, divided by the sum of all types of base period Common Line minutes of use.

$EUCL_{xxxx}$ = Proposed End User Common Line rates multiplied by base period lines, and

g = The ratio of minutes of use per access line during the base period to minutes of use per access line during the previous base period, minus 1.

(e) In addition, for the purposes of § 61.46(d), "Existing Carrier Common Line Rates" shall include existing originating premium, originating non-premium, terminating premium, and terminating non-premium rates; and "End User Common Line Rates" used to calculate the CL_{xxxx} and the $EUCL_{xxxx}$ factors shall include, but not be limited to, Residential and Single Line Business rates, Multi-Line Business rates, Centrex rates, Limited Pay Telephone Rates, and the Special Access surcharge.

(f) The "1/(1+(g/2)" component of the CCL_{xxxx} formula contained in paragraph (d) shall be employed only in the adjustment made in connection with the annual price cap filing.

11. Section 61.47 is amended by adding paragraph (h) to read as follows:

§ 61.47 Adjustments to the SBI; pricing bands.

* * * * *

(h) Local exchange carriers subject to price cap regulation as that term is defined in § 61.3(v) of this chapter shall use the methodology set forth in paragraphs (a) through (d) of this section to calculate two separate subindexes: One for the DS1 services offered by such carriers and the other for the DS3 services offered by such carriers. Notwithstanding paragraph (e) of this section, the annual pricing flexibility for each of these two subindexes shall be limited to an annual increase or decrease of five percent, relative to the percentage change in the PCI for the special access services basket, measured from the last day of the preceding tariff year.

12. Section 61.48 is amended by adding paragraphs (c), (d), (e), and (f) to read as follows:

§ 61.48 Transition rules for price cap formula calculations.

* * * * *

(c) Local exchange carriers subject to price cap regulation shall file initial price cap tariffs not later than November 1, 1990, to be effective January 1, 1991.

(d) In connection with the initial price cap filing described in paragraph (c) of this section, each PCI, API, and SBI shall be assigned an initial value prior to adjustment of 100, corresponding to the costs and rates in effect as of July 1, 1990.

(e) In connection with the initial price cap filing described in paragraph (c) of this section, initial PCI calculations shall be made without adjustment for any changes in inflation or productivity. Annual price cap filings incorporating the full values of the GNP–PI and productivity offsets will commence April 2, 1991, with a scheduled effective date of July 1, 1991.

(f) Local exchange carriers specified in § 61.41(a) (2) or (3) shall, in their initial price cap filings described in paragraph (c) of this section, adjust their PCIs through use of an exogenous cost factor to account for the represcription of the rate of return, effective January 1, 1991.

13. Section 61.49 is amended by revising paragraph (a) and the last sentence of paragraph (g) to read as follows:

§ 61.49 Supporting information to be submitted with letters of transmittal for tariffs of carriers subject to price cap regulation.

(a) Each price cap tariff filing must be accompanied by supporting materials sufficient to calculate required adjustments to each PCI, API, and SBI pursuant to the methodologies provided in §§ 61.44, 61.45, 61.46, and 61.47, as applicable

* * * * *

(g) * * * Each such tariff filing must also be accompanied by data sufficient to make the API and PCI calculations required by §§ 61.46(b), 61.44(g), and 61.45(f), § 61.46(d), and, as necessary, to make the SBI calculations provided in §§ 61.47 (b) and (c).

14. Section 61.58 is amended by revising paragraphs (c)(1), (c)(5), and (c)(6) to read as follows:

§ 61.58 Notice Requirements.

* * * * *

(c) * * *

(1) For annual adjustments to the PCI, API, and SBI values under §§ 61.44, 61.46, and 61.47, respectively, dominant interexchange carrier filings must be made on at least 45 days' notice. For annual adjustments to the PCI, API, and SBI values under §§ 61.45, 61.46, and 61.47, respectively, local exchange carrier tariff filings must be made on not less than 90 days' notice.

* * * * *

(5) Tariff filings involving a change in rate structure of a service included in a basket listed in § 61.42(a) or § 61.42(d), or the introduction of a new service within the scope of § 61.42(g), must be made on at least 45 days' notice.

(6) The required notice for tariff filings involving services included in § 61.42(c) or § 61.42(f), or involving changes to tariff regulations, shall be that required in connection with such filings by dominant carriers that are not subject to price cap regulation.

* * * * *

PART 65—INTERSTATE RATE OF RETURN PRESCRIPTION PROCEDURES AND METHODOLOGIES

1. The authority citation for part 65 continues to read as follows:

Authority: Secs. 4, 201, 202, 203, 205, 218, 403, 48 Stat. 1066, 1072, 1077, 1094, as amended, 47 U.S.C. 154, 201, 202, 203, 205, 218, 403.

2. Section 65.1 is revised to read as follows:

§ 65.1 Application of Part 65.

This part establishes procedures and methodologies for Commission prescription of interstate rates of return. This part shall apply to those interstate services and carriers as the Commission shall designate by order. This part shall not apply to dominant interexchange carriers subject to §§ 61.41 through 61.49, except as set forth in §§ 65.600(c), 65.701(c) and 65.703(g) of this chapter. Local exchange carriers subject to §§ 61.41 through 61.49 are exempt from the requirements of this part with the following exceptions:

(a) Carriers that meet the requirements of § 65.200(b) shall be subject to the filing requirements of Subpart C of this part;

(b) Carriers subject to §§ 61.41 through 61.49 shall employ the rate of return value calculated for interstate access services in complying with any applicable rules under parts 36 and 69 that require a return component;

(c) Carriers subject to §§ 61.41 through 61.49 shall be subject to §§ 65.600(d), 65.701(d), and 65.703(h); and

(d) Carriers subject to §§ 61.41 through 61.49 shall continue to comply with the prescribed rate of return when offering any services specified in § 61.42(f) unless the Commission otherwise directs.

3. Section 65.600 is amended by revising paragraph (b) and adding new paragraph (d), to read as follows:

§ 65.600 Rate of return reports.

* * * * *

(b) Each local exchange carrier or group of affiliated carriers which is not subject to §§ 61.41 through 61.49 of this chapter and which has filed individual access tariffs during the preceding enforcement period shall file with the Commission within three (3) months after the end of each calendar quarter, a quarterly rate of return monitoring report. Each report shall contain two parts. The first part shall contain rate of return information on a cumulative basis from the start of the enforcement period through the end of the quarter being reported. The second part shall contain similar information for the most recent quarter. The final quarterly monitoring report for the entire enforcement period shall be considered the enforcement period report. Reports shall be filed on the appropriate report form prescribed by the Commission (*see* § 1.795 of this chapter) and shall provide full and specific answers to all questions propounded and information requested in the currently effective report form. The number of copies to be filed shall be specified in the applicable report form. At least one copy of the report shall be signed on the signature page by the responsible officer. A copy of each report shall be retained in the principal office of the respondent and shall be filed in such manner as to be readily available for reference and inspection. Final adjustments to the enforcement period report shall be made by September 30 of the year following the enforcement period to ensure that any refunds can be properly reflected in an annual access filing. For local exchange carriers subject to §§ 61.41 through 61.49 of this chapter, final adjustments to the final enforcement period report covering the period ending December 31, 1990, shall be made no later than September 30, 1991.

* * * * *

(d) Each local exchange carrier or group of affiliated carriers subject to §§ 61.41 through 61.49 of this chapter shall file with the Commission within three (3) months after the end of each calendar year a report of its total interstate access rate of return for that year. Such filings shall include a report of the total revenues, total expenses and taxes, operating income, and the rate base. Reports shall be filed on the appropriate report form prescribed by the Commission (see § 1.795 of this chapter) and shall provide full and specific answers to all questions propounded and information requested in the currently effective report form. The number of copies to be filed shall be specified in the applicable report form. At least one copy of the report shall be signed on the signature page by the responsible officer. A copy of each report shall be retained in the principal office of the respondent and shall be filed in such manner as to be readily available for reference and inspection.

4. Section 65.701 is amended by adding paragraph (d) to read as follows:

§ 65.701 Period of review.

* * * * *

(d) Notwithstanding other provisions in this subpart, the final period of review for any local exchange carrier subject to §§ 61.41 and 61.49 of this chapter shall end on December 31, 1990.

5. Section 65.703 is amended by revising the first sentence of paragraph (g) and by adding new paragraph (h) to read as follows:

§ 65.703 Refunds.

* * * * *

(g) For interexchange carriers subject to §§ 61.41 through 61.49 of this chapter, refund obligations incurred prior to the date their tariffs filed pursuant to §§61.41 through 61.49 of this chapter take effect for the first time shall be effectuated by an adjustment to the applicable Actual Price Index, Service Band Index, and Price Cap Index (as defined in § 61.3 of this chapter). * * *

(h) For each local exchange carrier subject to §§ 61.41 through 61.49 of this chapter, refund obligations incurred prior to the end of its final period of review shall be effectuated by an adjustment to the applicable Actual Price Index, Service Band Index, and Price Cap Index (as defined in § 61.3 of this chapter). Carriers making an adjustment to effectuate any outstanding refund requirements from their final enforcement period shall make such adjustments no later than the next scheduled annual price cap adjustment tariff filing following the submission of the final enforcement report. The adjustment shall be designed to complete the required refund within 12 months of the close of such period. Upon completion of the required refund, the Actual Price Index, the Service Band Index, or the Price Cap Index shall be adjusted to remove the effect of the adjustment.

PART 69—ACCESS CHARGES

1. The authority citation for part 69 continues to read as follows:

Authority: Secs. 4, 201, 202, 203, 205, 218, 403, 48 Stat. 1066, 1070, 1072, 1077, 1094, as amended, 47 U.S.C. §§ 154, 201, 202, 203, 205, 218, 403, unless otherwise noted.

2. Section 69.1 is amended by revising the first sentence of paragraph (b) and adding paragraph (c) to read as follows:

§ 69.1 Application of access charges.

* * * * *

(b) Except as provided in § 69.1(c), charges for such access service shall be computed, assessed, and collected and revenues from such charges shall be distributed as provided in this part. * * *

(c) The following provisions of this part shall apply to telephone companies subject to price cap regulation only to the extent that application of such provisions is necessary to develop the nationwide average carrier common line charge and for purposes of reporting pursuant to § 43.21 and § 43.22: §§ 69.3(f), 69.105(b)(4), 69.105(b)(5), 69.106(b), 69.107(b), 69.107(c), 69.109(b), 69.111(c), 69.112(a), 69.112(b)(2), 69.112(b)(3), 69.112(d)(2), 69.112(d)(3), 69.114(b), 69.114(d), 69.205(e), 69.301 through 69.310, and 69.401 through 69.412. The computation of rates pursuant to these provisions by telephone companies subject to price cap regulation, as that term is defined in § 61.3(v) of this chapter, shall be governed by the price cap rules set forth in part 61 of this chapter and other applicable Commission Rules and orders.

3. Section 69.3 is amended by revising paragraphs (a) and (e)(4), and by adding new paragraphs (h) and (i) to read as follows:

§ 69.3 Filing of access service tariffs.

(a) Except as provided in paragraphs (f) and (g) of this section, a tariff for access service shall be filed with this Commission for an annual period. Such tariffs shall be filed on a minimum of 90 days' notice with a scheduled effective date of July 1. Such tariff filings shall be limited to rate level changes.

* * * * *

(e) * * *

(4) Except for charges subject to price cap regulation as that term is defined in § 61.3(v) of this chapter, any charge in such a tariff that is not an association charge must be computed to reflect the combined investment and expenses of all companies that participate in such a charge;

* * * * *

(h) Local exchange carriers subject to price cap regulation as that term is defined in § 61.3(v) of this chapter, shall file with this Commission a price cap

tariff for access service for an annual period. Subject to § 61.48, such tariffs shall be filed to provide a minimum of 90 days' notice with a scheduled effective date of July 1. Such tariff filings shall be limited to changes in the Price Cap Indexes, rate level changes (with corresponding adjustments to the affected Actual Price Indexes and Service Band Indexes), and the incorporation of new services into the affected indexes as required by § 61.49 of this chapter.

(i) The following rules apply to the withdrawal from Association tariffs by telephone companies electing to file price cap tariffs pursuant to § 69.3(h).

(1) In addition to the withdrawal provisions of § 69.3(e)(9), a telephone company or group of affiliated telephone companies that participates in one or more Association tariffs during the current tariff year and that elects to file price tariffs effective July 1, 1991, shall notify the Association not later than December 31, 1990, that it is withdrawing from all Association tariffs effective June 30, 1991, subject to the terms of this Rule.

(2) Such withdrawal shall only be filed for the purpose of becoming eligible to file price cap tariffs effective July 1, 1991.

(3) Notwithstanding the provisions of § 69.3(e)(9), in the event a telephone company or group of affiliate telephone companies withdraws from all Association tariffs for the purpose of filing price cap tariffs, such companies may exclude from such withdrawal any or all affiliates that qualify as "average schedule" companies under §§ 69.605 and 69.606 provided that all affiliates so excluded are clearly specified in the withdrawal.

(4) If a telephone company elects to withdraw from Association tariffs and thereafter becomes subject to price cap regulation as that term is defined in § 61.3(v) of this chapter, neither such telephone company nor any of its withdrawing affiliates shall thereafter be permitted to participate in any Association tariffs.

4. Section 69.101 is revised to read as follows:

§ 69.101 General.

Except as provided in § 69.1 and subpart C of this part, charges for each access element shall be computed and assessed as provided in this subpart.

5. Section 69.105 is amended by adding paragraphs (b)(7) and (b)(8), to read as follows:

§ 69.105 Carrier Common Line.

* * * * *

(b) * * *

(7) The Carrier Common Line charges of telephone companies that are subject to price cap regulation as that term is defined in § 61.3(v) of this chapter, shall be computed at the level of Carrier Common Line access element aggregation selected by such telephone companies, subject to § 69.3(e)(7). For each such Carrier Common Line access element tariff, the premium originating Carrier Common Line charge shall be one cent per minute. The premium terminating Carrier Common Line charge shall be set at a level that, when aggregated with the one cent originating charge and the non-premium originating and terminating carrier common line charges, shall not cause the aggregate carrier common line charge for the common line basket to exceed the capped charge computed pursuant to § 61.46(d) for that basket. The non-premium charges shall be equal to .45 multiplied by the premium charges.

(8) If the calculations described in paragraph (b)(7) of this section result in a per minute charge on premium terminating minutes that is less than one cent, the originating and terminating charges shall be equal, and set at a level that does not cause the aggregate carrier common line charge for the common line basket to exceed the capped charge computed pursuant to § 61.46(d). The non-premium charges shall be equal to .45 multiplied by the premium charge.

* * * * *

6. Section 69.111 is amended by revising paragraph (a) to read as follows:

§ 69.111 Common transport.

(a) A charge that is expressed in dollars and cents per access minute shall be assessed upon all interexchange carriers that use

(1) Switching or transmission facilities that are apportioned to the Common Transport element for purposes of apportioning investment, or

(2) Equivalent facilities offered by carriers subject to price cap regulation as that term is defined in § 61.3(v) of this chapter.

* * * * *

7. Section 69.112 is amended by revising paragraph (b)(1), the first sentence of paragraph (c), and paragraph (d)(1) to read as follows:

§ 69.112 Dedicated transport.

* * * * *

(b) * * *

(1) Such charges shall be assessed upon all interexchange carriers for the interface arrangements they use to provide interstate or foreign services and for the equivalent arrangements offered by companies subject to price cap regulation as that term is defined in § 61.3(v) of this chapter.

* * * * *

(c) Charges for the use of voice grade transmission facilities shall be assessed upon interstate carriers that use such facilities to provide interstate or foreign services and for the use of equivalent facilities offered by companies subject to price cap regulation as that term is defined in § 61.3(v) of this chapter. * * *

(d) * * *

(1) Such charges shall be assessed upon all interexchange carriers that use conditioning arrangements in the provision of interstate and foreign services and those that use equivalent arrangements offered by companies subject to price cap regulation as that term is defined in § 61.3(v) of this chapter.

* * * * *

8. Section 69.113 is amended by revising paragraph (c) to read as follows:

§ 69.113 Non-premium charges for MTS-WATS equivalent services.

* * * * *

(c) For telephone companies that are not subject to price cap regulation as that term is defined in § 61.3(v) of this chapter, the non-premium charge for the Local Switching element shall be computed by multiplying a hypothetical premium charge for such element by .45. The hypothetical premium charge for such element shall be computed by dividing the annual revenue requirement for each element by the sum of the projected access minutes for such period and a number that is computed by multiplying the projected non-premium minutes for such element for such period by .45. For telephone companies that are price cap carriers, the non-premium charge for the Local Switching element shall be computed by multiplying the premium charge for such element by .45. Through December 31, 1992, the non-premium charge shall be computed by multiplying the LS1 charge for such element by .45.

* * * * *

9. Section 69.114 is amended by revising paragraph (a) to read as follows:

§ 69.114 Special access.

(a) Appropriate subelements shall be established for the use of equipment or facilities that are assigned to the Special Access element for purposes of apportioning net investment, or that are equivalent to such equipment or facilities for companies subject to price

cap regulation as that term is defined in § 61.3(v) of this chapter.

* * * * *

10. Section 69.205 is amended by revising paragraph (c) to read as follows:

§ 69.205 Transitional premium charges.

* * * * *

(c) Except for telephone companies subject to price cap regulation, as that term is defined in § 61.3(v) of this chapter, the charge for an LS2 premium access minute shall be computed by dividing the premium Local Switching revenue requirement by the sum of the projected LS2 premium access minutes and a number that is computed by multiplying the projected LS1 premium access minutes by the applicable LS1 transition factor. For all telephone companies, the charge for an LS1 premium access minute shall be computed by multiplying the charge for an LS2 premium minute by the applicable LS1 transition factor. For telephone companies that are not subject to price regulation, as that term is defined in § 61.3(v) of this chapter, the premium Local Switching revenue requirement shall be computed by subtracting the projected revenues from non-premium charges attributable to the Local Switching element from the revenue requirement for each element.

* * * * *

Federal Communications Commission.

Donna R. Searcy,

Secretary.

Separate Statement of Commissioner Andrew C. Barrett

I support the Commission's efforts in adopting a new system to regulate the interstate common carrier services of the largest local exchange carriers (LECs). Price cap regulation should result in a more efficient and competitive telecommunications industry. In addition, price caps, as an incentive-based form of regulation, promotes the development of a technologically advanced telecommunications infrastructure. Such an infrastructure is necessary to maintain our nation's competitive posture in the global marketplace.

I write separately to voice my concern about language in this report that could be misinterpreted.[1] Specifically, I want to emphasize that my support for this Order is not based on the notion that price cap regulation prevents cross-subsidies. The adoption of this Order should not in any way be interpreted as a lessening of my concern about preventing cross-subsidization. Nor, should it be construed as a weakening of the Commission's obligation to enforce its rules against such behavior. It is important that this Commission make clear that it will not countenance LECs engaging in cross-subsidization to the detriment of particular classes of customers. Price cap regulation does not serve as a substitute for strict enforcement of our rules against predation or cross-subsidization. As I have stated in the past, cross-subsidization is a symptom of complex structural and cost allocation issues. Thus, I do not believe that price cap regulation alone removes either the potential or the actual ability of the LECs to cross-subsidize services. Therefore, it is upon the staff of the Commission and the state regulatory bodies to do their best to continue to police the LECs. This Order affirms that commitment on the part of the FCC.[2] I plan to work with my colleagues on the Commission to ensure that this commitment is kept.

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

50 CFR Part 675

[Docket No. 91046-0006]

Groundfish of the Bering Sea and Aleutian Islands Area

AGENCY: National Marine Fisheries Service (NMFS), NOAA, Commerce.

ACTION: Notice of apportionment; request for comments.

SUMMARY: The Secretary of Commerce (Secretary) announces that amounts of the reserve are needed in domestic annual processing operations (DAP) for the Pacific Ocean perch (POP) complex in the Aleutian Islands (AI) subarea and are being apportioned to that fishery. This action is necessary to promote optimum use of groundfish in the AI subarea. It is intended to carry out the management objectives contained in the Fishery Management Plan for Bering Sea/Aleutian Islands Groundfish (FMP).

DATES: *Effective* noon, Alaska local time, October 13, 1990.

Comments are invited until October 31, 1990.

ADDRESSES: Comments should be mailed to Steven Pennoyer, Director, Alaska Region, National Marine Fisheries Service, P.O. Box 21668, Juneau, AK 99802, or be delivered to the Federal Building Annex, Suite 6, 9109 Mendenhall Mall Road, Juneau, Alaska.

FOR FURTHER INFORMATION CONTACT: Patsy A. Bearden, Resource Management Specialist, NMFS, 907-586-7229.

SUPPLEMENTARY INFORMATION: The FMP governs the groundfish fishery in the Exclusive Economic Zone within the Bering Sea and Aleutian Islands (BSAI) management area under the Magnuson Fishery Conservation and Management Act. The FMP was developed by the North Pacific Fishery Management Council (Council) and is implemented by regulations codified at 50 CFR 611.93 and 50 part 675.

Section 675.20(a)(1) of the implementing regulations establishes an optimum yield (OY) range of 1.4 to 2.0 million metric tons (mt) for all groundfish species in the BSAI management area. Total allowable catches (TACs) for target species and the "other species" category are specified annually within the OY range and apportioned by subarea under § 675.20(a)(2).

Under § 675.20(a)(3), 15 percent of the TAC for each target species and the "other species" category is automatically placed in a reserve not designated by species or species group, and the remaining 85 percent of the TAC for each target species and the "other species" category is apportioned between domestic annual harvest (DAH) and total allowable level of foreign fishing (TALFF). Under § 675.20(b)(1)(i), the Secretary will apportion reserve amounts to a target species or the "other species" category as needed, provided that the apportionments do not result in overfishing.

The initial 1990 TAC for POP in the AI subarea, under § 675.20(a)(2), is 5,610 metric tons (mt), which was initially apportioned to DAP (55 FR 1434, January 16, 1990). On August 3, 1990, 3,000 mt of reserve was apportioned to DAP for POP (55 FR 32421, August 9, 1990) under § 675.20(b)(1)(i). On September 12, 1990, the Secretary apportioned 4,000 mt of reserve to DAP POP (55 FR 38331, September 18, 1990), bringing the current amount for DAP POP to 12,610 mt.

Under § 675.20(b)(1)(i), the Secretary now finds that the DAP fishery in the AI subarea requires an additional 3,990 mt of POP for the remainder of the year. Therefore, he apportions 3,990 mt from

the reserve to DAP POP in the AI subarea. This apportionment results in a revised amount of 16,600 mt for DAP POP in the AI subarea as listed in Table 1. The revised DAP POP amount is equal to the acceptable biological catch (ABC) for POP; therefore, overfishing of POP will not occur. The amount of 16,600 mt for POP ABC was approved by the Council during its December 5–8, 1989, meeting. The ABC was incorrectly noted as 16,000 mt in the last apportionment notice (55 FR 38331, September 18, 1990).

Classification

The Assistant Administrator for Fisheries, NOAA, finds for good cause that it is impractical and contrary to the public interest to provide prior notice and comment or to delay the effective date of this notice. Immediate effectiveness of this notice is necessary to benefit U.S. fishermen participating in DAP POP operations who would otherwise be prohibited from fishing due to a premature closure. However, interested persons are invited to submit comments in writing to the address above until October 31, 1990.

This action is taken under § 675.20, and is in compliance with Executive Order 12291.

TABLE 1.—ALEUTIAN ISLANDS APPORTIONMENT OF TAC

[Values are in metric tons]

	Current	This action	Revised
Pacific Ocean Perch Complex (AI)			
ABC=16,600 (DAP)	12,610	3,990	16,600
TAC=16,600 (JVP)	0	0	0
Total (BSAI)			
(ABC=2,038,500) (DAP)	1,704,730	+3,990	1,708,720
(TAC=2,000,000) (JVP)	257,992	0	257,992

Proposed Rules

Federal Register
Vol. 55, No. 203
Friday, October 19, 1990

This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

OFFICE OF PERSONNEL MANAGEMENT

5 CFR Parts 300 and 330

Employment (General); Time-in-Grade Restrictions

AGENCY: Office of Personnel Management.

ACTION: Proposed rule.

SUMMARY: The Office of Personnel Management (OPM) proposes to revise its regulations governing the time-in-grade restriction on advancement to positions in the General Schedule. These changes would provide additional flexibility and simplify or clarify provisions.

DATES: Comments must be received on or before December 18, 1990.

ADDRESSES: Send or deliver written comments to Leonard R. Klein, Associate Director for Career Entry and Employee Development, Office of Personnal Management, room 6F08, 1900 E Street, NW., Washington, DC 20415.

FOR FURTHER INFORMATION CONTACT: Leota Shelkey, (202) 606–0398; FTS 266–0398.

SUPPLEMENTARY INFORMATION: Since the early 1950's, Federal employees in General Schedule positions at GS–5 and above have been required to serve at least 1 year in grade before being promoted. The time-in-grade requirement helps to control budgets and rates of promotion and to assure proper use of competitive examination registers. It originated with the "Whitten Amendment," a series of controls on expansion of the Federal work force during the Korean conflict.

Since expiration of the Whitten Amendment in 1978, OPM has continued the time-in-grade restriction in regulation. Because of the expiration of its statutory basis, the restriction applies only to filling General Schedule positions in the competitive service but not in the excepted service. Except for a minor change in 1985, the time-in-grade regulations have not been revised since 1978. The proposals in this notice are intended to eliminate inconsistencies, simplify application, or clarify provisions.

OPM periodically receives suggestions to abolish the time-in-grade restriction. However, we believe its elimination is unnecessary. A 1-year waiting period between promotions is not unreasonable. Furthermore, the impact of employee salaries and related benefits on the Federal budget continues to be a concern. Our approach has been to provide agency managers with needed flexibility so the restriction does not prevent them from filling jobs with qualified candidates. For example, OPM gave agencies the authority to approve training agreements that permit accelerated promotions in shortage occupations and to waive the restriction to prevent undue hardship or inequity. That approach is continued in the following proposals.

Section 300.601. A new "purpose" section is added.

Section 300.602. A new "definitions" section is added.

Section 300.603. This section on coverage (currently § 300.601) clarifies that an employee who held a General Schedule position in the executive branch under nontemporary appointment within the previous 52 weeks is subject to the restriction. This section also addresses temporary appointment to a GS position.

In addition, this section clarifies existing exceptions and adds several new ones (currently § 300.603). Under current policy, new appointments of disabled veterans and new Veterans Readjustment Act appointments are not subject to the restriction. Consistent with the approach that eligibility under a statutory appointing authority should not be restricted by this regulatory requirement, a new exception is added to permit appointment under any special noncompetitive appointment authority. In such a case, the employee would have to be qualified and all procedural requirements met for making such appointments. In addition to the veterans' appointments, this provision would cover appointing authorities in 5 CFR part 315, subpart F, and similar statutory authorities.

Under current regulations, an exception is allowed for repromotion up to GS–5 to a grade previously held. Repromotion above GS–5 is allowed only when an employee lost the higher grade by reduction in force. The proposal broadens this exception by allowing promotion up to any grade previously held under a nontemporary competitive appointment, regardless of how the grade was lost.

Currently, an agency may waive time in grade to avoid undue hardship or inequity. This proposal redefines (in § 300.602) those terms to give agencies additional flexibility to deal with shortages and organizational difficulties. However, as with the existing policy, this authority does not include waiver of qualification standards.

Section 300.604. This section (currently § 300.602) contains the time-in-grade waiting period. The major change is that the waiting period of 1 year is changed to 52 weeks to make it consistent with the waiting period for within grade increases to steps 2, 3, and 4 of General Schedule grades. This change should eliminate confusion between the two waiting periods and reduce paperwork in those cases where separate within grade increase and promotion actions must be processed because of the 1 to 2 day difference in the waiting periods.

In addition, this section gives agency heads the authority to determine whether time in grade is satisfied by service one grade or two grades lower when positions with 1-grade interval work have mixed interval promotion patterns (e.g., GS–5, 6, 8). Allowing the agency to make this determination would help insure that the policy takes into account the particular promotion patterns and organizational arrangements of the agency.

Section 300.605. This section (currently § 300.604) defines creditable service for meeting time in grade. The major change is in the crediting of higher grade temporary service that occurs prior to an employee's first competitive appointment. Under current rules (5 CFR 330.502), such service is credited for time-in-grade purposes at the grade of the subsequent competitive appointment. The purpose is to prevent abuse of the competitive examining system.

This rule was adopted because agencies were appointing individuals from low grade registers (because they were not within reach at higher grade levels) and then promoting them to

higher grades held under temporary appointment. This continues to be a concern and OPM believes the restriction is still needed. However, we believe both agencies and employees could benefit from a modification of the rule. Therefore, the proposal would continue the same rule, but it would apply only until an employee had served in pay status for 52 weeks under nontemporary competitive appointment. We propose also to move this requirement from 5 CFR part 330 to § 300.605.

Other changes include adding nonappropriated fund employment as creditable service and clarifying District of Columbia service. The rule for using representative rates to determine equivalent grades for non-GS service is revised because agencies have difficulty in understanding and applying the current rule. Also, the special rule for crediting non-GS service that intervenes between two periods of GS service is dropped to simplify application.

Section 300.606. This new provision reflects existing policy but makes clear that an agency may adopt additional policies, beyond these regulations, to control rates of promotion.

E.O. 12291, Federal Regulation

I have determined that this is not a major rule as defined under section 1(b) of E.O. 12291, Federal Regulation.

Regulatory Flexibility Act

I certify that this regulation will not have a significant economic impact on a substantial number of small entities because it pertains only to Federal employees and agencies.

List of Subjects in 5 CFR Parts 300, 330

Government employees, Personnel Management Office.

U.S. Office of Personnel Management.
Constance Berry Newman,
Director.

Accordingly, OPM proposes to amend 5 CFR parts 300 and 330, as follows:

PART 300—EMPLOYMENT (GENERAL)

1. The authority citation for part 300 continues to read as follows:

Authority: 5 U.S.C. secs. 552, 3301, 3302; E.O. 10577, 3 CFR, 1954–1958 Comp., page 218, unless otherwise noted.

Secs. 300.101 through 300.104 also issued under 5 U.S.C. secs. 7201, 7204, 7701; E.O. 11478, 3 CFR, 1966–1970 Comp., page 803.

Sec. 300–301 also issued under 5 U.S.C. 2954.

Secs. 300.401 through 300.408 also issued under 5 U.S.C. secs. 3109(c), 2301, and 2302.

Secs. 300.501 through 300.507 also issued under 5 U.S.C. 1103(a)(5).

Sec. 300.603 also issued under 5 U.S.C. 1104.

2. Subpart F is revised to read as follows:

Subpart F—Time-in-Grade Restrictions

Sec.
300.601 Purpose.
300.602 Definitions.
300.603 Coverage.
300.604 Restrictions.
300.605 Creditable service.
300.606 Agency authority.

Subpart F—Time-in-Grade Restrictions

§ 300.601 Purpose.

The restrictions in this subpart are intended to prevent excessively rapid promotions in competitive service positions and to protect competitive principles. They provide a budgetary control on promotion rates and help assure that appointments are made from appropriate registers. These restrictions are in addition to the eligibility requirements for promotion in part 335 of this chapter.

§ 300.602 Definitions.

In this subpart—

Nontemporary appointment means any appointment other than a temporary appointment pending establishment of a register (TAPER) or a temporary or excepted appointment not to exceed 1 year or less.

Hardship to an agency involves serious difficulty in filling a position, including when:

(a) The situation to be redressed results from circumstances beyond the organization's control and otherwise would require extensive corrective action; or

(b) A position at the next lower grade in the normal line of promotion does not exist and the resulting action is not a career ladder promotion; or

(c) There is a shortage of candidates for the position to be filled and the criteria in § 572.301(b) of this chapter are met.

Inequity to an employee involves situations where a position is upgraded as a result of a new classification standard or correction of a classification error but without change in the employee's duties or responsibilities, or where discrimination or administrative error prevented an employee from reaching a higher grade.

Advancement means a position change or any type of appointment.

Competitive appointment means an appointment based on selection from a competitive examination register of eligibles or a direct hire authority.

§ 300.603 Coverage.

(a) *Coverage.* This subpart applies to any advancement to a General Schedule position in the competitive service by any individual who within the previous 52 weeks held a General Schedule position under nontemporary appointment in the competitive or excepted service in the executive branch, unless excluded by paragraph (b) of this section.

(b) *Exclusions.* This subpart does not apply to the following actions:

(1) Appointment based on selection from a competitive examination certificate of eligibles or under a direct hire authority.

(2) Noncompetitive appointment, based on a special authority in law or executive order, that is made in accordance with all requirements applicable to new appointments under that authority.

(3) Advancement up to any General Schedule grade the employee previously held under a nontemporary appointment in the competitive service.

(4) Advancement of an employee under a non-General Schedule pay system unless the employee held a General Schedule position under nontemporary appointment in the executive branch within the previous 52 weeks.

(5) Advancement of an individual whose General Schedule service during the previous 52 weeks has been totally under temporary appointment.

(6) Advancement of an employee under a training agreement established in accordance with chapter 330 of the Federal Personnel Manual. However, an employee may not receive more than two promotions in any 52-week period solely on the basis of one or more training agreements. Also, only OPM may approve a training agreement that provides for consecutive promotions at rates that exceed those permitted by § 300.604 of this part.

(7) Advancement to avoid hardship to an agency or inequity to an employee in an individual meritorious case but only with the prior approval of the agency head or other official to whom this authority has been redelegated. However, an employee may not be promoted more than three grades during any 52-week period on the basis of this paragraph.

(8) Advancement when OPM authorizes it to avoid hardship to an agency or inequity to an employee in an individual meritorious case.

§ 300.604 Restrictions.

The following time-in-grade restrictions must be met unless an

advancement is permitted by § 300.603(b) of this part:

(a) *Advancement to positions at GS–12 and above.* Candidates for advancement to position at GS–12 and above must have completed a minimum of 52 weeks in positions no more than one grade lower (or equivalent) than the position to be filled.

(b) *Advancement to positions at GS–6 through GS–11.* Candidates for advancement to a position at GS–6 through GS–11 must have completed a minimum of 52 weeks in positions:

(1) No more than two grades lower (or equivalent) when the position to be filled is in a line of work properly classified at 2-grade intervals; or

(2) No more than one grade lower (or equivalent) when the position to be filled is in a line of work properly classified at 1-grade intervals; or

(3) No more than one or two grades lower (or equivalent), as determined by the agency head, when the position to be filled is in a line of work properly classified at 1-grade intervals but has a mixed interval promotion pattern.

(c) *Advancement to positions up to GS–5.* Candidates may be advanced without time restriction to positions up to GS–5 if the position to be filled is no more than two grades above the lowest grade the employee held within the preceding 52 weeks under his or her latest nontemporary competitive appointment.

§ 300.605 Creditable service.

(a) All service at the required or higher grade (or equivalent) in positions to which appointed in the Federal civilian service is creditable towards the time periods required by § 300.604 of this part, except as provided in paragraph (c) of this section. Creditable service includes competitive and excepted service in positions under the General Schedule and other pay systems, including employment with a nonappropriated fund instrumentality, but does not include service while on detail. It also includes appropriate service with the District of Columbia Government prior to January 1, 1980 (or prior to September 28, 1980, for those District employees who were converted to the District personnel system on January 1, 1980).

(b) Service in positions not subject to the General Schedule (GS) is credited at the equivalent GS grade by comparing representative rates (as defined in § 351.203 of this chapter) in effect when the service was performed. The equivalent GS grade is the GS grade with a representative rate that equals the representative rate of the employee's non-GS position. When the representative rate of the non-GS position falls between the representative rates of two GS grades, the non-GS service is credited at the higher grade. When the employee's non-GS position has no representative rate, the actual pay rate is used.

(c) In applying the restrictions in § 300.604 of this part, prior service under temporary appointment at a level above that of a subsequent nontemporary competitive appointment is credited as if the service had been performed at the level of the nontemporary appointment. This provision applies until the employee has served in pay status for 52 weeks under nontemporary competitive appointment; thereafter, the service is credited at its actual grade level (or equivalent).

§ 300.606 Agency authority.

An agency may adopt policies to control promotion rates of employees not covered by this subpart or to expand on the provisions in this subpart.

PART 330—RECRUITMENT, SELECTION, AND PLACEMENT (GENERAL)

3. The authority citation for part 330 continues to read as follows:

Authority: 5 U.S.C. 1302, 3301, 3302; E.O. 10577, 3 CFR, 1954–58 Comp., p. 218.

Sec. 330.102 also issued under 5 U.S.C. 3327.

Subpart B also issued under 5 U.S.C. 3315 and 8151.

Sec. 330.401 also issued under 5 U.S.C. 3310.

Subpart H also issued under 5 U.S.C. 8337(h) and 8457(b).

§ 330.502 [Removed and Reserved]

4. In part 330, § 330.502 is removed and reserved.

[FR Doc. 90–24727 Filed 10–18–90; 8:45 am]
BILLING CODE 6325–01–M

DEPARTMENT OF AGRICULTURE

Agricultural Marketing Service

7 CFR Part 944

[Docket No. FV–90–139PR]

Fruit Import Regulations; Withdrawal of Proposed Rule to Change Orange Import Requirements

AGENCY: Agricultural Marketing Service, USDA.

ACTION: Withdrawal of proposed rule.

SUMMARY: This document withdraws a proposed rule which would have changed the minimum grade and size requirements for oranges imported into the United States. The proposed rule is being withdrawn because of a lack of record evidence to support the change.

FOR FURTHER INFORMATION CONTACT: Gary D. Rasmussen, Marketing Specialist, Marketing Order Administration Branch, Fruit and Vegetable Division, AMS, P.O. Box 96456, Room 2525–S, Washington, DC 20090–6456; telephone: (202) 475–3918.

SUPPLEMENTARY INFORMATION:

This action withdraws a proposed rule published in the **Federal Register** (55 FR 24249, June 15, 1990), which gave notice that the Department was considering revising § 944.312 (7 CFR 944.312) to change the minimum grade and size requirements for oranges imported into the United States. Section 944.312 is effective under section 8e (7 U.S.C. 608e–1) of the amended Agricultural Marketing Agreement Act of 1937.

Section 8e of the Act provides that whenever specified commodities, including oranges, are regulated under a Federal marketing order, imports of these commodities into the United States are prohibited unless they meet the same or comparable grade, size, quality, or maturity requirements as those in effect for the domestically produced commodities. Section 8e also provides that whenever two or more marketing orders regulate the same commodity produced in different areas of the United States, the Secretary shall determine which area the imported commodity is in most direct competition with and apply the regulations for that area to the imported commodity. Currently, the orange import requirements are the same as those applied to Texas oranges under marketing order (7 CFR part 906).

The proposal would have based orange import requirements on the Florida orange marketing order (7 CFR part 905), instead of the Texas marketing order. In response to the proposal, twenty-four comments were received from 21 individuals. On the basis of the information supplied therein, there is insufficient evidence in the rulemaking record to conclude that imported oranges are in most direct competition with Florida oranges.

Therefore, the proposed rule published in the **Federal Register** (55 FR 24249, June 15, 1990), is hereby withdrawn, and imported oranges shall continue to meet the Texas marketing order requirements.

BILLING CODE 3410-02-M

Animal and Plant Health Inspection Service

9 CFR Parts 101 and 102

[Docket No. 88-187]

Viruses, Serums, Toxins and Analogous Products; Restrictions on Distribution and Use

AGENCY: Animal and Plant Health Inspection Service, USDA.

ACTION: Proposed rule.

SUMMARY: We are proposing to amend the regulations pertaining to veterinary biological products to: (1) Clarify that restrictions on the distribution and use of federally licensed biological products may be imposed by a State or other jurisdiction based on local disease conditions, and (2) provide a procedure whereby any person, including a State or other jurisdiction, may request that federal restrictions be imposed on such products. The purpose of this proposed rule is to clarify the regulations with respect to State restrictions on the use and distribution of veterinary biologics, and to specify how a person can request that federal restrictions be imposed on such products.

DATES: Consideration will be given only to comments postmarked or received on or before December 18, 1990.

ADDRESSES: Send an original and three copies of written comments to Chief, Regulatory Analysis and Development, PPD, APHIS, USDA, room 866, Federal Building, 6505 Belcrest Road, Hyattsville, MD 20782. Please state that your comments refer to Docket No. 88-187. Comments received may be inspected at USDA, room 1141, South Building, 14th Street and Independence Avenue SW., Washington, DC, between 8 a.m. and 4:30 p.m., Monday through Friday, except holidays.

FOR FURTHER INFORMATION CONTACT: Dr. David A. Espeseth, Deputy Director, Veterinary Biologics, BBEP, APHIS, USDA, Room 838, Federal Building, 6505 Belcrest Road, Hyattsville, MD 20782, 301-436-8245.

SUPPLEMENTARY INFORMATION:

Background:

The Animal and Plant Health Inspection Service (APHIS) of the United States Department of Agriculture (USDA) is responsible for the administration and enforcement of the Virus-Serum-Toxin Act (21 U.S.C. 151-159) (Act). That Act prohibits the importation or the shipment anywhere in or from the United States of any veterinary biologic which is worthless, contaminated, dangerous, or harmful. The Secretary of Agriculture is authorized to prescribe regulations which are necessary to carry out the purposes of the Act, including regulations governing the preparation of these products. The Act requires that, unless they are subject to exemption, products prepared in the United States must be prepared in establishments licensed by the Secretary of Agriculture pursuant to regulations issued by the Secretary.

Regulations concerning veterinary biologics appear in 9 CFR parts 101-118. They are intended to ensure that only pure, safe, potent and efficacious products are available to farmers, livestock owners, and others who use them.

Section 102.5(d) (2) of the present regulations pertaining to the distribution of veterinary biological products reads as follows:

The licensee shall distribute the product in any State or other jurisdiction only in accordance with the requirements of such State or other jurisdiction.

The intent of the provision is to recognize that States or other jurisdictions have a legitimate interest in regulating certain biologics based on local disease conditions, and that licensees are subject to such regulation, as well as to the regulations under the Virus-Serum-Toxin Act.

There has been some confusion concerning the provision in § 102.5(d) (2), as currently written. Questions have arisen whether APHIS is enforcing State law and to what extent State and local restrictions may be imposed on animal biologics in addition to Federal regulations. We believe that it is necessary to clarify the meaning of this section. We are therefore proposing to amend § 102.5(d) (2) as follows:

In addition to restrictions imposed by the Deputy Administrator pursuant to paragraph (e) of this section, biological products shall be subject to restrictions imposed by any State or other jurisdiction pertaining to the distribution and use of such products, based on local disease conditions.

This provision is intended to reflect the Department's long standing policy which recognizes that local disease conditions may require special restrictions to be imposed on biological products. For example, a State may have an active program to eradicate a specific disease within its borders. If a veterinary biological product has been licensed for use against this disease, a State may want to restrict use of the biological product to veterinarians to ensure that its use by nonveterinarians does not interfere with the eradication program. In the event that a disease does not exist within a State, the State may wish to prevent distribution of a vaccine against that disease because there would be no need to vaccinate, or because allowing the use of the vaccine would complicate diagnosis or serological surveillance since serological responses in animals due to vaccine are often difficult to distinguish from those due to disease.

APHIS issues U.S. Veterinary Biological Product Licenses (see 9 CFR Part 102) for products which meet the requirements of the Act and the regulations. The regulations provide that the Administrator of APHIS may impose additional restrictions on the use or distribution of a licensed biological product when the protection of domestic animals or the public health, interest, or safety, or both necessitate such restrictions. Restrictions imposed under this authority are prescribed on the product license, and may be required to be included on product labels. The regulations state that the restrictions may include, but are not limited to, limits on distribution of a product, or provisions that a biological product is restricted to use by veterinarians, or under the supervision of veterinarians, or both. (9 CFR 102.5(e)).

Any interested person, including a State, may request that Federal restrictions be imposed on the distribution and use of a particular biologic. However, the regulations do not contain a provision concerning such a request. Therefore, we are proposing to add a new § 102.5(f) to the regulations which would provide that any person may request that APHIS impose restrictions on the distribution and use of veterinary biologics, and which would contain procedures for submitting such a request.

Executive Order 12291 and Regulatory Flexibility Act

We are issuing this proposed rule in conformance with Executive Order 12291, and we have determined that it is not a "major rule." Based on information

compiled by the Department, it has been determined that this proposed rule would have an effect on the economy of less than $100 million; would not cause a major increase in costs or prices for consumers, individual industries, Federal, State, or local government agencies, or geographic regions, and would not have a significant adverse effect on competition, employment, investment, productivity, innovation, or on the ability of United States-based enterprises to compete with foreign-based enterprises in domestic or export markets.

Under certain circumstances, States may restrict the distribution and use, within their own borders, of veterinary biological products licensed by APHIS. The current regulations, however, have caused some confusion regarding such restrictions as they relate to the requirements under the Virus-Serum-Toxin Act. The proposed rule would clarify the meaning of the regulation. It would also provide procedures whereby any person could request that federal restrictions be imposed on an animal biologic.

Under these circumstances, the Administrator of the Animal and Plant Health Inspection Service has determined that this action would not have a significant economic impact on a substantial number of small entities.

Paperwork Reduction Act

In accordance with the Paperwork Reduction Act of 1980 (44 U.S.C. 3501 *et seq.*), the information collection provisions that are included in the proposed rule have been submitted for approval to the Office of Management and Budget (OMB). Written comments concerning any information collection provisions should be submitted to the Office of Information and Regulatory Affairs, OMB, Attention Desk Officer for APHIS, Washington, D.C. 20503. A duplicate copy of such comments should be submitted to: (1) Chief, Regulatory Analysis and Development, PPD, APHIS, USDA, Room 866, Federal Building, 6505 Belcrest Road, Hyattsville, MD 20782 and (2) Clearance Officer, OIRM, USDA, room 404–W, 14th Street and Independence Avenue SW., Washington, DC 20250.

Executive Order 12372

This program/activity is listed in the Catalog of Federal Domestic Assistance under No. 10.025 and is subject to Executive Order 12372, which requires intergovernmental consultation with State and local officials. [See 7 CFR part 3015, subpart V].

List of Subjects

9 CFR Part 101

Animal biologics.

9 CFR Part 102

Animal biologics.

Accordingly, it is proposed to amend title 9 of the Code of Federal Regulations as follows:

Part 101—DEFINITIONS

1. The authority citation for 9 CFR part 101 would continue to read as follows:

Authority: 21 U.S.C. 151–159; 7 CFR 2.17, 2.51, and 371.2(d).

2. Section 101.2 would be amended to remove all the paragraph designations, to rearrange the definitions in alphabetical order, and to add, in alphabetical order, the following definition:

§ 101.2 Administrative terminology.

* * * * *

Animal and Plant Health Inspection Service. The Animal and Plant Health Inspection Service of the United States Department of Agriculture (APHIS).

* * * * *

PART 102—LICENSES FOR BIOLOGICAL PRODUCTS

3. The authority citation for 9 CFR part 102 would continue to read as follows:

Authority: 21 U.S.C. 151–159; 7 CFR 2.17, 2.51, and 371.2(d).

§ 102.5 [Amended]

4. In § 102.5, paragraph (d)(2) would be revised to read as follows:

(d) * * *

(2) In addition to restrictions imposed by the Deputy Administrator pursuant to paragraph (e) of this section, biological products shall be subject to restrictions imposed by any State or other jurisdiction pertaining to the distribution and use of such products, based on local disease conditions.

* * * * *

5. In § 102.5, a new paragraph (f) would be added to read as follows:

* * * * *

(f) Any person may request that the distribution and use of a veterinary biological product be restricted if the restriction pertains to the protection of domestic animals or the public health, interest, or safety, or both. All requests must be sent, in writing, to the Director, Biotechnology, Biologics and Environmental Protection, USDA, APHIS, c/o Deputy Director, Veterinary Biologics, room 838, Federal Building, 6505 Belcrest Road, Hyattsville, MD 20782. Requests must specify the restriction(s) being requested and must explain why the restrictions are needed. Copies of any supporting documents, such as scientific literature, published or unpublished articles, or data from tests, should be attached to the request. When a decision is reached regarding the request, the person submitting the request will be sent written notification of such decision.

Done in Washington, DC, this 15 day of October 1990.

James W. Glosser,

Administrator, Animal and Plant Health Inspection Service.

BILLING CODE 3410-34-M

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. 90-NM-179-AD]

Airworthiness Directives; Boeing Model 737 Series Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: This notice proposes to supersede an existing airworthiness directive (AD), applicable to certain Boeing Model 737 series airplanes, which currently requires ultrasonic inspections of the bonded waffle doublers for delamination between body station (BS) 360 and BS 1016. This action would require inspections for delamination, cracking, and corrosion, in an area expanded to include the area between BS 259 and BS 360, the circumferential fuselage splices, stringer (S)–17, and bonded doublers. This proposal is prompted by reports of cracking of the skin at S–17. This condition, if not corrected, could result in rapid decompression of the airplane.

DATES: Comments must be received no later than December 7, 1990.

ADDRESSES: Send comments on the proposal in duplicate to Federal Aviation Administration, Northwest Mountain Region, Transport Airplane Directorate, ANM–103, Attention: Airworthiness Rules Docket No. 90–NM–179–AD, 1601 Lind Avenue SW., Renton, Washington 98055–4056. The applicable service information may be obtained from Boeing Commercial Airplane Group, P.O. Box 3707, Seattle,

Washington 98124. This information may be examined at the FAA, Northwest Mountain Region, Transport Airplane Directorate, 1601 Lind Avenue SW., Renton, Washington.

FOR FURTHER INFORMATION CONTACT: Dan R. Bui, Airframe Branch, ANM-120S; telephone (206) 227-2785. Mailing address: FAA, Northwest Mountain Region, Transport Airplane Directorate, 1601 Lind Avenue. SW., Renton, Washington 98055-4056.

SUPPLEMENTARY INFORMATION: Interested persons are invited to participate in the making of the proposed rule by submitting such written data, views, or arguments as they may desire. Communications should identify the regulatory docket number and be submitted in duplicate to the address specified above. All communications received on or before the closing date for comments specified above will be considered by the Administrator before taking action on the proposed rule. The proposals contained in this Notice may be changed in light of the comments received.

Comments are specifically invited on the overall regulatory, economic, environmental, and energy aspects of the proposed rule. All comments submitted will be available, both before and after the closing date for comments, in the Rules Docket for examination by interested persons. A report summarizing each FAA/public contact, concerned with the substance of this proposal, will be filed in the Rules Docket.

Commenters wishing the FAA to acknowledge receipt of their comments submitted in response to this Notice must submit a self-addressed, stamped post card on which the following statement is made: "Comments to Docket Number 90-NM-179-AD." The post card will be date/time stamped and returned to the commenter.

Discussion

On July 20, 1989, the FAA issued AD 89-16-05, Amendment 39-6281 (54 FR 31507, July 31, 1989), to require ultrasonic inspections of the bonded waffle doublers for delamination between body station (BS) 360 and BS 1016. Affected operators were required to submit reports to the FAA of any cracking or disbonding found as a result of the inspections. That action was prompted by reports of delamination of the waffle doublers on several Boeing Model 737 series airplanes. This condition, if not corrected, could lead to the inability of the airplane to carry fail-safe loads, which may result in rapid decompression.

Since issuance of that AD, one operator recently reported cracking of the skin at stringer (S)-17 at multiple locations. As a result of this and other reports from operators, in accordance with AD 89-16-05, the FAA has determined that additional inspections are necessary in order to detect cracking and disbonding in a more timely manner.

The FAA has reviewed and approved Boeing Service Bulletin 737-53-1124, dated August 24, 1989; Service Bulletin 737-53-1089, Revision 1 and Revision 3, dated October 13, 1988, and November 2, 1989, respectively; Service Bulletin 737-53-1076, Revision 2, dated February 8, 1990; and Alert Service Bulletin 737-53A1039, Revision 5, dated May 25, 1989; all of which describe procedures for inspection of the bonded doublers and repair, as necessary.

Additionally, the FAA has re-evaluated the fatigue life of repairs made using blind fasteners, and has determined that such repairs should be repetitively inspected for cracks and loose or missing fasteners every 3,000 flight cycles, and must be replaced prior to the accumulation of 10,000 flight cycles.

Since this condition is likely to exist or develop on other airplanes of the same type design, an AD is proposed which would supersede AD 89-16-05 with a new AD which would require inspection for delamination, cracking, and corrosion of an expanded area to include BS 259 and BS 360, the circumferential fuselage splices, S-17, and bonded doublers in accordance with the service bulletins previously described. This action would also revise the interval for repetitive inspections of blind fasteners from 1,000 to 3,000 flight cycles; and the interval for replacement of blind fasteners from 3,000 to 10,000 flight cycles. This action would also delete the reporting requirement of the existing AD.

The regulations proposed herein would not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, in accordance with Executive Order 12612, it is determined that this proposal would not have sufficient federalism implications to warrant the preparation of a Federalism Assessment.

For the reasons discussed above, I certify that this proposed regulation: (1) Is not a "major rule" under Executive Order 12291; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979); and (3) if promulgated, will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act. A copy of the draft evaluation prepared for this action is contained in the regulatory docket. A copy of it may be obtained from the Rules Docket.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Safety.

The Proposed Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, the Federal Aviation Administration proposes to amend 14 CFR part 39 of the Federal Aviation Regulations as follows:

PART 39—[AMENDED]

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 1354(a), 1421 and 1423; 49 U.S.C. 106(g) (Revised Pub. L. 97-449, January 12, 1983); and 14 CFR 11.89.

§ 39.13 [Amended]

2. Section 39.13 is amended by superseding Amendment 39-6281 (54 FR 31507, July 31, 1989), AD 89-16-05, with the following new airworthiness directive:

Boeing: Applies to Model 737 series airplanes, line numbers 520 through 610, certificated in any category. Compliance required as indicated, unless previously accomplished.

To prevent the inability of the airplane to carry fail-safe loads due to disbonded doublers, and to reduce the possibility of rapid decompression, accomplish the following:

A. Within 60 calendar days after the effective date of this AD, perform a one-time external ultrasonic inspection of the bonded doublers above stringer (S)-28 between body station (BS) 259 and BS 1016 in accordance with Boeing Service Bulletin 737-53-1124, dated August 24, 1989.

Note: The area inspected, in accordance with AD 89-16-05, Amendment 39-6281, does not require reinspection for disbonding.

B. If disbond is detected, prior to further flight, accomplish the following:

1. Perform a high frequency eddy current (HFEC) inspection for cracks and a visual inspection for corrosion along the upper rivet row of the lower lap splices and both rivet rows of S-17 (if affected), for the entire length of affected panel, in accordance with Boeing Service Bulletin 737-53-1124, dated August 24, 1989. If, during the inspections required by this paragraph, paint inhibits identification of the fastener heads or cracks, the paint must be stripped using an FAA-approved chemical stripper.

a. If no cracking or corrosion is found, repeat the HFEC and visual inspections at intervals not to exceed 4,500 flight cycles

until the preventive modification required by paragraph C. of this AD is accomplished.

b. If cracks are found, repair prior to further flight, in accordance with Boeing Service Bulletin 737–53–1124, dated August 24, 1989. Within 2,000 flight cycles following the repair, accomplish the lap splice preventive modification on the effected panel, which includes installation of oversize protruding head solid fasteners in the lap splice upper row and S–17, in accordance with Boeing Service Bulletin 737–53–1124, dated August 24, 1989.

(1) Blind fasteners may be used as a temporary repair only. Repairs using blind fasteners must be repetitively inspected for loose or missing fasteners at intervals not to exceed 3,000 flight cycles following installation, and replaced with protruding head solid fasteners within 10,000 flight cycles following installation.

(2) Repairs previously installed with blind fasteners prior to the effective date of this AD must be inspected for loose or missing fasteners within 1,000 flight cycles after the effective date of this AD and at thereafter intervals not to exceed 3,000 flight cycles. Blind fasteners must be replaced with protruding head solid fasteners within 10,000 flight cycles following installation.

2. Perform a detailed external visual inspection for cracks and corrosion at circumferential splices along the most forward and most aft rivet row of each panel found to contain delamination, in accordance with Boeing Service Bulletin 737–53–1076, Revision 2, dated February 8, 1990. Remove paint with an FAA-approved chemical stripper prior to inspection, or ensure that the fastener head is clearly visible. In addition to the detailed external visual inspection, perform an HFEC inspection for cracks at each circumferential splice from S–10R to S–10L in accordance with Boeing Service Bulletin in 737–53–1076, Revision 2, dated February 8, 1990, along the most forward and most aft rivet row of each circumferential splice.

a. If no cracks, corrosion, or delamination are found as a result of the detailed external visual inspection, repeat the detailed external visual and HFEC inspections required by this paragraph at intervals not to exceed 4,500 landings or 15 months, whichever occurs first.

b. If any cracking is detected, repair prior to further flight, in accordance with Boeing Service Bulletin 737–53–1076, Revision 2, dated February 8, 1990.

c. Replacement of the most forward and most aft fastener rows with standard protruding head solid fasteners at all circumferential fuselage splices, in accordance with Boeing Service Bulletin 737–53–1076, Revision 2, dated February 8, 1990, constitutes terminating action for the inspections required by this subparagraph, B.2.

3. In areas where corrosion or delamination are found as a result of the inspections required by paragraphs B.1. and B.2. of this AD, prior to further flight, perform a low frequency eddy current (LFEC) inspection using an FAA-approved method:

a. If corrosion depth does not exceed 10% of the skin's thickness, conduct the repetitive external detailed visual inspections required by paragraphs B.1. and B.2. of this AD, of each panel found to contain corrosion at intervals not to exceed 2,250 flight cycles or 6 months, whichever occurs first.

b. If corrosion depth exceeds 10% of the skin's thickness, or if cracks or delamination is found as a result of the detailed external visual inspections, repair prior to further flight, in accordance with Boeing Service Bulletin 737–53–1076, Revision 2, dated February 8, 1990. Following such a repair, continue to inspect in accordance with paragraphs B.1. and B.2. of this AD, at intervals not to exceed 4,500 flight cycles or 15 months, whichever occurs first.

c. Any cracks found must be repaired, prior to further flight, in accordance with an FAA-approved method. Blind fasteners may be used as a temporary repair only. They must be repetitively inspected for loose or missing fasteners at intervals not to exceed 3,000 flight cycles following installation, and then replaced with protruding head solid fasteners within 10,000 flight cycles following installation.

4. Repair all disbonded tearstraps prior to further flight, in accordance with Boeing Alert Service Bulletin 737–53A1030, Revision 4, dated April 24, 1986, or Revision 5, dated May 25, 1989; or Boeing Service Bulletin 737–53–1069, Revision 1, dated October 15, 1989; or Revision 3, dated November 2, 1989; as appropriate.

C. Within 24 months after detection of disbonding as a result of the inspection required by paragraph A. of this AD, accomplish the lap splice and S–17 preventative modification of the affected panel, which includes installation of oversize protruding head solid fasteners in the upper rivet row, in accordance with Boeing Service Bulletin 737–53–1124, dated August 24, 1989. Accomplishment of this modification constitutes terminating action for the inspection requirements of paragraphs B.1. and B.2. of this AD for the affected panel.

D. An alternate means of compliance or adjustment of the compliance time, which provides an acceptable level of safety, may be used when approved by the Manager, Seattle Aircraft Certification Office (ACO), FAA, Transport Airplane Directorate.

Note: The request should be submitted directly to the Manager, Seattle ACO, and a copy sent to the cognizant FAA Principal Inspector (PI). The PI will then forward comments or concurrence to the Seattle ACO.

E. Special flight permits may be issued in accordance with FAR 21.197 and 21.199 to operate airplanes to a base in order to comply with the requirements of this AD.

All persons affected by this directive who have not already received the appropriate service information from the manufacturer may obtain copies upon request to Boeing Commercial Airplane Group, P.O. Box 3707, Seattle, Washington 98124. This information may be examined at the FAA, Northwest Mountain Region, Transport Airplane Directorate, 1601 Lind Avenue SW., Renton, Washington.

Issued in Renton, Washington, on October 4, 1990.

Darrell M. Pederson,

Acting Manager, Transport Airplane Directorate, Aircraft Certification Service.

14 CFR Part 39

[Docket No. 90–NM–189–AD]

Airworthiness Directives; Boeing Model 727 Series Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of Proposed Rulemaking (NPRM).

SUMMARY: This notice proposes to adopt a new airworthiness directive (AD), applicable to certain Boeing Model 727 series airplanes, which would prohibit storage of items other than life rafts in the life raft stowage compartments unless certain modifications are accomplished. This proposal is prompted by an operator's report that loose items stored in these compartments became discolored and scorched after falling through gaps in the compartment onto hot passenger service unit lights. This condition, if not corrected, could result in an on-board cabin fire.

DATES: Comments must be received no later than December 10, 1990.

ADDRESSES: Send comments on the proposal in duplicate to the Federal Aviation Administration, Northwest Mountain Region, Transport Airplane Directorate, ANM–103, Attention: Airworthiness Rules Docket No. 90–NM–189–AD, 1601 Lind Avenue SW., Renton, Washington 98055–4056. The applicable service information may be obtained from Boeing Commercial Airplane Group, P.O. Box 3707, Seattle, Washington 98124. This information may be examined at the FAA, Northwest Mountain Region, Transport Airplane Directorate, 1601 Lind Avenue SW., Renton, Washington.

FOR FURTHER INFORMATION CONTACT: Mr. Terrell W. Rees, Seattle Aircraft Certification Office, Airframe Branch ANM–120S; telephone (206) 227–2785. Mailing address: FAA, Northwest Mountain Region, Transport Airplane Directorate, 1601 Lind Avenue SW., Renton, Seattle, Washington 98055–4056.

SUPPLEMENTARY INFORMATION: Interested persons are invited to participate in the making of the proposed rule by submitting such written data, views, or arguments as

they may desire. Communications should identify the regulatory docket number and be submitted in duplicate to the address specified above. All communications received on or before the closing date for comments specified above will be considered by the Administrator before taking action on the proposed rule. The proposals contained in this Notice may be changed in light of the comments received.

Comments are specifically invited on the overall regulatory, economic, environmental, and energy aspects of the proposed rule. All comments submitted will be available, both before and after the closing date for comments, in the Rules Docket for examination by interested persons. A report summarizing each FAA/public contact, concerned with the substance of this proposal, will be filed in the Rules Docket.

Commenters wishing the FAA to acknowledge receipt of their comments submitted in response to this Notice must submit a self-addressed, stamped post card on which the following statement is made: "Comments to Docket Number 90-NM-169-AD." The post card will be date/time stamped and returned to the commenter.

Discussion

When life rafts are not required, the overhead raft stowage compartments have been utilized to store carry-on baggage and passenger comfort items such as blankets and pillows. One operator of Boeing Model 727 series airplanes reported that small items such as the blankets and pillows can slip down through gaps in the life raft compartment (the opening between the door and the outboard closure panel) onto the hot passenger service lights. These items have been found scorched and discolored. This condition, if not corrected, could result in an on-board cabin fire.

The FAA has reviewed and approved Boeing Service Bulletin 727-25-0271, dated April 19, 1990, which describes modifications to these stowage compartments to improve the retention of small items.

Since this condition is likely to exist or develop on other airplanes of this same type design, an AD is proposed which would require installation of a placard stating that storage of items other than life rafts in the life raft stowage compartments is prohibited. The placard may be removed and the life raft compartment may be used for stowage if or when the life raft compartment is modified in accordance with the service bulletin previously described.

There are approximately 72 Model 727 series airplanes of the affected design in the worldwide fleet. It is estimated that 71 airplanes of U.S. registry would be affected by this AD, that it would take approximately 2 manhours per airplane to accomplish the required placard in action, and that the average labor cost would be $40 per manhour. Based on these figures, the total cost impact of the AD on U.S. operators is estimated to be $5,680. Modification of each airplane's compartments, should operators choose to accomplish it, would require approximately 66 manhours at a labor cost of $40 per manhour. Modification kits cost approximately $5,208 per airplane. Based on these figures, the total cost to modify each airplane is estimated to be $7,848.

The regulations proposed herein would not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, in accordance with Executive Order 12612, it is determined that this proposal would not have sufficient federalism implications to warrant the preparation of a Federalism Assessment.

For the reasons discussed above, I certify that this proposed regulation: (1) Is not a "major rule" under Executive Order 12291; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979); and (3) if promulgated, will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act. A copy of the draft evaluation prepared for this action is contained in the regulatory docket. A copy of it may be obtained from the Rules Docket.

Air transportation, Aircraft, Aviation safety, Safety.

The Proposed Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, the Federal Aviation Administration proposes to amend 14 CFR part 39 of the Federal Aviation Regulations as follows:

PART 39—[AMENDED]

1. The authority citation of part 39 continues to read as follows:

Authority: 49 U.S.C. 1354(a), 1421 and 1423; 49 U.S.C. 106(g) (Revised Pub. L. 97-449, January 12, 1983); and 14 CFR 11.89.

§ 39.13 [Amended]

2. Section 39.13 is amended by adding the following new airworthiness directive:

Boeing: Applies to Boeing Model 727 series airplanes, as listed in Service Bulletin 727-25-0271, dated April 19, 1990, certificated in any category. Compliance required as indicated, unless previously accomplished.

To prevent a fire hazard associated with unrestrained loose items in life raft stowage compartments falling onto hot passenger service unit lights, accomplish the following:

A. Within the next 30 days after the effective date of this AD, install a placard on each affected life raft compartment, stating: "LIFE RAFT STOWAGE ONLY".

B. The life raft compartment may be used for stowage and the placard required by paragraph A of this AD may be removed if or when the life raft compartment is modified in accordance with Boeing Service Bulletin 727-25-0271, dated April 19, 1990.

C. An alternate means of compliance or adjustment of the compliance time, which provides an acceptable level of safety, may be used when approved by the Manager, Seattle Aircraft Certification Office (ACO), FAA, Transport Airplane Directorate.

Note: The request should be submitted directly to the Manager, Seattle ACO, and a copy sent to the cognizant FAA Principal Inspector (PI). The PI will then forward comments or concurrence to the Seattle ACO.

D. Special flight permits may be issued in accordance with FAR 21.197 and 21.199 to operate airplanes to a base in order to comply with the requirements of this AD.

All persons affected by this directive who have not already received the appropriate service documents from the manufacturer may obtain copies upon request to Boeing Commercial Airplane Group, P.O. Box 3707, Seattle, Washington 98124. These documents may be examined at the FAA, Northwest Mountain Region, Transport Airplane Directorate, 1601 Lind Avenue SW., Renton, Washington.

Issued in Renton, Washington, on October 9, 1990.

Darrell M. Pederson,

Acting Manager, Transport Airplane Directorate, Aircraft Certification Service.

BILLING CODE 4910-13-M

14 CFR Part 39

[Docket No. 90-NM-191-AD]

Airworthiness Directives: British Aerospace Model ATP Series Airplanes Equipped with AC Generators, Part Numbers BA03301, BA03301-01, and BA03301-02

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: This notice proposes to adopt a new airworthiness directive (AD), applicable to certain British Aerospace Model ATP series airplanes, which would require repetitive inspections to detect debris in the left and right AC generators' oil inlet strainer and outlet and vent filters, and replacement of the generator, if necessary; the installation of new outlet and vent filters; and the installation of a new end plate and mainframe on the left and right AC generators. This proposal is prompted by reports of rupture of the generator oil system due to debris blocking the vent and outlet oil strainers. This condition, if not corrected, could result in rupture of the AC generators' oil system and subsequent loss of electrical power.

DATES: Comments must be received no later than December 10, 1990.

ADDRESSES: Send comments on the proposal in duplicate to the Federal Aviation Administration, Northwest Mountain Region, Transport Airplane Directorate, ANM-103, Attention: Airworthiness Rules Docket No. 90-NM-191-AD, 1601 Lind Avenue S.W., Renton, Washington 98055-4056. The applicable service information may be obtained from British Aerospace, PLC, Librarian for Service Bulletins, P.O. Box 17414, Dulles International Airport, Washington, DC 20041-0414. This information may be examined at the FAA, Northwest Mountain Region, Transport Airplane Directorate, 1601 Lind Avenue SW., Renton, Washington.

FOR FURTHER INFORMATION CONTACT: Mr. William Schroeder, Standardization Branch, ANM-113; telephone (206) 227-2148. Mailing address: FAA, Northwest Mountain Region, Transport Airplane Directorate, 1601 Lind Avenue SW., Renton, Washington 98055-4056.

SUPPLEMENTARY INFORMATION: Interested persons are invited to participate in the making of the proposed rule by submitting such written data, views, or arguments as they may desire. Communications should identify the regulatory docket number and be submitted in duplicate to the address specified above. All communications received on or before the closing date for comments specified above will be considered by the Administrator before taking action on the proposed rule. The proposals contained in this Notice may be changed in light of the comments received. .

Comments are specifically invited on the overall regulatory, economic, environmental, and energy aspects of the proposed rule. All comments submitted will be available, both before and after the closing date for comments, in the Rules Docket for examination by interested persons. A report summarizing each FAA/public contact, concerned with the substance of this proposal, will be filed in the Rule Docket.

Commenters wishing the FAA to acknowledge receipt of their comments submitted in response to this Notice must submit a self-addressed, stamped post card on which the following statement is made: "Comments to Docket Number 90-NM-191-AD." The post card will be date/time stamped and returned to the commenter.

Discussion

The United Kingdom Civil Aviation Authority (CAA), in accordance with existing provisions of a bilateral airworthiness agreement, has notified the FAA of an unsafe condition which may exist on certain British Aerospace Model ATP series airplane equipped with AC generators, part numbers BA03301, BA03301-01, and BA03301-02. There have been recent reports of rupture of the generator oil system due to debris blocking the vent and outlet oil filters. This condition, if not corrected, could result in rupture of the AC generator's oil system and subsequent loss of electrical power.

British Aerospace has issued Service Bulletin ATP-24-23, dated March 14, 1990, which describes procedures for repetitive visual inspections to detect debris in the inlet strainer, and outlet and vent oil filters, and replacement of the generator, if necessary; the installation of new outlet and vent filters; and the installation of a new end plate and a new mainframe on the left and right AC generators. The British Aerospace service bulletin references Lucas Service Bulletins BA03301-24-1, Revision 3, dated August 28, 1989; BA03301-24-2, Revision 3, dated August 14, 1989; and BA03301-24-3, dated September 19, 1989; for additional instructions. The United Kingdom CAA has classified these service bulletins as mandatory.

The airplane model is manufactured in the United Kingdom and type certificated in the United States under the provisions of Section 21.29 of the Federal Aviation Regulations and the applicable bilateral airworthiness agreement.

Since this condition is likely to exist or develop on other airplanes of the same type design registered in the United States, an AD is proposed which would require repetitive visual inspections to detect debris in the inlet strainer, and outlet and vent oil filters, and replacement of generator, if necessary; the installation of new outlet and vent filters; and the installation of a new end plate and a new mainframe on the AC generator, in accordance with the service bulletins previously described.

It is estimated that 15 airplanes of U.S. registry would be affected by this AD, that it would take approximately 9 manhours per airplane to accomplish the required actions, and that the average labor cost would be $40 per manhour. The estimated cost for required parts is $210. Based on these figures, the total cost impact of the AD on U.S. operators is estimated to be $8,550.

The regulations proposed herein would not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, in accordance with Executive Order 12612, it is determined that this proposal would not have sufficient federalism implications to warrant the preparation of a Federalism Assessment.

For the reasons discussed above, I certify that this proposed regulation (1) is not a "major rule" under Executive Order 12291, (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979); and (3) if promulgated, will not have significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act. A copy of the draft evaluation prepared for this action is contained in the regulatory docket. A copy of it may be obtained from the Rules Docket.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Safety.

The Proposed Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, the Federal Aviation Administration proposes to amend 14 CFR part 39 of the Federal Aviation Regulations as follows:

BEST COPY AVAILABLE

PART 39—[AMENDED]

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 1354(a), 1421 and 1423; 49 U.S.C. 106(g) (Revised Pub. L. 97-449, January 12, 1983); and 14 CFR 11.89.

§ 39.13 [AMENDED]

2. Section 39.13 is amended by adding the following new airworthiness directive:

British Aerospace: Applies to Model ATP series airplanes equipped with AC generators, part numbers BA03301, BA03301-01, and BA01301-02; certificated in any category. Compliance is required as indicated, unless previously accomplished.

To prevent rupture of the AC generators' oil system and subsequent loss of electrical power, accomplish the following:

A. Within 125 hours time-in-service after the effective date of this AD, and thereafter at intervals not to exceed 500 hours time-in-service, perform a visual inspection of the inlet oil strainer, and the outlet and vent oil filters, in accordance with Lucas Aerospace Service Bulletin BA03301-24-1, Revision 3, dated August 28, 1989. If evidence of debris is found, prior to further flight, replace the generator.

B. On generators having part numbers BA3301-01 and BA3301-02, within 1,250 hours time-in-service after the effective date of this AD, install a new outlet filter and new vent filter, in accordance with Lucas Aerospace Service Bulletin BA03301-24-2, Revision 3, dated August 14, 1989. Repeat the inspection required by paragraph A. of this AD at intervals not to exceed 500 hours time-in-service.

C. Within 18 months after the effective date of this AD, install a new end plate, a new mainframe, and revised sealing features on the stator bolts and within the terminal block area, in accordance with Lucas Aerospace Service Bulletin BA03301-24-3, dated September 13, 1989. Incorporation of this modification terminates the requirements for the repetitive inspections and modifications required by paragraphs A. and B. of this AD.

D. An alternate means of compliance or adjustment of the compliance time, which provides an acceptable level of safety, may be used when approved by the Manager, Standardization Branch, ANM-113, FAA, Transport Airplane Directorate.

Note: The request should be submitted directly to the Manager, Standardization Branch, ANM-113, and a copy sent to the cognizant FAA Principal Inspector (PI). The PI will then forward comments or concurrence to the Manager, Standardization Branch, ANM-113.

E. Special flight permits may be issued in accordance with FAR 21.197 and 21.199 to operate airplanes to a base in order to comply with the requirements of this AD.

All persons affected by this directive who have not already received the appropriate service documents from the manufacturer may obtain copies upon request to British Aerospace, PLC, Librarian for Service Bulletins, P.O. Box 17414, Dulles International Airport, Washington, DC 20041-0414. These documents may be examined at the FAA, Northwest Mountain Region, Transport Airplane Directorate, 1601 Lind Avenue SW., Renton, Washington.

Issued in Renton, Washington, on October 9, 1990.

Darrell M. Pederson,

Acting Manager, Transport Airplane Directorate, Aircraft Certification Service.

14 CFR Part 39

[Docket No. 90-NM-192-AD]

Airworthiness Directives; British Aerospace Model BAC 1-11 200 and 400 Series Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: This notice proposes to adopt a new airworthiness directive (AD), applicable to all British Aerospace Model BAC 1-11 200 and 400 series airplanes, which would require repetitive visual inspections to detect cracks in the flight deck canopy area, and repair, if necessary. This proposal is prompted by several reports of cracks in various structural members in the flight deck canopy area. This condition, if not corrected, could result in reduced structural integrity of the fuselage.

DATES: Comments must be received no later than December 10, 1990.

ADDRESSES: Send comments on the proposal in duplicate to the Federal Aviation Administration, Northwest Mountain Region, Transport Airplane Directorate, ANM-103, Attention: Airworthiness Rules Docket No. 90-NM-192-AD, 1601 Lind Avenue S.W., Renton, Washington 98055-4056. The applicable service information may be obtained from British Aerospace, PLC, Librarian for Service Bulletins, P.O. Box 17414, Dulles International Airport, Washington, DC 20041-0414. This information may be examined at the FAA, Northwest Mountain Region, Transport Airplane Directorate, 1601 Lind Avenue SW., Renton, Washington.

FOR FURTHER INFORMATION CONTACT: Mr. William Schroeder, Standardization Branch, ANM-113; telephone (206) 227-2148. Mailing address: FAA, Northwest Mountain Region, Transport Airplane Directorate, 1601 Lind Avenue SW., Renton, Washington 98055-4056.

SUPPLEMENTARY INFORMATION: Interested persons are invited to participate in the making of the proposed rule by submitting such written data, views, or arguments as they may desire. Communications should identify the regulatory docket number and be submitted in duplicate to the address specified above. All communications received on or before the closing date for comments specified above will be considered by the Administrator before taking action on the proposed rule. The proposals contained in this Notice may be changed in light of the comments received.

Comments are specifically invited on the overall regulatory, economic, environmental, and energy aspects of the proposed rule. All comments submitted will be available, both before and after the closing date for comments, in the Rule Docket for examination by interested persons. A report summarizing each FAA/public contact, concerned with the substance of this proposal, will be filed in the Rule Docket.

Commenters wishing the FAA to acknowledge receipt of their comments submitted in response to this Notice must submit a self-addressed, stamped post card on which the following statement is made: "Comments to Docket Number 90-NM-192-AD." The post card will be date/time stamped and returned to the commenter.

Discussion

The United Kingdom Civil Aviation Authority (CAA), in accordance with existing provisions of a bilateral airworthiness agreement, has notified the FAA of an unsafe condition which may exist on all British Aerospace Model BAC 1-11 200 and 400 series airplanes. There have been recent reports of fatigue cracks found in various structural members in the flight deck canopy area. In one case, the joint strap had failed completely. This condition, if not corrected, could result in reduced structural integrity of the fuselage.

British Aerospace has issued Alert Service Bulletin 53-A-PM5094, Issue 2, dated June 5, 1990, which describes procedures for repetitive visual inspections to detect cracks in the flight deck canopy area, and repair, if necessary. The United Kingdom CAA has classified this service bulletin as mandatory.

This airplane model is manufactured in the United Kingdom and type certificated in the United States under the provisions of section 21.29 of the Federal Aviation Regulations and the

applicable bilateral airworthiness agreement.

Since this condition is likely to exist or develop on other airplanes of the same type design registered in the United States, and AD is proposed which would require repetitive visual inspections to detect cracks in the flight deck canopy area, and repair, if necessary, in accordance with the service bulletin previously described.

It is estimated that 70 airplanes of U.S. registry would be affected by this AD, that it would take approximately 18 manhours per airplane to accomplish the required actions, and that the average labor cost would be $40 per manhour. Based on these figures, the total cost impact of the AD on U.S. operators is estimated to be $50,400.

The regulations proposed herein would not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, in accordance with Executive Order 12612, it is determined that this proposal would not have sufficient federalism implications to warrant the preparation of a Federalism Assessment.

For the reasons discussed above, I certify that this proposed regulation (1) is not a "major rule" under Executive Order 12291, (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979); and (3) if promulgated, will will have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act. A copy of the draft evaluation prepared for this action is contained in the regulatory docket. A copy of it may be obtained from the Rules Docket.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Safety.

The Proposed Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, the Federal Aviation Administration proposes to amend 14 CFR part 39 of the Federal Aviation Regulations as follows:

PART 39—[AMENDED]

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 1354(A), 1421 and 1423; 49 U.S.C. 106(g) (Revised Pub. L. 97-449, January 12, 1983); and 14 CFR 11.89.

§ 39.13 [Amended]

2. Section 39.13 is amended by adding the following new airworthiness directive:

British Aerospace. Applies to all Model BAC 1-11 200 and 400 series airplanes, certificated in any category. Compliance is required as indicated, unless previously accomplished.

To detect cracks in the flight deck canopy area and to prevent reduced structural integrity of the fuselage, accomplish the following:

A. Prior to the accumulation of 30,000 landings, or within 6 months after the effective date of this AD, whichever occurs later, and thereafter at intervals not to exceed 5,000 landings, perform a visual inspection of the flight deck canopy area, in accordance with British Aerospace Alert Service Bulletin 53-A-PM5994, Issue 2, dated June 5, 1990. Pay particular attention to the top sill joint strap, the top sill intercostal, the frame at Station 113, and the top sill boom and web.

B. If cracks are found, repair prior to further flight, in a manner approved by the Manager, Standardization Branch, ANM-113, FAA, Transport Airplane Directorate. After repair, repeat the inspections required by paragraph A. of this AD at intervals not to exceed 5,000 landings.

C. An alternate means of compliance or adjustment of the compliance time, which provides an acceptable level of safety, may be used when approved by the Manager, Standardization Branch, ANM-113, FAA, Transport Airplane Directorate.

Note: The request should be submitted directly to the Manager, Standardization Branch, ANM-113, and a copy sent to the cognizant FAA Principal Inspector (PI). The PI will then forward comments or concurrence to the Manager, Standardization Branch, ANM-113.

D. Special flight permits may be issued in accordance with FAR 21.197 and 21.199 to operate airplanes to a base in order to comply with the requirements of this AD.

All persons affected by this directive who have not already received the appropriate service documents from the manufacturer may obtain copies upon request to British Aerospace, PLC, Librarian for Service Bulletins, P.O. Box 17414, Dulles International Airport, Washington, DC 20041-0414. These documents may be examined at the FAA, Northwest Mountain Region, Transport Airplane Directorate, 1601 Lind Avenue SW., Renton, Washington.

Issued in Renton, Washington, on October 9, 1990.

Darrell M. Pederson,

Acting Manager, Transport Airplane Directorate, Aircraft Certification Service.

BILLING CODE 4910-13-M

14 CFR Part 71

[Airspace Docket No. 90-ASW-41]

Proposed Revision of Transition Area; Las Cruces, NM

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking.

SUMMARY: This notice proposes to revise the transition area located at Las Cruces, NM. The creation of two original standard instrument approach procedures (SIAP), NDB RWY 8 and NDB RWY 30, with the concurrent termination of the NDB A SIAP, has made this proposed revision necessary. In addition, this proposal would include minor revisions to the coordinates used to describe the transition area and would revise the airport name to the Las Cruces International Airport. The intended effect of this proposal is to provide adequate controlled airspace for aircraft executing the new SIAP's to the Las Cruces International Airport and to revise the airport coordinates.

DATES: Comments must be received on or before November 30,1990.

ADDRESSES: Send comments on the proposal in triplicate to:
Manager, System Management Branch, Air Traffic Division, Southwest Region, Docket No. 90-ASW-41, Department of Transportation, Federal Aviation Administration, Fort Worth, TX 76193-0530.

The official docket may be examined in the office of the Assistant Chief Counsel, Southwest Region, Federal Aviation Administration, 4400 Blue Mound Road, Fort Worth, TX.

FOR FURTHER INFORMATION CONTACT: Mark F. Kennedy, System Management Branch, Department of Transportation, Federal Aviation Administration, Fort Worth, TX 76193-0530; telephone: (817) 624-5561.

SUPPLEMENTARY INFORMATION:

Comments Invited

Interested parties are invited to participate in this proposed rulemaking by submitting such written data, views, or arguments as they may desire. Comments that provide the factual basis supporting the views and suggestions presented are particularly helpful in developing reasoned regulatory decisions on the proposal. Comments are specifically invited on the overall regulatory, economic, environmental, and energy aspects of the proposal. Communicatiosn should identify the airspace docket and be submitted in triplicate to the address listed above.

Commenters wishing the FAA to acknowlege receipt of their comments on this notice must submit with those comments a self-addressed, stamped postcard on which the following statement is made: "Comments to Airspace Docket No. 90-ASW-41." The postcard will be date/time stamped and returned to the commenter. All communications received before the specified closing date for comments will be considered before taking action on the proposed rule. The proposal contained in this notice may be changed in the light of comments received.

All comments submitted will be available for examination in the office of the Assistant Chief Counsel, 4400 Blue Mound Road, Forth Worth, TX, both before and after the closing date for comments. A report summarizing each substantive public contact with FAA personnel concerned with this rulemaking will be filed in the docket.

Availability of NPRM's

Any person may obtain a copy of this notice of proposed rulemaking (NPRM)— by submitting a request to the Manager, System Management Branch, Department of Transportation, Federal Aviation Administration, Forth Worth, TX 76193-0530. Communications must identify the notice number of this NPRM. Persons interested in being placed on a mailing list for future NPRM's should also request a copy of Advisory Circular No. 11-2A which describes the application procedure.

The Proposal

The FAA is considering an amendment to § 71.181 of the Federal Aviation Regulations (14 CFR part 71) to revise the transition are located at Las Cruces, NM. Section 71.181 of part 71 of the Federal Aviation Regulations was republished in Handbook 7400.6P dated January 2, 1990.

The FAA has determined that this proposed regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore—(1) is not a "major rule" under Executive Order 12291; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that will only affect air traffic procedures and air navigation, it is certified that this rule, when promulgated, will not have a significant impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

Aviation safety, Transition areas.

The Proposed Amendment

PART 71—[AMENDED]

Accordingly, pursuant to the authority delegated to me, the FAA proposed to amend part 71 of the Federal Aviation Regulations (14 CFR part 71) as follows:

PART 71—DESIGNATION OF FEDERAL AIRWAYS, AREA LOW ROUTES, CONTROLLED AIRSPACE, AND REPORTIGN POINTS

1. The authority citation for part 71 continues to read as follows:

Authority: 49 U.S.C. 1348(a), 1354(a), 1510; Executive Order 10854; 49 U.S.C. 106(g) (Revised Pub. L. 97-449, January 12, 1983); 14 CFR 11.69.

§ 71.181 [Amended]

2. Section 71.181 is amended as follows:

Las Cruces, NM [Revised]

That airspace extending upward from 700 feet above the surface within a 10.5-mile radius of the Las Cruces International Airport (latitude 32°17'22" N., longitude 106°55'17" W.).

Issued in Forth Worth, TX on September 25, 1990.

Larry L. Craig,

Manager, Air Traffic Division, Southwest Region.

[Airspace Docket No. 90-AGL-14]

Proposed Transition Area Alteration; Morris, MN

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking.

SUMMARY: This notice proposes to alter the Morris, MN, transition area to accommodate a new VOR Runway 14 Standard Instrument Approach Procedure (SIAP) to Morris Municipal Airport, Morris, MN. The intended effect of this action is to ensure segregation of the aircraft using approach procedures under instrument flight rules from other aircraft operating under visual flight rules in controlled airspace.

DATES: Comments must be received on or before November 16, 1990.

ADDRESSES: Send comments on the proposal in triplicate to: Federal Aviation Administration, Office of the Assistant Chief Counsel, AGL-7, Attn: Rules Docket No. 90-AGL-14, 2300 East Devon Avenue, Des Plaines, Illinois 60018.

The official docket may be examined in the Office of the Assistant Chief Counsel, Federal Aviation Administration, 2300 East Devon Avenue, Des Plaines, Illinois.

An informal docket may also be examined during normal business hours at the Air Traffic Division, System Management Branch, Federal Aviation Administration, 2300 East Devon Avenue, Des Plaines, Illinois.

FOR FURTHER INFORMATION CONTACT: Douglas F. Powers, Air Traffic Division, System Management Branch, AGL-530, Federal Aviation Administration, 2300 East Devon Avenue, Des Plaines, Illinois 60018, telephone (312) 694-7568.

SUPPLEMENTARY INFORMATION:

Comments Invited

Interested parties are invited to participate in this proposed rulemaking by submitting such written data, views, or arguments as they may desire. Comments that provide the factual basis supporting the views and suggestions presented are particularly helpful in developing reasoned regulatory decisions on the proposal. Comments are specifically invited on the overall regulatory, economic, environmental, and energy aspects of the proposal. Communications should identify the airspace docket and be submitted in triplicate to the address listed above. Commenters wishing the FAA to acknowledge receipt of their comments on this notice must submit with those comments a self-addressed, stamped postcard on which the following statement is made: "Comments to Airspace Docket No. 90-AGL-14". The postcard will be date/time stamped and returned to the commenter. All communications received before the specified closing date for comments will be considered before taking action on the proposed rule. The proposal contained in this notice may be changed in the light of comments received. All comments submitted will be available for examination in the Rules Docket, FAA, Great Lakes Region, Office of the Assistant Chief Counsel, 2300 East Devon Avenue, Des Plaines, Illinois, both before and after the closing date for comments. A report summarizing each substantive public contact with FAA personnel concerned with this rulemaking will be filed in the docket.

Availability of NPRM's

Any person may obtain a copy of this Notice of Proposed Rulemaking (NPRM) by submitting a request to the Federal Aviation Administration, Office of Public Affairs, Attention: Public Information Center, APA–430, 800 Independence Avenue, SW., Washington, DC 20591, or by calling (202) 426–8058. Communications must identify the notice number of this NPRM. Persons interested in being placed on a mailing list for future NPRM's should also request a copy of Advisory Circular No. 11–2A, which describes the application procedure.

The Proposal

The FAA is considering an amendment to § 71.181 of part 71 of the Federal Aviation Regulations (14 CFR part 71) to alter the designated transition area airspace near Morris, MN. The present transition area is being modified to accomodate a new VOR Runway 14 SIAP to Morris Municipal Airport. The modification to the existing airspace will consist of a 2.75 miles width each side of the 331° bearing from the airport, extending from the 5.5-mile radius area to 8.5 miles northwest of the airport.

Aeronautical maps and charts will reflect the defined area which will enable other aircraft to circumnavigate the area in order to comply with applicable visual flight rule requirements. Section 71.181 of part 71 of the Federal Aviation Regulation was republished in Handbook 7400.6F dated January 2, 1990.

The FAA has determined that this proposed regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore—(1) is not a "major rule" under Executive Order 12291; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that will only affect air traffic procedures and air navigation, it is certified that this rule, when promulgated, will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 71

Aviation safety, Transition areas.

The Proposed Amendment

Accordingly, pursuant to the authority delegated to me, the Federal Aviation Administration proposed to amend part 71 of the Federal Aviation Regulations (14 CFR part 71) as follows:

PART 71—[AMENDED]

1. The authority citation for part 71 continues to read as follows:

Authority: 49 U.S.C. 1348(a), 1354(a), 1510; Executive Order 10854; 49 U.S.C. 106(g) (Revised Pub. L. 97–449, January 12, 1983); 14 CFR 11.69.

§ 71.181 [Amended]

2. Section 71.181 amended as follows:

Morris, MN [Revised]

That airspace extending upward from 700 feet above the surface within a 5.5-mile radius of Morris Municipal Airport (lat. 45°34'00"N., long. 95°58'00"W.); and, within 3 miles each side of the 136° bearing from the Morris Municipal Airport extending from the 5.5-mile radius to 7 miles southeast of the airport; and within 2.75 miles each side of the 331° bearing from the airport extending from the 5.5-mile radius to 8.5 miles northwest of the airport.

Issued in Des Plaines, Illinois, on September 25, 1990.

Teddy W. Burcham,

Manager, Air Traffic Division.

[Airspace Docket No. 90–AEA–9]

Proposed Alteration of Federal Airways

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking.

SUMMARY: This notice proposes to alter the descriptions of several Federal airways located in the States of New York, Pennsylvania, and New Jersey. This action is the result of the relocation of the LaGuardia, NY, Very High Frequency Omnidirectional Radio Range (VOR), and the associated air traffic control (ATC) procedural changes as a result of the relocation.

DATES: Comments must be received on or before November 16, 1990.

ADDRESSES: Send comments on the proposal in triplicate to:

Manager, Air Traffic Division, AEA–500, Docket No. 90–AEA–9, Federal Aviation Administration, JFK International Airport, The Fitzgerald Federal Building, Jamaica, NY 11430.

The official docket may be examined in the Rules Docket, weekdays, except Federal holidays, between 8:30 a.m. and 5 p.m. The FAA Rules Docket is located in the Office of the Chief Counsel, Room 916, 800 Independence Avenue, SW., Washington, DC.

An informal docket may also be examined during normal business hours at the office of the Regional Air Traffic Division.

FOR FURTHER INFORMATION CONTACT: Jesse B. Bogan, Jr., Airspace and Obstruction Evaluation Branch (ATP–240), Airspace-Rules and Aeronautical Information Division, Air Traffic Rules and Procedures Service, Federal Aviation Administration, 800 Independence Avenue, SW., Washington, DC 20591; telephone: (202) 267–9253.

SUPPLEMENTARY INFORMATION:

Comments Invited

Interested parties are invited to participate in this proposed rulemaking by submitting such written data, views, or arguments as they may desire. Comments that provide the factual basis supporting the views and suggestions presented are particularly helpful in developing reasoned regulatory decisions on the proposal. Comments are specifically invited on the overall regulatory, aeronautical, economic, environmental, and energy aspects of the proposal. Communications should identify the airspace docket and be submitted in triplicate to the address listed above. Commenters wishing the FAA to acknowledge receipt of their comments on this notice must submit with those comments a self-addressed, stamped postcard on which the following statement is made: "Comments to Airspace Docket No. 90–AEA–9." The postcard will be date/time stamped and returned to the commenter. All communications received before the specified closing date for comments will be considered before taking action on the proposed rule. The proposal contained in this notice may be changed in the light of comments received. All comments submitted will be available for examination in the Rules Docket both before and after the closing date for comments. A report summarizing each substantive public contact with FAA personnel concerned with this rulemaking will be filed in the docket.

Availability of NPRM's

Any person may obtain a copy of this Notice of Proposed Rulemaking (NPRM) by submitting a request to the Federal

Aviation Administraiton, Office of Public Affairs, Attention: Public Inquiry Center, APA–230, 800 Independence Avenue, SW., Washington, DC 20591, or by calling (202) 267–3484. Communications must identify the notice number of this NPRM. Persons interested in being placed on a mailing list for future NPRM's should also request a copy of Advisory Circular No. 11–2A which describes the applicaiton procedure.

The Proposal

The FAA is considering an amendment to part 71 of the Federal Aviation Regulations (14 CFR part 71) to alter the descriptions of VOR Federal Airways V–8, V–123, V–157, V–433, and V–445 located in the States of New York, Pennsylvania, and New Jersey. The airway changes are the result of the relocation of the LaGuardia, NY, VOR, and the associated ATC procedural changes as a result of the relocation. Section 71.123 of part 71 of the Federal Aviation Regulations was republished in Handbook 7400.6F dated January 2, 1990.

The FAA has determined that this proposed regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore—(1) is not a "major rule" under Executive order 12291; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that will only affect air traffic procedures and air navigation, it is certified that this rule, when promulgated, will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 71

Aviation safety, VOR federal airways.

The Proposed Amendment

Accordingly, pursuant to the authority delegated to me, the Federal Aviation Administration proposes to amend part 71 of the Federal Aviation Regulations (14 CFR part 71) as follows:

PART 71—DESIGNATION OF FEDERAL AIRWAYS, AREA LOW ROUTES, CONTROLLED AIRSPACE, AND REPORTING POINTS

1. The authority citation for part 71 continues to read as follows:

Authority: 49 U.S.C. 1348(a), 1354(a), 1510; Executive Order 10854; 49 U.S.C. 106(g) (Revised Pub. L. 97–449, January 12, 1983); 14 CFR 11.69.

§ 71.123 [Amended]

2. § 71.123 is amended as follows:

V–8 [Amended]

By removing the words "INT Solberg 105° and Canarsie, NY, 246° radials; INT Canarsie 245° and LaGuardia, NY, 209° radials;" and substituting the words "INT Solberg 107°T(117°M) and Yardley, PA, 066°T(078°M) radials; INT Yardley 066°T(078°M) and LaGuardia, NY, 213°T(225°M) radials;"

V–123 [Amended]

By removing the words "LaGuardia, NY, 209°" and substituting the words "LaGuardia, NY, 213°T(225°M)".

V–157 [Amended]

By removing the words "LaGuardia, NY, 209°" and substituting the words "LaGuardia, NY, 213°T(225°M)".

V–433 [Amended]

By removing the words "LaGuardia, NY, 209°" and substituting the words "LaGuardia, NY, 213°T(225°M)".

V–445 [Amended]

By removing the words "INT Yardley 065° and LaGuardia, NY, 209° radials;" and substituting the words "INT Yardley 066°T(078°M) and LaGuardia, NY, 213°T(225°M) radials;"

Issued in Washington, DC, on September 27, 1990.

Harold W. Becker,

Manager, Airspace-Rules and Aeronautical Information Division.

[FR Doc. 90–24800 Filed 10–18–90; 8:45 am]

BILLING CODE 4910–13–M

CONSUMER PRODUCT SAFETY COMMISSION

16 CFR Ch. II

Strangulation Hazards Associated With Crib Toys; Advance Notice of Proposed Rulemaking

AGENCY: Consumer Product Safety Commission.

ACTION: Advance notice of proposed rulemaking.

SUMMARY: The Consumer Product Safety Commission is beginning a rulemaking proceeding which may result in the issuance of labeling and other requirements for crib toys to address risks of strangulation to children associated with those products.[1] As used in this notice, the term "strangulation" means asphyxiation due to occlusion of respiration and/or circulation by external compression of the neck.

Crib toys are toys which are intended to be attached to or near a crib or playpen for use by children younger than two years of age. Since 1973, the Commission has received reports of 51 strangulation or near-strangulation incidents associated with crib toys. These reports include 31 deaths and one permanent injury involving severe brain damage. The other 19 incidents did not result in permanent injury. Victims in these incidents ranged in age from one month to two years old. However, a majority of the victims were from six to twelve months old.

This notice describes some types of crib toys and some risks of strangulation to children associated with those particular crib toys. The Commission solicits written comments from all interested persons concerning all risks of strangulation associated with crib toys, including any risk of strangulation associated with any crib toy which is not described in this notice. The Commission also solicits comments on the regulatory alternatives discussed in this notice, and other possible means to address risks of strangulation associated with crib toys. The Commission also invites all interested persons to submit an existing standard or a statement of intent to modify or develop a voluntary standard to address risks of strangulation to children associated with crib toys.

DATES: Written comments and submissions in response to this notice must be received by December 18, 1990.

ADDRESSES: Comments should be mailed, preferably in five (5) copies, to the Office of the Secretary, Consumer Product Safety Commission, Washington, DC 20207, or delivered to the Office of the Secretary, room 528, 5401 Westbard Avenue, Bethesda, Maryland; telephone (301) 492–6800.

FOR FURTHER INFORMATION CONTACT: Elaine A. Tyrrell, Project Manager, Office of Program Management and Budget, Consumer Product Safety Commission, Washington, DC 20207; telephone (301) 492–6554.

SUPPLEMENTARY INFORMATION:

A. Background

Crib toys are articles which are intended to be attached to or near a crib or playpen for use by children younger than two years of age. [A description of several types of crib toys appears below

[1] The Commission decided to begin this proceeding by a 2–1 vote, with Commissioner Carol G. Dawson dissenting. Copies of the Commissioners' separate statements are available upon request from the Office of the Secretary, Consumer Product Safety Commission, Washington, DC 20207; telephone (301) 492–6800.

under the heading "C. The Products and Risks of Injury.")

On November 17, 1988, the Consumer Federation of America and the New York State Attorney General's Office petitioned the Commission to issue a rule under provisions of the Federal Hazardous Substances Act (FHSA) (15 U.S.C. 1261 *et seq.*) banning various crib toys described in the petition. (2) [a] The petition alleged that these crib toys present risks of strangulation to infants.

The petition requested the Commission to issue a rule which would:

- Ban any manipulative crib toy with a horizontal suspension member, unless (a) the horizontal member is rigid and can be attached at or above the height of the crib side rails; (b) the horizontal member does not have any vertical protrusion; and (c) the toy is labeled with the following statement:

Warning

Always use both ends attached to opposite crib sides.

Child could strangle on unconnected end.

- Ban any crib toy with vertical strings six inches or longer.
- Ban any crib toy with cords or other components which form a perimeter greater than 14 inches.
- Ban any crib toy with any protrusion which can catch an infant's clothing or other item worn by an infant.
- Ban any crib toy with a pull ring attached to a cord.
- Ban any crib mobile that can be located within reach of an infant not capable of pushing up on hands or knees when inside the crib.
- Ban any mobile that can be attached to a crib unless the following statement appears clearly and conspicuously on the product, its packaging, and as the first item in any instructions accompanying the product:

Warning

Keep toy away from baby's reach.

Remove mobile and attachment clamp (and music box attachment, if applicable) when baby becomes 5 months of age or begins to push up on hands or knees.

Child could strangle if clothing, head, or neck gets caught on toy part.

- Ban any crib toy which fails to include a conspicuous warning as the first item in any instructions accompanying the product to advise that when the toy is used in the crib, the crib sides should be raised and the crib mattress should be in one of the lower positions, or a strangulation hazard may result.

In support of its request for rulemaking, the petition cited two documents prepared by the Commission staff. One is a report prepared in 1987 by the Division of Human Factors, Directorate for Epidemiology, which analyzes strangulation incidents associated with crib toys, and discusses provisions of a voluntary standard applicable to crib toys (3). The second is a memorandum dated June 22, 1987, from the Division of Hazard Analysis, Directorate for Epidemiology, providing information about the numbers of strangulation incidents associated with crib toys from 1973 through April 1987 (4).

The documents cited by the petition describe and analyze reports of 49 strangulation or near-strangulation incidents associated with crib toys received by the Commission from 1973 through April of 1987. Since the preparation of these documents in 1987, the Commission has received two additional reports of strangulation incidents associated with crib toys (13, 22). One of these incidents resulted in the death of a one-year-old child who was found in a crib with his bib caught on some portion of a crib mobile attached to a crib railing (22). The other involved a seven-month-old child who was found in a playpen with the cord of a toy telephone receiver, which was part of an activity box, wrapped around his neck. This incident did not result in death or permanent injury (13).

The injury information cited by the petition in support of its request for rulemaking included reports of 30 deaths, four of which were associated with home-made toys (4). One case associated with a crib toy resulted in permanent injury involving severe brain damage. The other 18 incidents described in the documents cited by the petition did not result in any permanent injury. The victims ranged in age from one month to two years. However, most of the victims were six to twelve months old (4).

Twelve deaths and 13 other incidents resulted when cords from a crib toy became entangled around a child's neck. Seven deaths and three other incidents resulted when an article of clothing or other item worn by the child (such as a pacifier cord, bib, or necklace) caught on a protrusion on the crib toy. Six deaths and two other incidents occurred when the child's head and neck were suspended over a horizontal cord, and the weight of the child's body created pressure on the neck. In six incidents, the mode of strangulation was not known (3).

The Commission staff prepared a briefing package for consideration by the Commission when deciding whether to grant or deny the petition (1–12). The briefing package discussed the provisions of the rule requested by the petition (1, 5), information about strangulation incidents associated with crib toys (1, 3, 4, 5), and conclusions contained in the 1987 report prepared by the Commission's Division of Human Factors (1, 2, 5, 6). The briefing package also contained information about provisions of a voluntary standard which are applicable to crib toys (1, 3, 7, 10, 11, 12).

On June 13, and July 26, 1990, the staff presented oral briefings to the Commission on the petition.

After consideration of the petition and information provided by the petitioners in support of their request for rulemaking, the briefing materials prepared by the staff, information presented by the staff during the oral briefings, and other information (13–22), the Commission decided on August 16, 1990, to grant the petition.

Accordingly, the Commission is beginning a rulemaking proceeding which may result in the issuance of requirements to address strangulation hazards associated with crib toys. The regulation which may be issued as a result of this proceeding could include any or all of the provisions requested by the petition, or other requirements for crib toys.

B. Statutory Authority

This proceeding is conducted under provisions of the Federal Hazardous Substances Act (FHSA) (15 U.S.C. 1261 *et seq.*). Section 2(f)1(D) of the FHSA (15 U.S.C. 1261(f)1(D)) defines the term "hazardous substance" to include "[a]ny toy or other article intended for use by children" which the Commission determines by regulation to present "an electrical, mechanical, or thermal hazard." Section 2(s) of the FHSA provides that an article may be determined to present a "mechanical hazard" if in normal use or reasonably foreseeable use or abuse it presents an unreasonable risk of personal injury or illness "from points or other protrusions, surfaces, edges, openings or closures" or "because of any other aspect of the article's design or manufacture."

The Commission shall make its determination that a toy or children's article presents a mechanical hazard by issuance of a regulation in accordance with the procedures prescribed by 5 U.S.C. 553, unless the Commission elects

[a] Numbers in parentheses identify reference documents listed in the Bibliography at the end of this notice. Requests for inspection of any of these documents should be made at the Commission's Public Reading Room, 5401 Westbard Avenue, room 529, Bethesda, Maryland, or by calling the Office of the Secretary at (301) 492-6800.

to use the procedures prescribed in section 701(e) of the Federal Food, Drug and Cosmetic Act (21 U.S.C. 371(e)). In this proceeding, the Commission will use procedures in 5 U.S.C. 553. The proceeding is also governed by the provisions of sections 3 (e) through (l) of the FHSA (15 U.S.C. 1262 (e) through (l)). The proceeding is commenced by publication of an advance notice of proposed rulemaking (ANPR) in accordance with provisions of section 3(f) of the FHSA. If, after considering comments received in response to the ANPR, the Commission decides to continue the proceeding, section 3(h) of the FHSA requires publication of the text of the proposed rule and a preliminary regulatory analysis of the proposal including a description of potential benefits and potential costs of the proposal. If the Commission issues a final rule, it must publish a third notice which sets forth the text of the final rule, a summary of significant issues raised by comments on the proposal, a final regulatory analysis including a description of potential benefits and potential costs, as well as specified findings about voluntary standards and the relationship of the costs and the benefits of the rule.

C. The Products and Risks of Injury

This proceeding is concerned with "crib toys," a term used in this notice to describe a variety of toys which are intended to be attached to or near cribs or playpens and to be used by infants younger than two years of age. The term "crib toy" includes, but is not limited to, all of the articles described below:

- *Crib gyms.* These toys usually are strung across the width of a crib, and may have attached objects such as pull cords, squeakers, rotary spokes, or rattles. The attached objects are intended to be manipulated by the infant, and may provide visual or auditory stimulation.
- *Crib mobiles.* Crib mobiles typically consist of one or more rigid members suspended above the crib to which decorative objects are attached. Crib mobiles may be designed to be attached to the crib, to another article of furniture, or to a wall or ceiling. Crib mobiles are intended to be installed beyond the reach of the infant in the crib, and are not intended to be manipulated by the infant. These toys are intended to provide visual stimulation to the infant.
- *Suspended stuffed toys.* These are stuffed toys, usually in the shape of an animal, suspended by two or more cords which converge at some distance above the toy. These toys are intended to be suspended from or over the crib so that they can be manipulated by the infant in the crib.
- *Cord-activated toys.* These toys are attached in one place to a crib side or end rail and hang into the crib. These toys contain cords which can be pulled by the infant to activate a device in the toy, such as a music box. Unlike crib gyms, which usually have several types of objects to be manipulated by the infant, cord-activated toys usually have only pull-cords.
- *Activity toys.* These toys are attached to one part of a crib and contain such items as doors, push buttons, rotary knobs, and other movable objects. These toys are intended to be manipulated by the infant and to provide visual and auditory stimulation.
- *Crib music boxes.* Crib music boxes are intended to be attached to a crib. They contain a wind-up mechanism which is activated by an adult outside the crib.
- *Crib mirrors.* Crib mirrors are intended to be attached to a crib or playpen.

The risks of injury associated with crib toys under consideration in this proceeding are risks of strangulation: That is, asphyxiation due to occlusion of respiration and/or circulation by external compression of the neck. The Commission has received reports of strangulation incidents associated with crib toys which occurred when a child's neck became entangled in cords that were part of a crib toy, when an item of clothing or other article worn by a child became entangled on a protrusion on a crib toy, or when a child's head and neck were suspended over a horizontal cord which was part of a crib toy (3).

D. Voluntary Standard

The Commission is aware of only one voluntary standard applicable to crib toys and risks of strangulation associated with those products. That standard is published by the American Society for Testing and Materials (ASTM) and is designated F 963–86, Standard Consumer Safety Specification on Toy Safety. This voluntary standard has provisions intended to address a variety of hazards presented by a wide range of toys.

The provisions of this standard that apply to crib toys limit the length of any string or cord which is part of a crib toy to a maximum of twelve inches. If the crib toy has string which can tangle to form a loop, the perimeter of the loop must be less than 14 inches.

The voluntary standard provides that toys which are intended to be strung across a crib, such as crib gyms, must be labeled with the following statements:

From birth to 5 months—
Caution: To prevent possible entanglement injury, remove toy when baby begins to push up on hands and knees.

This labeling provision does not apply to crib mobiles or other types of crib toys.

The voluntary standard also requires crib gyms, crib exercisers, and similar toys to be accompanied by instructions for proper assembly to assure that the product does not present an entanglement hazard. The standard provides that those instructions should include directions to position the toy out of range of the infant's face and mouth because the toy is not intended to be "mouthed"; a statement to the effect that if the crib has an adjustable mattress level, the highest level may allow the toy to be too close to the infant and the second or lower position is more appropriate; and a warning not to leave the infant unattended with the crib gym in place and the drop side of the crib lowered (7).

The Commission believes preliminarily that the provisions of the voluntary standard which are applicable to crib toys do not eliminate or adequately address risks of strangulation deaths and injuries associated with crib toys, for the following reasons:

- Provisions of the voluntary standard limit the length of cords attached to crib toys to 12 inches (7). This limitation is not supported by current anthropometric data or by available information concerning the mechanisms involved in strangulation accidents. The 50th percentile neck circumference of infants between the ages of four and six months is 8.3 inches (3). The Commission has received one report of a death associated with a crib toy in which an infant's neck became entangled in a pull-cord nine to ten inches long (3). The Commission also has reports of six deaths and two other incidents associated with crib toys in which the infant's head and neck became suspended over a horizontal cord attached to the toy. The shortest cord involved in these incidents was 2.5 inches long (3).
- The voluntary standard provides that crib gyms and other crib toys which are "intended to be strung across the width of a crib by means of strings, cords, elastic, or straps" shall be labeled with the statements:

From birth to five months—
Caution: To prevent possible entanglement injury, remove toy when baby begins to push up on hands and knees. (7)

Crib gyms and similar toys are intended to be manipulated by infants. Infants acquire the ability to reach and grasp, shake, and pull objects at about the age of three months (3). Literature concerning child-development indicates that infants obtain the maximum value from crib gyms and similar toys when they are from three to twelve months old (3). For these reasons, the Commission has reason to believe that many parents may not follow a label recommending that the remove a crib gym or similar crib toy when an infant is five months old.

• The voluntary standard provides that if string can tangle to form a loop, the perimeter of the loop shall be less than 14 inches (7). While this provision is adequate to prevent entrapment of an infant's head in a loop, this provision does not adequately address entrapment hazards which may result from openings formed by multiple cords or by cords in combination with other parts of a crib toy, particularly on suspended stuffed toys. The Commission has reports of three deaths and one other incident in which an infant's head became entrapped in the opening formed by multiple cords of a crib toy, or by cords and a part of the crib toy (3).

• The voluntary standard contains no provision to address strangulations which have resulted when an item of clothing or other article worn by the infant became entangled on a protrusion on a crib toy (7). The Commission has reports of seven strangulation deaths (not including the 1990 fatality involving a crib mobile) and three other incidents associated with entanglement of clothing or other articles worn by infants on protrusions on crib toys (3).

From 1987 through February of 1990, the Commission's Directorate for Compliance and Administrative Litigation has identified 14 different crib toys which the Commission's staff preliminarily determined to present a substantial risk of injury to children because of a strangulation hazard. In ten instances, the projects were recalled. In the other cases, the manufacturer ceased production, stopped distribution, or corrected future production of the toy. In almost all of these cases, the product did not conform to one or more provisions applicable to crib toys in the voluntary standard (12). From this information, the Commission has reason to believe that widespread nonconformance with the voluntary standard may exist.

E. Regulatory Alternatives Under Consideration

In the proceeding initiated by publication of this ANPR, the Commission is considering the possibility of issuing a rule consisting of labeling or other requirements to address strangulation hazards associated with crib toys. Such a rule could include any or all of the requirements requested by the petition, or other requirements.

In addition to the regulatory alternatives described above, the Commission also is considering the possibility that the voluntary standard for toys, ASTM F 963–86, could be revised to reduce even further the risks of strangulation associated with crib toys. The Commission also is considering the possibility that a new voluntary standard might be developed to address the risks of strangulation associated with crib toys.

F. Solicitation of Information and Comments

This advance notice of proposed rulemaking is the first step of a proceeding which could result in the issuance of regulations to eliminate or reduce risks of strangulation to infants associated with crib toys. All interested persons are invited to submit to the Commission:

(1) Written comments concerning the risks of injury described in this notice and any other incident or medical data concerning strangulation associated with any crib toy; the regulatory alternatives being considered by the Commission to address those risks; and other possible alternatives to address those risks.

(2) Any market information regarding the annual sales and retail price for each of these types of toys, the share of the market for which imported items account, and the share of domestic manufacturers' sales derived from these products.

(3) The Commission is also soliciting estimates of the possible economic effect of potential mandatory actions, particularly those dealing with cord length, protrusion requirements, and labeling.

(4) Any existing standard or portion of a standard which could be published as a proposed regulation to address the risks of injury described in this notice.

(5) A statement of intent to modify or develop a voluntary standard to address the risks of injury discussed in this notice, together with a description of a plan to modify or develop that standard.

Any plan submitted with a statement of intent to modify or develop a voluntary standard should include, to the extent possible: A description of how interested groups and persons will be notified that a proceeding to modify or develop a voluntary standard is under way; a description of how the views of interested groups and persons will be addressed in the modification or development of the standard; a detailed discussion of how the modification or development of the standard will proceed; a realistic estimate of the length of time that will be required to modify or develop the standard; a list of persons expected to participate in the modification or development of the standard, together with information about their backgrounds and experience; and a description of any facilities or equipment that will be used during the project.

All comments and submissions should be addressed to the Office of the Secretary, Consumer Product Safety Commission, Washington, DC 20207, and received not later than December 18, 1990.

Dated: October 15, 1990.

Sadye E. Dunn,

Secretary, Consumer Product Safety Commission.

[FR Doc. 90-24804 Filed 10-18-90; 8:45 am]

BILLING CODE 6355-01-M

DEPARTMENT OF THE INTERIOR

Bureau of Indian Affairs

25 CFR Part 20

Consultation Hearings on Indian Social Services Programs Proposed Revisions

AGENCY: Bureau of Indian Affairs, Interior.

ACTION: Notice of consultation hearings.

In the matter of consultation hearings on the proposed amendments to the current regulations contained in 25 CFR part 20, Office of Tribal Services, Division of Social Services, Activity 3060, Element 22 funds and other Social Services issues.

SUMMARY: The Bureau of Indian Affairs (BIA), Office of Tribal Services, Division of Social Services announces forthcoming consultation hearings with tribal representatives, tribal members and other interested parties on proposed changes to the current regulations that govern Social Services Programs, 25 CFR part 20. The proposed regulatory changes involve all components of the Social Services Programs, including General Assistance, Child Welfare Assistance, Miscellaneous Assistance, Services to Families and Communities, Tribal Work Experience Program and Adult Care. The intent of the hearings is to consult with Tribes on the future direction of these programs.

DATES: *Date and time:* Hearing Dates: Three regional meetings have been scheduled for November 1, 1990, November 6, 1990 and November 8, 1990. The meetings are scheduled for 1½ days at each site. With the exception of Minneapolis, all meetings are scheduled to begin at 9 a.m. and end at 4 p.m. the first day. The meetings will resume at 9 a.m. and last until 12 p.m. the second day. The Minneapolis hearing will commence at 1 p.m. on November 8, and end at 5 p.m. on November 9, 1990. All meeting times are local time.

ADDRESSES: Hearing Locations: San Francisco, California November 1–2, 1990; Phoenix, Arizona November 6–7, 1990; Minneapolis, Minnesota November 8–9, 1990.

The conference locations for each site are being sent by mail to all Area Directors, Agency Superintendents and Tribal Leaders.

LOCATION CONTACT PERSON:

Aberdeen Area: Dean Krahulec (605) 226–7301
Albuquerque Area: Joe Naranjo (505) 766–2321
Anadarko Area: Jerry Bridges (405) 247–6673
Billings Area: Louise Zokan-Delos Reyes (406) 657–6551
Eastern Area: Evelyn Rosenhorse (703) 235–2353
Juneau Area: Jimmie Clemmons (907) 586–7628
Minneapolis Area: Rosalie Clark (612) 340–2615
Muskogee Area: Alice Allen (918) 687–2507
Navajo Area: Nancy Evans (602) 871–5151
Phoenix Area: Elizabeth Blackowl (602) 241–2262
Portland Area: Robert Carr (503) 231–6783
Sacramento Area: Kevin Sanders (916) 978–4691

Interested persons may present oral testimony or file written statements. All written statements must be received no later than November 15, 1990, in the Bureau of Indian Affairs, Office of Tribal Services, Division of Social Services, room 3614, MIB, 1849 C Street NW., Washington, DC 20240, Attn: Ronal Eden, Deputy to the Assistant Secretary—Indian Affairs (Tribal Services).

FOR FURTHER INFORMATION CONTACT: David, Hickman, Chief, Division of Social Services or Deborah Maddox, Assistant Chief, Division of Social Services, Bureau of Indian Affairs, room 310 SIB 1849 C Street NW., Washington, DC 20240, (202) 208–2721; (202) 208–2835; or (202) 208–2536.

SUPPLEMENTARY INFORMATION: The current regulations that govern social services programs 25 CFR part 20, was revised in 1987. The revision was mandated with very specific criteria to be addressed. Since that time, there has been additional legislation and events that have occurred that must by law be incorporated into the regulations.

The draft regulations are available upon request and are being submitted to all Area Directors, Agency Superintendents and Tribal Leaders, prior to the hearings for preparatory comment time. Comments will be accepted both verbally and in written form. The intent of the hearings is to consult with tribal representatives on the future of the programs and the appropriate regulations that will be needed to assure compliance. Participation by tribal leaders is encouraged.

Dated: October 16, 1990.

Carol Bacon,

Acting Deputy to the Assistant Secretary, Indian Affairs (Tribal Services).

DEPARTMENT OF LABOR

Occupational Safety and Health Administration

29 CFR Part 1910

[Docket No. H–041]

RIN 1218–AA83

Occupational Exposure to 1,3–Butadiene

AGENCY: Occupational Safety and Health Administration (OSHA), Department of Labor.

ACTION: Proposed rule; notice of extension of comment period, notice of change of hearing dates.

SUMMARY: On August 10, 1990, OSHA published a Notice of Proposed Rulemaking (NPRM) on Occupational Exposure to 1,3–Butadiene (BD) in the Federal Register (55 FR 32736). Included in the NPRM was a date by which public comments needed to be submitted and the schedule for public hearings. With this notice, OSHA is extending the dates for public comment and the dates for the public hearings. OSHA believes

extending these dates will give all interested parties the additional time they need to submit comments and prepare for the hearings.

DATES: Comments on the proposal must be postmarked on or before November 9, 1990. Notices of Intention to Appear at the hearings must be postmarked on or before November 2, 1990. Written testimony and evidence to be presented at the hearing must be postmarked on or before November 9, 1990. The Washington, DC hearing will begin January 15, 1991 at 10 a.m. The New Orleans hearing will begin February 20, 1991 at 10 a.m.

ADDRESSES: Comments on the proposed standard are to be submitted to the Docket Officer, Docket No. H–041, room N–2625, U.S. Department of Labor, 200 Constitution Avenue, NW., Washington, DC 20210, telephone (202) 523–7894. Comments limited to 10 pages or less in length also may be transmitted by facsimile to (202) 523–5046 or (for FTS) to 8–523–5046, provided the original and 3 copies of the comment are sent to the Docket Officer thereafter.

Notices of Intention to Appear at the informal rulemaking hearings, testimony and documentary evidence for the public hearings are to be sent to Mr. Tom Hall, OSHA Division of Consumer Affairs, Docket No. H–041, room N–3647, U.S. Department of Labor, 200 Constitution Avenue, NW., Washington, DC 20210, telephone (202) 523–8615. All informal public hearings will begin at 10 a.m. The locations of the informal public hearings are:

Washington, DC: The Auditorium, Frances Perkins Building, Department of Labor, 200 Constitution Avenue, NW., Washington, DC 20210. Telephone (202) 523–8615.

New Orleans, Louisiana: Denechaud Room, Le Pavillion Hotel, 833 Poydras Street, New Orleans, Louisiana 70140. Telephone: (504) 581–3111.

FOR FURTHER INFORMATION CONTACT: Mr. James F. Foster, OSHA, U.S. Department of Labor, Office of Public Affairs, room N–3647, 200 Constitution Avenue, NW., Washington, DC 20210. Telephone: (202) 523–8148.

SUPPLEMENTARY INFORMATION: On August 10, 1990, OSHA published the NPRM on Occupational Exposure to 1,3–Butadiene in the **Federal Register** (55 FR 32736). The Chemical Manufacturers Association (CMA) and the International Institute of Synthetic Rubber Producers (IISRP) have requested that the deadline for filing comments and written testimony be extended from October 19 to November 9, 1990, in order to allow the IISRP and the CMA ample time to assure that their testimony would fully cover the issues raised by OSHA's NPRM. OSHA has agreed to grant this request and believes that all interested parties will benefit from the additional time allowed for comment and to prepare for the hearings. This in turn will promote a more complete, accurate and clear rulemaking record.

Notice of Hearing

Interested persons are invited to submit written data, views, and arguments with respect to this proposed standard. These comments must be postmarked on or before November 9, 1990, and submitted in quadruplicate to the Docket Officer, Docket No. H–041, room N–2625, U.S. Department of Labor, 200 Constitution Avenue NW., Washington, DC 20210. Comments limited to 10 pages or less also may be transmitted by facsimile to (202) 523–5046 or (for FTS) 8–523–5046, provided the original and 3 copies are sent to the Docket Officer thereafter.

Written submissions must clearly identify the provisions of the proposal which are addressed and the position taken with respect to each issue. The data, views, and arguments that are submitted will be available for public inspection and copying at the above address. All timely written submissions will be made a part of the record of the proceeding.

Pursuant to section 6(b)(3) of the Act, an opportunity to submit oral testimony concerning the issues raised by the proposed standard including economic and environmental impacts, will be provided at two informal public hearings scheduled to begin at 10 a.m. on dates as follows: Washington, DC: January 15, 1991, in the Auditorium, Frances Perkins Building, U.S. Department of Labor, 200 Constitution Avenue, NW., Washington, DC 20210, and to reconvene at 10 a.m. on February 20, 1991, in New Orleans, Louisiana, in the Le Pavillion Hotel (Denechaud Room) 833 Poydras Street, Telephone No. 504–581–3111.

Notice of Intention To Appear

All persons desiring to participate at the hearing must file in quadruplicate a Notice of Intention to Appear, postmarked on or before November 2, 1990, addressed to Mr. Tom Hall, OSHA Division of Consumer Affairs, Docket No. H–041, room N–3649, U.S. Department of Labor, Third Street and Constitution Avenue, NW., Washington, DC 20210; telephone 202–523–8615. A Notice of Intention to Appear also may be transmitted by facsimile to 202–523–5986 or to 8–523–5986 (for FTS), provided the original and 3 copies of the Notice are sent to the above address thereafter.

The Notices of Intention to Appear, which will be available for inspection and copying at the OSHA Technical Data Center, Docket Office (room N–2625), telephone 202–523–7894, must contain the following information:

(1) The name, address, and telephone number of each person to appear;
(2) The capacity in which the person will appear;
(3) The approximate amount of time requested for the presentation;
(4) The specific issues that will be addressed;
(5) A statement of the position that will be taken with respect to each issue addressed;
(6) Whether the party intends to submit documentary evidence, and if so, a brief summary of that evidence; and
(7) At which hearing the party wishes to testify.

Filing of Testimony and evidence Before Hearing

Any party requesting more than 10 minutes for a presentation at the hearings, or who will submit documentary evidence, must provide in quadruplicate the complete text of his or her testimony, including any documentary evidence to be presented at the hearing, to the OSHA Division of Consumer Affairs. This material must be postmarked on or before November 9, 1990. The material will be available for inspection and copying at the Technical Data Center Docket Office. Each such submission will be reviewed in light of the amount of time requested in the Notice of Intention to Appear. In those instances where the information contained in the submission does not justify the amount of time requested, a more appropriate amount of time will be allocated and the participant will be notified of that fact.

Any party who has not substantially complied with this requirement may be limited to a 10-minute presentation, and may be requested to return for questioning at a later time. Any party who has not filed a Notice of Intention to Appear may be allowed to testify, as time permits, at the discretion of the Administrative Law Judge.

OSHA emphasizes that the hearing is open to the public, and that interested persons are welcome to attend. However, only persons who have filed proper Notices of Intention to Appear at the hearing will be entitled to ask questions and otherwise participate fully in the proceedings.

Conduct and Nature of Hearing

The Washington, DC and the New Orleans hearings will commence at 10 a.m. on January 15, 1991 and February 20, 1991, respectively. At that time any

procedural matters relating to the hearing will be resolved.

The nature of the informal rulemaking hearings to be held is established in the legislative history of section 6 of the Act and is reflected by the OSHA hearing regulations (see 29 CFR 1911.15(a)). Although the presiding officer is an Administrative Law Judge and questioning by interested persons is allowed on crucial issues, it is clear that the proceedings shall remain informal and legislative in type. The essential intent is to provide an opportunity for effective oral presentation by interested persons which can be carried out expeditiously and in the absence of rigid procedures which might unduly impede or protract the rulemaking process.

Additionally, since the hearing is primarily for information gathering and clarification, it is an informal administrative proceeding, rather than an adjudicative one. The technical rules of evidence, for example, do not apply. The regulations that govern hearings and the pre-hearing guidelines to be issued for this hearing will ensure fairness and due process and also facilitate the development of a clear, accurate and complete record. Those rules and guidelines will be interpreted in a manner that furthers that development. Thus, questions of relevance, procedure and participation generally will be decided so as to favor development of the record.

The hearing will be conducted in accordance with 29 CFR part 1911. The hearing will be presided over by an Administrative Law Judge who will have all the powers necessary and appropriate to conduct a full and fair informal hearing as provided in 29 CFR part 1911 including the powers:

1. To regulate the course of the proceedings;
2. To dispose of procedural requests, objections and comparable matters;
3. To confine the presentation to the matters pertinent to the issues raised;
4. To regulate the conduct of those present at the hearing by appropriate means;
5. At the Judge's discretion, to question and permit the questioning of any witness and to limit the time for questioning; and
6. At the Judge's discretion, to keep the record open for a reasonable stated time to receive written information and additional data, views, and arguments from any person who has participated in oral proceedings.

Certification of Record and Final Determination After the Hearing

Following the close of the hearing and post-hearing comment period, the presiding Administrative Law Judge will certify the record to the Assistant Secretary of Labor for Occupational Safety and Health. The Administrative Law Judge does not make or recommend any decisions as to the content of the final standard.

The proposed standard will be reviewed in light of all oral and written submissions received as part of the record, and a permanent standard for occupational exposure to BD, will be issued, based upon the entire record in the proceeding including the written comments and data received from the public.

Authority: Sections 4, 6(b), 8(c) and 8(g) of the Occupational Safety and Health Act of 1970, Public Law 91-596, 84 stat. 1593, 1599, 1600; (29 U.S.C. 653, 655, 657), 29 CFR part 1911 and Secretary of Labor's Order Nos. 12-71 (36 FR 8754), 8-76 (41 FR 25059), 9-83 (48 FR 35736) or 1-90 (55 FR 9033) as applicable.

This document was prepared under direction of Gerard F. Scannell, Assistant Secretary of Labor for Occupational Safety and Health, U.S., Department of Labor, 200 Constitution Avenue, NW., Washington, DC 20210.

Signed at Washington, DC this 15th day of October 1990.

Gerard F. Scannell,

Assistant Secretary of Labor for Occupational Safety and Health.

BILLING CODE 4510-26-M

DEPARTMENT OF TRANSPORTATION

Coast Guard

33 CFR Part 117

[CGD8-90-22]

Drawbridge Operation Regulations; Colorado River, TX

AGENCY: U.S. Coast Guard, DOT.

ACTION: Proposed rule.

SUMMARY: At the request of the Texas Department of Highways and Public Transportation, the Coast Guard is considering a change to the regulation governing the operation of the bascule span bridge on FM 521 across the Colorado River, mile 10.7, about 5 miles southwest of Wadsworth, Texas, by requiring that at least forty-eight hours advance notice be given for an opening on weekdays between the hours of 8 a.m. and 5 p.m. At all other times the draw would remain closed. The draw is currently required to open on 24 hours notice at all times. This action will provide relief to the bridge owner, since the bridge must be opened by winch trucks. This would also allow for advance coordination with vehicular traffic that becomes congested during bridge openings. At the same time, this regulation will still provide for the reasonable needs of navigation.

DATES: Comments must be received on or before December 3, 1990.

ADDRESSES: Comments should be mailed to Commander (obb), Eighth Coast Guard District, 501 Magazine Street, New Orleans, Louisiana 70130-3396. The comments and other materials referenced in this notice will be available for inspection and copying in room 1115 at this address. Normal office hours are between 8 a.m. and 3:30 p.m., Monday through Friday, except holidays. Comments may also be hand-delivered to this address.

FOR FURTHER INFORMATION CONTACT: John Wachter, Bridge Administration Branch, at the address given above, telephone (504) 589-2965.

SUPPLEMENTARY INFORMATION: Interested persons are invited to participate in this proposed rulemaking by submitting written views, comments, data or arguments. Persons submitting comments should include their names and addresses, identify the bridge, and give reasons for concurrence with or any recommended change in the proposal. Persons desiring acknowledgment that their comments have been received should enclose a stamped, self-addressed postcard or envelope.

The Commander, Eighth Coast Guard District, will evaluate all communications received and determine a course of final action on this proposal. This proposed regulation may be changed in the light of comments received.

Drafting Information

The drafters of this notice are John Wachter, project officer, and Lt. J. A. Wilson, project attorney.

Discussion of Proposed Regulation

Vertical clearance of the bridge in the closed position is 38 feet at normal low water (80% of the time), and 28 feet at normal high water. Navigation through the bridge that requires an opening of the draw is almost nonexistent. There were four openings in 1987; three openings in 1988; no openings in 1989; and, one opening to date during 1990 for a Coast Guard vessel.

Federalism

This proposed action has been analyzed in accordance with the principles and criteria contained in Executive Order 12612, and it has been demonstrated that the rulemaking does not have sufficient federalism implications to warrant the preparation of a Federalism Assessment.

Economic Assessment and Certification

This proposed regulation is considered to be non-major under Executive Order 12291 on Federal Regulation and nonsignificant under the Department of Transportation regulatory policies and procedures (44 FR 11034: February 26, 1979).

The economic impact of this proposal is expected to be so minimal that a full regulatory evaluation is unnecessary. The basis for this conclusion is that the number of vessels passing this bridge as evidenced by the bridge openings from January 1987 through August 1990, is minimal. These few vessels can reasonably give advance notice for a bridge opening by placing a collect call to the bridge owner at any time. Mariners requiring the bridge openings are repeat users of the waterway and scheduling their arrival at the bridge at the appointed time during the proposed advance notice period should involve little or no additional expense to them. Since the economic impact of this proposal is expected to be minimal, the Coast Guard certifies that, if adopted, it will not have a significant economic impact on a substantial number of small entities.

List of Subjects in 33 CFR Part 117

Bridges.

Proposed Regulation

In consideration of the foregoing, the Coast Guard proposes to amend Part 117 of Title 33, Code of Federal Regulations, as follows:

PART 117—DRAWBRIDGE OPERATION REGULATIONS

1. The authority citation for part 117 continues to read as follows:

Authority: 33 U.S.C. 499; 49 CFR 1.46 and 33 CFR 1.05–1(g).

2. Section 117.963 is revised to read as follows:

§ 117.963 Colorado River.

The draw of the highway bridge, mile 10.7 at Wadsworth, Texas will open on signal Monday through Friday only, and then only from 8 a.m. to 5 p.m. At least 48 hours notice is required.

Dated: October 2, 1990.

J.M. Loy,

Rear Admiral, U.S. Coast Guard Commander, Eighth Coast Guard District.

BILLING CODE 4910–14–M

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Parts 141 and 142

[WH–FRL–3846–7]

National Primary Drinking Water Regulations: Lead and Copper

AGENCY: Environmental Protection Agency.

ACTION: Notice of availability with request for comments.

SUMMARY: On August 18, 1988, the Environmental Protection Agency (EPA) published proposed National Primary Drinking Water Regulations (NPDWRs) and Maximum Contaminant Level Goals for lead and copper in drinking water. (53 FR 31516). EPA is making available for public review and comment new analyses of information and supporting documentation received by the Agency which is being considered in establishing a final regulation for these contaminants. The Agency is also soliciting comment on options being considered for adoption into the final lead and copper regulation.

DATES: Written comments should be submitted on or before November 19, 1990.

ADDRESSES: Send written comments to Lead Docket Clerk care of Jeff Cohen, Office of Drinking Water (WH–550), U.S. Environmental Protection Agency, 401 M Street, SW., Washington, DC 20460. Commenters are also requested to submit one original and three copies of their written comments.

The data and the documents may be reviewed at the EPA Lead Docket by calling for an appointment at (202) 382–3027. The Docket is located at the EPA, 401 M Street SW., Washington, DC. The Docket hours are Monday through Friday, excluding Federal holidays, from 9:30 a.m. to 3:30 p.m. Eastern Time. Copies of the documents are also available for a fee from the National Technical Information Service (NTIS), U.S. Department of Commerce, 5285 Port Royal Road, Springfield, VA 22161. The toll-free number 800/336–4700, local:703/487–4650.

FOR FURTHER INFORMATION CONTACT: Jeff Cohen, Office of Drinking Water (WH–550), U.S. Environmental Protection Agency, 401 M Street SW, Washington, DC 20460, (202) 382–5456, or one of the EPA Regional Office contacts listed below.

SUPPLEMENTARY INFORMATION:

EPA Regional Offices

X. 1200 Sixth Avenue, Seattle, WA 98101, Phone: (206) 442–4092, Janis Hasting

Analyses and Supporting Documents

The analyses and supporting documents available for public comment include the following: (1) "Summary of Lead Service Line Replacement Analyses" related to survey data submitted by the American Water Works Association regarding the presence and number of lead service lines reported by public water systems; (2) "Influence of Plumbing, Lead Service Lines, and Water Treatment on Lead Levels at the Tap" and "Variability of Household Water Lead Levels in American Cities." These analyses are based on data on lead levels at household taps, submitted by the American Water Works Service Company, and data either obtained or collected by EPA before and after the public comment period on the 1988 proposal; and (3) an update of the National Inorganics and Radionuclides Survey, which provides data that the Agency is using to estimate costs associated with control of lead in drinking water supplies.

The Agency is also making available three documents related to the laboratory analysis of lead and copper in drinking water: (1) "Use of Water Supply Performance Evaluation Data to Calculate Laboratory Certification Criteria and Practical Quantitation Limits for Inorganic Contaminants"; (2)

a September 22, 1988, EPA memorandum on "Calculation of the Practical Quantification Limits for Lead and Copper; and (3) a study by EPA's Environmental Monitoring and Support Laboratory on "Procedures for Preservation of Lead in Drinking Water." In addition, the Agency is also making available an analysis on the projected costs attributable to States' implementation of the proposed lead and copper regulations. The public is invited to comment on this information for a period of 30 days.

The Agency is also making available for review and comment a manual published by the American Water Works Association (AWWA), "Lead Control Strategies." EPA is using this manual in formulating corrosion control guidance for public water suppliers and States, and in developing a cost and technologies document to support the final rulemaking. The "Lead Control Strategies" manual may also be obtained by sending $38.50 (non-members), or $32.50 (members) to the American Water Works Association, Customer Service, 6666 West Quincy Avenue, Denver, Colorado 80235.

Regulatory Options

The Agency solicits comment on the following alternatives being considered for the final rule for lead and copper in drinking water. The regulation proposed on August 18, 1988, would have established several action levels to trigger implementation of the treatment technique. Under the proposed rule, systems would have been required to install optimal corrosion control treatment if one of the following action levels were exceeded at consumers' taps: An average lead level greater than 0.010 milligrams per liter (mg/L); a copper level in 5 percent of the samples exceeding 1.3 mg/L; a pH of less than 6.0 in 5 percent of the samples. In addition, systems would have been required to implement public education specified in the proposed rule if the level of lead exceeded 0.020 mg/L in 5 percent of the tap samples.

EPA is considering a final rule which would apply the lead and copper action levels as a trigger for corrosion control treatment only to systems serving less than 50,000 persons (small and medium size systems). Under the new option under consideration, all systems serving greater than 50,000 persons (large systems) would have to install treatment to minimize lead and copper levels at consumer taps while insuring that the treatment does not cause the water system to violate any national primary drinking water regulations (optimized corrosion control), unless they could demonstrate that the water they deliver to their users is already minimally corrosive. EPA is considering this change because larger systems may have the technical expertise to reduce lead and copper levels below the action levels that are appropriate for medium and small systems. This change in the regulation may contribute to greater public health protection than would be achieved by application of the lead action level to all systems.

In addition, the Agency is considering specifying in the regulation time periods under which systems and States would be required to conduct each step in the evaluation, installation, and adjustment of corrosion control and source water treatment. Including deadlines in the regulation would enhance the overall enforceability of the regulation and assure uniformity in treatment implementation schedules. EPA solicits comment upon the time periods, listed below, that EPA is considering for each of the following steps.

For large systems (serving more than 50,000 people): (1) Conducting corrosion control studies and submission of results and recommeded treatment to State—18 months; (2) approval or specification by State of treatment—6 months; (3) installation of corrosion control treatment approved or specified by the State and conduct of follow-up monitoring—36 months; (4) determination by State that system has installed specified corrosion control treatment and specification of water quality parameters under which system must continue to operate—6 months.

For medium size systems (serving more than 3,300 persons and fewer than 50,000 persons): (1) Adjustment of pH to above 7.0 (if necessary)—within 18 months of exceedance of lead or copper action level; (2) conduct of follow-up monitoring to determine if action levels met—12 months; (3) specification by State of treatment or corrosion control studies to be conducted by system—12 months; (4) completion by system of corrosion control studies (if required)—18 months; (5) specification by State of corrosion control treatment—12 months; (6) installation of treatment specified by State and conduct of follow-up monitoring—36 months; (7) determination by State that system has installed specified treatment and specification of water quality parameters under which the system must continue to operate—6 months.

Small systems (serving fewer than 3,300 persons): (1) Specification by State of optimal corrosion control treatment—24 months after exceedance of lead or copper action level; (2) installation of treatment specified by State and conducting of follow-up monitoring—36 months; (3) determination by State that system has installed specified corrosion control treatment and specification of water quality parameters under which system must continue to operate—6 months.

Based on source water and tap water monitoring, the State may determine that source water treatment is necessary to minimize lead and/or copper levels at the tap. In such cases for any size system, the system would have 36 months to install source water treatment and conduct follow-up monitoring.

EPA is considering allowing longer time periods for State determinations for small and medium size systems compared to large systems for two reasons. First, small and medium size systems comprise the vast majority of public water systems, and the potentially large number of determinations, that will have to be made for these systems will place a greater strain on State resources. Second, determining optimal corrosion control treatment for small and medium size systems may require a greater degree of State involvement and technical assistance than would be necessary for more technically sophisticated larger systems.

EPA is also considering including a provision in the final rule which would authorize EPA to review State determinations of what constitutes optimal corrosion control and source water treatment in limited circumstances. Under the option being considered, EPA Regional Administrators would be authorized to rescind State treatment determinations, and issue new or revised determinations with which the system must comply where: (1) A State has failed to specify treatment requirements by deadlines specified in the regulation, (2) where the Regional Administrator determines that a State has seriously abused its discretion in a substantial number of cases or in cases affecting a substantial population, or (3) where EPA concludes that the technical aspects of a State's determination would be indefensible in an expected Federal enforcement action taken against a system. EPA continues to support a strong State role in the implementation of the Safe Drinking Water Act requirements and the Federalism principles outlined in Executive Order Number 12612. The EPA oversight of States being considered in this notice is intended to ensure general compliance with the reqirements without reducing State flexibility or discretion.

In each case, the Regional Administrator would be required to provide an opportunity for the State, the affected system(s), and the public to review and comment upon EPA's proposed decision. EPA would exercise this authority only where a State could not demonstrate that its determination(s) are reasonable, based upon the provisions of the approved State program. Authorizing EPA review of State determinations would therefore help ensure that States were properly implementing the corrosion control requirements of the regulation.

Finally, for the final lead and copper NPDWRs, EPA is considering requirements for public water suppliers that have to install or improve corrosion control to measure several water quality parameters to assist in the determination of corrosion control treatment. Among these are calcium, conductivity, orthophosphate, and silica. Should these water quality parameters be included as part of implementing the final rule, EPA is considering approving the following analytical methods for use in their measurement. In addtion, EPA is also updating some of the methods for lead, copper, pH, and total alkalinity to use the most recent reference documents. Several newly developed methods for lead and copper are also listed along with the updated methods. Only those methods which are now or have been updated since the 1988 proposal are listed in this notice. Methods that have not been updated since the proposal would still be appropriate for compliance monitoring analyses after the rule is promulgated.

(1) Lead—

(A) Method 3113, Atomic Absorption; furnace technique (update).

"Standard Methods for the Examination of Water and Wastewater," 17th edition, American Public Health Association, American Water Works Association, Water Pollution Control Federation, 1989.

(B) Method 200.8, Inductively Coupled Plasma; Mass Spectrometry (new).

"Determination of Trace Elements in Waters and Wastes by Inductively Coupled Plasma—Mass Spectrometry." Method 200.8, August 1990, Revision 4.3, U.S. EPA Environmental Monitoring Systems Laboratory, Cincinnati, OH 45268.

(C) Method 200.9, Atomic Absorption; Platform furnace technique (new).

"Determination of Trace Elements by Stabilized Temperature Graphite Furnace Atomic Absorption Spectrometry," Method 200.9, August 1990, Revision 1.1, U.S. EPA Environmental Monitoring Systems Laboratory, Cinicinnati, OH 45268.

(2) Copper—

(A) Method 3113, Atomic Absorption; furnance technique (update).

"Standard Methods for the Examination of Water and Wastewater," 17th edition, American Public Health Association, American Water Works Association, Water Pollution Control Federation, 1989.

(B) Method D1688-90C, Atomic Absorption; furnance technique (update).

Annual Book of ASTM Standards, Vol. 11.01, American Society of Testing and Materials, 1916 Race Street, Philadelphia, PA 19103.

(C) Method 3111 B or C, Atomic Absorption; direct aspiration (update).

"Standard Methods for the Examination of Water and Wastewater," 17th edition, American Public Health Association, American Water Works Association, Water Pollution Control Federation, 1989.

(D) Method D1688-90A, Atomic Absorption; direct aspiration (update).

Annual Book of ASTM Standards, Vol. 11.01, American Society for Testing and Materials, 1916 Race Street, Philadelphia, PA 19103.

BILLING CODE 6560–50–M

NATIONAL SCIENCE FOUNDATION

45 CFR Parts 612 and 613

Amendments to Freedom of Information and Privacy Act Regulations

AGENCY: National Science Foundation (NSF).

ACTION: Proposed rule.

SUMMARY: The National Science Foundation (NSF) proposes to amend 45 CFR parts 612 and 613 to make technical changes in NSF's Freedom of Information and Privacy Act regulations to account for records maintained by NSF's Office of Inspector General. The NSF also proposes to add a section to its Freedom of Information Act (FOIA) regulations. This section more fully describes NSF's existing procedures for notifying submitters of confidential commercial information that their records have been requested under the FOIA. Other proposed amendments would increase fees for search and copying of records, and make technical changes to properly cross reference the sections of these regulations.

DATES: Comments must be received on or before November 19, 1990.

ADDRESSES: Interested persons may submit written comments to: D. Matthew Powell, Assistant General Counsel, NSF, Washington, DC 20550 (202–357–9435).

FOR FURTHER INFORMATION CONTACT: D. Matthew Powell, Assistant General Counsel, NSF, Washington, DC 20550 (202–357–9435).

SUPPLEMENTARY INFORMATION: The National Science Foundation's Office of Inspector General (OIG) was created in 1989. On February 14, 1990, notice was given of the creation of a Privacy Act System of Records for OIG. (55 FR 5308) As indicated in the Privacy Act Systems Notice, OIG records are maintained in secure locations and are available only to those persons whose official duties require access to the records. In order to coordinate properly requests for access to these records under the Freedom of Information and Privacy Acts, requests for access to OIG records should be made directly to the OIG. The following regulatory changes are being proposed to insure that OIG is able to coordinate public access to its records under the Freedom of Information Act (FOIA) and the Privacy Act.

a. 45 CFR 612.2(a). Under the current regualtion the NSF Deputy Director may order disclosure of any record exempt from disclosure under FOIA. The proposed amendment would allow only the NSF Inspector General to order disclosure of OIG records exempt from disclosure under FOIA.

b. 45 CFR 612.3(c). Under the proposed amendment, requests for OIG records would be made directly to OIG.

c. 45 CFR 612.7(a). Under the proposed amendment, OIG would control incoming requests, monitor compliance, dispatch denial letters, and maintain administrative records concerning FOIA requests for materials maintained by OIG.

d. 45 CFR 612.7(d). Under the proposed amendment only the Inspector General may deny a written request for records maintained by OIG.

e. 45 CFR 613.4(c). Under the proposed amendment, Privacy Act requests for correction of OIG records shall be brought to the attention of the Inspector General rather than the General Counsel.

The second change concerns notification procedures. NSF's procedures for providing predisclosure notification to submitters of confidential commercial information conform to the requirements of Executive Order 12600. NSF proposes to add a new section, 45 CFR 612.8, which more fully describes its procedures. Section 612.7, which describes the agency's processing of requests, would be amended to refer to these procedures.

The third change would increase fees. NSF's current search and copying fees do not reflect current costs. Fees being charged under the regulations should reflect more accurately the actual costs of search and copying. Therefore, NSF proposes to amend 45 CFR 612.10(a) and (d) to increase search fees from $1.25 to $2.50 per quarter hour for clerical staff and from $3.75 to $7.50 per quarter hour for managerial staff, and its copying fee from $0.10 to $0.25 per page.

The remainder of the changes proposed correct out-of-date or improper cross references and other minor errors.

Under the criteria set forth in Executive Order 12291, this rule has been determined not to be a "major rule" requiring regulatory impact analysis. It has also been determined, pursuant to the requirements of the Regulatory Flexibility Act, 5 U.S.C. 601–612, these changes will have no significant economic impact on any substantial number of small entities.

List of Subjects

45 CFR Part 612

Availability of records and information.

45 CFR Part 613

Privacy.

NSF proposes to amend 45 CFR chapter IV, parts 612 and 613, by adding § 612.8 and amending other sections as indicated below.

Dated: October 15, 1990.

Charles H. Herz,

General Counsel.

PART 612—AMENDED

1. The authority for part 612 would continue to read:

Authority: 5 U.S.C. 552, as amended.

2. In the table of contents for part 612 the heading for § 612.8 would be added to read:

612.8 Confidential commerical information—notice.

3. 45 CFR part 612 would be amended by adding § 612.8 and by revising § 612.1, 612.2(a), 612.3 (b) and (c), 612.4, 612.7 (a), (c), and (d), 612.8(a)(2)(ii), 612.10 (a) and (d) and 612.11 (a) and (c) as follows.

§ 612.1 Scope.

This part establishes procedures by which the National Science Foundation (NSF) will implement the Freedom of Information Act, 5 U.S.C. 552(a), relating to public availability of NSF records.

§ 612.2 Information policy.

(a) Subject to the policies set forth below, NSF will make the fullest possible disclosure of informaiton to any person who requests information,

without unnecessary expense or delay. The Inspector General concerning records maintained by the Office of Inspector General, or the Deputy Director, NSF concerning all other records, may, except where prohibited by law, order disclosure in the public interest of records exempt from mandatory disclosure under § 612.8 of this part.

* * * * *

§ 612.3 Procedures applicable to the public—requests and appeals.

* * * * *

(b) *Form of request.* A request need not be in any particular format, but it:

(1) Must be in writing,

(2) Must be clearly identified both on the envelope and in the letter as a Freedom of Information Act or FOIA request,

(3) Must describe the records sought with sufficient specificity to permit identification, and

(4) Must state that the requester promptly will pay the fees chargeable under this regulation.

Provided, however, that when the requester places an inadequate limit on the amount he will pay or the requester has failed to make payments for previous requests, the NSF may require advance payment in accordance with § 612.12(d) of this part except in cases when fees have been waived or reduced in accordance with § 612.13 of this part.

(c) *Place of request.* A request for records under FOIA maintained by the Office of Inspector General shall be addressed to the National Science Foundation, Office of Inspector General, 1800 G Street, NW., Washington, DC 20550. Requests for records addressed to the Office of Inspector General under this paragraph shall be deemed to include only records maintained by the Office of Inspector General. Any request for any other record under FOIA shall be addressed to the National Science Foundation, Office of Legislative and Public Affairs, 1800 G Street, NW., Washington, DC 20550. Requests for records addressed to the Office of Legislative and Public Affairs under this paragraph shall be deemed not to include records maintained by the Office of Inspector General. A request which meets the requirements of paragraph (b) of this section and is properly addressed shall be deemed received on the date of arrival in the Office of Legislative and Public Affairs or the Office of Inspector General.

* * * * *

§ 612.4 Copies of records.

If a requested record is to be disclosed, a copy will be furnished the requester as promptly as possible provided payment of fees has been arranged for or has been waived pursuant to § 612.13 of this part. Records will not be released for copying.

* * * * *

§ 612.8 Confidential commercial information—notice.

(a) *In general.* Commercial information provided to the NSF by a submitter shall not be disclosed pursuant to a Freedom of Information Act request except in accordance with this section.

(b) *Definitions.* The following definitions are used in reference to this section:

Commercial information means commercial or financial information provided to the NSF by a submitter that arguably is protected from disclosure under Exemption 4 of the Freedom of Information Act, 5 U.S.C. 552(b)(4) and § 612.8 of this part.

Submitter means any person, organization, or entity who provides commercial information, directly or indirectly, to the NSF. The term includes, but is not limited to, corporations, state governments and foreign governments.

(c) *Designation of commercial information.* Submitters of commercial information shall use good-faith efforts to designate, by appropriating markings, either at the time of submission or at a reasonable time thereafter, those portions of their submissions which they deem to be protected from disclosure under Exemption 4. Such designations shall be deemed to have expired ten years after the date of the submission unless the submitter requests, and provides reasonable justification for, a designation period of greater duration.

(d) *Notice to submitters.* The NSF shall, to the extent permitted by law, provide a submitter with prompt written notice of a Freedom of Information Act request or administrative appeal encompassing its commercial information wherever required under paragraph (e) of this section, except as provided for in paragraph (f) of this section, in order to afford the submitter an opportunity to object to disclosure pursuant to paragraph (g) of this section. Such written notice shall either describe the exact nature of the commercial information requested or provide copies of the records or portions thereof containing the information. The requester also shall be notified that notice and an opportunity to object are being provided to a submitter.

(e) *When notice is required.* Notice shall be given to a submitter whenever:

(1) The information has been designated in good faith by the submitter as information deemed protected from disclosure under Exemption 4, or

(2) The NSF has reason to believe that the information may be protected from disclosure under Exemption 4.

(f) *Exceptions to notice requirements.* The notice requirements of paragraph (d) of this section shall not apply if:

(1) The NSF determines that the information should not be disclosed;

(2) The information lawfully has been published or has been officially made available to the public;

(3) Disclosure of the information is required by law (other than 5 U.S.C. 552); or

(4) The designation made by the submitter in accordance with paragraph (c) of this section appears obviously frivolous, except that, in such case, the NSF shall provide the submitter with written notice of any final administrative decision to disclose commercial information within a reasonable number of days prior to a specified disclosure date.

(g) *Opportunity to object to disclosure.* Through the notice described in paragraph (d) of this section, the NSF shall afford a submitter a reasonable period of time within which to provide the NSF with a detailed written statement of any objection to disclosure. Such statement shall specify all grounds for withholding any of the information under any exemption of the Freedom of Information Act and, in the case of Exemption 4, shall provide a detailed description of why the information is contended to be a trade secret or commercial or financial information that is privileged or confidential. This description shall explain why release of commercial or financial information would cause substantial harm to the competitive position of the submitter. Whenever possible, the submitter's claim of confidentiality should be supported by a statement or certification by an officer or authorized representative of the submitter. Information provided by a submitter pursuant to this paragraph may itself be subject to disclosure under the FOIA. When the submitter fails to object within the specified time or the objection appears obviously frivolous, the NSF shall provide the submitter with written notice pursuant to paragraph (f)(4) of this section.

(h) *Notice of intent to disclose.* The NSF shall consider carefully a submitter's objections and specific grounds for nondisclosure prior to determining whether to disclose

confidential information. Whenever the Foundation decides to disclose confidential information over the objection of a submitter, the NSF shall forward to the submitter a written notice which shall include:

(1) A statement of the reasons for which the submitter's disclosure objections were not sustained;

(2) A description of the confidential information to be disclosed; and

(3) A specified disclosure date.

Such notice of intent to disclose shall be forwarded to the submitter a reasonable number of days prior to the specified disclosure date and the requester shall be notified likewise.

(i) *Notice of FOIA lawsuit.* Whenever a requester brings suit seeking to compel disclosure of confidential information, the NSF, shall promptly notify the submitter.

§ 612.7 Agency actions on receipt of a properly presented request for record.

(a) *Monitoring of requests.* The NSF Office of Legislative and Public Affairs, or such other office as may be designated by the Director, will serve as the central office for internal administration of these regulations. For records maintained by the Office of Inspector General, that Office will control incoming requests, monitor compliance, dispatch denial letters, and maintain administrative records. For all other records maintained by NSF, the Office of Legislative and Public Affairs, or such other office as may be designated by the Director, will control incoming requests, assign them to appropriate action offices, monitor compliance, consult with action offices on disclosure, approve unavoidable extensions, dispatch denial letters, and maintain administrative records.

* * * * *

(c) *Records containing commercial information.* When the requested record contains confidential commercial information such as a successful proposal that was submitted to NSF, the NSF will normally contact, in accordance with § 612.6 of this part, the organization that submitted the record in order to ask whether the submitter wishes portions of the record withheld under any applicable exemptions. (The Foundation protects from disclosure pending proposals or unsuccessful proposals in any case.)

(d) *Denial of request.* No written request for record shall be denied except by the Director of the Office of Legislative and Public Affairs, the Office of Inspector General or such other office as may be designated by the Director. Notice of the denial of a request shall briefly set forth the reasons therefor which shall be based solely upon one or more of the exemptions specified in § 612.6 of this part. Each notice of denial shall set forth the names and title or positions of each person responsible for the denial and shall inform the requester of the right to appeal as provided in § 612.3 of this part.

* * * * *

§ 612.8 Records not available.

(a) * * *

(2) * * *

(ii) Negotiating positions and limitations involved in a negotiation prior to the execution of a contract or the completion of the action to which the negotiating positions or limitations were applicable. They may also be exempt pursuant to other provisions of this section.

* * * * *

§ 612.10 Fees to be charged—general.

* * * * *

(a) *Manual searches for records.* Whenever feasible, NSF shall charge at the salary rate(s) (i.e., basic pay plus 16 percent) of the employee(s) making the search. However, where a homogeneous class of personnel is used exclusively (e.g., all administrative/clerical, or all professional/executive), NSF may establish an average rate for the range of grades typically involved. Thus, for each one-quarter hour after the first quarter hour, for search of a record by clerical personnel, the charge is $2.50. For a nonroutine, nonclerical search by professional personnel, for example, where the task of determining which records fall within a request and search requires professional or managerial time, the charge is $7.50 for each one quarterhour spent in excess of the first quarter hour.

* * * * *

(d) *Duplication of records.* NSF shall establish an average agency-wide, per-page charge for paper copy reproduction of documents. This charge shall represent the reasonable direct costs of making such copies, taking into account the salary of the operators as well as the cost of the reproduction machinery. For copies prepared by computer, such as tapes or printouts, NSF shall charge the actual cost, including operator time, of production of the tape or printout. For other methods of reproduction or duplication, NSF shall charge the actual direct costs of producing the document(s). For photocopies of documents, $0.25 per copy per page will be charged. In practice, if NSF estimates that duplication charges are likely to exceed $25, it shall notify the requester of the estimated amount of fees, unless the requester has indicated in advance his willingness to pay fees as high as those anticipated. Such a notice shall offer a requester the opportunity to confer with agency personnel with the object of reformulating the request to meet his or her needs at a lower cost.

* * * * *

§ 612.11 Fees to be charged—categories of requesters.

* * * * *

(a) *Commercial use requesters.* When a request for documents for commercial use is received, NSF shall assess charges which recover the full direct cost of searching for, reviewing for release, and duplicating the records sought. Requesters must reasonably describe the records sought. Commercial use requesters are not entitled to two hours of free search time nor 100 free pages of reproduction of documents. NSF may recover the cost of searching for and reviewing records even if there is ultimately no disclosure of records (see § 612.12(b) of this part).

* * * * *

(c) Requesters who are representatives of the news media. NSF shall provide documents to requesters in this category for the cost of reproduction alone, excluding charges for the first 100 pages. To be eligible for inclusion in this category a requester must meet the criteria in § 612.9(j) of this part, and his request must not be made for a commercial use. In reference to this class of requester, a request for records supporting the news dissemination function of the requester shall not be considered to be a request that is for commercial use. Requesters must reasonably describe the records sought.

* * * * *

PART 613—[AMENDED]

1. The authority for part 613 would continue to read:

Authority: 5 U.S.C. 552a(f).

2. It is proposed to amend 45 CFR part 613 by revising § 613.4(c) as follows:

§ 613.4 Correction of records.

* * * * *

(c) The Privacy Act Officer upon the receipt of such a request shall promptly confer with the Directorate or office within the NSF responsible for the record. In the event it is felt that correction is not warranted in whole or in part, the matter if it pertains to records maintained by the Office of Inspector General shall be brought to the attention of the Inspector General and if it pertains to other records shall be brought to the attention of the

General Counsel. If, after review by the General Counsel or by the Inspector General and discussion with the requester if deemed helpful, it is determined that correction as requested is not warranted, a letter shall be sent by the Privacy Act Officer to the requester denying his request and/or explaining what correction might be made if agreeable to the requester. This letter shall set forth the reasons for the refusal to honor the request for correction. It shall also inform him of his right to appeal this decision and include a description of the appeals procedure set forth in paragraph (d) of this section. Such letter or notification that the desired correction will be made shall normally be sent within 30 working days of the receipt of a properly addressed request (or within 30 working days of the time the Privacy Act Officer becomes aware that a particular communication not addressed as prescribed above is a request for correction of a record under the Privacy Act).

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Office of Human Development Services

45 CFR Parts 1355, 1356 and 1357

Title IV-B and Title IV-E of the Social Security Act: Data Collection for Adoption and Foster Care

AGENCY: Office of Human Development Services, Department of Health and Human Services.

ACTION: Notice of briefings

SUMMARY: The Department wishes to extend to all interested persons the opportunity to attend a briefing on the proposed rule governing the national data collection system for adoption and foster care. The Notice of Proposed Rulemaking (NPRM) on this subject was published in the Federal Register on September 27, 1990 at page 39540. The briefing is not a public hearing and will not substitute for the written comments requested from the public in relation to the NPRM. Rather, it is intended to inform interested parties so that they may comment fully and effectively on the various components of the proposed data collection system.

DATES: Two identical briefings on the NPRM will be held: one in Washington, DC on October 24, and the other in Denver, Colorado, on November 14, 1990. Each briefing will begin at 10 a.m., will be one day in duration, and will review all aspects of the proposed rule.

ADDRESSES: The Washington meeting will be held at the Omni Shoreham Hotel, 2500 Calvert Street, NW., Washington, DC. The Denver meeting will be held at the Sheraton Denver Airport Hotel, 3535 Quebec Street, Denver, Colorado.

FOR FURTHER INFORMATION CONTACT: A. Lee Bruno or Holly Herrera, Cygnus, Inc., 1400 Eye Street, NW., suite 625, Washington, DC 20005, (202) 289-4992.

Dated: October 15, 1990.

Wade F. Horn,

Commissioner, Administration for Children, Youth and Families.

Dated: October 17, 1990.

Mary Sheila Gall,

Assistant Secretary for Human Development Services.

BILLING CODE 4130-01-M

FEDERAL MARITIME COMMISSION

46 CFR Parts 550, 580 and 581

[Docket No. 90-23]

Automated Tariff Filing and Information System (ATFI); Ocean Freight Tariffs in Foreign and Domestic Offshore Commerce; Notice of Inquiry

AGENCY: Federal Maritime Commission.

ACTION: Advance notice of proposed rulemaking; extension of comment period.

SUMMARY: The Advanced Notice of Proposed Rulemaking, published August 1, 1990 (55 FR 31199), solicited public comment on the proposed Automated Tariff Filing and Information Systems ("ATFI"). ATFI will facilitate the electronic filing, processing and retrieval of tariff data required by statute to be filed with the Federal Maritime Commission and made available to the public. Comments were solicited on some basic features being considered for ATFI and how they may impact current paper tariff practices. Comments are now due on October 15, 1990. The Asia North America Eastbound Rate Agreement and the Transpacific Westbound Rate Agreement have requested a two week extension for filing comments so that members may complete their review and file comments. This notice extends the time for filing comments to the Advanced Notice of Proposed Rulemaking to October 29, 1990.

DATES: Comments due October 29, 1990.

ADDRESSES: Comments (Original and 15 Copies) must be submitted to: Joseph C. Polking, Secretary, Federal Maritime Commission, 1100 L Street, N.W., Washington, D.C. 20573-0001. (202) 523-5725.

FOR FURTHER INFORMATION CONTACT: John Robert Ewers, Director, Bureau of Administration, Federal Maritime Commission, 1100 L Street, NW., Washington, DC 20573. (202) 523-5868.

By the Commission.

Joseph C. Polking,

Secretary.

BILLING CODE 6730-01-M

GENERAL SERVICES ADMINISTRATION

48 CFR Part 552

[GSAR Notice No. 5-397]

General Services Administration Acquisition Regulation; Restriction on Advertising Clause

AGENCY: Office of Acquisition Policy, GSA.

ACTION: Proposed rule.

SUMMARY: This notice invites written comments on a proposed change to the General Services Administration Acquisition Regulation (GSAR), Chapter 5 (APD 2800.12A), that would revise the text of the clause in section 552.203-70 to add a reference to the White House and the Executive Office of the President regarding referring to GSA contracts in commercial advertising or similar promotions in a manner that would imply that the product or service provided is endorsed or preferred by any element of the Federal Government.

DATES: Comments are due in writing on or before November 19, 1990.

ADDRESSES: Comments should be addressed to Ms. Marjorie Ashby, Office of GSA Acquisition Policy (VP), 18th & F Streets, NW., Washington, DC 20405.

FOR FURTHER INFORMATION CONTACT: John Joyner, Office of GSA Acquisition Policy (202) 501-1224.

SUPPLEMENTARY INFORMATION: The Director, Office of Management and Budget (OMB), by memorandum dated December 14, 1984, exempted certain agency procurement regulations from Executive Order 12291. The exemption applies to this proposed rule. An Initial

Regulatory Flexibility Analysis has not been prepared because the proposed rule does not appear to have a significant impact on a substantial number of small entities because the provision simply adds a reference to the White House and Executive Office of the President in order to clarify that they are considered to be part of the Federal Government. The proposed rule does not contain information collection requirements that require the approval of OMB under the Paperwork Reduction Act (44 U.S.C. 3501 et seq.).

List of Subjects in 48 CFR Part 552

Government procurement.

PART 552—[AMENDED]

1. The authority citation for 48 CFR part 552 continues to read as follows:

Authority: 40 U.S.C. 486(c).

2. Section 552.203–70 is revised to read as follows:

552.203–70 Restriction on Advertising.

As prescribed in 503.570–2, insert the following clause:

Restriction on Advertising (SEP 1990)

The Contractor shall not refer to this contract in commercial advertising or similar promotions in such a manner as to state or imply that the product or service provided is endorsed or preferred by any element of the Federal Government, the White House or the Executive Office of the President, or is considered by these entities to be superior to other products or services. Any advertisement by the Contractor, including price-off coupons, which refer to a military resale activity shall contain the following statement: "This advertisement is neither paid for nor sponsored in whole or in part, by any element of the United States Government."

(End of clause)

Dated: October 9, 1990.

Richard H. Hopps, III,

Associate Administrator for Acquisition Policy.

DEPARTMENT OF AGRICULTURE

Animal and Plant Health Inspection Service

[Docket No. 90-036]

Advisory Committee on Foreign Animal and Poultry Diseases: Renewal; Selection of Members

AGENCY: Animal and Plant Health Inspection Service, USDA.

ACTION: Notice of reopening and extension of comment period.

SUMMARY: We are reopening and extending the comment period for a notice advising the public that the Secretary of Agriculture is soliciting nominations for membership on the Secretary's Advisory Committee on Foreign Animal and Poultry Diseases, which has been renewed for a 2-year period. Reopening and extending the comment period will give interested persons additional time to submit nominations or other comments.

DATES: Consideration will be given to nominations or comments received on or before November 19, 1990.

ADDRESSES: Nominations or comments should be addressed to the person listed under "FOR FURTHER INFORMATION CONTACT." Please state that your comments refer to Docket Number 90-036.

FOR FURTHER INFORMATION CONTACT: Dr. M.A. Mixson, Chief Staff Veterinarian, VS, APHIS, USDA, room 747, Federal Building, 6505 Belcrest Road, Hyattsville, MD 20782, 301-436-8073.

SUPPLEMENTARY INFORMATION: In a document published in the Federal Register on August 9, 1990 (55 FR 32450, Docket Number 90-036), we gave notice that the Secretary of Agriculture is renewing the Secretary's Advisory Committee on Foreign Animal and Poultry Diseases (Committee) for a 2-year period, and that the Secretary is also soliciting nominations for membership on this Committee. The closing date for submitting nominations or other comments to the Committee was inadvertently omitted from the notice.

We corrected this omission in a notice published in the Federal Register on August 29, 1990 (55 FR 35332, Docket Number 90-107). The notice stated that consideration would be given to nominations or comments received on or before September 28, 1990.

Due to the omission in the original notice, we believe that individuals and groups that may be interested in submitting nominations or comments may not have had adequate time to do so. We therefore believe it is in the public interest to reopen and extend the commit period to afford interested individuals and groups sufficient opportunity to prepare and submit nominations or comments to the Committee.

Accordingly, we are reopening and extending the comment period until November 19, 1990.

Done in Washington, DC, this 16 day of October 1990.

James W. Glosser,

Administrator, Animal and Plant Health Inspection Service.

[FR Doc. 90-24805 Filed 10-18-90; 8:45 am]

BILLING CODE 3410-34-M

Forest Service

Timber Management and Road Construction in the Ladder Compartment, Trinity County, CA; Intent

AGENCY: Department Of Agriculture, Forest Service.

ACTION: Notice of intent, timber management and road construction in the Ladder Compartment, Trinity County, California.

SUMMARY: Notice is hereby given that the USDA Forest Service will prepare an Environmental Impact Statement for timber management and road construction in Ladder Compartment located on the Lower Trinity Ranger District, Six Rivers National Forest, Trinity County, California. The Forest Service invites written comments on this proposal. A full environmental analysis will be conducted. The Draft EIS will be published in March, 1991, and the final EIS will be available for review in July, 1991.

DATES: Interested and affected individuals should make their input by December 21,1991.

ADDRESSES: Submit Written comments and suggestions to Lawrence Cabodi, District Ranger, Lower Trinity Ranger District, P.O. Box 68, Willow Creek, California 95573.

FOR FURTHER INFORMATION CONTACT: Jo Ann Hereford, Planning Forester, Lower Trinity Ranger District, P.O. Box 68, Willow Creek, California 95573, phone 916-629-2118 or Julie Ranieri, Environmental Coordinator, Six Rivers National Forest, 500 Fifth St., Eureka, California 95501-1033, phone 707-442-1721.

SUPPLEMENTARY INFORMATION: The Ladder Compartment is located in a portion of the former Orleans Roadless Area considered for inclusion in the National Wilderness Preservation System in the 1970's. The passage of the California Wilderness Act of 1984 returned this portion of the roadless area to management for multiple use. Management direction at this time requires that an environmental impact statement be prepared for projects proposing activities within former roadless areas.

In preparing the environmental impact statement, the Forest Service will identify and consider a range of alternatives. One of these will be "No Action". Other alternatives will consider various management options.

James L. Davis, Jr., Forest Supervisor, Six Rivers National Forest, Eureka, California, is the responsible official.

Public participation will be especially important at several points during the analysis. The first point is during the scoping process (40 CFR 1501.7). The Forest Service will be seeking information, comments, and assistance from Federal, State, and local agencies and other individuals or organizations who may be interested in or affected by the proposed action. This input will be used in preparation of the draft environmental impact statement (DEIS). The scoping process includes:

1. Identifying potential issues.
2. Identifying issues to be analyzed in depth.
3. Eliminating insignificant issues or those which have been covered by a relevant previous environmental analysis.

4. Exploring additional alternatives.
5. Identifying potential environmental effects of the proposed action and alternatives (i.e., direct, indirect, and cumulative effects and connected actions).

The District Ranger will hold a public scoping meeting in the conference room located at the Lower Trinity Ranger District office on Highway 96, Willow Creek, California, at 7 p.m., Wednesday, November 28, 1990.

The Draft Environmental Impact Statement (DEIS) is expected to be filed with the Environmental Protection Agency (EPA) and to be available for public review by March, 1991. At that time EPA will publish a notice of availability of the DEIS in the Federal Register.

The comment period on the Draft Environmental Impact Statement will be 45 days from the date the Environmental Protection Agency's Notice of Availability appears in the Federal Register. It is very important that those interested in the management of the Ladder Compartment participate at that time. To be the most helpful, comments on the DEIS should be as specific as possible and may address the adequacy of the statement or the merits of the alternatives discussed (see The Council on Environmental Quality Regulations for implementing the procedural provisions of the National Environmental Policy Act at 40 CFR 1503.3). In addition, Federal court decisions have established that reviewers of draft EIS's must structure their participation in the environmental review of the proposal so that it is meaningful and alerts an agency to the reviewers' position and contentions, *Vermont Yankee Nuclear Power Corp.* v. *NRDC*, 435 U.S. 519,553(1978), and that environmental objections that could have been raised at the draft stage may be waived if not raised until after completion of the final environmental impact statement. *Wisconsin Heritages, Inc.* v. *Harris*, 490F. Supp. 1334, 1338 (E.D. Wis. 1980). The reason for this is to ensure that substantive comments and objections are made available to the Forest Service at a time when it can meaningfully consider them and respond to them in the final.

After the comment period for the draft EIS ends, the comments received will be analyzed and considered by the Forest Service in the preparation of the Final Environmental Impact Statement (FEIS). The final EIS is scheduled to be completed by July, 1991. In the final EIS the Forest Service is required to respond to the comments received (40 CFR 1503.4). The responsible official will consider the comments, responses, environmental consequences discussed in the EIS, and applicable laws, regulations, and policies in making a decision regarding this proposal. The responsible official will document the decision and reasons for the decision in the Record of Decision. That decision will be subject to appeal under 36 CFR part 217.

Dated: October 9, 1990.

James L. Davis, Jr.

Forest Supervisor.

BILLING CODE 3410-11-M

DEPARTMENT OF COMMERCE

Bureau of Export Administration

[Docket No. 900862-0257]

Foreign Availability Determination: Gallium Arsenide

AGENCY: Office of Foreign Availability, Bureau of Export Administration, Commerce.

ACTION: Notice of positive determination.

SUMMARY: On September 13, 1990, under the authority of the Export Administration Act of 1979, as amended (EEA), the Deputy Assistant Secretary for Export Administration determined that foreign availability exists for certain gallium arsenide to controlled destinations such that current controls are ineffective in achieving their purposes. Gallium arsenide is controlled under ECCN 1757A(b) of the Commodity Control List (CCL) (15 CFR 799.1, Supp. 1) of the Export Administration Regulations (EAR) (15 CFR 730 *et seq.*). The Commerce Department will publish the appropriate changes to the EAR in a future issue of the Federal Register.

FOR FURTHER INFORMATION CONTACT: Anatoli Welihozkiy, Acting Deputy Director, Office of Foreign Availability, Room SB-097, Department of Commerce, Washington, DC 20230; Telephone: (202) 377-8074.

SUPPLEMENTARY INFORMATION:

Background

Although the Export Administration Act (EAA) expired on September 30, 1990, the President, invoking the International Emergency Economic Powers Act, continued in effect the powers of the EAA and the Export Administration Regulations (EAR), to the extent permitted by law, in Executive Order 12730 of September 30, 1990.

Part 791 of the EAR establishes the procedures and criteria for determining foreign availability of items controlled for national security reasons. The Secretary of Commerce or his designee is authorized to determine whether foreign availability exists.

With limited exceptions, the Department of Commerce may not maintain national security controls on exports of an item to countries when it has been determined that items of comparable quality are available in fact to such countries from foreign sources in quantities sufficient to render the controls ineffective in achieving their purpose.

On May 15, 1990, OFA initiated a foreign availability assessment on gallium arsenide (GaAs) in response to a claim filed with OFA, pursuant to section 5(f) of the EAA. Gallium arsenide is controlled for national security reasons under ECCN 1757A(b) of the CCL. The Department published a notice of initiation of the assessment in the Federal Register on July 6, 1990 (55 FR 27858).

Having considered the assessment and other relevant information, the Deputy Assistant Secretary for Export Administration determined that, within the meaning of Section 5 of the EAA, foreign availability exists to controlled countries for doped semi-insulating (SI) GaAs, conducting GaAs, and undoped semi-insulating GaAs, except undoped SI GaAs having all of the characteristics for use in MMIC applications, as follows: (1) Registivity greater than or equal to $1x10^7$ ohm-cm; (2) Etch Pit Density less than 100,000 per cm^2; (3) Mobility greater than or equal to 8000 cm^2/Volt.sec; (4) Diameter greater than or equal to 3 inches (76.2 mm); and (5) Wafers with a (1-0-0) orientation. All interested government agencies, including the Departments of State and Defense, were given the opportunity to provide comments on the assessment and the determination.

The Department of Commerce will soon publish regulations in the Federal Register amending the national security export controls on gallium arsenide. Initially, the Department intends to remove validated licensing requirements to all non-controlled destinations.

Following multilateral review by the Coordinating Committee, the Department of Commerce will make appropriate changes to the licensing requirements for exports to controlled countries and publish them in the Federal Register.

If the Office of Foreign Availability receives new evidence affecting this foreign availability determination, OFA may reevaluate its assessment. Inquiries concerning this assessment should be sent to Anatoli Welihozkiy, Acting

Deputy Director of OFA, at the above address.

Dated: October 15, 1990.

James M. LeMunyon,

Deputy Assistant Secretary for Export Administration.

BILLING CODE 3510-DT-M

Foreign-Trade Zones Board

Title 15

[Order No. 466]

Resolution and Order Approving With Restriction the Application of St. Joseph County Airport Authority for a Special-Purpose Subzone at the Allied Products Corporation Plant; South Bend, IN

Proceedings of the Foreign-Trade Zones Board, Washington, DC.

Resolution and Order

Pursuant to the authority granted in the Foreign-Trade Zones Act of June 18, 1934, as amended (19 U.S.C. 81a–81u), the Foreign-Trade Zones Board (the Board) has adopted the following Resolution and Order:

The Board, having considered the matter, hereby orders:

After consideration of the application of the St. Joseph County Airport Authority, grantee of FTZ 125, filed with the Foreign-Trade Zones Board (the Board) on December 18, 1987, requesting special-purpose subzone status for the steel automobile body parts manufacturing plant of Allied Products Corporation, in South Bend, Indiana, the Board, finding that the requirements of the Foreign-Trade Zones Act, as amended, and the Board's regulations would be satisfied, and that the proposal would be in the public interest provided that full zone benefits are limited to exports and that approval is subject to the restriction that Allied elect privileged foreign status on all foreign steel mill products admitted to the zone, approves the application subject to the foregoing restriction.

The Secretary of Commerce, as Chairman and Executive Officer of the Board, is hereby authorized to issue a grant of authority and appropriate Board Order.

Grant of Authority To Establish a Foreign-Trade Subzone in South Bend, IN

Whereas, by an act of Congress approved June 18, 1934, an Act "To provide for the establishment, operation, and maintenance of foreign-trade zones in ports of entry of the United States, to expedite and encourage foreign commerce, and for other purposes," as amended (19 U.S.C. 81a–81u) (the Act), the Foreign-Trade Zones Board (the Board) is authorized and empowered to grant to corporations the privilege of establishing, operating, and maintaining foreign-trade zones in or adjacent to ports of entry under the jurisdiction of the United States;

Whereas, the Board's regulations (15 CFR 400.304) provide for the establishment of special-purpose subzones when existing zone facilities cannot serve the specific use involved, and where a significant public benefit will result;

Whereas, the St. Joseph County Airport Authority, grantee of Foreign-Trade Zone 125, has made application (filed December 18, 1987, FTZ Docket 46–87, 53 FR 45, 1/4/88), in due and proper form to the Board for authority to establish a special-purpose subzone at the steel automobile body parts manufacturing plant of Allied Products Corporation (APC), located in South Bend, Indiana, adjacent to the Chicago Customs port of entry;

Whereas, notice of said application has been given and published, and full opportunity has been afforded all interested parties to be heard; and,

Whereas, the Board has found that the requirements of the Act and the Board's regulations would be satisfied and that the purpose would be in the public interest if approval were given subject to the restriction in the resolution accompanying this action;

Now, therefore, in accordance with the application filed December 18, 1987, the Board hereby authorizes the establishment of a special-purpose subzone at the APC plant in South Bend, Indiana, designated on the records of the Board as Foreign-Trade Subzone No. 125A at the location mentioned above and more particularly described on the maps and drawings accompanying the application, said grant of authority being subject to the provisions and restrictions of the Act and regulations issued thereunder, to the restriction in the resolution accompanying this action, and also to the following express conditions and limitations:

Activation of the subzone shall be commenced within a reasonable time from the date of issuance of the grant, and prior thereto any necessary permits shall be obtained from federal, state, and municipal authorities.

Officers and employees of the United States shall have free and unrestricted access to and throughout the foreign-trade subzone facility in the performance of their official duties.

The grant shall not be construed to relieve responsible parties from liability for injury or damage to the person or property of others occasioned by the construction, operation, or maintenance of said subzone, and in no event shall the United States be liable therefor.

The grant is further subject to settlement locally by the District Director of Customs and the Army District Engineer with the Grantee regarding compliance with their respective requirements for the protection of the revenue of the United States and the installation of suitable facilities.

In witness whereof, the Foreign-Trade Zones Board has caused its name to be signed and its seal to be affixed hereto by its Chairman and Executive Officer at Washington, DC, this 5th day of October, 1990, pursuant to Order of the Board.

Foreign-Trade Zones Board.

Marjorie A. Chorlins,

Acting Assistant Secretary of Commerce for Import Administration, Chairman, Committee of Alternates, Foreign-Trade Zones Board.

BILLING CODE 3510-DS-M

International Trade Administration

[A-570-803]

Preliminary Determinations of Sales at Less Than Fair Value: Heavy Forged Hand Tools, Finished or Unfinished, With or Without Handles, From the People's Republic of China

AGENCY: Import Administration, International Trade Administration, Commerce.

ACTION: Notice.

SUMMARY: We preliminarily determine that imports of heavy forged hand tools (HFHTs) from the People's Republic of China (PRC) are being, or are likely to be, sold in the United States at less than fair value. Furthermore, we preliminarily determine that critical circumstances exist on imports of the following three classes or kinds of HFHTs: (1) Hammers and sledges with heads over 1.5 kg. (3.25 pounds); (2) bars over 18 inches in length, track tools and wedges; and (3) picks and mattocks. We have notified the U.S. International Trade Commission (ITC) of our determinations. We have directed the U.S. Customs Service to suspend liquidation of all entries of HFHTs from the PRC, as described in the Suspension of Liquidation section of this notice. The statutory deadline for the final determinations is December 26, 1990. However, we may expedite these determinations.

EFFECTIVE DATE: October 19, 1990.

FOR FURTHER INFORMATION CONTACT: James Maeder or Brad Hess, Office of Antidumping Investigations, Import Administration, International Trade Administration, U.S. Department of Commerce, 14th Street and Constitution Avenue, NW., Washington, DC 20230; telephone (202) 377–4929 or (202) 377–3773 respectively.

SUPPLEMENTARY INFORMATION:

Preliminary Determinations

We preliminarily determine that imports of HFHTs from the PRC are being, or are likely to be, sold in the United States at less than fair value, as provided in section 733 of the Tariff Act of 1930, as amended (19 U.S.C. 1673b) (the Act). The estimated weighted-average margins are shown in the "Suspension of Liquidation" section of this notice. We also preliminarily determine that critical circumstances exist for three of the four classes or kinds of merchandise from the PRC. The statutory deadline for the final determinations is December 24, 1990. However, we may expedite these determinations.

Case History

Since publication of the notice of initiation on May 2, 1990, (55 FR 18364), the following events have occurred. On May 21, 1990, the ITC informed the Department that there is a reasonable indication that imports of HFHTs from the PRC are materially injuring, or are threatening to materially injure, a U.S. industry (USITC Pub. No 2284, May 1990).

On June 14, 1990, petitioner alleged that critical circumstances exist with respect to imports of HFHTs from the PRC. We presented a questionnaire to counsel for China National Machinery Import and Export Corporation (CMC) on June 21, 1990, and required that information be reported for Shandong Machinery Import & Export Corporation (Shandong), Tianjin Machinery Import & Export Corporation (Tianj in), and Henan Machinery Import & Export Corporation (Henan), the three branches of CMC which counsel indicated had exported the subject merchandise to the United States during the period of investigation.

On July 12, 1990, a response to section A of our questionnaire was submitted on behalf of Shandong. On July 27, 1990, a response to Section A of our questionnaire was submitted on behalf of Tianjin. No information was submitted with respect to the sales activity of Henan. Separate responses to section C of the questionnaire were submitted on behalf of Shandong and Tianjin on August 3, 1990.

On August 15, 1990, petitioner requested that the Department postpone the preliminary determinations by 50 days, *i. e.*, until not later than 210 days after the date of receipt of the petition in accordance with section 733(c) (1) (A) of the Act. Accordingly, we postponed the date of the preliminary determinations until not later than October 31, 1990 (55 FR 37341).

We issued a deficiency letter on September 5, 1990. On September 19, 1990, we received responses to the deficiency letter on behalf of Shandong and Tianjin.

Scope of Investigations

Imports covered by these investigations are HFHTs comprising the following classes or kinds of merchandise: (1) Hammers and sledges with heads over 1.5 kg (3.25 pounds)(hammers/sledges"); (2) bars over 18 inches in length, track tools and wedges ("bars/wedges"); (3) picks and mattocks ("picks/mattocks"); and (4) axes, adzes and similar hewing tools ("axes/adzes"). HFHTs are currently provided for under the following Harmonized Tariff System (HTS) subheadings: 8205.20.60, 8205.59.30, 8201.30.00, and 8201.40.60. These investigations do not include hammers and sledges with heads 1.5 kg (3.25 pounds) in weight and under, hoes and rakes, or bars 18 inches in length and under.

Period of Investigation

The period of investigation (POI) is November 1, 1989, through April 30, 1990.

Best Information Available

We have determined, in accordance with section 776(c) of the Act, that the use of best information available is appropriate for sales of the subject merchandise in these investigations. In deciding what to use as best information available, 19 CFR 353.37(b) provides that the Department may take into account whether a party refused to provide requested information. Thus, the Department determines on a case-by-case basis what is best information available.

For two of its trading branches, Shandong and Tianjin, CMC has failed to provide much of the information requested. CMC failed to provide shipment dates, payment dates, explanation of containerization expenses, and explanation of loading expenses for either Shandong or Tianjin. For Tianjin, production quantity by factory and type of steel used for each product were not reported. CMC failed to provide explanation of Shandong's production process for splitting mauls for one factory and most of the information requested for packing for two factories.

Moreover, much of the information that was provided on behalf of Shandong and Tianjin was not in the form required. For both Shandong and Tianjin, many of the data fields submitted on computer diskette were formatted in a manner that did not permit manipulation of the data contained therein. CMC did not report Shandong's material input data for steel on a product-specific basis, nor did CMC specify whether Shandong's material inputs included allowances for "odd pieces." CMC also failed to report Shandong's energy costs per product or to clarify the size of its splitting mauls in its production data. CMC did not report the transport distance for Tianjins steel on a per-factory basis.

Additionally, for both branches, the quantity and value figures reported in response to section A of our questionnaire differed drastically from the amounts reported in response to section C. Despite our request for clarification in our deficiency letter, CMC failed to reconcile these differences.

Furthermore, although specifically instructed to do so, CMC failed to include sales by Henan in any of its responses.

Also, throughout the course of these investigations, CMC has contended that its three trading branches are actually independent corporate entities. The Department has repeatedly requested substantive proof that the branches are independent. CMC failed to provide adequate proof, however, and the Department instructed CMC to submit a consolidated response for all three branches. CMC ignored our instructions and continued to file separate responses for each of the trading branches. Because the technical deficiencies found in the responses are enough to support our use of best information available, there is no need to further address this issue, nor consider its effect on our decision to use best information available.

We determined that the best information available was information submitted by the petitioner. We used an average of the margins contained in the petition, for each class or kind of merchandise, as the basis for best information available.

We note that for the margins contained in the petition, no adjustment had been made for credit expenses and that the average margin for axes/adzes had been calculated incorrectly.

Therefore, based on credit information included in the petition, we recalculated average margins for each class or kind of merchandise, adjusting for differences in credit costs. We also corrected the error in the calculation of the average margin for axes/adzes.

Critical Circumstances

Petitioner alleged that "critical circumstances" exist with respect to imports of HFHTs from the PRC. Section 733(e)(1) of the Act provides that critical circumstances exist when we determine that there is a reasonable basis to believe or suspect that:

(A)(i) there is a history of dumping in the United States or elsewhere of the class or kind of the merchandise which is the subject of the investigation, or

(ii) The person by whom, or for whose account, the merchandise was imported knew or should have known that the exporter was selling the merchandise which is the subject of the investigation at less than its fair value, and

(B) There have been massive imports of the merchandise which is the subject of the investigation over a relatively short period.

We generally consider the following factors in determining whether imports have been massive over a relatively short period of time: (1) The volume and value of the imports; (2) seasonal trends (if applicable); and (3) the share of the domestic consumption accounted for by imports.

In determining knowledge of dumping we normally consider margins of 25 percent or more sufficient to impute knowledge of dumping under section 735(a)(3)(A). *See, e.g., Final Determination of Sales at Less Than Fair Value; Tapered Roller Bearings and Parts Thereof, Finished or Unfinished, from Italy* (52 FR 24198, June 29, 1987). Because we are relying on the petition for purposes of our determinations regarding sales at less than fair value (*see* Best Information Available section of this notice), we have also relied on the petition as best information available in determining knowledge of dumping.

Average margins contained in the petition for hammers/sledges, bars/wedges, and picks/mattocks exceed 25 percent. Therefore, in accordance with section 735(a)(3)(A)(ii), we determine that knowledge of dumping existed for these three classes or kinds.

Because of serious inconsistencies in CMC's quantity and value data (*see* Best Information Available section of this notice), we have relied upon best information available for determining whether there have been massive imports. As best information, we compared the Commerce Department import statistics for the four-month period beginning with the month the petition was filed with the four-month period prior to the month the petition was filed. The first period, running from April through July, represents the months from the beginning of the investigations until the most recent month for which Commerce Department import statistics are available. We have chosen this time period because it is the period in which respondent could take advantage of its knowledge of the dumping investigations to increase exports to the United States without being subject to antidumping duties. (*See, e.g., Final Determinations of Sales at Less Than Fair Value; Certain Internal-Combustion, Industrial Forklift Trucks from Japan*, 53 FR 12552, April 15, 1988).

For two classes or kinds, hammers/sledges and bars/wedges, we compared Commerce Department import statistics for the periods described above. Based on our analysis of this data, we have found that imports of hammers/sledges and bars/wedges have been massive over a relatively short period of time. The Commerce Department import data for picks/mattocks are based on a basket HTS category for which no quantity information is available. Therefore, we have relied upon the Commerce Department import data for hammers/sledges and bars/wedges as best information available and have assumed that imports of picks/mattocks have also been massive over a relatively short period of time.

We also examined Commerce Department import statistics for hammers/sledges and bars/wedges to ensure that the increase in imports did not simply reflect seasonal trends. The seasonal data did not indicate any seasonal increases in shipments. In fact, data for 1986 and 1989 indicated that April–July imports actually dropped in comparison to December–March imports.

Because the dumping margins for CMC for hammers/sledges, bars/wedges, and picks/mattocks are sufficient to impute knowledge of dumping, and because imports of these three classes or kinds have been massive, in accordance with sections 735(a)(3)(A)(ii) and 735(a)(3)(B), we preliminarily find that critical circumstances exist with respect to hammers/sledges, bars/wedges, and picks/mattocks exported by CMC. We have based our critical circumstances determinations on country-wide import data.

Verification

Because we have rejected CMC's questionnaire response and are using best information available for our determinations, we do not intend to verify CMC's questionnaire response.

Suspension of Liquidation

In accordance with sections 733(d)(1) and 733(e)(2) of the Act, we are directing the U.S. Customs Service to suspend liquidation of all entries of HFHTs from the PRC, as defined in the "Scope of Investigations" section of this notice, that are entered, or withdrawn from warehouse, for consumption on or after the date which is 90 days prior to the date of publication of this notice in the Federal Register. The U.S. Customs service shall require a cash deposit or a bond equal to the estimated preliminary dumping margin, as shown below. The suspension of liquidation will remain in effect until further notice.

All exports of HFHTs from the PRC	Weighted-average margin percentage	Critical circumstances
Hammers/sledges	40.54	Yes.
Bars/wedges	32.80	Yes.
Picks/mattocks	82.65	Yes.
Axes/adzes	16.18	No.

ITC Notification

In accordance with section 733(f) of the Act, we have notified the ITC of our determinations and findings. In addition, we are making available to the ITC all nonprivileged and nonproprietary information relating to these investigations. We will allow the ITC access to all privileged and business proprietary information in our files, provided the ITC confirms in writing that it will not disclose such information, either publicly or under administrative protective order, without the written consent of the Deputy Assistant Secretary for Investigations, Import Administration. If our final determinations are affirmative, the ITC will determine whether these imports are materially injuring, or threaten material injury to, the U.S. industry before the later of 120 days after the date of these preliminary determinations or 45 days after our final determinations.

Public Comment

In accordance with 19 CFR 353.38, case briefs or other written comments in at least ten copies must be submitted to the Assistant Secretary no later than October 22, 1990, and rebuttal briefs no later than October 29, 1990. In accordance with 19 CFR 353.38(b), we

will hold a public hearing, if requested, to afford interested parties an opportunity to comment on arguments raised in case or rebuttal briefs. The hearing will be held at 1 p.m. on October 31, 1990, at the U.S. Department of Commerce, room 3708, 14th Street and Constitution Avenue NW., Washington, DC 20230. Interested parties who wish to participate in the hearing must submit a written request to the Assistant Secretary for Import Administration, U.S. Department of Commerce, room B-099 within 10 days of the publication of this notice. Requests should contain: (1) The party's name, address, and telephone number; (2) the number of participants; (3) the reasons for attending; and (4) a list of the issues to be discussed. In accordance with 19 CFR 353.38(b), oral presentations will be limited to arguments raised in the briefs.

These determinations are published pursuant to section 733(f) of the Act (19 U.S.C. 1673(f)).

Dated: October 11, 1990.

Francis J. Sailer,

Acting Assistant Secretary for Import Administration.

BILLING CODE 3510-DS-M

[A-588-087]

Portable Electric Typewriters From Japan; Court of Appeals for the Federal Circuit Decision Concerning the Scope of the Antidumping Duty Order

AGENCY: International Trade Administration/Import Administration Department of Commerce.

ACTION: Notice of Court of Appeals for the Federal Circuit Decision concerning the scope of the antidumping duty order.

SUMMARY: On March 18 and November 23, 1988, in accordance with orders of the Court of International Trade ("CIT"), the Department of Commerce ("the Department") submitted to the CIT final results of a revised determination with respect to the scope of the antidumping duty order. In the revised determination we determined that automatic portable typewriters and portable electric typewriters incorporating a calculating mechanism are within the scope of the antidumping duty order. The CIT affirmed this determination on February 3, 1989. The CIT's order was appealed to the Court of Appeals for the Federal Circuit ("CAFC").

On April 5, 1990, in accordance with the CAFC's decision in *The Timken Company* v. *United States*, the Department issued a notice of the CIT's decision. *See* 55 FR 12701. We also instructed Customs to suspend liquidation of all unliquidated entries of automatic portable electric typewriters and portable electric typewriters incorporating a calculating mechanism, entered, or withdrawn from warehouse, for consumption on or after February 3, 1989.

On September 28, 1990, the CAFC affirmed the decision of the CIT that automatic portable electric typewriters are within the scope of the antidumping duty order.

EFFECTIVE DATE: October 19, 1990.

FOR FURTHER INFORMATION CONTACT: Tom Prosser or Maureen Flannery, Office of Antidumping Compliance, International Trade Administration, U.S. Department of Commerce, Washington, DC 20230; telephone: (202) 377-2923.

SUPPLEMENTARY INFORMATION:

Background

On December 31, 1987, the Court of International Trade ("CIT") in *Smith Corona Corporation* v. *United States* (Slip Op. 87-145) remanded to the Department of Commerce ("the Department") for redetermination the scope of the *Antidumping Duty Order on Portable Electric Typewriters from Japan*, 45 FR 30618 (May 9, 1980). The CIT ordered the Department to reconsider its scope determination made in *Portable Electric Typewriters from Japan; Final Results of Antidumping Administrative Review*, 52 FR 1504 (January 14, 1987), and publish a revised determination as to whether automatic portable electric typewriters, that is, those incorporating text memory, or portable electric typewriters incorporating a calculating mechanism, are within the scope of the May 9, 1980 antidumping duty order.

On March 18, 1988, the Department filed a revised scope determination with the Court, in which it determined that non-automatic portable electric typewriters incorporating a calculating mechanism are within the scope of the May 9, 1980 antidumping duty order and that automatic portable electric typewriters are not within the scope of that order.

After reviewing the Department's revised scope determination, the CIT, on September 20, 1988, in *Smith Corona Corporation* v. *United States* (Slip Op. 88-127), affirmed the Department's decision that non-automatic portable electric typewriters incorporating a calculating mechanism are included within the scope of the antidumping duty order, but reversed the Department's determination that automatic portable electric typewriters are not within the scope of the order. On November 23, 1988, based on the Court's instruction to the Department on September 20, 1988 to issue a redetermination on the issue of automatic portable electric typewriters, the Department determined that automatic portable electric typewriters are within the scope of the antidumping duty order.

On February 3, 1989 (Slip Op. 89-14), the CIT affirmed the Department's November 23, 1988 determination with respect to automatic portable electric typewriters, and the Department's March 18, 1988 determination with respect to non-automatic portable electric typewriters incorporating a calculating mechanism.

On April 3, 1989, respondents appealed the CIT's decision in the Court of Appeals for the Federal Circuit ("CAFC"). On April 5, 1990, pursuant to a CAFC decision in *The Timken Company* v. *United States*, 893 F.2d 337 (Fed. Cir. 1990), reh'g denied, (March 12, 1990), the Department issued a notice of the CIT's decision. We thereupon instructed the Customs Service to suspend liquidation of all unliquidated entries of automatic portable electric typewriters and portable electric typewriters incorporating a calculating mechanism entered, or withdrawn from warehouse, for consumption on or after February 3, 1989.

On September 28, 1990 the CAFC affirmed the decision of the CIT that automatic portable electric typewriters are within the scope of the May 9, 1980 antidumping duty order on portable electric typewriters from Japan.

Suspension of Liquidation

In accordance with the conclusive decision from the CAFC on the scope of the antidumping duty order, we are instructing the Customs Service to continue to suspend liquidation of all unliquidated entries of automatic portable electric typewriters and portable electric typewriters incorporating a calculating mechanism which were entered, or withdrawn from warehouse, for consumption on or after February 3, 1989. Additionally, we are instructing Customs to collect cash deposits of estimated antidumping duties for all such merchandise entered, or withdrawn from warehouse, for consumption on or after September 28, 1990. Cash deposits will be based on the margins currently in effect for each manufacturer/exporter. (*See Portable Electric Typewriters from Japan; Final Results of Antidumping Duty Administrative Review*, October 19, 1990.)

Dated: October 9, 1990.

Eric I. Garfinkel,

Assistant Secretary for Import Administration

BILLING CODE 3510-DS-M

[A-428-807 and A-412-806]

Preliminary Determinations of Sales at Less Than Fair Value: Sodium Thiosulfate from the Federal Republic of Germany and the United Kingdom

AGENCY: Import Administration, International Trade Administration, Commerce.

ACTION: Notice.

SUMMARY: We preliminarily determine that imports of sodium thiosulfate from the Federal Republic of Germany and the United Kingdom are being, or are likely to be, sold in the United States at less than fair value. We have notified the U.S. International Trade Commission (ITC) of our determinations and have directed the U.S. Customs Service to suspend liquidation of all entries of sodium thiosulfate from the Federal Republic of Germany and the United Kingdom, as described in the "Suspension of Liquidation" section of this notice. The statutory deadline for the final determinations is December 28, 1990. However, we may expedite these determinations.

EFFECTIVE DATE: October 19, 1990.

FOR FURTHER INFORMATION CONTACT: Kate Johnson or Steve Alley, Office of Antidumping Investigations, Import Administration, International Trade Administration, U.S. Department of Commerce, 14th Street and Constitution Avenue, NW., Washington, DC 20230; telephone (202) 377-4103 or (202) 377-1766, respectively.

SUPPLEMENTARY INFORMATION:

We preliminarily determine that imports of sodium thiosulfate from the Federal Republic of Germany and the United Kingdom are being, or are likely to be, sold in the United States at less than fair value, as provided in section 733 of the Tariff Act of 1930, as amended (19 U.S.C. 1673b) (the Act). The estimated margins are shown in the "Suspension of Liquidation" section of this notice. The statutory deadline for the final determinations is December 28, 1990. However, we may expedite these determinations.

Case History

We initiated these investigations under the name "Certain Sulfur Chemicals from the Federal Republic of Germany, the United Kingdom, Turkey, and the People's Republic of China" (55 FR 32119 August 7, 1990). The scope of investigation, defined in the notices of initiation, included both sodium thiosulfate and sodium metabisulfite.

On August 29, 1990, the ITC published its determination that there is a reasonable indication that an industry in the United States is threatened with material injury by reason of imports from the Federal Republic of Germany, the United Kingdom and the People's Republic of China of sodium thiosulfate (55 FR 34373). The ITC also determined that there is no reasonable indication that an industry in the United States is threatened with material injury by reason of imports from Turkey of sodium thiosulfate. In addition, the ITC determined that there is no reasonable indication that an industry in the United States is threatened with material injury by reason of imports from the Federal Republic of Germany, the United Kingdom, Turkey, and the People's Republic of China of sodium metabisulfite.

As a result, the investigations of sodium metabisulfite from the Federal Republic of Germany, the United Kingdom, Turkey, and the People's Republic of China, and the investigation of sodium thiosulfate from Turkey terminated, and the remaining investigations are renamed "Sodium Thiosulfate from the Federal Republic of Germany, the United Kingdom, and the People's Republic of China."

On September 4, 1990, the Department's questionnaire was presented to William Blythe & Co., Ltd. (Blythe). This manufacturer accounted for almost all exports of the subject merchandise from the United Kingdom during the period of investigation (POI).

On September 10, 1990, the Department's questionnaire was received by Th. Goldschmidt AG (Goldschmidt). This manufacturer accounted for more than 60 percent of the imports of the subject merchandise to the United States from the Federal Republic of Germany during the POI. There were no imports into the United States during the POI from the former German Democratic Republic.

On September 19, 1990, Blythe submitted a letter notifying the Department that it would not respond to the Department's questionnaire. Likewise, on October 5, 1990, Goldschmidt submitted a letter notifying the Department that it would not respond to the Department's questionnaire.

Because representatives of the People's Republic of China have indicated that exporters of sodium thiosulfate may still respond to our questionnaire, we will make our preliminary determination on sodium thiosulfate from the People's Republic of China at a later date.

On September 28, 1990, Blythe requested that the Department investigate whether petitioner has standing. Blythe cites *Saramerica de Aleaciones Laminadas, C.A.* v. *U.S.*, Slip. Op. 90-79 at 32 (CIT Aug. 22, 1990), in which the Court of International Trade held that the Department cannot presume industry support for a petition. This issue is addressed in the Standing section, below.

On October 3, 1990, Blythe requested that the Department not find critical circumstances with respect to Blythe. Blythe submitted company-specific shipment data and United Kingdom export statistics that, according to Blythe, indicate that critical circumstances are not present. This issue is addressed in the Critical Circumstances section, below.

Scope of Investigation

The products covered by these investigations are all grades of sodium thiosulfate, in dry or liquid form, used primarily to dechlorinate industrial waste water. The chemical composition of sodium thiosulfate is $Na_2S_2O_3$. Sodium thiosulfate is currently classifiable under Harmonized Tariff Schedule (HTS) subheading 2832.30.1000. The HTS subheadings are provided for convenience and U.S. Customs Service purposes. The written description remains dispositive.

Period of Investigation

The period of investigation is February 1, 1990, through July 31, 1990.

Standing

There is nothing in the statute, its legislative history, or our regulations which requires that petitioners establish affirmatively that they have the support of a majority of their industries. In many cases, such a requirement would be so onerous as to preclude access to import relief under the countervailing and antidumping duty laws. Therefore, consistent with our past practice (see, for example, Final Affirmative Countervailing Duty Determination: Certain Stainless Steel Hollow Products from Sweden (52 FR 5794, February 26, 1987); Final Affirmative Countervailing Duty Determination: Certain Fresh Atlantic Groundfish from Canada (51 FR 10041, March 24, 1986); and Frozen Concentrated Orange Juice from Brazil: Final Determination of Sales at Less than Fair Value (52 FR 8324, March 17, 1987)), we have preliminarily

determined that the petitioner does not lack standing.

Fair Value Comparisons

To determine whether sales of sodium thiosulfate from the Federal Republic of Germany and the United Kingdom to the United States were made at less than fair value, we used best information available as required by section 776(c) of the Act because Blythe and Goldschmidt declined to respond to the Department's request for information. We determined that the best information available was information submitted by the petitioner.

For the United Kingdom, we used a simple average of both margins listed in the petition for sodium thiosulfate for the period of investigation. We adjusted the U.S. price and foreign market value for one sale of sodium thiosulfate pentahydrate in the United Kingdom for clerical errors found in the petition.

For the Federal Republic of Germany, we used the only margin listed in the petition for sodium thiosulfate for the period of investigation.

Critical Circumstances

Petitioner alleges that "critical circumstances" exist with respect to imports of the subject merchandise from the Federal Republic of Germany and the United Kingdom. Section 733(e)(1) of the Act provides that critical circumstances exist if we determine that there is a reasonable basis to believe or suspect that:

(A)(i) There is a history of dumping in the United States or elsewhere of the class or kind of merchandise which is the subject of the investigation, or

(ii) The person by whom, or for whose account, the merchandise was imported knew or should have known that the exporter was selling the merchandise which is the subject of the investigation at less than its fair value, and

(B) There have been massive imports of the class or kind of merchandise which is the subject of the investigation over a relatively short period.

Pursuant to section 733(e)(1)(B), we generally consider the following factors in determining whether imports have been massive over a short period of time: (1) The volume and value of the imports; (2) seasonal trends (if applicable); and (3) the share of domestic consumption accounted for by imports.

Since Blythe and Goldschmidt failed to participate in these investigations, we have preliminarily determined that critical circumstances exist based on best information available. As best information available, we are assuming that imports of sodium thiosulfate have been massive over a relatively short period of time. The available import statistics compiled by the U.S. Department of Commerce do not allow us to measure the level of imports since the filing of the petition. Assuming that additional data becomes available, we will reconsider these findings in our final determinations.

Given that Blythe notified the Department that it would not participate in the investigation, we did not rely on the company-specific shipment information it submitted because such information will not be verified. We did not rely on the United Kingdom export statistics submitted by Blythe because they covered a period only through August 1990. These statistics were insufficient to measure import levels subsequent to the filing of the petition. Assuming that Blythe submits additional official U.K. export data, we will reconsider this data in our final determination.

In determining knowledge of dumping the Department normally considers margins of 25 percent or more sufficient to impute knowledge of dumping under section 735(a)(3)(A). *See, e.g., Final Determination of Sales at Less Than Fair Value; Tapered Roller Bearings and Parts Therefor, Finished or Unfinished, from Italy* (52 FR 24198 June 29, 1987). Because the dumping margins alleged in the petition for both Blythe and Goldschmidt exceed 25 percent, this condition is satisfied.

Therefore, in accordance with sections 735(a)(3)(A)(ii) and 735(a)(3)(B), we preliminarily determine that critical circumstances exist with respect to both Blythe and Goldschmidt.

With respect to firms covered by the "All Other" rate, we have determined that imports of sodium thiosulfate have not been massive over a relatively short period of time. As such, we preliminarily determine that critical circumstances do not exist for those firms.

Suspension of Liquidation

In accordance with section 733(d)(1) of the Act, we are directing the U.S. Customs Service to suspend liquidation of all entries of sodium thiosulfate from Goldschmidt and Blythe, as defined in the "Scope of Investigation" section of this notice, that are entered, or withdrawn from warehouse, for consumption on or after the date which is 90 days prior to the date of publication of this notice in the Federal Register. Also in accordance with section 733(d)(1) of the Act, we are directing the U.S. Customs Service to suspend liquidation of all other entries of sodium thiosulfate from the Federal Republic of Germany and the United Kingdom, as defined in the "Scope of Investigation" section of this notice, that are entered or withdrawn from warehouse, for consumption on or after the date of publication of this notice in the Federal Register. The U.S. Customs Service shall require a cash deposit or posting of a bond equal to the estimated preliminary dumping margin, as shown below. The suspension of liquidation will remain in effect until further notice.

Manufacturer/producer/exporter	Margin percentage
United Kingdom:	
William Blythe & Co., Ltd.	50.62
All Others	50.62
Federal Republic of Germany:	
Th. Goldschmidt AG	100.40
All others	100.40

ITC Notification

In accordance with section 733(f) of the Act, we have notified the ITC of our determinations. In addition, we are making available to the ITC all nonprivileged and nonproprietary information relating to these investigations. We will allow the ITC access to all privileged and business proprietary information in our files, provided the ITC confirms in writing that it will not disclose such information, either publicly or under administrative protective order, without the written consent of the Deputy Assistant Secretary for Investigations, Import Administration.

If our final determinations are affirmative, the ITC will determine whether these imports are materially injuring, or threaten material injury to, the U.S. industry before the later of 120 days after the date of these preliminary determinations or 45 days after our final determinations.

Public Comment

In accordance with 19 CFR 353.38, case briefs or other written comments in at least ten copies must be submitted to the Assistant Secretary for Import Administration no later than November 5, 1990, and rebuttal briefs no later than November 8, 1990. In accordance with 19 CFR 353.38(b), we will hold a public hearing, if requested, to afford interested parties an opportunity to comment on arguments raised in case or rebuttal briefs. The hearing will be held at 10 a.m. on November 15, 1990, at the U.S. Department of Commerce, room 3708, 14th Street and Constitution Avenue, NW., Washington, DC 20230. Interested parties who wish to participate in the hearing must submit a written request to the Assistant Secretary for Import

Administration, U.S. Department of Commerce, room B-099 within 10 days of the publication of this notice. Requests should contain:

(1) The party's name, address, and telephone number; (2) the number of participants; (3) the reasons for attending; and (4) a list of the issues to be discussed. In accordance with 19 CFR 353.38(b), oral presentations will be limited to arguments raised in the briefs.

These determinations are published pursuant to section 733(f) of the Act (19 U.S.C. 1673b(f)).

Dated: October 11, 1990.

Francis J. Sailer,

Acting Assistant Secretary for Import Administration.

BILLING CODE 3510-DS-M

COMMISSION ON MINORITY BUSINESS DEVELOPMENT

[90-M-7]

Hearings

AGENCY: Commission on Minority Business Development.

ACTION: Notice of public hearing.

SUMMARY: Notice is hereby given in accordance with the Federal Advisory Committee Act that a public hearing of the Commission on Minority Business Development will be held on Friday, October 26, 1990 in Cincinnati, Ohio. The hearing is open to the public.

The October 26th hearing will convene at 9 a.m. at the City Council Chambers, City Hall, 8th and Plum Streets, Cincinnati, Ohio.

The public hearing is for the purpose of receiving testimony from public and private sector decision-makers and entrepreneurs, professional experts, corporate leaders and representatives of key interest groups and organizations concerned about minority business development and participation in Federal programs and contracting opportunities.

The Commission was established by Public Law 100-656, for purposes of reviewing and assessing Federal programs intended to promote minority business and making recommendations to the President and the Congress for such changes in laws or regulations as may be necessary to further the growth and development of minority businesses.

FOR FURTHER INFORMATION CONTACT: Arlene Pinkney or Connie K. McCracken at 202-523-0330 at the Commission on Minority Business Development, 730 Jackson Place, NW., Washington, DC 20006.

SUPPLEMENTARY INFORMATION: Transcripts of hearings will be available for public inspection during regular working hours at 730 Jackson Place, NW., Washington, DC 20006 approximately 30 days following the hearing.

André M. Carrington,

Executive Director.

BILLING CODE 6820-FS-M

COMMITTEE FOR THE IMPLEMENTATION OF TEXTILE AGREEMENTS

Announcement of a Request for Bilateral Textile Consultations With the Government of Nepal

October 9, 1990.

AGENCY: Committee for the Implementation of Textile Agreements (CITA).

ACTION: Notice.

FOR FURTHER INFORMATION CONTACT: Anne Novak, International Trade Specialist, Office of Textiles and Apparel, U.S. Department of Commerce, (202) 377-4212. For information on categories on which consultations have been requested, call (202) 377-3740.

SUPPLEMENTARY INFORMATION:

Authority. Executive Order 11651 of March 3, 1972, as amended; section 204 of the Agricultural Act of 1956, as amended (7 U.S.C. 1854).

On September 25, 1990, under section 204 of the Agricultural Act of 1956, as amended, the Government of the United States requested consultations with the Government of Nepal regarding imports of men's and boys' woven shirts in Category 640, produced or manufactured in Nepal.

The purpose of this notice is to advise the public that, if no solution is agreed upon in consultations with the Government of Nepal, the Committee for the Implementation of Textile Agreements may later establish a limit for the entry and withdrawal from warehouse for consumption of shirts in Category 640, produced or manufactured in Nepal and exported during the twelve-month period which began on September 25, 1990 and extends through September 24, 1991, of not less than 73,525 dozen.

A summary market statement concerning Category 640 follows this notice.

Anyone wishing to comment or provide data or information regarding the treatment of Category 640, or to comment on domestic production or availability of products included in Category 640, is invited to submit 10 copies of such comments or information to Auggie D. Tantillo, Chairman, Committee for the Implementation of Textile Agreements, U.S. Department of Commerce, Washington, DC 20230, ATTN: Public Comments.

Because the exact timing of the consultations is not yet certain, comments should be submitted promptly. Comments or information submitted in response to this notice will be available for public inspection in the Office of Textiles and Apparel, Room H3100, U.S. Department of Commerce, 14th and Constitution Avenue, NW., Washington, DC.

Further comments may be invited regarding particular comments or information received from the public which the Committee for the Implementation of Textile Agreements considers appropriate for further consideration.

The solicitation of comments regarding any aspect of the agreement or the implementation thereof is not a waiver in any respect of the exemption contained in 5 U.S.C. 553(a)(1) relating to matters which constitute "a foreign affairs function of the United States."

The United States remains committed to finding a solution concerning Category 640. Should such a solution be reached in consultations with the Government of Nepal, further notice will be published in the **Federal Register**.

A description of the textile and apparel categories in terms of HTS numbers is available in the CORRELATION: Textile and Apparel Categories with the Harmonized Tariff Schedule of the United States (see **Federal Register** notice 54 FR 50797, published on December 11, 1989).

Ronald I. Levin,

Acting Chairman, Committee for the Implementation of Textile Agreements.

Market Statement—Men's and Boys' Man-Made Fiber Woven Shirts

Category 640

Nepal, September 1990.

Import Situation and Conclusion

U.S. imports of men's and boys' man-made fiber woven shirts (Category 640) from Nepal reached 73,525 dozen during the year ending June 1990, 61 percent above the 45,669 dozen imported during the same period of 1989. During the first six months of 1990, imports of Category 640 from Nepal reached 31,282 dozen, nearly five times the 12,726 dozen imported during the corresponding

period in 1989 and two and one-half times greater than the 24,000 dozen imported during calendar year 1989. Nepal is the largest uncontrolled supplier of men's and boys' man-made fiber woven shirts to the U.S.

The sharp and substantial increase in Category 640 imports from Nepal is causing disruption in the U.S. market for men's and boys' man-made fiber woven shirts.

U.S. Production and Market Share

U.S. production of men's and boys' man-made fiber woven shirts (Category 640) fell from 9,750 thousand dozen in 1987 to 7,052 thousand dozen in 1989, a decline of 28 percent. The share of this market held by domestic manufacturers fell from 43 percent in 1987 to 38 percent in 1989, a decline of 5 percentage points.

U.S. Imports and Import Penetration

U.S. imports of men's and boys' man-made fiber woven shirts (Category 640) increased from 10,098 thousand dozen during the year ending June 1989 to 11,187 thousand dozen during the year ending June 1990, a 2 percent increase. The ratio of imports to domestic production increased to 161 percent in 1989, 27 percentage points above the 134 percent in 1987.

Duty-Paid Value and U.S. Producer's Price

Approximately 95 percent of Category 640 imports from Nepal during the first six months of 1990 entered under HTSUSA Number 6205.30.2070—men's man-made fiber woven shirts, other than dress type shirts and other than of yarn-dyed fabric. These shirts entered the U.S. at landed duty-paid values below U.S. producers' prices for comparable garments.

BILLING CODE 6820-33-M

Procurement List 1990; Additions to and Deletions

AGENCY: Committee for Purchase from the Blind and Other Severely Handicapped.

ACTION: Additions to and deletions from procurement list.

SUMMARY: This action adds to and deletes from Procurement List 1990 commodities to be produced and services to be provided by workshops for the blind or other severely handicapped.

EFFECTIVE DATE: November 19, 1990.

ADDRESSES: Committee for Purchase from the Blind and Other Severely Handicapped, Crystal Square 5, Suite 1107, 1755 Jefferson Davis Highway, Arlington, Virginia 22202-3509.

FOR FURTHER INFORMATION CONTACT: Beverly Milkman (703) 557-1145.

SUPPLEMENTARY INFORMATION: On May 4, July 20, 27 and August 31, 1990, the Committee for Purchase from the Blind and Other Severely Handicapped published notices (55 FR 18743, 29647, 30745 and 35706) of proposed additions to and deletions from Procurement List 1990, which was published on November 3, 1989 (54 FR 46450).

Additions

A comment was received from one of the current contractors for the glass cleaner. The contractor alleged that the proposed addition, when combined with two earlier additions to the Procurement List, would have a significant impact upon the firm's sales. However, the Committee determined that the actual impact of the proposed addition upon this company would not constitute serious adverse impact.

During the development stage, a current contractor indicated in a letter to the Committee that the addition of the wet weather poncho to the Procurement List would have a severe impact on the health of his business. After reviewing all data available to it on this point, the Committee has determined that the current contractor will not sustain serious adverse impact as a result of the addition of this commodity to the Procurement List. After consideration of the material presented to it concerning capability of qualified workshops to produce the commodities and provide the services at a fair market price and impact of the additions on the current or most recent contractors, the Committee has determined that the commodities and services listed below are suitable for procurement by the Federal Government under 41 U.S.C. 46-48c and 41 CFR 51-2.6.

I certify that the following actions will not have a significant impact on a substantial number of small entities. The major factors considered for this certification were:

a. The actions will not result in any additional reporting, recordkeeping or other compliance requirements.
b. The actions will not have a serious economic impact on any contractors for the commodities and services listed.
c. The actions will result in authorizing small entities to produce the commodities and provide the services procured by the Government.

Accordingly, the following commodities and services are hereby added to Procurement List 1990:

Commodities

Cover, Protective
1430-00-082-0054
1430-00-084-3086
1440-01-152-7790
(Remaining Government Requirement)

Harness, Safety Shoulder
2540-00-133-1263

Clamp, Loop
5340-01-155-5481

Cover, Fire Extinguisher
5340-00-419-2288
(Remaining Government Requirement)

Strap, Webbing
5340-00-001-1288
5340-00-082-6087
5340-00-085-4489
(Remaining Government Requirement)

Cleaner, Glass
7930-00-801-3088

Poncho, Wet Weather
8405-00-290-9650

Services

Janitorial/Custodial—Marine Corps Combat Development Command, Buildings 2008, 2010, 3040 and 3087, Quantico, Virginia

Tub and Burlap Washing—Rogue River National Forest, J. Herbert Stone Nursery, Central Point, Oregon

This action does not affect contracts awarded prior to the effective date of this addition or options exercised under the contracts.

Deletions

After consideration of the relevant matter presented, the Committee has determined that the commodities listed below are no longer suitable for procurement by the Federal Government under 41 U.S.C. 46–48c and 41 CFR 51–2.6.

Accordingly, the following commodities are hereby deleted from Procurement List 1990:

Paper Set, Manifold and Carbon
7530-00-401-6010
7530-01-072-2536
7530-01-072-2537
7530-01-072-2538
7530-01-072-2539
[Requirements for GSA Regions W, 4 and 6]

Beverly L. Milkman,
Executive Director.

BILLING CODE 6820-33-M

Procurement List 1990; Proposed Additions

AGENCY: Committee for Purchase from the Blind and Other Severely Handicapped.

ACTION: Proposed additions to procurement list.

SUMMARY: The Committee has received proposals to add to Procurement List 1990 commodities to be produced by workshops for the blind or other severely handicapped.

COMMENTS MUST BE RECEIVED ON OR BEFORE: November 19, 1990.

ADDRESSES: Committee for Purchase from the Blind and Other Severely Handicapped, Crystal Square 5, Suite 1107, 1755 Jefferson Davis Highway, Arlington, Virginia 22202–3509.

FOR FURTHER INFORMATION CONTACT: Beverly Milkman (703) 557–1145.

SUPPLEMENTARY INFORMATION: This notice is published pursuant to 41 U.S.C. 47(a)(2) and 41 CFR 51–2.6. Its purpose is to provide interested persons an opportunity to submit comments on the possible impact of the proposed actions.

If the Committee approves the proposed additions, all entities of the Federal Government will be required to procure the commodities listed below from workshops for the blind or other severely handicapped.

It is proposed to add the following commodities to Procurement List 1990, which was published on November 3, 1989 (54 FR 46540):

Cover, Mattress Pad
7210-00-118-6010

Liner, Night Camouflage Parka
8415-01-102-4487
8415-01-102-4488
8415-01-102-4683

BILLING CODE 6820-33-M

DEPARTMENT OF DEFENSE

Office of the Secretary

Defense Science Board Task Force on Acquisition Streamlining; Meeting

ACTION: Notice of Advisory Committee Meeting.

SUMMARY: The Defense Science Board Task Force on Acquisition Streamlining will meet in closed session on 5, 6 and 7 November, 1990, at Science Applications International Corporation (SAIC), McLean, Virginia.

The mission of the Defense Science Board is to advise the Secretary of Defense and the Under Secretary of Defense for Acquisition on scientific and technical matters as they affect the perceived needs of the Department of Defense. This meeting will address Phases 1 and 2 of the study. Data containing classified information from over 100 weapon system development programs will be reviewed during the meeting.

In accordance with section 10(d) of the Federal Advisory Committee Act, Public Law No. 92–463, as amended (5 U.S.C. App. II, (1982)), it has been determined that this DSB Task Force meeting concerns matters listed in 5 U.S.C. 552b(c)(1) (1982), and that accordingly this meeting will be closed to the public.

Dated: October 15, 1990.

Linda M. Bynum,
Alternate OSD Federal Register Liaison Officer, Department of Defense.

Defense Science Board Task Force on Advanced Naval Warfare Concepts; Meeting

ACTION: Notice of Advisory Committee meeting.

SUMMARY: The Defense Science Board Task Force on Advance Naval Warfare Concepts will meet in closed session on 14 November, 1990, at the Center for Naval Analyses, Alexandria, Virginia.

The mission of the Defense Science Board is to advise the Secretary of Defense and the Under Secretary of Defense for Acquisition on scientific and technical matters as they affect the perceived needs of the Department of Defense. At this meeting, the Task Force will examine advanced naval warfare concepts and assess relevant technology, equipment, and modernization plans.

In accordance with section 10(d) of the Federal Advisory Committee Act, Public Law No. 92–463, as amended (5 U.S.C. App. II, (1982)), it has been determined that this DSB Task Force meeting concerns matters listed in 5 U.S.C. 552b(c)(1) (1982), and that accordingly this meeting will be closed to the public.

Dated: October 15, 1990.

Linda M. Bynum,
Alternate OSD Federal Register Liaison Officer, Department of Defense.

Defense Science Board Task Force on Anti-Submarine Warfare; Meeting

ACTION: Notice of Advisory Committee meeting.

SUMMARY: The Defense Science Board Task Force on Anti-Submarine Warfare will meet in closed session on 20 November, 1990, at the Center for Naval Analyses, Alexandria, Virginia.

The mission of the Defense Science Board is to advise the Secretary of Defense and the Under Secretary of Defense for Acquisition on scientific and technical matters as they affect the perceived needs of the Department of Defense. At this meeting, the Task Force will receive briefings on future anti-submarine warfare programs and current plans and deliberate on preliminary findings.

In accordance with section 10(d) of the Federal Advisory Committee Act, Public Law No. 92–463, as amended (5 U.S.C. App. II, (1982)), it has been determined that this DSB Task Force meeting concerns matters listed in 5

U.S.C. 552b(c)(1) (1982), and that accordingly this meeting will be closed to the public.

Dated: October 15, 1990.

Linda M. Bynum,

Alternate OSD Federal Register Liaison Officer, Department of Defense.

Defense Science Board Task Force on Chemical Weapons Policy; Meeting

ACTION: Notice of Advisory Committee meeting.

SUMMARY: The Defense Science Board Task Force on Chemical Weapons Policy will meet in closed session on 16 November, 1990, at the Pentagon, Arlington, Virginia.

The mission of the Defense Science Board is to advise the Secretary of Defense and the Under Secretary of Defense for Acquisition on scientific and technical matters as they affect the perceived needs of the Department of Defense. At this meeting, the Task Force will deliberate on briefings received to date and begin formulation of findings and recommendations.

In accordance with section 10(d) of the Federal Advisory Committee Act, Public Law No. 92-463, as amended (5 U.S.C. App. II, (1982)), it has been determined that this DSB Task Force meeting concerns matters listed in 5 U.S.C. 552b(c)(1) (1982), and that accordingly this meeting will be closed to the public.

Dated: October 15, 1990.

DEPARTMENT OF EDUCATION

Notice of Proposed Information Collection Requests

AGENCY: Department of Education.

ACTION: Notice of proposed information collection requests.

SUMMARY: The Director, Office of Information Resources Management, invites comments on the proposed information collection requests as required by the Paperwork Reduction Act of 1980.

DATES: Interested persons are invited to submit comments on or before November 19, 1990.

ADDRESSES: Written comments should be addressed to the Office of Information and Regulatory Affairs Attention: Dan Chenok, Desk Officer, Department of Education, Office of Management and Budget, 726 Jackson Place, NW., room 3208, New Executive Office Building, Washington, DC 20503. Requests for copies of the proposed information collection requests should be addressed to James O'Donnell, Department of Education, 400 Maryland Avenue, SW., room 5624, Regional Office Building 3, Washington, DC 20202.

FOR FURTHER INFORMATION CONTACT: James O'Donnell, (202) 708-5174.

SUPPLEMENTARY INFORMATION: Section 3517 of the Paperwork Reduction Act of 1980 (44 U.S.C. chapter 35) requires that the Office of Management and Budget (OMB) provide interested Federal agencies and the public an early opportunity to comment on information collection requests. OMB may amend or waive the requirement for public consultation to the extent that public participation in the approval process would defeat the purpose of the information collection, violate State or Federal law, or substantially interfere with any agency's ability to perform its statutory obligations.

The Acting Director, Office of Information Resources Management, publishes this notice containing proposed information collection requests prior to submission of these requests to OMB. Each proposed information collection, grouped by office, contains the following: (1) Type of review requested, e.g., new, revision, extension, existing or reinstatement; (2) Title; (3) Frequency of collection; (4) The affected public; (5) Reporting burden; and/or (6) Recordkeeping burden; and (7) Abstract. OMB invites public comment at the address specified above. Copies of the requests are available from James O'Donnell at the address specified above.

Dated: October 15, 1990.

James O'Donnell,

Acting Director, for Office of Information Resources Management.

Office of Planning, Budget and Evaluation

Type of Review: New.
Title: Case Study of the Chelsea School Project's Implementation—Teacher Survey.
Frequency: One-time.
Affected Public: Individuals or households.
Reporting Burden:
Responses: 290.
Burden Hours: 73.
Recordkeeping Burden:
Recordkeepers: 0.
Burden Hours: 0.
Abstract: The purpose of this survey is to identify teacher perceptions regarding the needs of the Chelsea School System and the impact of the project. The Department uses the data to assess the accomplishments and program goals.

Office of Postsecondary Education

Type of Review: Revision.
Title: Guaranteed Student Loan Tape Dump.
Frequency: Annually.
Affected Public: State or local governments; Non-profit institutions.
Reporting Burden:
Responses: 36.
Burden Hours: 55368.
Recordkeeping Burden:
Recordkeepers: 0.
Burden Hours: 0.
Abstract: This information is collected to describe the characteristics of borrowers under the Guaranteed Student Loan (GSL) Program and to monitor borrower fraud and abuse in the programs. The Department uses this information to report to Congress.

Office of Special Education and Rehabilitative Services

Type of Review: Extension.
Title: Application or Written Request for Assistant for Client Assistance Program.
Frequency: Triennial.
Affected Public: State or local governments.
Reporting Burden:
Responses: 5.
Burden Hours: 1.
Recordkeeping Burden:
Recordkeepers: 0.
Burden Hours: 0.
Abstract: This form is used by State Educational agencies to request funding under the Client Assistance Program (CAP). The Department uses the information to make grant awards.

Projects With Industry

AGENCY: Department of Education.

ACTION: Correction notice.

SUMMARY: On October 3, 1990, a notice of final funding priorities for fiscal year 1991 for the Projects With Industry program was published in the Federal Register.

On page 40630, in the first column, a line affecting the last two sentences of "Priority 7: The Older Disabled Worker" was inadvertently omitted. The

sentences should read: "Accordingly, priority will be given to projects that provide specialized service programs that meet the competitive employment needs of individuals in this age group who have severe or other disabilities. Project services must include training, supportive services, job development, and placement services."

Dated: October 15, 1990.

Robert R. Davila,

Assistant Secretary, Office of Special Education and Rehabilitative Services.

BILLING CODE 4000-01-M

Fund for the Improvement and Reform of Schools and Teaching Board; Meeting

AGENCY: Fund for the Improvement and Reform of Schools and Teaching Board, Education.

ACTION: Notice of an open meeting.

SUMMARY: This notice sets forth the schedule and agenda of a forthcoming meeting of the Fund for the Improvement and Reform of Schools and Teaching Board. This notice also describes the functions of the Board. Notice of this meeting is required under section 10(a)(2) of the Federal Advisory Committee Act. This document is intended to notify the general public of their opportunity to attend.

DATE AND TIME: November 8, 1990, 9 a.m.–5 p.m., November 9, 1990, 9 a.m.–11:30 a.m.; November 9, 1990, 11:45 a.m.–12:30 p.m.

ADDRESSES: U.S. Department of Education, OERI, 555 New Jersey Avenue NW., room 328, Washington, DC 20208–5524.

FOR FURTHER INFORMATION CONTACT: Richard T. La Pointe, Director, Fund for the Improvement and Reform of Schools and Teaching, U.S. Department of Education, 555 New Jersey Avenue NW., room 522, Washington, DC 20208–5524, (202) 357–6496 before October 26, 1990 and (202) 219–1496 after October 26, 1990.

SUPPLEMENTARY INFORMATION: The Fund for the Improvement and Reform of Schools and Teaching (FIRST) Board was established under section 3231 of the Hawkins-Stafford Elementary and Secondary School Improvement Amendments of 1988 (Pub. L. 100–297). The Board was established to advise the Secretary concerning developments in education that merit his attention; identify promising initiatives to be supported under the authorizing legislation; and advise the Secretary and the Director of the Fund on the selection of projects under consideration for support, and on planning documents, guidelines and procedures for grant competitions carried out by the Fund.

On November 8, 1990, the Board will introduce and swear in new Board members, approve the minutes from the January meeting, discuss progress of selected 1989 projects, review the 1990 grants and grant competition process, discuss FIRST information outreach strategies, review the Technical Assistance/Dissemination Contract, and evaluate outcomes from the Fund for the Improvement of Postsecondary Education (FIPSE) and FIRST Conference held in September.

On November 9, 1990, the agenda includes: Strategies for improving procedures for grant competitions, priorities for the improvement of education, discussion and selection of a nominating committee and election for new officers, and briefing/orientation for new members. The meeting will conclude with a discussion of upcoming agenda for and date of the next Board meeting.

Records are kept of all Board proceedings, and are available for public inspection at the office of the Fund for the Improvement and Reform of Schools and Teaching, U.S. Department of Education, 555 New Jersey Avenue NW., room 522, Washington, DC 20208–5524, (202) 357–6496 before October 26, 1990 and (202) 219–1496 after October 26, 1990 from the hours of 8:30 am–5 pm.

Dated: October 16, 1990.

Christopher T. Cross,

Assistant Secretary, Office of Educational Research and Improvement.

[FR Doc. 90-24503 Filed 10-18-90; 8:45 am]

BILLING CODE 4000-01-M

DEPARTMENT OF ENERGY

Chicago Operations Office; Award Based on Acceptance of Unsolicited Application; Virginia Polytechnic Institute

AGENCY: Department of Energy.

ACTION: Notice of noncompetitive financial assistance award.

SUMMARY: The Department of Energy (DOE), Chicago Operations Office, announces it intends to award a grant to Virginia Polytechnic Institute and State University (VPI). VPI's unsolicited application was found to be meritorious by DOE based on the evaluation criteria set forth in 10 CFR 600.14(d) (1), (2), (3), and (e)(1) (i) and (ii) and is being accepted as it represents a unique, innovative idea, method and approach which would not otherwise be eligible for financial assistance under any recent, current, or planned solicitation. The objective of the work to be supported by this grant is to develop a new management strategy for Government Program Office (GPO) managers which takes a holistic approach to management rather than a post-classical compartmentalized approach. VPI will develop a Grand Strategy System through the research and development (R&D) of new tools and methods designed to meet the needs of a new management approach and will demonstrate the success of the system by using the DOE Office of New Production Reactors (NP) as a real-world laboratory test case.

FOR FURTHER INFORMATION CONTACT: Marlene R. Ferrari, U.S. Department of Energy, Chicago Operations Office, 9800 South Cass Avenue, Argonne, IL 60439, (708) 972–2080.

SUPPLEMENTARY INFORMATION: The mission of NP's is to provide new production reactor capacity on an urgent schedule for an assured supply of nuclear materials, primarily tritium, to maintain the nation's nuclear deterrent capability. The Department's strategy is to design, build, and operate a heavy water reactor at the Savannah River site in South Carolina and a modular high-temperature gas-cooled reactor plant at the Idaho National Engineering Laboratory in Idaho. NP was uniquely established as a project-oriented organization with singular missions and objectives which dictate that it be managed, justified, and funded as a production program and not as a research or demonstration program. This unique status required a different management philosophy. The success of the program will depend on how well the program participants are organized and managed in the performance of their jobs. Managing a major government program such as NP in the new and current environment is not a well established or documented process. The benefits of the proposed R&D will help GPOs, or equivalent organizations, effectively apply resources, proactively avert crises, and move efficiently toward their strategic and operational objectives. The project period for the grant is for a five-year period, expected to begin in October 1990. DOE plans to provide funding in the amount of $9,869,227.00 for this project period.

Issued in Chicago, Illinois, on October 9, 1990.

Edwin H. Hendricks,

Deputy Assistant Manager for Administration.

[FR Doc. 90-24761 Filed 10-18-90; 8:45 am]

BILLING CODE 6450-01-M

Energy Information Administration

Agency Information Collections Under Review by the Office of Management and Budget

AGENCY: Energy Information Administration, DOE.

ACTION: Notice of requests submitted for review by the Office of Management and Budget.

SUMMARY: The Energy Information Administration (EIA) has submitted the energy information collection(s) listed at the end of this notice to the Office of Management and Budget (OMB) for review under provisions of the Paperwork Reduction Act (Pub. L. 96-511, 44 U.S.C. 3501 *et seq.*). The listing does not include collections of information contained in new or revised regulations which are to be submitted under section 3504(h) of the Paperwork Reduction Act, nor management and procurement assistance requirements collected by the Department of Energy (DOE).

Each entry contains the following information: (1) The sponsor of the collection (the DOE component or Federal Energy Regulatory Commission (FERC)); (2) Collection number(s); (3) Current OMB docket number (if applicable); (4) Collection title; (5) Type of request, e.g., new, revision, extension, or reinstatement; (6) Frequency of collection; (7) Response obligation, i.e., mandatory, voluntary, or required to obtain or retain benefit; (8) Affected public; (9) An estimate of the number of respondents per report period; (10) An estimate of the number of responses per respondent annually; (11) An estimate of the average hours per response; (12) The estimated total annual respondent burden; and (13) A brief abstract describing the proposed collection and the respondents.

DATES: Comments must be filed on or before November 19, 1990. If you anticipate that you will be submitting comments but find it difficult to do so within the time allowed by this notice, you should advise the OMB DOE Desk Officer listed below of your intention to do so as soon as possible. The Desk Officer may be telephoned at (202) 395-3084. (Also, please notify the EIA contact listed below.)

ADDRESSES: Address comments to the Department of Energy Desk Officer, Office of Information and Regulatory Affairs, Office of Management and Budget, 726 Jackson Place NW., Washington, DC 20503. (Comments should also be addressed to the Office of Statistical Standards at the address below.)

FOR FURTHER INFORMATION AND COPIES OF RELEVANT MATERIALS CONTACT: Jay Casselberry, Office of Statistical Standards (EI-73) Forrestal Building, U.S. Department of Energy, Washington, DC 20585. Mr. Casselberry may be telephoned at (202) 586-2171.

SUPPLEMENTARY INFORMATION: The first energy information collection submitted to OMB for review was:

1. Energy Information Administration
2. EIA-254, EIA-851, and EIA-858
3. 1905-0160
4. Nuclear and Uranium Data Program Package
5. Revision—Only Form EIA-858 is being proposed for revision at this time. Various modifications are proposed for the data collected on schedules A and B of the EIA-858. No changes are proposed for schedule C. The remaining information applies only to Form EIA-858.
6. Annually
7. Mandatory
8. Businesses or other for profit, and Small businesses or organizations
9. 150 respondents
10. 150 responses
11. 32 hours per response
12. 4,800 hours
13. Forms EIA-858 collects data on uranium exploration activities, reserves, production, processing, marketing, inventories, shipments, and projections of future requirements. EIA-858 also collects information on the financial status of major uranium industry companies. Data are used to determine the viability of the domestic uranium industry. Respondents are firms in the uranium business.

The second energy information collection submitted to OMB for review was:

1. FERC; DOE/Office of Policy Planning and Analysis; DOE/Fossil Energy (The form is also sponsored by the Environmental Protection Agency (EPA) and the Department of Commerce's Bureau of Economic Analysis (BEA). These agencies will submit their requests for OMB approval separately to OMB.
2. EIA-767
3. 1902-0034; 1901-0237; 1901-0292
4. Steam-Electric Plant Operation and Design Report
5. Revision
6. Annually
7. Mandatory
8. State or local governments, Businesses or other for profit, Federal agencies or employees
9. 577 respondents
10. 577 responses
11. 68.096 hours per response (average for all sponsors)
12. 39,722 hours (total for all sponsors)
13. Forms EIA-767 collects data on steam-electric generating plants and related environmental data. Data are used by the Department of Energy, FERC, EPA, and BEA in models and to evaluate compliance with the Clean Air Act. Respondents are steam-electric generating plants of 10 megawatts or greater.

Authority: Section 5(a), 5(b), 13(b), and 52, Pub. L. 93-275, Federal Energy Administration Act of 1974, 15 U.S.C. 764(a), 764(b), 772(b), and 790(a).

Issued in Washington, DC, October 15, 1990.

Yvonne M. Bishop,

Director, Statistical Standards, Energy Information Administration.

BILLING CODE 6450-01-M

Federal Energy Regulatory Commission

[Docket Nos. ER91-14-000, et al.]

Alabama Power Co., et al.; Electric Rate, Small Power Production, and Interlocking Directorate Filings

October 12, 1990.

Take notice that the following filings have been made with the Commission:

1. Alabama Power Co.

[Docket No. ER91-14-000]

Take notice that on October 9, 1990, Alabama Power Company ("APCo") tendered for filing Amendment No. 1 to the Agreement for Partial Requirements Service and Complementary Services ("PR Agreement") between APCo and the Alabama Municipal Electric Authority ("AMEA"), together with a Second Revised Exhibit E to the PR Agreement. Amendment No. 1 revises the rate design in the PR Agreement to eliminate the demand ratchet, with a corresponding change in the billing demand portion of the rate to neutralize the revenue effect thereof. The parties request that Amendment No. 1 and the Second Revised Exhibit E to the PR Agreement be allowed to become effective for service beginning October 1, 1990.

Comment date: October 26, 1990, in accordance with Standard Paragraph E at the end of this notice.

2. Niagara Mohawk Power Corp.

[Docket No. ER91-16-000]

Take notice that on October 9, 1990, Niagara Mohawk Power Corporation ("Niagara Mohawk") tendered for filing a proposed change to Niagara Mohawk Rate Schedule No. 140, an agreement between Niagara Mohawk and the Orange and Rockland Utilities, Inc. ("O&R").

Rate Schedule No. 140 provides for the wheeling of certain loads by Niagara Mohawk to O&R. The proposed change revises the rates for the wheeling of power and energy by Niagara Mohawk. Niagara Mohawk proposes an effective date of September 1, 1990 and requests waiver of the Commission's notice requirements. In support thereof, Niagara Mohawk states that O&R has consented to this proposed effective date.

Copies of this filing were served upon the Public Service Commission State of New York and Orange and Rockland Utilities, Inc.

Comment date: October 26, 1990, in accordance with Standard Paragraph E at the end of this notice.

3. Northern States Power Co.

[Docket No. ER88-72-000]

Take notice that on October 5, 1990, Northern States Power Company Wisconsin (NSPW) tendered for filing copies of its revised refund and interest calculations in the above referenced docket.

Comment date: October 26, 1990, in accordance with Standard Paragraph E at the end of this notice.

4. Indianapolis Power & Light Co.

[Docket No. ER91-22-000]

Take notice that on October 11, 1990, Indianapolis Power & Light Company (IPL) tendered for filing Amendment No. 3 to the Agreement dated as of October 9, 1986 which sets forth the rates, charges, terms and conditions for wholesale electric service to Boone County Rural Electric Membership Corporation (Boone REMC) which is the only REMC IPS serves. Amendment No. 3 extends the existing Agreement for a successive term of three years which otherwise would terminate December 10, 1990.

The only customer affected by this filing is Boone REMC, which has executed said Amendment No. 3 and has concurred in this filing.

IPL states that copies of this filing were sent to Boone REMC and to the Indiana Utility Regulatory Commission.

Comment date: October 26, 1990, in accordance with Standard Paragraph E at the end of this notice.

5. Florida Power & Light Co.

[Docket No. ER91-15-000]

Take notice that on October 9, 1990, Florida Power & Light Company (FP&L) tendered for filing a Notice of Cancellation to Rate Schedule FERC No. 105 with a requested effective date of September 30, 1990.

FP&L states that copies of this filing have been served upon the Utility Board of the City of Key West, Florida.

Comment date: October 26, 1990, in accordance with Standard Paragraph E at the end of this notice.

6. Connecticut Light and Power Company

[Docket No. ER85-720-013]

Take notice that on October 4, 1990, Connecticut Light and Power Company tendered for filing revised copies of its compliance filing made on August 10, 1990.

Comment date: October 26, 1990, in accordance with Standard Paragraph E at the end of this notice.

7. Wisconsin Public Service Corp.

[Docket No. ER91-19-000]

Take notice that Wisconsin Public Service Corporation on October 9, 1990 tendered for filing a supplement to the following service agreement:

FERC Electric Tariff Original Volume No. 3, the October 29, 1987 Partial Requirements Load Pattern Service Agreement with the Consolidated Water Power Company.

This supplement will revise the contract demand quantities in accordance with Exhibit 1 of the service agreement, Paragraph 6, Requirements.

Copies of this filing were served upon the Consolidated Water Power Company and the Public Service Commission of Wisconsin.

This supplement is to be effective on and after January 1, 1991.

Comment date: October 26, 1990, in accordance with Standard Paragraph E end of this notice.

8. Catalyst Old River Hydroelectric Partnership

[Docket Nos. EL90-34-001 and EC90-14-001]

Take notice that on September 24, 1990, Catalyst Old River Hydroelectric Partnership tendered for filing copies of its compliance filing in the above referended dockets pursuant to the Commission's order issued on August 20, 1990.

Comment date: October 26, 1990, in accordance with Standard Paragraph E at the end of this notice.

9. Northern States Power Co. (Minnesota), Northern States Power Co. (Wisconsin)

[Docket No. ER91-21-000]

Take notice that on October 10, 1990, Northern States Power Company-Minnesota and Northern States Power-Wisconsin (NSP) filed a transmission services tariff making available reserved and interruptible transmission service on the combined NSP-Minnesota and NSP-Wisconsin transmission system.

Comment date: October 26, 1990, in accordance with Standard Paragraph E at the end of this notice.

10. Public Service Co. of New Mexico

[Docket No. ER91-17-000]

Take notice that on October 9, 1990, Public Service Company of New Mexico (PNM) tendered for filing a Notice of Termination of Service Schedule D to the Interconnection Agreement Between PNM and Southwestern Public Service Company (SPS) (Supplement 5 to PNM Rate Schedule FERC No. 53).

PNM requests that the applicable notice requirements be waived to permit

Service Schedule D to be terminated effective as of December 31, 1989.

Copies of the filing have been served upon SPS and the New Mexico Public Service Commission.

Comment date: October 26, 1990, in accordance with Standard Paragraph E at the end of this notice.

11. Public Service Co. of New Mexico

[Docket No. ER91-18-000]

Take notice that on October 9, 1990, Public Service Company of New Mexico (PNM) tendered for filing a Notice of Termination of the Agreement for Transmission Service Between Raton Public Service Company and PNM (PNM Rate Schedule FERC No. 50, as supplemented by Supplements 1 through 6) and a Notice of Termination of the Sales and Transmission Letter Agreement among PNM, the Arkansas River Power Authority (PNM Rate Schedule FERC No. 79) and Raton Public Service Company (Supplement 6 to PNM Rate Schedule FERC No. 50).

PNM requests that the applicable notice requirements be waived to permit the Agreement for Transmission Service and the Sales and Transmission Letter Agreement to be terminated effective as of February 1, 1990.

Comment date: October 26, 1990, in accordance with Standard Paragraph E at the end of this notice.

Standard Paragraphs

E. Any person desiring to be heard or to protest said filing should file a motion to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, NE., Washington, DC 20426, in accordance with rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211 and 385.214). All such motions or protests should be filed on or before the comment date. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a motion to intervene. Copies of this filing are on file with the Commission and are available for public inspection.

Lois D. Cashell,

Secretary.

[FR Doc. 90-24864 Filed 10-18-90; 8:45 am]

BILLING CODE 6717-01-M

[Docket Nos. ST90-4148-000 through ST90-4158-000]

Delhi Gas Pipeline Corp.; Self-Implementing Transactions

October 12, 1990.

Take notice that the following transactions have been reported to the Commission as being implemented pursuant to part 284 of the Commission's regulations, section 311 and 312 of the Natural Gas Policy Act of 1978 (NGPA) and section 5 of the Outer Continental Shelf Lands Act.[1]

The "Recipient" column in the following table indicates the entity receiving or purchasing the natural gas in each transaction.

The "part 284 subpart" column in the following table indicates the type of transaction.

A "B" indicates transportation by an interstate pipeline on behalf of an intrastate pipeline or a local distribution company pursuant to § 284.102 of the Commission's regulations and section 311(a)(1) of the NGPA.

A "C" indicates transportation by an intrastate pipeline on behalf of an interstate pipeline or a local distribution company served by an interstate pipeline pursuant to § 284.122 of the Commission's regulations and section 311(a)(2) of the NGPA.

A "D" indicates a sale by an intrastate pipeline to an interstate pipeline or a local distribution company served by an interstate pipeline pursuant to § 284.142 of the Commission's Regulations and section 311(b) of the NGPA. Any interested person may file a complaint concerning such sales pursuant to § 284.147(d) of the Commission's Regulations.

An "E" indicates an assignment by an intrastate pipeline to any interstate pipeline or local distribution company pursuant to § 284.102 of the Commission's regulations and section 312 of the NGPA.

A "G" indicates transportation by an interstate pipeline on behalf of another interstate pipeline pursuant to § 284.222 and a blanket certificate issued under § 284.221 of the Commission's regulations.

A "G-S" indicates transportation by interstate pipelines on behalf of shippers other than interstate pipelines pursuant to § 284.223 and a blanket certificate issued under § 284.221 of the Commission's regulations.

A "G-LT" or "G-LS" indicates transportation, sales or assignments by a local distribution company on behalf of or to an interstate pipeline or local distribution company pursuant to a blanket certificate issued under § 284.224 of the Commission's regulations.

A "G-HT" or "G-HS" indicates transportation, sales or assignments by a Hinshaw Pipeline pursuant to a blanket certificate issued under § 284.224 of the Commission's regulations.

A "K" indicates transportation of natural gas on the Outer Continental Shelf by an interstate pipeline on behalf of another interstate pipeline pursuant to § 284.303 of the Commission's regulations.

A "K-S" indicates transportation of natural gas on the Outer Continental Shelf by an intrastate pipeline on behalf of shippers other than interstate pipelines pursuant to § 284.303 of the Commission's regulations.

Lois D. Cashell,

Secretary.

[Docket Nos. CP91-21-000, et al.]

Texas Eastern Transmission Corp., et al.; Natural Gas Certification Filings

October 11, 1990.

Take notice that the following filings have been made with the Commission:

1. Texas Eastern Transmission Corp.

[Docket No. CP91-21-000]

Take notice that on October 2, 1990, Texas Eastern Transmission Corporation (Texas Eastern), Post Office Box 2521, Houston, Texas 77252-2521, filed in Docket No. CP91-21-000 a request pursuant to § 157.205 and 284.223 of Regulations under the Natural Gas Act (18 CFR 157.205) for authorization to transport gas on an interruptible basis for Rangeline Gas Corporation (Rangeline) under its blanket certificate issued in Docket No. CP88-136-000, as amended in Docket No. CP88-136-007, pursuant to section 7 of the Natural Gas Act, all as more fully set forth in the request on file with the Commission and open to public inspection.

Texas Eastern states that pursuant to a Transportation Agreement dated June 26, 1990, under its Rate Schedule IT-1, it proposes to transport up to 50,000 MMBtu per day on an interruptible basis on behalf of Rangeline. The Transportation Agreement provides for Texas Eastern to receive gas from existing receipt points on its system offshore and onshore Louisiana and multiple states. Texas Eastern will then transport and redeliver subject gas, less applicable shrinkage, to existing delivery points on its system offshore and onshore Louisiana and multiple states.

Texas Eastern also states that the estimated daily and estimated annual quantities would be 50,000 MMBtu and 18,250,000 MMBtu, respectively.

Texas Eastern further states that it commenced their service on August 3, 1990, as reported in Docket No. ST90-4419-000.

Comment date: November 26, 1990, in accordance with Standard Paragraph G at the end of this notice.

2. Texas Eastern Transmission Corp.

[Docket No. CP91-23-000]

Take notice that on October 2, 1990, U-T Offshore System (U-TOS), Post Office Box 1396, Houston, Texas 77251 filed in Docket No. CP91-23-000 a request pursuant to § 157.205 and 284.223 of the Commission's Regulations under the Natural Gas Act (18 CFR 157.205) for authorization to transport gas on an interruptible basis for Texaco Gas Marketing, Inc. (Texaco) under the blanket certificate issued in Docket No. RM88-14-0001 and RM88-15-000 pursuant to section 7 of the Natural Gas Act, all as more fully set forth in the request on file with the Commission and open to public inspection.

U-TOS states that proposes to transport for Texaco 300,000 Mcf on a peak day, pursuant to a Transportation Agreement dated July 1, 1990, between U-TOS and Texas (Transportation Agreement) proposed to transport natural gas for Texaco from points of receipts located in offshore Louisiana. The points of delivery and ultimate points of delivery are located in Cameron, Louisiana.

U-TOS further states that it commenced this service on August 14, 1990, are reported in Docket No. ST90-4741-000.

Comment date: November 26, 1990, in accordance with Standard Paragraph G at the end of this notice.

3. CNG Transmission Corp.

[Docket No. CP91-82-000]

Take notice that on October 9, 1990, CNG Transmission Corporation (CNG Transmission), 445 West Main Street, Clarksburg, West Virginia 26301, filed in Docket No. CP91-82-000 an application pursuant to section 7(b) of the Natural Gas Act for permission and approval to abandon, by sale to Hope Gas, Inc. (Hope), certain pipeline and regulation facilities located in Logan and Upshur Counties, West Virginia, all as more fully set forth in the application on file with the Commission and open to public inspection.

CNG Transmission requests permission and approval to abandon Lines D-2119, H-17666, a portion of H-17666 and regulating station XS-1942 all located in Logan County, West Virginia, and Line DM-1525 and measuring and regulating station XS-2076 located in Upshur County, West Virginia. It is stated that all of these facilities were transferred to Consolidated Gas Transmission Corporation (now CNG Transmission Corporation) from its predecessor, Consolidated Gas Supply Corporation (now Hope Gas, Inc.) effective January 1, 1984. It is further stated that the facilities are currently used to deliver gas to Hope Gas, Inc., a local distribution company customer and affiliate of CNG Transmission, as part of the certificated sales and transportation service rendered to Hope.

CNG Transmission requests that these facilities be abandoned so that they may be sold to Hope at book value. It is

stated that no interruption of consumers' service currently provided to Hope will occur. CNG Transmission states that Hope has requested that the lines be transferred to it as distribution lines. CNG Transmission submits that sales and transportation services to Hope will be continued by delivery to measurement and regulation stations rather than at the pipeline taps at consumer locations. It is stated that the delivery points and meters will be added by the notice and comment procedures under § 157.212 of the Commission's Regulations.

Comment date: November 1, 1990, in accordance with Standard Paragraph F at the end of this notice.

6. Stingray Pipeline Co., et al.

[Docket Nos. CP91-84-000[1] CP91-85-000, CP91-86-000, CP91-87-000]

Take notice that the above referenced companies (Applicants), filed in the above referenced dockets, prior notice requests pursuant to §§ 157.205 and 284.223 of the Commission's Regulations under the Natural Gas Act for authorization to transport natural gas on behalf of various shippers under its blanket certificate issued pursuant to section 7 of the Natural Gas Act, all as more fully set forth in the prior notice requests which are on file with the Commission and open to public inspection and in the attached appendix.

Information applicable to each transaction including the identity of the shipper, the type of transportation service, the appropriate transportation rate schedule, the peak day, average day, and annual volumes, and the docket numbers and initiation dates of the 120-day transactions under § 284.223 of the Commission's Regulations has been provided by Applicants and is included in the attached appendix.

Applicants also states that each would provide the service for each shipper under an executed transportation agreement, and that Applicants would charge rates and abide by the terms and conditions of the referenced transportation rate schedules.

Comment date: November 26, 1990, in accordance with Standard Paragraph G at the end of this notice.

7. U-T Offshore System

[Docket Nos. CP91-70-000, CP91-71-000, CP91-72-000, CP91-73-000]

Take notice that U-T Offshore System (U-TOS), P.O. Box 1396, Houston, Texas 77251 (U-TOS), filed in the above-referenced dockets prior notice requests pursuant to §§ 157.205 and 284.223 of the Commission's Regulations under the Natural Gas Act for authorization to transport natural gas on behalf of various shippers under U-TOS' blanket authorization pursuant to the Commission's Order No. 509 and pursuant to section 7 of the Natural Gas Act, all as more fully set forth in the requests that are on file with the Commission and open to public inspection.[2]

Information applicable to each transaction, including the identity of the shipper, the type of transportation service, the appropriate transportation rate schedule, the peak day, average day and annual volumes, and the initiation service dates and related ST docket numbers of the 120-day transactions under § 284.223 of the Commission's Regulations, has been provided by U-TOS and is summarized in the attached appendix. U-TOS states that it would abide by the conditions and rates set forth in Docket Nos. RM88-14-001 and RM88-15-000.

Comment date: November 26, 1990, in accordance with Standard Paragraph G at the end of this notice.

7. Texas Eastern Transmission Corp.

[Docket No. CP91-22-000]

Take notice that on October 2, 1990, Texas Eastern Transmission Corporation (Texas Eastern), Post Office Box 2521, Houston, Texas 77252-2521, filed in Docket No. CP91-22-000 a request pursuant to §§ 157.205 and 284.223 of Regulations under the Natural Gas Act (18 CFR 157.205) for authorization to transport gas on an interruptible basis for LL&E Gas Marketing Company (LL&E) under its blanket certificate issued in Docket No. CP88-136-000, as amended in Docket No. CP88-136-007, pursuant to section 7 of the Natural Gas Act, all as more fully set forth in the request on file with the Commission and open to public inspection.

Texas Eastern states that pursuant to a Transportation Agreement dated July 16, 1990, under its Rate Schedule IT-1, it proposes to transport up to 600,000 MMBtu per day on an interruptible basis on behalf of LL&E. The Transportation Agreement provides for Texas Eastern to receive gas from existing receipt points on its system offshore and onshore Louisiana and multiple states. Texas Eastern will then transport and redeliver subject gas, less applicable shrinkage, to existing delivery points on its system offshore and onshore Louisiana and multiple states.

Texas Eastern also states that the estimated daily and estimated annual quantities would be 600,000 MMBtu and 219,000 MMBtu respectively.

Texas Eastern further states that it commenced this service on August 10, 1990, as reported in Docket No. ST90-4421-000.

Comment date: November 26, 1990, in accordance with the Standard Paragraph G at the end of this notice.

8. Transcontinental Gas Pipe Line Corp. et al.

[Docket Nos. CP91-79-000,[4] CP91-80-000, CP91-81-000]

Take notice that on October 9, 1990, Applicants filed in the above referenced dockets, prior notice requests pursuant to §§ 157.205 and 284.223 of the Commission's Regulations under the Natural Gas Act for authorization to transport natural gas on behalf of various shippers under their blanket certificates issued pursuant to section 7 of the Natural Gas Act, all as more fully set forth in the prior notice requests which are on file with the Commission and open to public inspection and in the attached appendix.

Information applicable to each transaction, including the identity of the shipper, the type of transportation service, the appropriate transportation rate schedule, the peak day, average day and annual volumes, and the docket numbers and initiation dates of the 120-day transactions under § 284.223 of the Commission's Regulations has been provided by the Applicants and is included in the attached appendix.

Applicants state that each of the proposed services would be provided under an executed transportation agreement, and that the Applicants would charge rates and abide by the terms and conditions of the referenced transportation rate schedule(s).

Comment date: November 26, 1990, in accordance with Standard Paragraph G at the end of this notice.

Standard Paragraphs

F. Any person desiring to be heard or make any protest with reference to said filing should on or before the comment date file with the Federal Energy Regulatory Commission, 825 North Capitol Street, NE., Washington, DC 20426, a motion to intervene or a protest in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 385.211 and 385.214) and the Regulations under the Natural Gas Act (18 CFR 157.10). All protests filed with the Commission will be considered by it in determining the appropriate action to be taken but will not serve to make the protestants parties to the proceeding. Any person wishing to become a party to a proceeding or to participate as a party in any hearing therein must file a motion to intervene in accordance with the Commission's Rules.

Take further notice that, pursuant to the authority contained in and subject to jurisdiction conferred upon the Federal Energy Regulatory Commission by Sections 7 and 15 of the Natural Gas Act and the Commission's Rules of Practice and Procedure, a hearing will be held without further notice before the Commission or its designee on this filing if no motion to intervene is filed within the time required herein, if the Commission on its own review of the matter finds that a grant of the certificate is required by the public convenience and necessity. If a motion for leave to intervene is timely filed, or if the Commission on its own motion believes that a formal hearing is required, further notice of such hearing will be duly given.

Under the procedure herein provided for, unless otherwise advised, it will be unnecessary for the applicant to appear or be represented at the hearing.

G. Any person or the Commission's staff may, within 45 days after the issuance of the instant notice by the Commission, file pursuant to rule 214 of the Commission's Procedural Rules (18 CFR 385.214) a motion to intervene or notice of intervention and pursuant to § 157.205 of the Regulations under the Natural Gas Act (18 CFR 157.205) a protest to the request. If no protest is filed within the time allowed therefore, the proposed activity shall be deemed to be authorized effective the day after the time allowed for filing a protest. If a protest is filed and not withdrawn within 30 days after the time allowed for filing a protest, the instant request shall be treated as an application for authorization pursuant to section 7 of the Natural Gas Act.

Lois D. Cashell,
Secretary.

BILLING CODE 6717-01-M

[Docket No. PR91-1-000]

Exxon Gas System, Inc.; Petition for Rate Approval

October 12, 1990.

Take notice that an October 9, 1990, Exxon Gas System, Inc. (EGSI) filed pursuant to § 284.123(b)(2) of the Commission's regulations, a petition for rate approval requesting that the Commission approve as fair and equitable a maximum rate of 12.8 cents per MMBtu plus 1% retainage for fuel and unaccounted for gas for transportation of natural gas under section 311(a)(2) of the National Gas Policy Act of 1978.

EGSI's petition states that it is an intrastate pipeline in Texas within the meaning of section 2(16) of the NGPA. EGSI's system contains approximately 1,668 miles of pipeline and it receives and delivers gas at various locations in the South Texas, Houston, Beaumont-Port Arthur, and Northeast Texas areas.

Pursuant to § 284.123(b)(2)(ii), if the Commission does not act within 150 days of the filing date, the rate will be deemed to be fair and equitable and not in excess of an amount which interstate pipelines would be permitted to charge for similar transportation service. The Commission may, prior to the expiration of the 150 day period, extend the time for action or institute a proceeding to afford parties an opportunity for written comments and for the oral presentation of views, data and arguments. Any person desiring to participate in this rate proceeding must file a motion to intervene in accordance with § 385.211 and 385.214 of the Commission's Rules of Practice and Procedures. All motions must be filed with the Secretary of the Commission on or before November 1, 1990. The petition for rate approval is on

file with the Commission and is available for public inspection.

Lois D. Cashell,

Secretary.

BILLING CODE 6717-01-M

[Docket No. SA91-1-000]

San Jacinto Gas Transmission Company; Notice of Petition for Adjustment

October 12, 1990.

Take notice that on October 1, 1990, San Jacinto Gas Transmission Company (San Jacinto) filed pursuant to section 502(c) of the Natural Gas Policy Act of 1978 (NGPA), a petition for adjustment from § 284.123(b)(1)(ii) of the Commission's regulations to permit San Jacinto to use its tariff on file with the Railroad Commission of Texas (Railroad Commission) for services performed pursuant to section 311 of the NGPA. San Jacinto asserts that since it does render city-gate service the Commission should issue this adjustment under section 502(c) of the NGPA to prevent special hardship and inequity that would otherwise result if San Jacinto were required to submit a § 284.123(b)(2) filing.

In support of its petition San Jacinto states that it is an intrastate pipeline which operates in the State of Texas, subject to the jurisdiction of the Railroad Commission. San Jacinto provides intrastate transportation service within the State of Texas. San Jacinto's transportation rates are subject to regulation by the Railroad Commission and have been filed with the Railroad Commission in the form of tariffs. San Jacinto states that it intends to perform interruptible transportation services on its main line gas transportation pursuant to section 311(a)(2) of the NGPA on behalf of eligible interstate pipeline companies and/or local distribution companies by interstate pipeline companies, for a transportation fee not to exceed $0.13 per MMBtu.

The regulations applicable to this proceeding are found in subpart K of the Commission's Rules of Practice and Procedure. Any person desiring to participate in this proceeding must file a motion to intervene in accordance with the provisions of subpart K. Motions to intervene must be filed within 15 days after publication of this notice in the Federal Register. The petition for adjustment is on file with the Commission and is available for public inspection.

Lois D. Cashell,

Secretary.

BILLING CODE 6717-01-M

[Docket No. CP91-50-000]

Sumas Energy, Inc.; Notice of Application for a Presidential Permit for the Construction, Operation, Maintenance, and Connection at the United States/Canada International Boundary of Facilities for Importation of Natural Gas

October 12, 1990.

Take notice that on October 4, 1990, Sumas Energy, Inc. (Sumas), 17411 NE. Union Hill Road, suite 280, Redmond, WA, 98052-3373, filed an application pursuant to section 3 of the Natural Gas Act, Executive Order No. 10485, as amended by Executive Order No. 12038; and Delegation order No. 0204-112 of the Secretary of Energy. Sumas[1] seeks authority for a Presidential Permit for the point of entry for the importation of natural gas and authority to construct, operate, maintain and connect a natural gas pipeline extending from Canadian pipeline facilities at the Canadian border to a cogeneration facility near Sumas, Washington, all as more fully set forth in the application which is on file with the Commission and open to public inspection.

It is stated that the Sumas Pipeline USA will consist of a 6 to 8 5/8 pipe extending from an interconnection with Westcoast Energy, Inc. (Westcoast) at the Canadian border near Sumas, Washington to the Sumas cogeneration project near Sumas, Washington. Westcoast will construct and operate tap, pipe and meter facilities in Canada. The design capacity of the natural gas pipeline will be approximately 25 MMcf/d with an estimated cost of $700,000. The proposed pipeline will transport gas only to facilities owned or operated by Sumas Energy, Inc., it will not offer or provide any service to the public it is stated.

It is further stated that this application incorporates all of the terms and conditions imposed by the Commission for granting authorization for a Presidential Permit for a point of entry for importation of natural gas, and for construction and connection of a natural gas pipeline. The Applicant requests that FERC grant this application on an expedited basis.

[1] Sumas is the owner of Sumas Pipeline USA.

Any person desiring to be heard or to protest this petition should file a motion to intervene or protest in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure. All motions to intervene or protests should be submitted to the Federal Energy Regulatory Commission, 825 North Capitol Street, NE. Washington, DC 20426, not later than 15 days after publication of this notice in the Federal Register. All protests filed will be considered but, will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a motion to intervene in accordance with rule 214. Copies of the petition filed in this proceeding are on file with the Commission and available for public inspection.

Lois D. Cashell,

Secretary.

ENVIRONMENTAL PROTECTION AGENCY

[FRL-3865-8]

Agency Information Collection Activities Under OMB Review

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: In compliance with the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*), this notice announces that the Information Collection Request (ICR) abstracted below has been forwarded to the Office of Management and Budget (OMB) for review and comment. This ICR describes the nature of the information collection and its expected costs and burdens; where appropriate, it includes the actual data collection instrument(s).

DATES: Comments must be submitted on or before November 19, 1990.

FOR FURTHER INFORMATION CONTACT: Sandy Farmer at EPA, (202) 382-2740.

SUPPLEMENTARY INFORMATION:

Office of Pesticides and Toxic Substances

Title: Notification of Stored Pesticides with Cancelled or Suspended Registration Under section 6(g) of the Federal Insecticide, Rodenticide and Fungicide Act. (OMB #2070-109; EPA #1510.02).

Abstract: Section 6(g) of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) requires anyone who holds

a cancelled or suspended pesticide to provide EPA, state and local officials with the following information: (1) The identity of the submitter, (2) the type and amount of the (cancelled or suspended) pesticides in possession, and (3) the place of storage. Respondents include commercial applicators, distributors, exporters and registrants. EPA uses this information to monitor compliance with federal laws assuring safe storage and distribution of pesticides.

Burden Statement: The public reporting burden for this collection of information is estimated to average sixty minutes per response. This estimate includes the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information.

Respondents: Holders of Cancelled or Suspended Pesticides.

Estimated Number of Respondents: 381,000.

Responses Per Respondent: 1.

Estimated Total Annual Burden on Respondents: 381,000.

Frequency of Collection: On occasion.

Send comments regarding the burden estimate, or any other aspect of this information collection, including suggestions for reducing the burden, to:

Sandy Farmer, U.S. Environmental Protection Agency, Information Policy Branch, 401 M Street, SW., Washington DC 20460.

and

Tim Hunt, Office of Management and Budget, Office of Information and Regulatory Affairs, 725 17th Street, NW., Washington, DC 20530.

Dated: October 12, 1990.

Paul Lapsley,

Director, Regulatory Management Division.

[FRL-3869-4]

National Drinking Water Advisory Council; Request for Nomination of Members

The Environmental Protection Agency (EPA) invites all interested persons to nominate qualified individuals to serve as members of the National Drinking Water Advisory Council. This Advisory Council was established to provide practical and independent advice, consultation and recommendations to the Agency on the activities, functions and policies related to the implementation of the Safe Drinking Water Act as amended. The Council consists of fifteen members, including a Chairperson. Five members represent the general public; five members represent appropriate state and local agencies concerned with water hygiene and public water supply; and five members represent private organizations or groups demonstrating an active interest in the field of water hygiene and public water supply. Each member holds office for a term of three years and is eligible for reappointment. On December 15 of each year, five members complete their appointment. This notice solicits names to fill these five vacancies.

Any interested person or organization may nominate qualified individuals for membership. Nominees should be identified by name, occupation, position, address and telephone number. Nominations must include a current résumé providing the nominee's background, experience, and qualifications.

Persons selected for membership will receive compensation for travel and a nominal daily compensation while attending meetings.

Nominations should be submitted to Charlene E. Shaw, Designated Federal Official, National Drinking Water Advisory Council, U.S. Environmental Protection Agency, Office of Drinking Water (WH-550A), 401 M Street SW., Washington, DC 20460, no later than November 9, 1990. The Agency will not formally acknowledge or respond to nominations.

Dated: October 12, 1990.

Michael B. Cook,

Director, Office of Drinking Water.

[ER-FRL-3853-1]

Environmental Impact Statements and Regulations; Availability of EPA Comments

Availability of EPA comments prepared October 1, 1990 through October 5, 1990 pursuant to the Environmental Review Process (ERP), under section 309 of the Clean Air Act and section 102(2)(c) of the National Environmental Policy Act as amended. Requests for copies of EPA comments can be directed to the Office of Federal Activities at (202) 382-5076.

An explanation of the ratings assigned to draft environmental impact statements (EISs) was published in the Federal Register dated April 13, 1990 (55 FR 15949).

Draft EISs

ERP No. D-APH-A99185-00 Rating EO2, Nationwide Cooperative Animal Damage Control Program, Integrated Pest Management Approach, Implementation.

Summary

EPA has environmental objections to the proposed project based on the lack of sufficient information to assess the environmental impacts of the pesticide used and the programs' impacts to some local environments. The draft EIS also uses inadequate definition of integrated pest management and lacks evidence that the program is effective.

ERP No. D-GSA-C81014-NY Rating EC2, Foley Square Federal Courthouse and Federal/Municipal Office Building Development, Construction, New York County, NY.

Summary

EPA expressed environmental concerns about potential impacts to air quality and potential wastewater treatment problems. EPA requested that additional information be provided in the final EIS to address these issues.

ERP No. DS-FMW-L40171-OR Rating EC2, I-84 Widening, NE. 181st Avenue to Sandy River, New Interchange at NE. 207th Ave and Sandy Boulevard to Halsey Street Construction Additional Information, Funding and 404 Permit, Multnomah County, OR.

Summary

EPA has environmental concerns with the proposed design changes to the NE. 207th Avenue interchange based on its contribution to the rate and kind of development in the surrounding area and 0.7 acres of wetland fill that were not previously discussed in the draft EIS.

Final EISs

ERP No. F-HUD-G85179-TX Harris Branch Development Project, Mortgage Insurance, Section 404 Permit, City of Austin, Travis County, TX.

Summary

EPA has no objection to the proposed action as described.

Dated: October 16, 1990.

William D. Dickerson,

Deputy Director, Office of Federal Activities.

[OPP–66142; FRL 3776–8]

Receipt of Request to Cancel Certain Pesticide Registrations

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: In accordance with section 6(f)(1) of the Federal Insecticide, Fungicide and Rodenticide Act (FIFRA), as amended, EPA is issuing a notice of receipt of requests by registrants to voluntarily cancel certain pesticide registrations.

DATE: Unless a request is withdrawn, all cancellations will be effective December 18, 1990.

FOR FURTHER INFORMATION CONTACT: By mail: James A. Hollins, Office of Pesticide Programs (H7502C), Environmental Protection Agency, 401 M St., SW., Washington, DC 20460. Office location for commercial courier delivery and telephone number: Rm.210, CM # 2, 1921 Jefferson Davis Highway, Arlington, VA 22202, (703) 557-4461.

SUPPLEMENTARY INFORMATION:

I. Introduction

Section 6(f)(1) of the Federal Insecticide, Fungicide and Rodenticide Act (FIFRA), as amended, provides that a pesticide registrant may, at any time, request that any of its pesticide registrations be cancelled. The Act further provides that EPA must publish a notice of receipt of any such request in the Federal Register before acting on the request.

II. Intent to Cancel

This notice announces receipt by the Agency of requests to cancel some 1,100 pesticide registrations under section 3 or 24(c) of FIFRA. These registrations are listed in sequence by registration number (or company number and 24(c) number) in the following Table 1.

III. Procedures for Withdrawal of Request

Registrants who chose to withdraw a request for cancellation must submit such withdrawal in writing to James A. Hollins, at the address given above, postmarked before December 18, 1990. This written withdrawal of the request for cancellation must include a commitment to pay any reregistration or registration maintenance fees due, and to fulfill any applicable unsatisfied data requirements.

IV. Loss of Active Ingredients

Unless these requests for cancellation are withdrawn, 28 pesticide active ingredients will no longer appear in any registered products. Those who are concerned about the potential loss of these active ingredients for pesticidal use are encouraged to work directly with the registrants to explore the possibility of their withdrawing the request for cancellation. These ingredients are listed in the following Table 3 with the EPA Company Numbers of their registrants.

TABLE 3—ACTIVE INGREDIENTS WHICH WOULD DISAPPEAR AS A RESULT OF REGISTRANTS' REQUESTS TO CANCEL

Chemical name/CAS No.	EPA Company No.
I. Agricultural Crops & Ornamental Uses:	
Bifenox (methyl 5-(2,4-dichlorophenoxy)-2-nitrobenzoate (42576-02-3)	000264
2-tert-butylamino-4-ethylamino-6-methylthio-*S*-triazine (886-50-0)	000100
2-Chloro-4-,6-bis(isopropylamino)-*S*-triazine (139-40-2)	002749
N'-(4-Chloro-*o*-tolyl)-*N,N*-dimethylformamidine (6164-98-3)	000100
2-(*m*-Chlorophenoxy)propionamide (5825-67-6)	000264
2-(*m*-Chlorophenoxy)propionic acid) (101-10-0)	000264
Diamidafos (Phenyl *N,N'*-dimethylphosphorodiamidate) (1754-58-1)	000464
Diethanolamine dicamba (3,6-dichloro-2-anisic acid) (25059-78-3)	002217
	011715
	002935
O,O-Diethyl (1,3-dihydro-1, 3-dioxo-2*H*-isoindol-2-yl) phosphonothioate (5131-24-8)	000464
Lead arsenate, basic (53404-12-9)	051036
Nickel sulfate hexahydrate (10101-97-0)	000707
II. Domestic & Human Use:	
Alkyl* dipropoxyamine *(47% C12, 18% C14, 10% C16, 9% C10, 8% C16, 8% C8) (68516-06-3)	052390
N-Alkyl*-*N*-ethyl morpholium ethyl sulfate *(66% C18, 25% C16, 8% C18, 1% C14) (01791-34-2)	004000
Dialkyl* dimethyl ammonium chloride *(47% C12, 18%C14, 10% C16, 9% C10, 8% C16, 8% C8) (73398-64-8)	052390
Diethyl diphenyl dichloroethane & related compounds (72-56-0)	000324
Sodium bicarbonate (144-55-8)	001459
2-Thiocyanatoethyl dodecanoate (301-11-1)	000394
III. Domestic Animal and Pet Treatments:	
Chlorfenvinphos (470-90-6)	000859
Fospirate (dimethyl 3,5,6-trichloro-2-pyridyl phosphate) (5598-52-7)	000464
IV. Uncultivated Land/Wide Area/Public Health Uses:	
O,O-Bis(*p*-chlorophenyl) acetimidoylphosphoroamidothioate (4104-14-7)	000126
V. Aquatic Uses:	
Copper sulfate (anhydrous) (7758-98-7)	010465
VI. Wood Preservatives:	
Sodium pyroarsenate (13464-42-1)	002190
VII. Commercial/Institutional Uses:	
2-Chloro-*N*-(hydroxymethyl)acetamide (2832-19-1)	000356
VIII. Manufacturing & Miscellaneous Uses:	
Butyl 2-methyl-4-chlorophenoxyacetate (1713-12-8)	034704
S-(2,3-Dichloroallyl) diisopropylthiocarbamate (2303-16-4)	000524
Isobutyl 2-methyl-4-chlorophenoxyacetate (1713-11-7)	034704
Isopropyl 2-methyl-4-chlorophenoxyacetate (2698-40-0)	034704
Nicotine sulfate (65-30-5)	000655

V. Provisions for Disposition of Existing Stocks

The orders effecting these requested cancellations will generally permit registrants to continue to sell and distribute existing stocks of the cancelled products for one year after the date of this notice. The orders will also generally provide for use of stocks already in the hands of dealers or users until they are exhausted. Exceptions to these general rules will be made in specific cases when more stringent restrictions on sale, distribution, or use of the products or their ingredients have already been imposed, as in Special Review actions, or where the Agency has identified significant potential risk concerns associated with a particular chemical.

Dated: October 9, 1990.

Douglas D. Campt,

Director, Office of Pesticide Programs.

[OPTS-51752; FRL 3803-4]

Toxic and Hazardous Substances; Certain Chemicals Premanufacture Notices

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: Section 5(a)(1) of the Toxic Substances Control Act (TSCA) requires any person who intends to manufacture or import a new chemical substance to submit a premanufacture notice (PMN) to EPA at least 90 days before manufacture or import commences. Statutory requirements for section 5(a)(1) premanufacture notices are discussed in the final rule published in the Federal Register of May 13, 1983 (48 FR 21722). This notice announces receipt of 202 such PMNs and provides a summary of each.

ADDRESSES: Written comments, identified by the document control number "(OPTS-51753)" and the specific PMN number should be sent to: Document Processing Center (TS-790), Office of Toxic Substances, Environmental Protection Agency, 401 M Street, SW., Room L-100, Washington, DC, 20460, (202) 382-3532.

FOR FURTHER INFORMATION CONTACT: Michael M. Stahl, Director, Environmental Assistance Division (TS-799), Office of Toxic Substances, Environmental Protection Agency, Room EB-44, 401 M Street, SW., Washington, DC, 20460, (202) 554-1404, TDD (202) 554-0551.

SUPPLEMENTARY INFORMATION: The following notice contains information extracted from the nonconfidential version of the submission provided by the manufacturer on the PMNs received by EPA. The complete nonconfidential document is available in the TSCA Public Docket Office, NE-G004 at the above address between 8 a.m. and noon, and 1 p.m. and 4 p.m., Monday through Friday, excluding legal holidays.

P 90-1646

Manufacturer. Wilmington Leather Coatings.

Chemical. (G) Solvent borne aromatic/aliphatic urethane polymer.

Use/Production. (G) Open, nondispersive. Prod. range: Confidential.

P 90-1647

Manufacturer. Confidential.

Chemical. (G) Polyamide resin.

Use/Production. (G) Intermediate; will be used to prepare an electrical insulation coating. Prod. range: Confidential.

P 90-1648

Importer. Confidential.

Chemical. (G) Polyurethane.

Use/Import. (S) Textile coating Import range: Confidential.

P 90-1649

Manufacturer. Confidential.

Chemical. (G) Salt of an acylated polyamine.

Use/Production. (G) Metallic corrosion inhibitor. Prod. range: Confidential.

P 90-1650

Manufacturer. Confidential.

Chemical. (G) Salt of an acylated polyamine.

Use/Production. (G) Metallic corrosion inhibitor. Prod. range: Confidential.

P 90-1651

Manufacturer. Confidential.

Chemical. (S) Soyabean oil, linseed oil, glycerine, chlorendic anhydride alkyd resin modified with styrene, vinyl-toluene, and methyl methacrylate.

Use/Production. (S) Major-vehicle component of paint. Prod. range: 50,000–250,000 kg/yr.

P 90-1652

Manufacturer. Minnesota Mining & Manufacturing Co.

Chemical. (G) Benzothiophenone salt.

Use/Production. (G) Dye intermediate. Prod. range: Confidential.

P 90-1653

Importer. Minnesota Mining & Manufacturing Co.

Chemical. (G) Benzothiophenone derivative.

Use/Import. (G) Dye intermediate. Import range: Confidential.

P 90-1654

Manufacturer. Ciba-Geigy Corporation Dyestuff.

Chemical. (G) Substituted benzenesulfonamide.

Use/Production. (S) Dye intermediate. Prod. range: Confidential.

Toxicity Data. Acute oral toxicity: LD50 > 5,000 mg/kg species (Rat). Eye irritation: none species (Rabbit). Skin irritation: negligible species (Rabbit).

P 90-1655

Manufacturer. Dearborn Division, W.R. Grace & Co.

Chemical. (G) Mixture of *N*-substituted (((2-hydroxyethyl)imino)bis(methylene))-bis-phosphonic acid, tetrasodium salt, and *N*-substituted ((tetrahydro-2-hydroxy-4*H*-1,4,2-oxazaphosphorin-4-yl)-methylphosphonic acid, *P*-oxide, trisodium salt

Use/Production. (S) Water treatment compound. Prod. range: 3,630–5,000 kg/yr.

Toxicity Data. Acute oral toxicity: LD50 > 5,000 mg/kg species (Rat). Static acute toxicity: time LC50 96 H10,587 ml/l species (Fathead Minnow). Mutagenicity: negative.

P 90-1656

Manufacturer. Dearborn Division, W.R. Grace & Co.

Chemical. (G) Mixture of *N*-substituted (((2-hydroxyethyl)imino)bis(methylene))-bis-phosphonic acid, tetrapotassium salt, and *N*-substituted ((tetrahydro-2-hydroxy-4*H*-1,4,2-oxazaphosphorin-4-yl)-methylphosphonic acid, *P*-oxide, tripotassium salt

Use/Production. (S) Water treatment compound. Prod. range: 3,630–5,000 mg/kg.

Toxicity Data. Acute oral toxicity: LD50 5,000 mg/kg species (Rat). Static acute toxicity: time LC50 96 h10,587 mg/l species (Fathead Minnow). Mutagenicity: negative.

P 90-1657

Manufacturer. Eastman Kodak Company.

Chemical. (G) Substituted alkyl sulfonic acid derivative.

Use/Production. (G) Chemical intermediate. Prod. range: 1,200–3,800 kg/yr.

Toxicity Data. Acute oral toxicity: LD50 884 mg/kg species (Rat).

P 90-1658

Manufacturer. Eastman Kodak Company.

Chemical. (G) Haloacetyl substituted alkyl sulfonic acid derivative.

Use/Production. (G) Chemical intermediate. Prod. range: 1,000–3,000 kg/yr.

P 90-1659

Manufacturer. Eastman Kodak Company.

Chemical. (G) Substituted aromatic substituted alkyl ester.

Use/Production. (G) Chemical intermediate. Prod. range: 1,000–3,200 kg/yr.

Toxicity Data. Acute oral toxicity: LD50 > 5,000 mg/kg species (Rat). Skin irritation: slight species (Rabbit).

P 90-1660

Manufacturer. Eastman Kodak Company.

Chemical. (G) Substituted phenyl alkyl sulfonic acid derivative.

Use/Production. (G) Chemical intermediate. Prod. range: 900–2,000 kg/yr.

Toxicity Data. Acute oral toxicity: LD50 > 5,000 mg/kg species (Rat). Acute dermal toxicity: LD50 > 2,000 mg/kg species (Rabbit). Skin irritation: slight species (Rabbit).

P 90-1661

Manufacturer. Eastman Kodak Company.

Chemical. (G) Heterocyclic substituted phenyl alkyl sulfonic acid derivative.

Use/Production. (G) Contained use in an article. Prod. range: 700–2,300 kg/yr.

Toxicity Data. Acute oral toxicity: LD50 > 5,000 mg/kg species (Rat). Acute dermal toxicity: LD50 > 2,000 mg/kg species (Rabbit). Eye irritation: slight species (Rabbit). Skin irritation: slight species (Rabbit). Mutagenicity: negative.

P 90-1662

Manufacturer. E.I. Du Pont De Nemours & Co., Inc.

Chemical. (G) Styrenated hydroxy functional acrylic.

Use/Production. (G) Highly dispersive use. Prod. range: Confidential.

P 90-1663

Importer. Ciba-Geigy Corporation.

Chemical. (S) 2-Naphthalene sulfonamide, 6-amino-*N*-methyl-.

Use/Import. (S) Raw material used in the manufacture of a dye intermediate. Import range: Confidential.

P 90-1664

Importer. Confidential.

Chemical. (G) Dicarboxylic acid ester.

Use/Import. (G) Chemical intermediate. Import range: Confidential.

Toxicity Data. Acute oral toxicity: LD50 5.5 mg/kg species (Rat). Acute dermal toxicity: LD50 8.7 ml/kg species (Rabbit). Eye irritation: slight species (Rabbit). Mutagenicity: negative. Skin irritation: slight species (Rabbit).

P 90-1665

Manufacturer. Continental Chemical Co.

Chemical. (S) Glycols, polyethylene, 3 sulfo-2 hydroxypropyl *P*-(1,1,3,3,-tetramethylbutyl) phenyl ether monosodium salt.
Use/Production. (S) Hand soap. Prod. range: Confidential.

P 90-1569
Importer. Sumitomo Corporation of America.
Chemical. (G) Vinyl chloride copolymer.
Use/Import. (G) Binder resin. Import range: Confidential.

P 90-1570
Manufacturer. H.B. Fuller Company.
Chemical. (G) Methylene bisphenyl isocyanate prepolymer.
Use/Production. (S) Coreactant for urethane potting and perimeter bonding compound used in filters. Prod. range: Confidential.

P 90-1571
Manufacturer. E.I. Du Pont De Nemours & Co. Inc.
Chemical. (G) Epoxy-amine adduct.
Use/Production. (G) Intermediate in the production of resins for automotive E-coat primers - contained use. Prod. range: Confidential.

P 90-1572
Manufacturer. Confidential.
Chemical. (G) Adipate salt.
Use/Production. (G) Polymer intermediate. Prod. range: Confidential.
Toxicity Data. Eye irritation: none species (Rabbit). Skin irritation: negligible species (Rabbit).

P 90-1573
Manufacturer. Confidential.
Chemical. (G) Copolyamide.
Use/Production. (G) Copolyamide. Prod. range: Confidential.

P 90-1573
Manufacturer. E.I. Du Pont De Nemours & Co., Inc.
Chemical. (G) Salt of epoxy-amine adduct.
Use/Production. (G) Open, nondispersive use. Prod. range: Confidential.

P 90-1574
Manufacturer. E.I Du Pont De Nemours & Co., Inc.
Chemical. (G) Salt of epoxy amine adduct.
Use/Production. (G) Open, nondispersive use. Prod. range: Confidential.

P 90-1575
Manufacturer. E.I. Du Pont De Nemours & Co., Inc.
Chemical. (G) Epoxy-amine adduct.
Use/Production. (G) Open, nondispersive use. Prod. range: Confidential.

P 90-1576
Manufacturer. E.I Du Pont De Nemours & Co. Inc.
Chemical. (S) Epoxy-amine adduct.
Use/Production. (G) Open, nondispersive use. Prod. range: Confidential.

P 90-1577
Manufacturer. Milliken & Company.
Chemical. (G) Alkoxylated aromatic amine.
Use/Production. (G) Chemical intermediate. Prod. range: Confidential.

P 90-1578
Manufacturer. Milliken Company.
Chemical. (G) Alkoxylated aromatic amine.
Use/Production. (G) Chemical intermediate. Prod. range: Confidential.

P 90-1579
Manufacturer. Milliken Company.
Chemical. (G) Alkoxylated aromatic amine.
Use/Production. (G) Chemical intermediate. Prod. range: Confidential.

P 90-1580
Manufacturer. Milliken Company.
Chemical. (G) Alkoxylated aromatic amine.
Use/Production. (G) Chemical intermediate. Prod. range: Confidential.

P 90-1581
Manufacturer. Milliken Company.
Chemical. (G) Alkoxylated aromatic amine.
Use/Production. (G) Chemical intermediate. Prod. range: Confidential.

P 90-1582
Manufacturer. Milliken Company.
Chemical. (G) Polyoxylated aromatic amine.
Use/Production. (G) Chemical intermediate. Prod. range: Confidential.

P 90-1583
Manufacturer. Milliken Company.
Chemical. (G) Polyoxylated aromatic amine.
Use/Production. (G) Chemical intermediate. Prod. range: Confidential.

P 90-1584
Manufacturer. Milliken Company.
Chemical. (G) Polyoxylated aromatic amine.
Use/Production. (G) Chemical intermediate. Prod. range: Confidential.

P 90-1585
Manufacturer. Milliken Company.
Chemical. (G) Polyoxylated aromatic amine.
Use/Production. (G) Chemical intermediate. Prod. range: Confidential.

P 90-1586
Manufacturer. Milliken Company.
Chemical. (G) Polyoxylated aromatic amine.
Use/Production. (G) Open, nondispersive. Prod. range: Confidential.

P 90-1587
Manufacturer. Milliken Company.
Chemical. (G) Polyoxylated aromatic amine.
Use/Production. (G) Open, nondispersive. Prod. range: Confidential.

P 90-1588
Manufacturer. Milliken Company.
Chemical. (G) Aromatic nitrile.
Use/Production. (G) Chemical intermediate. Prod. range: Confidential.

P 90-1589
Manufacturer. Milliken Company.
Chemical. (G) Polyoxyalkyl aromatic amine.
Use/Production. (G) Open, nondispersive. Prod. range: Confidential.

P 90-1590
Manufacturer. Milliken Company.
Chemical. (G) Substituted polyoxyalkylene aniline.
Use/Production. (G) Colorant. Prod. range: Confidential.

P 90-1591
Manufacturer. Milliken Company.
Chemical. (G) Substituted polyoxyalklene aniline.
Use/Production. (G) Colorant. Prod. range: Confidential.

P 90-1592
Manufacturer. Confidential.
Chemical. (G) Styrenated polyacrylate polymethacrylate.
Use/Production. (G) Coating with dispersive use. Prod. range: 200,000–300,000 kg/yr.

P 90-1593
Manufacturer. Confidential.
Chemical. (G) Hydroxylated functional styrene, acrylate and methacrylate polymer.
Use/Production. (G) Ingredient in a dispersive applied coating. Prod. range: 1,000,000–3,000,000 kg/yr.

P 90-1594
Manufacturer. C.I. Specialty Chemicals Inc.
Chemical. (G) Sulfonated polystyrene-formaldehyde polymer

Use/Production. (S) Polishing water in BWR water treatment systems. Prod. range: 5,000–30,000 kg/yr.

P 90–1806

Manufacturer. Confidential.
Chemical. (G) Polymer latex.
Use/Production. (G) Product will be used as a coating, sealant, binder, adhesive, flame retardant, or compatibilizer. Prod. range: Confidential.

P 90–1806

Manufacturer. Eastman Kodak Company.
Chemical. (G) Aryloxy substituted alkanoic acid, alkoxyphenyl hydrazide.
Use/Production. (G) Contained use in an article. Prod. range: 500–5,000 kg/yr.
Toxicity Data. Acute oral toxicity: LD50 > 5,000 mg/kg species (Rat). Acute dermal toxicity: LD50 > 2,000 mg/kg species (Rabbit). Eye irritation: none species (Rabbit). Mutagenicity: negative. Skin irritation: negligible species (Rabbit).

P 90–1807

Manufacturer. Eastman Kodak Company.
Chemical. (G) Aryloxy substituted alkanoyl chloride.
Use/Production. (G) Chemical intermediate. Prod. range: 600–6,500 kg/yr.

P 90–1808

Manufacturer. Eastman Kodak Company.
Chemical. (G) (Arylsulfonyl)aryloxy substituted alkanoic acid, alkoxyphenylhydrazide.
Use/Production. (G) Chemical intermediate. Prod. range: 750–7,600 kg/yr.

P 90–1809

Manufacturer. Monsanto Company.
Chemical. (G) Alkyl diphenyl phosphate.
Use/Production. (G) Plasticizer for pvc. Prod. range: Confidential.
Toxicity Data. Acute oral toxicity: LD50 > 5,000 mg/kg species (Rat). Acute dermal toxicity: LD50 > 2,000 mg/kg species (Rabbit). Eye irritation: moderate species (Rabbit). Static acute toxicity: time EC50 48H0.50 species (daphnia magna). Skin irritation: slight species (Rabbit). Mutagenicity: negative.

P 90–1809

Manufacturer. Confidential.
Chemical. (G) Substituted cyclopentadienide compound.
Use/Production. (G) Intermediate chemical. Prod. range: Confidential.

P 90–1901

Manufacturer. Confidential.
Chemical. (G) Tetra-alkyl silane.
Use/Production. (G) Intermediate chemical. Prod. range: Confidential.
Toxicity Data. Acute oral toxicity: LD50 2.0 g/kg species (Rat). Acute dermal toxicity: LD50 900 mg/kg species (Rabbit).

P 90–1902

Manufacturer. Confidential.
Chemical. (G) Organometallic salt compound.
Use/Production. (G) Intermediate chemical. Prod. range: Confidential.

P 90–1903

Manufacturer. Confidential.
Chemical. (G) Substituted zirconium salt.
Use/Production. (G) Intermediate chemical. Prod. range: Confidential.

P 90–1904

Manufacturer. Confidential.
Chemical. (G) Substituted organometallic compound.
Use/Production. (G) Intermediate. Prod. range: Confidential.

P 90–1905

Importer. Confidential.
Chemical. (G) Amino cyclohexyloxycarbonyl substituted aminoanthraquinone.
Use/Import. (G) Cyan component. Import range: Confidential.
Toxicity Data. Acute oral toxicity: LD50 > 5,000 mg/kg species (Rat). Skin irritation: slight species (Rabbit). Mutagenicity: negative.

P 90–1906

Importer. Confidential.
Chemical. (G) Alkylphenoxy amino hydroxyl anthraquinone.
Use/Import. (G) Magenta component. Import range: Confidential.
Toxicity Data. Acute oral toxicity: LD50 > 5,000 mg/kg species (Rat). Acute dermal toxicity: LD50 > 2,000 mg/kg species (Rabbit). Eye irritation: slight species (Rabbit). Skin irritation: slight species (Rabbit). Mutagenicity: negative.

P 90–1907

Importer. Confidential.
Chemical. (G) Alkycyanomethyloxy heterocyclicazo, benzoic acid ethoxycarbonylmethylester.
Use/Import. (G) Yellow component. Import range: Confidential.
Toxicity Data. Acute oral toxicity: LD50 > 5,000 mg/kg species (Rat). Acute dermal toxicity: LD50 > 2,000 mg/kg species (Rabbit). Eye irritation: slight species (Rabbit). Skin irritation: negligible species (Rabbit).

P 90–1908

Manufacturer. Confidential.
Chemical. (G) Saturated copolymer resin.
Use/Production. (S) Binder resin for toner manufacture. Prod. range: Confidential.

P 90–1910

Manufacturer. Ashland Chemical, Inc.
Chemical. (G) Saturated polyester.
Use/Production. (G) Cured reinforced plastic composite. Prod. range: Confidential.

P 90–1911

Manufacturer. Ashland Chemical, Inc.
Chemical. (G) Saturated polyester.
Use/Production. (G) Cured reinforced plastic composite. Prod. range: Confidential.

P 90–1912

Manufacturer. Amoco Chemical Company.
Chemical. (G) Aromatic polyimide.
Use/Production. (G) Protective coating. Prod. range: Confidential.

P 90–1913

Importer. Hoechst Celanese Corporation.
Chemical. (G) Tetra substituted naphthalene disulfonic acid, salt.
Use/Import. (S) Pigment for ink jet printing. Import range: 500–2,500 kg/yr.
Toxicity Data. Acute oral toxicity: LD50 > 2,000 kg/yr species (Rat). Eye irritation: none species (Rabbit). Skin irritation: negligible species (Rabbit).

P 90–1914

Manufacturer. Hoechst Celanese Corporation.
Chemical. (G) Substituted naphthalene sulfonic acid.
Use/Production. (S) Dyestuff for textile dying. Prod. range: 5,000–7,500 kg/yr.
Toxicity Data. Eye irritation: moderate species (Rabbit). Skin irritation: slight species (Rabbit).

P 90–1915

Importer. Hoechst Celanes Corporation.
Chemical. (G) Acrylic ester modified polyurethane adduct.
Use/Import. (S) Binder for paints. Import range: 470–480 kg/yr.

P 90–1916

Importer. Hoechst Celanes Corporation.
Chemical. (G) Acrylic ester modified polyurethane adduct.
Use/Import. (S) Binder for paints. Import range: 2,400 kg/yr.

P 90–1918

Importer. Base Corporation.

Chemical. (G) Metal complex of sulfonated disubstituted naphthalene-azo-trisubstitutedphyl-azo-disubstitutedphenyl-azo-monosubstitsedphenylfonate.

Use/Import. (S) Leather dye. Import range: Confidential.

Toxicity Data. Static acute toxicity: time LC50 400 mg/l species (zebra fish). Eye irritation: none species (Rabbit). Skin irritation: negligible species (Rabbit). Mutagenicity: positive. Skin sensitization: negative. Phototoxicity: positive species (Guinea Pig).

P 90-1619

Importer. Hoechst Celanese Corporation.

Chemical. (G) Amine modified unsaturated phenol/oxirane/polymer esterified.

Use/Import. (S) Binder for prints (cathodic electro deposition material). Import range: 5,600–5,700 kg/yr.

P 90-1620

Importer. Hoechst Celanese Corporation.

Chemical. (G) Amine modified unsaturated phenol/oxirane/polymer esterified.

Use/Import. (S) Binder for paints. Import range: 6,320–6,555 kg/yr.

P 90-1621

Importer. Confidential.

Chemical. (G) Fatty acidester.

Use/Import. (G) Lubricants. Import range: Confidential.

P 90-1622

Manufacturer. Amoco Chemical Company.

Chemical. (G) Polyimide-siloxane.

Use/Production. (G) Protection coating. Prod. range: Confidential.

Toxicity Data. Acute oral toxicity: LD50 7000 mg/kg species (Rat). Acute dermal toxicity: LD50 8,000 mg/kg species (Rabbit). Skin irritation: negligible species (Rabbit).

P 90-1623

Importer. Hoechst Celanese Corporation.

Chemical. (G) Amine modified unsaturated phenol/oxirane/polymer esterified.

Use/Import. (S) Binder for paints. Import range: 324–273 kg/yr.

P 90-1624

Manufacturer. Confidential.

Chemical. (G) Heterocycle aldehyde imine.

Use/Production. (G) Fuel scavenger. Prod. range: Confidential.

P 90-1625

Manufacturer. Confidential.

Chemical. (G) Carboxylic acid derivatives of polyoxyalkylenes.

Use/Production. (G) Crude oil demulsifier. Prod. range: Confidential.

P 90-1626

Manufacturer. Confidential.

Chemical. (G) Unrefined maleated polyprpene.

Use/Production. (G) Special surfactant/dispersing agent and lube oil additive. Prod. range: Confidential.

P 90-1627

Importer. Xerox Corporation.

Chemical. (G) Polycarbonate.

Use/Import. (G) Open, nondispersive use as a binder material on coated substance. Import range: Confidential.

P 90-1628

Importer. Confidential.

Chemical. (G) Triphenylmethane dye.

Use/Import. (G) Open, nondispersive use. Import range: Confidential.

P 90-1629

Importer. Huls America, Inc.

Chemical. (S) 3-Dodecyl-1-(2,2,6,6-tetramethyl-4-piperidinyl)- pyrrolidine-2, 5-dione, octadecanoate (salt).

Use/Import. (S) Light stabilizer for lacquers and plastics. Import range: 1,000–20,000 kg/yr.

Toxicity Data. Acute oral toxicity: LD50 > 3,000 mg/kg species (Rat). Eye irritation: strong species (Rabbit). Skin irritation: strong species (Rabbit).

P 90-1630

Importer. Ciba-Geigy Corporation.

Chemical. (G) Substituted hydroxybenzenepropenoic acid, (substituted-dioxa-thiaspiro-alky).

Use/Import. (S) Yellow-dye stabilizer for photo print paper. Import range: Confidential.

Toxicity Data. Acute oral toxicity: LD50 > 5,000 mg/kg species (Rat). Acute dermal toxicity: LD50 > 2,000 mg/kg species (Rabbit). Eye irritation: none species (Rabbit). Mutagenicity: positive. Skin irritation: negligible species (Rabbit).

P 90-1631

Manufacturer. Confidential.

Chemical. (G) Alkylated phenol.

Use/Production. (G) Additive for fuel. Prod. range: Confidential.

P 90-1632

Manufacturer. E.I. Du Pont De Nemours & Co. Inc.

Chemical. (G) Polyesterurethane copolymer.

Use/Production. (G) Open, nondispersive use. Prod. range: Confidential.

P 90-1633

Manufacturer. Union Camp Corporation.

Chemical. (S) Poly (alloocimene) maleic anhydride adduct.

Use/Production. (S) Substance functions as a chemical intermaterial in the malfacture poly(alloocimene)maleic anhydride. Prod. range: Confidential.

P 90-1634

Manufacturer. E.I.Du Pont De Nemours & Co.

Chemical. (G) Polyesterurethane copolymer.

Use/Production. (S) Substance functions as a minor component of the resin in binder industrial surface coating. Prod. range: Confidential.

P 90-1635

Manufacturer. Ciba-Geigy Corporation.

Chemical. (S) Benzene propanoic acid, 3-(2*H*-benzotriazol-2-yl)-5- (1,1-dimethylethyl)-4-hydroxy-, C7-9-alkyl, branched and linear, esters.

Use/Production. (S) UV absorber for industrial coatings. Prod. range: Confidential.

P 90-1636

Importer. SNPE Inc.

Chemical. (G) Hexanedioic acid, polymer with 1,2-ethanediol reaction products with 1,6-diisocyanato- 2,2,4(or 2,2,4(or 2,4,4)-trimethylhexane and 2-hydroxyethyl acrylate.

Use/Import. (S) Radiation curing of varnishes. Import range: 5,000–10,000 kg/yr.

Toxicity Data. Acute oral toxicity: LD50 > 5,000 mg/kg species (Rat). Skin irritation: negligible species (Rabbit).

P 90-1637

Importer. Ciba-Geigy Corporation.

Chemical. (S) Titanium, bis(.eta. 5-2,4-cyclopentadien-1-yl)bis [2,6-difloro-3-(1*H*-pyrrol-1-yl) phenyl]-.

Use/Import. (S) Laser sensitive photoinitator. Import range: Confidential.

Toxicity Data. Acute oral toxicity: LD50 > 2,000 mg/k species (Rat). Mutagenicity: negative.

P 90-1638

Manufacturer. Confidential.

Chemical. (G) Methacrylated chain extended maleated polybutadiene.

Use/Production. (S) Graphic arts printing plate. Prod. range: Confidential.

Toxicity Data. Acute oral toxicity: LD50 > 5 g/kg species (Rat). Acute dermal toxicity: LD50 > 2 g/kg species (Rabbit). Eye irritation: none species (Rabbit). Skin irritation: negligible species (Rabbit).

P 90-1039
Manufacturer. Confidential.
Chemical. (G) 1,4-btanediol, polymer with 2,2-dimethyl-1,3-prop a edioic acid, 3-hydroxy-2-(hydroxymethyl)-2-methylproanoic acid, 2-ethyl-2-(hydroxymethyl)-1,3-propanediol, hydrazine, and 1,1'-methylenebis(4-substituted cyclohexane.
Use/Production. (S) Coatings. Prod. range: 50,000–100,000 kg/yr.

P 90-1040
Manufacturer. Confidential.
Chemical. (G) Ethylenediamine adduction products with substituted and saturated fatty acids.
Use/Production. (G) Surface coating system additive. Prod. range: 10,000–68,000 kg/yr.

P 90-1041
Manufacturer. Confidential.
Chemical. (G) Polyaniline.
Use/Production. (G) Conductive polymer blends. Prod. range: Confidential.
Toxicity Data. Inhalation toxicity: LC50 > 2,903 mg/kg species (Rat). Eye irritation: moderate species (Rabbit). Skin irritation: strong species (Rabbit).

P 90-1042
Manufacturer. Confidential.
Chemical. (G) Dialkyl phosphoridithiaote phosphate compound.
Use/Production. (G) Petroleum product component. Prod. range: Confidential.
Toxicity Data. Acute oral toxicity: LD50 > 5 g/kg species (Rat). Acute dermal toxicity: LD50 > 2.0 g/kg species (Rabbit). Eye irritation: moderate species (Rabbit). Skin irritation: slight species (Rabbit).

P 90-1043
Manufacturer. Confidential.
Chemical. (G) Dialkyl phosphorodithioate phosphate compound.
Use/Production. (G) Petroleum product component. Prod. range: Confidential.
Toxicity Data. Acute oral toxicity: LD50 > 5 g/kg species (Rat). Acute dermal toxicity: LD50 > 2.0 g/kg species (Rabbit). Eye irritation: moderate species (Rabbit). Skin irritation: slight species (Rabbit).

P 90-1044
Manufacturer. Confidential.
Chemical. (G) Dialkyl.
Use/Production. (G) Petroleum product component. Prod. range: Confidential.
Toxicity Data. Acute oral toxicity: LD50 > 5 g/kg species (Rat). Acute dermal toxicity: LD50 > 2.0 g/kg species (Rabbit). Eye irritation: moderate species (Rabbit). Skin irritation: moderate species (Rabbit).

P 90-1045
Manufacturer. Confidential.
Chemical. (G) Dialkyl.
Use/Production. (G) Petroleum product component. Prod. range: Confidential.
Toxicity Data. Acute oral toxicity: LD50 > 5 g/kg species (Rat). Acute dermal toxicity: LD50 > 2.0 g/kg species (Rabbit). Eye irritation: moderate species (Rabbit). Skin irritation: slight species (Rabbit).

P 90-1046
Manufacturer. Confidential.
Chemical. (G) Dialkyl.
Use/Production. (G) Petroleum product component. Prod. range: Confidential.
Toxicity Data. Acute oral toxicity: LD50 > 5 g/kg species (Rat). Acute dermal toxicity: LD50 > 2.0 g/kg species (Rabbit). Eye irritation: moderate species (Rabbit). Skin irritation: slight species (Rabbit).

P 90-1047
Manufacturer. Confidential.
Chemical. (G) Dialkyl.
Use/Production. (G) Petroleum product component. Prod. range: Confidential.
Toxicity Data. Acute oral toxicity: LD50 > 5 g/kg species (Rat). Acute dermal toxicity: LD50 > 2.0 g/kg species (Rabbit). Eye irritation: moderate species (Rabbit). Skin irritation: slight species (Rabbit).

P 90-1048
Manufacturer. Confidential.
Chemical. (G) Dialkyl.
Use/Production. (G) Petroleum product component. Prod. range: Confidential.
Toxicity Data. Acute oral toxicity: LD50 > 5 g/kg species (Rat). Acute dermal toxicity: LD50 > 2.0 g/kg species (Rabbit). Eye irritation: moderate species (Rabbit). Skin irritation: slight species (Rabbit).

P 90-1049
Manufacturer. Confidential.
Chemical. (G) Dialkyl.
Use/Production. (G) Petroleum product component. Prod. range: Confidential.
Toxicity Data. Acute oral toxicity: LD50 > 5 g/kg species (Rat). Acute dermal toxicity: LD50 < 2.g/kg species (Rabbit). Eye irritation: moderate species (Rabbit). Skin irritation: slight species (Rabbit).

P 90-1050
Importer. Confidential.
Chemical. (S) Di(*p*-methylbenzyl) oxalate.
Use/Import. (S) Efficiency improver(sensizater) for heat-sensitive sheets. Import range: Confidential.

P 90-1051
Importer. Sinthopol Chemical.
Chemical. (S) Oil modified alkyd resin.
Use/Import. (S) A binder for high solid paints, having a cow content of solvents. Import range: Confidential.

P 90-1052
Importer. Confidential.
Chemical. (G) Polyurethane.
Use/Import. (S) Textile coating. Import range: Confidential.

P 90-1053
Manufacturer. Reichhold Chemicals, Inc.
Chemical. (G) Linseed oil-tall oil fatty acids alkyd resin.
Use/Production. (S) Intermediate in production of coating resins. Prod. range: Confidential.

P 90-1054
Manufacturer. Reichhold Chemicals, Inc.
Chemical. (G) Amine salt of polymer of alophatic isocyanate with polyester polyol.
Use/Production. (S) Flooring topcoat. Prod. range: Confidential.

P 90-1055
Manufacturer. Confidential.
Chemical. (G) Aluminum organometallic compound.
Use/Production. (G) Polymers production catalyst. Prod. range: Confidential.

P 90-1056
Manufacturer. Confidential.
Chemical. (G) Modified maleated resin.
Use/Production. (S) Chemical intermediate. Prod. range: Confidential.
Toxicity Data. Acute oral toxicity: LD50 > 5 g/kg species (Rat). Eye irritation: slight species (Rabbit). Skin irritation: negligible species (Rabbit).

P 90-1057
Manufacturer. Confidential.
Chemical. (G) Modified maleated resin salts.
Use/Production. (S) Binder in printing inks. Prod. range: Confidential.
Toxicity Data. Acute oral toxicity: LD50 > 5 g/kg species (Rat). Skin irritation: negligible species (Rabbit).

P 90-1669

Manufacturer. Confidential.

Chemical. (G) A polymer of acrylic acid esters, methacrylic acid and another vinyl monomer.

Use/Production. (G) Intermediate for textile resin size. Prod. range: Confidential.

P 90-1660

Manufacturer. Confidential.

Chemical. (G) A polymer of acrylic acid esters, methyl acrylic acid esters, acrylic acid another vinyl monomer, sodium salt.

Use/Production. (G) Textile resin size. Prod. range: Confidential.

P 90-1661

Importer. Nacham Inc.

Chemical. (G) Thioxanthone derivative.

Use/Import. (S) Sensitiser for photosensitive coatings. Import range: Confidential.

Toxicity Data. Acute oral toxicity: LD50 > 5,000 mg/kg species (Rat). Acute dermal toxicity: LD50 > 2,000 mg/kg species (Rabbit). Eye irritation: none species (Rabbit). Mutagenicity: negative. Static acute toxicity: time LC50 96H > 30 mg/l species (Zebra Fish). Skin irritation: negligible species (Rabbit). Skin sensitization: negative species (Guinea Pig).

P 90-1662

Importer. Confidential.

Chemical. (G) Polyurethane.

Use/Import. (S) Textile/leather coating. Import range: 65,000–100,000 kg/yr.

P 90-1663

Importer. Confidential.

Chemical. (G) Polyurethane.

Use/Import. (S) Textile/leather coating. Import range: 65,000–100,000 kg/yr.

P 90-1664

Manufacturer. Confidential.

Chemical. (G) Polyamines reaction product with alkyl acid and alkenyl glacid.

Use/Production. (G) Petroleum product additive. Prod. range: Confidential.

Toxicity Data. Acute oral toxicity: LD50 > 5 g/kg species (Rat). Acute dermal toxicity: LD50 > 3.2 g/kg species (Rabbit). Static acute toxicity: time LC50 96-100 mg/l species (Acartia Tonsa). Eye irritation: slight species (Rabbit).

P 90-1665

Importer. Confidential.

Chemical. (G) Metal chloride/methacrylate complex.

Use/Import. (G) Intermediate chemical. Import range: Confidential.

P 90-1666

Manufacturer. Confidential.

Chemical. (G) Metal chloride/methacrylate/organic aluminium complex.

Use/Production. (G) Intermediate chemcial. Prod. range: Confidential.

P 90-1667

Manufacturer. Confidential.

Chemical. (G) Polyalkene.

Use/Production. (G) Intermediate chemical. Prod. range: Confidential.

P 90-1668

Manufacturer. Confidential.

Chemical. (G) Magnesium-titanium-aluminum-chloride compound.

Use/Production. (G) Polyolefin catalyst. Prod. range: Confidential.

P 90-1669

Importer. Confidential.

Chemical. (G) *N*-[*N*,*N*-dialkylamino methyl(phenyl)substituted, benzoquinone monoimine.

Use/Import. (G) Cyan component. Import range: Confidential.

Toxicity Data. Acute oral toxicity: LD50 > 5,000 mg/kg species (Rat). Acute dermal toxicity: LD50 > 2,000 mg/kg species (Rat). Eye irritation: none species (Rabbit). Mutagenicity: negative. Skin irritation: slight species (Rabbit). Skin sensitization: negative species (Guinea Pig).

P 90-1670

Importer. Confidential.

Chemical. (G) Polyurea thickner.

Use/Import. (G) Lubricating grease for automotive application. Import range: Confidential.

P 90-1671

Manufacturer. Harcros Chemicals, Inc.

Chemical. (G) Alkyl aryl sulfonate amine salt.

Use/Production. (S) Pesticide emulsifier. Prod. range: 18,000–24,000 kg/yr.

Toxicity Data. Acute oral toxicity: LD50 > 5 g/kg species (Rat). Acute dermal toxicity: LD50 > 3.16 g/kg species (Rabbit). Skin irritation: slight species (Rabbit).

P 90-1672

Importer. Hoechst Celanese Corporation.

Chemical. (G) Substituted dioxazene.

Use/Import. (S) Additive for pigments. Import range: 500–12,000 kg/yr.

Toxicity Data. Acute oral toxicity: LD50 > 2,000 mg/kg species (Rat). Acute dermal toxicity: LD50 > 2,000 mg/kg species (Rabbit).

P 90-1673

Importer. Takeda U.S.A., Inc.

Chemical. (G) Hybrid polymer of unsaturated polyester and vinyl ester.

Use/Import. (S) Matrix of Sheet Molding Compound (SMC). Import range: Confidential.

P 90-1674

Manufacturer. Confidential.

Chemical. (G) Acrylic polymer.

Use/Production. (G) Open, nondispersive use. Prod. range: Confidential.

Toxicity Data. Acute oral toxicity: LD50 > 5 g/kg species (Rat). Acute dermal toxicity: LD50 > 5 g/kg species (Rabbit). Eye irritation: slight species (Rabbit). Skin irritation: negligible species (Rabbit).

P 90-1675

Manufacturer. Confidential.

Chemical. (G) Modified acrylic polymer.

Use/Production. (G) Open, nondispersive. Prod. range: Confidential.

Toxicity Data. Acute oral toxicity: LD50 > 5,000 mg/kg species (Rat). Acute dermal toxicity: LD50 > 2,000 mg/kg species (Rabbit). Skin irritation: negligible species (Rabbit). Skin sensitization: negative species (Guinea Pig). Phototoxicity: positive.

P 90-1676

Manufacturer. Estron Chemical, Inc.

Chemical. (G) Polyether.

Use/Production. (S) Adhesive promoter. Prod. range: Confidential.

P 90-1677

Importer. Confidential.

Chemical. (S) Hydroxylapatite lead.

Use/Import. (G) Intermediate chemical. Import range: Confidential.

P 90-1678

Manufacturer. Confidential.

Chemical. (G) Modified methylaluminoxane.

Use/Production. (S) Homogeneous cocatalyst component in the production of polyolefins. Prod. range: Confidential.

P 90-1679

Manufacturer. Confidential.

Chemical. (G) Dialkenyl substituted dialkenyl ether of a alkoxylated bis phenol A.

Use/Production. (G) A formulation component for open, nondispersive use. Prod. range: Confidential.

P 90-1680

Manufacturer. Confidential.

Chemical. (G) Substituted aliphatic-terminated poly(dimethylsiloxane).

Use/Production. (G) A formulation component for open, nondispersive use. Prod. range: Confidential.

P 90-1661

Importer. Zeon Chemicals USA, Inc.
Chemical. (G) Polyacrylate elastomer.
Use/Import. (G) Base elastomer for making rubber molding compounds. Import range: Confidential.

P 90-1662

Manufacturer. Confidential.
Chemical. (G) Styrenated polyacrylate polymethacrylate.
Use/Production. (G) Dispersively applied coating. Prod. range: 50,000–100,000 kg/yr.

P 90-1663

Manufacturer. Confidential.
Chemical. (G) Modified melamine formaldehyde resin.
Use/Production. (G) Ingredient in a dispersively applied coating. Prod. range: 250,000 kg/yr.

P 90-1664

Manufacturer. Confidential.
Chemical. (S) 1-Methylpyrrolidine-2-thione.
Use/Production. (G) Chemical intermediate. Prod. range: Confidential.
Toxicity Data. Eye irritation: strong species (Rabbit). Skin irritation: slight species (Rabbit). Skin sensitization: negative species (guinea pig).

P 90-1665

Importer. Confidential.
Chemical. (G) Nonionic surfactant.
Use/Import. (G) Emulsifier. Import range: Confidential.

P 90-1666

Manufacturer. Amoco Petroleum Additives Co.
Chemical. (G) Alkyl aromatic sulfonated mettallo salt.
Use/Production. (G) Lubricanting oil detergent. Prod. range: Confidential.

P 90-1667

Manufacturer. Minnesota Mining & Manufacturing (3M).
Chemical. (G) Formaldehyde adducts.
Use/Production. (G) Adhesive. Prod. range: Confidential.

P 90-1668

Manufacturer. Confidential.
Chemical. (G) Substituted benzofurane.
Use/Production. (G) Destructive use. Prod. range: confidential.

P 90-1669

Manufacturer. Milliken & Company.
Chemical. (G) Substituted polyoxyalkyl aromatic amine.
Use/Production. (G) Open, nondispersive. Prod. range: Confidential.

P 90-1660

Manufacturer. Milliken & Company.
Chemical. (G) Substituted polyoxyalkyl aromatic amine.
Use/Production. (G) Open, nondispersive. Prod. range: Confidential.

P 90-1661

Importer. Confidential.
Chemical. (G) Styrene-acrylic polymer.
Use/Import. (G) Component of coating formulations. Import range: Confidential.

P 90-1662

Manufacturer. The Dow Chemical.
Chemical. (G) Modified polyolefin.
Use/Production. (G) Impact modifier. Prod. range: Confidential.

P 90-1663

Manufacturer. The Dow Chemical.
Chemical. (G) Modified polyolefin.
Use/Production. (G) Impact modifier. Prod. range: Confidential.

P 90-1664

Manufacturer. The Dow Chemical.
Chemical. (G) Modified polyolefin.
Use/Production. (G) Impact modifier. Prod. range: Confidential.

P 90-1665

Manufacturer. Confidential.
Chemical. (S) Aqueous polyurethane dispersion.
Use/Production. (S) Bonding or finishing treatment for textiles. Prod. range: 19,000–115,000 kg/yr.

P 90-1666

Manufacturer. Ciba-Geigy Corporation.
Chemical. (G) Substituted azo naphthalenesulfonic acid.
Use/Production. (S) Dye intermediate. Prod. range: Confidential.
Toxicity Data. Acute oral toxicity: LD50 > 5,000 mg/kg species (Rat). Eye irritation: none species (Rabbit). Skin irritation: negligible species (Rabbit). Mutagenicity: positive.

P 90-1667

Manufacturer. Confidential.
Chemical. (G) Metal carboxyl carboxylate.
Use/Production. (G) Catalyst. Prod. range: Confidential.

P 90-1668

Manufacturer. Confidential.
Chemical. (G) Metal carbonyl carboxylate.
Use/Production. (G) Calalyst. Prod. range: Confidential.

P 90-1669

Manufacturer. Confidential.
Chemical. (G) Metal carbonyl carboxylate.
Use/Production. (G) catalyst. Prod. range: Confidential.

Manufacturer. Confidential.
Chemical. (G) Metal carbonyl carboxylate.
Use/Production. (G) Catalyst. Prod. range: Confidential.

P 90-1715
Manufacturer. Confidential.
Chemical. (G) Tannin, sodium salt, polymer with acrylic monomers.
Use/Production. (G) Fluid loss additive for oil and gas production. Prod. range: Confidential.

P 90-1716
Manufacturer. Air Product and Chemicals, Inc.
Chemical. (S) Amino-, aminoalkyl- and aminoalkyl substituted cyclohexanes.
Use/Production. (G) Epoxy curative/chemical additive/corrosion inhibitor. Prod. range: Confidential.
Toxicity Data. Acute oral toxicity: LD50 .83 g/kg species (Rat). Acute dermal toxicity: LD50 > 1.0 g/kg species (Rabbit).

P 90-1717
Manufacturer. Confidential.
Chemical. (G) Polyvinyl acetate polysaccharide graft copolymer.
Use/Production. (S) Nonwoven textile binder. Prod. range: Confidential.

P 90-1718
Manufacturer. Confidential.
Chemical. (G) Hydroxy ketone.
Use/Production. (S) Chemical intermediate. Prod. range: Confidential.
Toxicity Data. Acute oral toxicity: LD50 3.51 ml/kg species (Rat). Acute dermal toxicity: LD50 8.5 ml/kg species (Rabbit). Eye irritation: moderate species (Rabbit). Skin irritation: negligible species (Rabbit).

P 90-1719
Manufacturer. Ashland Chemical, Inc.
Chemical. (G) Modified ethoxylated phenol-formaldehyde polymer.
Use/Production. (S) Intermediate for vinyl ester resin. Prod. range: Confidential.

P 90-1720
Manufacturer. Ashland Chemical, Inc.
Chemical. (G) Vinyl ester resin.
Use/Production. (S) Matrix resin for composite. Prod. range: Confidential.

P 90-1721
Manufacturer. Ashland Chemical, Inc.
Chemical. (G) Vinyl ester resin.
Use/Production. (S) Matrix resin for composite. Prod. range: Confidential.

P 90-1722
Manufacturer. Ashland Chemical Inc.
Chemical. (G) Vinyl ester resin.
Use/Production. (S) Matrix resin for composite. Prod. range: Confidential.

P 90-1723
Manufacturer. Ashland Chemical, Inc.
Chemical. (G) Vinyl ester resin.
Use/Production. (S) Matrix resin for composite. Prod. range: Confidential.

P 90-1724
Manufacturer. Sika Corporation.
Chemical. (G) Organic acid/amine salt.
Use/Production. (S) Corrosion inhibitor. Prod. range: 500-600 kg/yr.

P 90-1725
Manufacturer. DowElanco.
Chemical. (G) Acetanilide.
Use/Production. (G) Chemical intermediate. Prod. range: Confidential.
Toxicity Data. Acute oral toxicity: LD50 500-2,000 mg/kg species (Rat). Acute dermal toxicity: LD50 > 2,000 mg/kg species (Rabbit). Eye irritation: slight species (rabbi). Skin irritation: negligible species (Rabbit).

P 90-1726
Manufacturer. DowElanco.
Chemical. (G) Substituted triazole.
Use/Production. (S) Chemical intermediate. Prod. range: Confidential.
Toxicity Data. Acute oral toxicity: LD50 > 2,000 mg/kg species (Rat). Eye irritation: slight species (Rabbit). Skin irritation: negligible species (Rabbit).

P 90-1727
Manufacturer. DowElanco.
Chemical. (G) Substituted triazole.
Use/Production. (S) Chemical intermediate. Prod. range: Confidential.

P 90-1728
Manufacturer. DowElanco.
Chemical. (G) Substituted triazole.
Use/Production. (S) Chemical intermediate. Prod. range: Confidential.
Toxicity Data. Acute oral toxicity: LD50 > 2,000 mg/yr species (Rat). Eye irritation: moderate species (Rabbit). Skin irritation: negligible species (Rabbit).

P 90-1729
Manufacturer. DowElanco.
Chemical. (G) Sulfonamide.
Use/Production. (S) Chemical intermediate. Prod. range: Confidential.
Toxicity Data. Acute oral toxicity: LD50 > 2,000 mg/kg species (Rat). Eye irritation: moderate species (Rabbit). Skin irritation: negligible species (Rabbit).

P 90-1730
Manufacturer. DowElanco.
Chemical. (G) Sulfonamide.
Use/Production. (S) Chemical intermediate. Prod. range: Confidential.

P 90-1731
Manufacturer. DowElanco.
Chemical. (G) Substituted triazole.
Use/Production. (S) Chemical intermediate. Prod. range: Confidential.
Toxicity Data. Acute oral toxicity: LD50 > 2,000 mg/kg species (Rat). Eye irritation: moderate species (Rabbit). Skin irritation: negligible species (Rabbit).

P 90-1732
Manufacturer. DowElanco.
Chemical. (G) Sulfonamide.
Use/Production. (S) Chemical intermediate. Prod. range: Confidential.

P 90-1734
Importer. Confidential.
Chemical. (G) Pentaerythritol diphosphite.
Use/Import. (G) Stabilizing plastics. Import range: Confidential.
Toxicity Data. Acute oral toxicity: LD50 > 5,000 mg/kg species (Rat). Eye irritation: slight species (Rabbit). Skin irritation: negligible species (Rabbit).

P 90-1736
Importer. DSM Chemicals New Jersey, Inc.

Chemical. (G) Salt of an oxygenated carboxylic acid.
Use/Import. (G) Surface active agent. Import range: Confidential.

P 90-1736

Importer. DSM Chemicals New Jersey, Inc.
Chemical. (G) Oxygenated alkyl carboxylate.
Use/Import. (G) Surfactant. Import range: Confidential.

P 90-1737

Manufacturer. Ashland Chemical, Inc.
Chemical. (G) Modified phenol/formaldehyde polymer.
Use/Production. (G) Open, nondispersive use. Prod. range: Confidential.

P 90-1738

Importer. Ciba-Geigy Corporation.
Chemical. (G) Organic phosphorus company.
Use/Import. (S) Antiwear additive for lubricants. Import range: Confidential.
Toxicity Data. Acute dermal toxicity: LD50 > 2,000 mg/kg species (Rabbit). Static acute toxicity: time EC50 24 H5.5 mg/l species (daphnia magna). Eye irritation: none species (Rabbit).Skin irritation: negligible species (Rabbit). Mutagenicity: negative. Skin sensitization: negative species (Guinea pig).

P 90-1739

Manufacturer. Confidential.
Chemical. (G) Cycloaliphatic polyester.
Use/Production. (G) Ingredient in a dispersively applied coating. Prod. range: 167,000–500,000 kg/yr.

P 90-1740

Manufacturer. Confidential.
Chemical. (G) Ketoxime blocked alicycle isocyanate isocyanurate.
Use/Production. (G) Ingredient in a dispersively used coating. Prod. range: 600–4,000 kg/yr.

P 90-1741

Importer. Confidential.
Chemical. (G) Polyester from aromatic dicarboxylic acid, aliphatic diol.
Use/Import. (G) Dispersing agent. Import range: Confidential.

P 90-1742

Manufacturer. Minnesota Mining & Manufacturing (3M).
Chemical. (G) Aliphatic diisocyanate prepolymer.
Use/Production. (G) Repolymer used in protective coatings. Prod. range: Confidential.

P 90-1743

Importer. Confidential.
Chemical. (S) Tar, coal.
Use/Import. (S) Binder for carbon fiber components. Import range: Confidential.
Toxicity Data. Acute oral toxicity: LD50 > 5 mg/kg species (Rat). Eye irritation: none species (Rabbit). Skin irritation: slight species (Rabbit). Mutagenicity: negative. Skin sensitization: negative species (guinea pig).

P 90-1744

Importer. Huls America Inc.
Chemical. (S) Butene, tetramer (hydrogenated).
Use/Import. (G) Ingredient in a dispersively applied coating. Import range: 167,000–500,000 kg/yr.

P 90-1745

Manufacturer. Confidential.
Chemical. (G) Neutralized alkylaryl ether phosphate ester.
Use/Production. (G) An addition used in the paint industry. Prod. range: Confidential.

P 90-1746

Manufacturer. Confidential.
Chemical. (G) (Aryl)(arylheterocyclicalkylidienyl) pyrazolinone.
Use/Production. (G) Contained use in an article. Prod. range: 1,000–1,200 kg/yr.
Toxicity Data. Acute oral toxicity: LD50 > 5,000 mg/kg species (Rat). Acute dermal toxicity: LD50 > 2,000 mg/kg species (Rat). Eye irritation: moderate species (Rabbit). Skin irritation: slight species (Rabbit).

P 90-1747

Manufacturer. Dianal America, Inc.
Chemical. (S)
Use/Production. (S) Binder for printing inks and vehicle for paints. Prod. range: 175,000–525,000 kg/yr.

P 90-1748

Manufacturer. Stamford Chemicals, Corp.
Chemical. (G) Acrylic copolymer.
Use/Production. (S) Dispersing agent. Prod. range: Confidential.

P 90-1749

Importer. Confidential.
Chemical. (G) Substituted cyclohexane.
Use/Import. (S) Monomer for thermoplastic polymer production. Import range: Confidential.
Toxicity Data. Acute oral toxicity: LD50 > 2,000 mg/kg species (Rabbit). Acute dermal toxicity: LD50 > 2,000 mg/kg species (Rabbit). Eye irritation: none species (Rabbit).Skin irritation: negligible species (Rabbit). Mutagenicity: negative.

P 90-1750

Importer. Huls America Inc.
Chemical. (S) Fatty acids, fish oil, esters with polyethylene glycol mono (nonylphenyl) ether.
Use/Import. (S) Component of defoamer additive for acqueous or water-based paints or coating. Import range: 9,500–20,000 kg/yr.

P 90-1751

Importer. Mitsubishi America, Inc.
Chemical. (G) Styrene polymer with alkane reaction product with organic anhydride.
Use/Import. (G) Coating agent. Import range: 10,000–30,000 kg/yr.
Toxicity Data. Acute oral toxicity: LD50 > 5,000 kg/yr species (Rat).

P 90-1752

Manufacturer. Dow Corning Corporation.
Chemical. (S) Trisiloxane, 1,1,5,5-tetramethyl-3, 3-diphenyl.
Use/Production. (S) Silicone crosslinker. Prod. range: Confidential.
Toxicity Data. Acute oral toxicity: LD50 > 5,000 mg/kg species (Rat). Acute dermal toxicity: LD50 > 2,000 mg/kg species (Rabbit). Eye irritation: none species (Rabbit). Mutagenicity: negative.Skin irritation: negligible species (Rabbit).

P 90-1753

Manufacturer. Confidential.
Chemical. (G) Halogenated nitroalkane.
Use/Production. (G) Intermediate in pesticide production. Prod. range: Confidential.
Toxicity Data. Acute oral toxicity: LD50 102 mg/kg species (Rat). Acute dermal toxicity: LD50 2100 mg/kg species (Rabbit). Eye irritation: strong species (Rabbit). Skin irritation: strong species (Rabbit).

Dated: October 15, 1990.

Steven Newburg-Rinn,

Acting Director, Information Management Division, Office of Toxic Substances.

BILLING CODE 6560-50-F

[OPTS-59238; FRL-3804-6]

Toxic and Hazardous Substances; Certain Chemicals; Approval of a Test Marketing Exemption

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: This notice announces EPA's approval of an application for test marketing exemption (TME) under

section 5(h)(1) of the Toxic Substances Control Act (TSCA) and 40 CFR 720.38. EPA has designated this application as TME-90-19. The test marketing conditions are described below.

DATES: This approval is effective October 3, 1990. Written comments will be received until November 5, 1990.

ADDRESSES: Written comments, identified by the document control number "OPTS-59286" and the specific TME number "TME-90-19" should be sent to: Document Control Officer (TS-790), Confidential Data Branch, Information Management Division, Office of Toxic Substances, Environmental Protection Agency, Rm. E-201, 401 M St., SW., Washington, DC 20460, (202) 382-3532.

FOR FURTHER INFORMATION CONTACT: Mark Howard, New Chemical Branch, Chemical Control Division (TS-794), Office of Toxic Substances, Environmental Protection Agency, Rm. E-611, 401 M St., SW., Washington, DC 20460, (202) 245-4143.

SUPPLEMENTARY INFORMATION: Section 5(h)(1) of TSCA authorizes EPA to exempt persons from premanufacture notification (PMN) requirements and permit them to manufacture or import new chemical substances for test marketing purposes if the Agency finds that the manufacture, processing, distribution in commerce, use and disposal of the substances for test marketing purposes will not present an unreasonable risk of injury to health or the environment. EPA may impose restrictions on test marketing activities and may modify or revoke a test marketing exemption upon receipt of new information which casts significant doubt on its finding that the test marketing activity will not present an unreasonable risk of injury.

EPA hereby approves TME-90-19. EPA has determined that test marketing of the new chemical substance described below, under the conditions set out in the TME application, and for the time period and restrictions specified below, will not present an unreasonable risk of injury to health or the environment. The test marketing period, production volume, use, and number of customers must not exceed that specified in the application. All other conditions and restrictions described in the application and in this notice must be met.

Inadvertently, notice of receipt of the application was not published. Therefore, an opportunity to submit comments is being offered at this time. The complete nonconfidential document is available in the TSCA Public Docket Office, NE G004 at the above address between 8 a.m. and noon, and 1 p.m. and 4 p.m., Monday through Friday, excluding legal holidays. EPA may modify or revoke the test marketing exemption if comments are received which cast significant doubt on its finding that the test marketing activities will not present an unreasonable risk of injury.

The following additional restrictions apply to TME-90-19. A bill of lading accompanying each shipment must state that the use of the substance is restricted to that approved in the TME. In addition, the applicant shall maintain the following records until 5 years after the date they are created, and shall make them available for inspection or copying in accordance with section 11 of TSCA:

1. Records of the quantity of the TME substance produced and the date of manufacture.
2. Records of dates of the shipments to each customer and the quantities supplied in each shipment.
3. Copies of the bill of lading that accompanies each shipment of the substance.

T-90-19

Date of Receipt: August 29, 1990.

Close of Review Period: October 12, 1990. The extended comment period will close (insert date 15 days after date of publication in the Federal Register).

Applicant: Westvaco Corporation.

Chemical: (G) Resin modified, hydrocarbon resin.

Use: (G) Printing ink resin Litho, LP, and Gravure publication and packaging.

Production Volume: Confidential.

Number of Customers: Confidential.

Test Marketing Period: Confidential. Period commences on first day of commercial manufacture.

Risk Assessment: EPA identified no significant health or environmental concerns for the test market substance. Therefore, the test market activities will not present any unreasonable risk of injury to health or the environment.

The Agency reserves the right to rescind approval or modify the conditions and restrictions of an exemption should any new information come to its attention which casts significant doubt on its finding that the test marketing activities will not present an unreasonable risk of injury to health or the environment.

Dated: October 3, 1990.

John W. Melcose,

Director, Chemical Control Division, Office of Toxic Substances.

(OPTS-51753; FRL 3837-9)

Toxic and Hazardous Substances; Certain Chemicals Premanufacture Notices

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: Section 5(a)(1) of the Toxic Substances Control Act (TSCA) requires any person who intends to manufacture or import a new chemical substance to submit a premanufacture notice (PMN) to EPA at least 90 days before manufacture or import commences. Statutory requirements for section 5(a)(1) premanufacture notices are discussed in the final rule published in the Federal Register of May 13, 1983 (48 FR 21722). This notice announces receipt of 44 such PMNs and provides a summary of each.

FEDERAL MARITIME COMMISSION

Agreement(s) Filed

The Federal Maritime Commission hereby gives notice of the filing of the following agreement(s) pursuant to section 5 of the Shipping Act of 1984.

Interested parties may inspect and obtain a copy of each agreement at the Washington, DC. office of the Federal Maritime Commission, 1100 L Street, NW., Room 10220. Interested parties may submit comments on each agreement to the Secretary, Federal Maritime Commission, Washington, DC 20573, within 10 days after the date of the Federal Register in which this notice appears. The requirements for comments are found in § 572.603 of title 46 of the Code of Federal Regulations. Interested persons should consult this section before communicating with the Commission regarding a pending agreement.

Agreement No.: 224-200426.

Title: Port Everglades Authority/Sea-Land Service, Inc. Terminal Agreement.

Parties:

Port Everglades Authority

Sea-Land Service, Inc.

Synopsis: The Agreement provides for the lease of property, terminal yard, maintenance facility, office and storage space at Port Everglades. The Agreement's term will end September 28, 1998.

Agreement No.: 224-200428.

Title: Port Everglades Authority/Crowley Caribbean Transport, Inc. Terminal Agreement

Parties:

Port Everglades Authority (Port)

Crowley Caribbean Transport, Inc. (Lessee)

Synopsis: The Agreement provides Lessee with a one year lease of certain Port property located at Southport, Port Everglades, Florida. Lessee shall use said property as a container/RoRo terminal and related uses including the storage of containers, equipment and cargo; and for partial use as a Container Freight Station. The Port shall receive monthly rent based on a rate of $800.00 per acre, plus applicable Florida sales tax.

Agreement No.: 224-200427.

Title: Maryland Port Administration-Mediterranean Shipping Company, Inc.

Parties:

Maryland Port Administration (MPA)
Mediterranean Shipping Company, Inc. (MSC)

Synopsis: The Agreement provides for MPA to grant MSC an incentive of $3.00 per loaded container and $0.40 per ton for Ro/Ro cargo restricted to containers and Ro/Ro cargo coming into and going out of MPA's marine terminals by direct vessel calls.

By order of the Federal Maritime Commission.

Dated: October 15, 1990.

Joseph C. Polking,

Secretary.

BILLING CODE 6730-01-M

FEDERAL RESERVE SYSTEM

ComSouth Bankshares, Inc., et al.; Notice of Applications To Engage De Novo in Permissible Nonbanking Activities

The companies listed in this notice have filed an application under § 225.23(a)(1) of the Board's Regulation Y (12 CFR 225.23(a)(1)) for the Board's approval under section 4(c)(8) of the Bank Holding Company Act (12 U.S.C. 1843(c)(8)) and § 225.21(a) of Regulation Y (12 CFR 225.21(a)) to commence or to engage *de novo*, either directly or through a subsidiary, in a nonbanking activity that is listed in § 225.25 of Regulation Y as closely related to banking and permissible for bank holding companies. Unless otherwise noted, such activities will be conducted throughout the United States.

Each application is available for immediate inspection at the Federal Reserve Bank indicated. Once the application has been accepted for processing, it will also be available for inspection at the offices of the Board of Governors. Interested persons may express their views in writing on the question whether consummation of the proposal can "reasonably be expected to produce benefits to the public, such as greater convenience, increased competition, or gains in efficiency, that outweigh possible adverse effects, such as undue concentration of resources, decreased or unfair competition, conflicts of interests, or unsound banking practices." Any request for a hearing on this question must be accompanied by a statement of the reasons a written presentation would not suffice in lieu of a hearing, identifying specifically any questions of fact that are in dispute, summarizing the evidence that would be presented at a hearing, and indicating how the party commenting would be aggrieved by approval of the proposal.

Unless otherwise noted, comments regarding the applications must be received at the Reserve Bank indicated or the offices of the Board of Governors not later than November 8, 1990.

A. Federal Reserve Bank of Richmond (Lloyd W. Bostian, Jr., Senior Vice President) 701 East Byrd Street, Richmond, Virginia 23261:

1. *ComSouth Bankshares, Inc.*, Columbia, South Carolina; to engage in making and selling first mortgage loans pursuant to § 225.25(b)(1)(iii) of the Board's Regulation Y. These activities will be conducted in the State of South Carolina.

B. Federal Reserve Bank of Atlanta (Robert E. Heck, Vice President) 104 Marietta Street, NW., Atlanta, Georgia 30303:

1. *Lowndes Bancshares, Inc.*, Hahira, Georgia; to engage *de novo*, through its subsidiary, Goldleaf Technologies, Inc., Hahira, Georgia, in providing data processing and data transmission services pursuant to section 225.25(b)(7) of the Board's Regulation Y.

Board of Governors of the Federal Reserve System, October 5, 1990.

Jennifer J. Johnson,

Associate Secretary of the Board.

[FR Doc. 90-24710 Filed 10-18-90; 8:45 am]

BILLING CODE 6210-01-M

NCNB Corp., Charlotte, NC; Application To Engage in Asset Management, Asset Valuation, Servicing, and Collection Activities

NCNB Corporation, Charlotte, North Carolina ("Applicant"), has applied, pursuant to section 4(c)(8) of the Bank Holding Company Act (12 U.S.C. 1843(c)(8)) ("BHC Act") and § 225.23(a)(3) of the Board's Regulation Y (12 CFR 225.23(a)(3)), for prior approval to engage *de novo* through a subsidiary in providing asset management, asset valuation, servicing, and collection activities. The Board has approved a similar proposal to provide certain management and consulting services to failed savings and loan associations under the Federal Home Loan Bank Board's management consignment program. *First Florida Banks, Inc.*, 74 Federal Reserve Bulletin 771 (1988). These activities will be conducted on a nationwide basis.

Section 4(c)(8) of the BHC Act provides that a bank holding company may engage in any activity that the Board has determined to be "so closely related to banking or managing or controlling banks as to be a proper incident thereto." A particular activity may be found to meet the "closely related to banking" test if it is demonstrated that banks have generally provided the proposed activity; that banks generally provide services that are operationally or functionally similar to the proposed activity so as to equip them particularly well to provide the proposed activity; or that banks generally provide services that are so integrally related to the proposed activity as to require their provision in a specialized forum. *National Courier Ass'n* v. *Board of Governors*, 516 F.2d 1229, 1237 (D.C. Cir. 1975). In addition, the Board may consider any other basis that may demonstrate that the activity has a reasonable or close relationship to banking or managing or controlling banks. Board Statement Regarding Regulation Y, 49 FR 806 (1984).

In determining whether an activity meets the second, or proper incident to banking, test of section 4(c)(8), the Board must consider whether the performance of the activity by an affiliate of a holding company "can reasonably be expected to produce benefits to the public, such as greater convenience, increased competition, or gains in efficiency that outweigh possible adverse effects, such as undue concentration of resources, decreased or unfair competition, conflicts of interests, or unsound banking practices."

As proposed by Applicant, the combination of activities for which approval is requested has not previously been approved by the Board. Under the categories of asset management and asset valuation, Applicant proposes to engage in the management and liquidation or other disposition of loans and their underlying collateral, including other real estate owned ("OREO") and other assets acquired through foreclosure or in satisfaction of debts previously contracted ("DPC property").

Applicant defines "management and liquidation of loans," to include: Classifying and valuing loan portfolios; filing reviews of loan documentation; developing collection strategies; negotiating renewals, extensions, and restructure agreements; and initiating foreclosure, bankruptcy, and other legal proceedings, where appropriate. Applicant defines "disposition of loans" to include developing and implementing market strategies for the sale or refinancing of individual loans and for the packaging and sale of whole or securitized loan portfolios. Applicant defines "management of OREO and DPC property" to include: Review of

BEST COPY AVAILABLE

appraisals, conduct (either directly or through independent contractors) of appraisals, environmental inspections, performance of cash flow and asset review analyses, contracting with and supervising independent property managers, and leasing of OREO and other DPC property (directly or through independent contractors). Applicant defines "disposition of assets" to include developing and implementing marketing strategies for the sale of OREO or other DPC property either individually or packaged for investors or developers.

Applicant maintains that the asset management and asset valuation activities described above have all previously been determined to be permissible for bank holding companies, and are included within the activities of servicing loans or other extensions of credit (12 CFR 225.25(b)(1)); providing investment or financial advice (12 CFR 225.25(b)(4)); providing management consulting advice to nonaffiliated depository institutions (12 CFR 225.25(b)(11)); providing real estate and personal property appraisals (12 CFR 225.25(b)(13)); and operating a collection agency (12 CFR 225.25(b)(23)). The Board also has by order previously approved asset management activities similar to those proposed by Applicant. *First Florida Banks, Inc.*, 74 Federal Reserve Bulletin 771 (1988).

Additionally, servicing and collection activities are permissible for bank holding companies pursuant to § 225.25(b)(1) and (23), respectively, of Regulation Y. 12 CFR 225.25(b)(1) and (23).

Any views or requests for hearing should be submitted in writing and received by William W. Wiles, Secretary, Board of Governors of the Federal Reserve System, Washington, D.C., 20551, not later than November 6, 1990. Any request for a hearing must, as required by § 262.3(e) of the Board's Rules of Procedure (12 CFR 262.3(e)), be accompanied by a statement of why a written presentation would not suffice in lieu of a hearing, identifying specifically any questions of fact that are in dispute, summarizing the evidence that would be presented at a hearing, and indicating how that party commenting would be aggrieved by approval of the proposal.

This application may be inspected at the offices of the Board of Governors or the Federal Reserve Bank of Richmond.

Board of Governors of the Federal Reserve System, October 15, 1990.

Jennifer J. Johnson,

Associate Secretary of the Board.

FEDERAL TRADE COMMISSION

[Dkt. C-3305]

Amersham International PLC; Prohibited Trade Practices, and Affirmative Corrective Actions

AGENCY: Federal Trade Commission.

ACTION: Consent order.

SUMMARY: In settlement of alleged violations of Federal law prohibiting unfair acts and practices and unfair methods of competition, this consent order prohibits, among other things, a Buckinghamshire, England company from consummating the acquisition of Medi-Physics, Inc. by respondent until after the closing of the sale of Medi-Physics, SPECTamine business to IMP, Incorporated or any other Commission-approved acquirer. In addition, for a period of ten years, respondent is prohibited from acquiring, without prior Commission approval, any stock, share capital, or equity interest in, or any assets relating to SPECT brain imaging.

DATES: Complaint and Order issued September 14, 1990.[1]

[1] Copies of the Complaint and the Decision and Order are available from the Commission's Public Reference Branch, H-130, 6th Street & Pennsylvania Avenue, NW., Washington, DC 20580.

FOR FURTHER INFORMATION CONTACT: Phillip Broyles, FTC/S-2308, Washington, DC 20580. (202) 326-2662.

SUPPLEMENTARY INFORMATION: On Monday, June 18, 1990, there was published in the Federal Register, 55 FR 24640, a proposed consent agreement with analysis in the Matter of Amersham International PLC, for the purpose of soliciting public comment. Interested parties were given sixty (60) days in which to submit comments, suggestions or objections regarding the proposed form of order.

No comments having been received, the Commission has ordered the issuance of the complaint in the form contemplated by the agreement, made its jurisdictional findings and entered an order to cease and desist, as set forth in the proposed consent agreement, in disposition of this proceeding.

Authority: Sec. 6, 38 Stat. 721; 15 U.S.C. 46. Interpret or apply sec. 5, 38 Stat. 719, as amended; sec. 7, 38 Stat. 731, as amended; 15 U.S.C. 45, 18.

Donald S. Clark,

Secretary.

BILLING CODE 6750-01-M

[File No. 892 3252]

Fertility Institute of Western Massachusetts, et al.; Proposed Consent Agreement with Analysis To Aid Public Comment

AGENCY: Federal Trade Commission.

ACTION: Proposed consent agreement.

SUMMARY: In settlement of alleged violations of Federal law prohibiting unfair acts and practices and unfair methods of competition, this consent agreement, accepted subject to final Commission approval, would prohibit, among other things, a Springfield, MA., fertility institute and its proprietor from misrepresenting: The number or percentage of patients that achieve success in overcoming infertility, including the number or percentage of patients that give birth or achieve pregnancy; the success rate of any infertility procedure, without competent and reliable scientific evidence to substantiate the claims; or the cost or expense of any infertility test or procedure. The order also prohibits respondents from misrepresenting their qualifications or ability to provide infertility treatments, and any beneficial or therapeutic aspects of any test or

procedure relating to the treatment of infertility.

DATES: Comments must be received on or before December 18, 1990.

ADDRESSES: Comments should be directed to: FTC/Office of the Secretary, room 159, 6th St. and Pa. Ave. NW., Washington, D.C. 20580.

FOR FURTHER INFORMATION CONTACT: Phoebe Morse, Boston Regional Office, Federal Trade Commission, 10 Causeway St., room 1184, Boston, MA 02222-1073. (617) 565-7240.

SUPPLEMENTARY INFORMATION: Pursuant to section 6(f) of the Federal Trade Commission Act, 38 Stat. 721, 15 U.S.C. 46 and § 2.34 of the Commission's Rules of Practice (16 CFR 2.34), notice is hereby given that the following consent agreement containing a consent order to cease and desist, having been filed with and accepted, subject to final approval, by the Commission, has been placed on the public record for a period of sixty (60) days. Public comment is invited. Such comments or views will be considered by the Commission and will be available for inspection and copying at its principal office in accordance with § 4.9(b)(6)(ii) of the Commission's Rules of Practice (16 CFR 4.9(b)(6)(ii)).

Agreement Containing Consent Order To Cease and Desist

In the matter of Fertility Institute of Western Massachusetts, a sole proprietorship, and Ronald K. Burke, M.D., individually.

The Federal Trade Commission having initiated an investigation of certain acts and practices of the Fertility Institute of Western Massachusetts, a sole proprietorship, and Ronald K. Burke, M.D., individually, hereinafter sometimes collectively referred to as proposed respondents or respondents, are willing to enter into an agreement containing an order to cease and desist from the use of the acts and practices being investigated;

It is Hereby Agreed by and between Fertility Institute of Western Massachusetts, Ronald K. Burke, M.D., and by their attorney, and counsel for the Federal Trade Commission that:

1. Proposed respondent Fertility Institute of Western Massachusetts is a sole proprietorship with its principal office and place of business located at 120 Maple Street, Springfield, MA 01103.

Proposed respondent Ronald K. Burke is the sole proprietor of Fertility Institute of Western Massachusetts.

2. Proposed respondents admit all the jurisdictional facts set forth in the attached draft complaint.

3. Proposed respondents waive:

(a) Any further procedural steps;

(b) The requirement that the Commission's decision contain a statement of findings of fact and conclusions of law;

(c) All rights to seek judicial review or otherwise to challenge or contest the validity of the order entered pursuant to this agreement; and

(d) Any claim under the Equal Access to Justice Act, 5 U.S.C. 504.

4. This agreement shall not become part of the public record of the proceeding unless and until it is accepted by the Commission. If this agreement is accepted by the Commission, it, together with the attached draft complaint, will be placed on the public record for a period of sixty (60) days and information in respect thereto publicly released. The Commission thereafter may either withdraw its acceptance of this agreement and so notify the respondents, in which event it will take such action as it may consider appropriate, or issue and serve its complaint (in such form as the circumstances may require) and decision, in disposition of the proceeding.

5. This agreement is for settlement purposes only and does not constitute an admission by proposed respondents that the law has been violated as alleged in the attached draft complaint.

6. This agreement contemplates that, if it is accepted by the Commission, and if such acceptance is not subsequently withdrawn by the Commission pursuant to the provisions of § 2.34 of the Commission's Rules, the Commission may without further notice to proposed respondents: (a) Issue its complaint corresponding in form and substance with the attached draft complaint and its decision containing the following order to cease and desist in disposition of the proceeding; and (b) make information public in respect thereto. When so entered, the order to cease and desist shall have the same force and effect and may be altered, modified or set aside in the same manner and within the same time provided by statute for other orders. The order shall become final upon service. Delivery by the U.S. Postal Service of the complaint and decision containing the agreed-to order to proposed respondents' addresses as stated in this agreement shall constitute service. Proposed respondents waive any right they may have to any other manner of service. The complaint may be used in construing the terms of the order, and no agreement, understanding, representation or interpretation not contained in the order or the agreement may be used to vary or contradict the terms of the order.

7. Proposed respondents have read the attached draft complaint and the following order. Proposed respondents understand that once the order has been issued, they will be required to file one or more compliance reports showing that they have fully complied with the order. Proposed respondents further understand that they may be liable for civil penalties in the amount provided by law for each violation of the order after it becomes final.

Order

I

It is ordered that respondents Fertility Institute of Western Massachusetts, a sole proprietorship, and Ronald K. Burke, M.D., individually, and respondents' officers, agents, representatives, and employees, directly or through any corporation, subsidiary, division, or other device, in connection with the advertising, promotion, sale or offering for sale of any service in or affecting commerce, as "commerce" is defined in the FTC Act, relating to the treatment of infertility, do forthwith cease and desist from:

A. Misrepresenting, directly or by implication, in any manner the number or percentage of patients that achieve success in overcoming infertility, including but not limited to the number or percentage of patients that give birth or achieve pregnancy, or have given birth or achieved pregnancy.

B. Representing, directly or by implication, any success rate of any infertility procedure, unless at the time of making such representation, respondents possess and rely upon competent and reliable scientific evidence substantiating the representation. For any test, analysis, research, study, or other evidence to be "competent and reliable," it must be conducted and evaluated in an objective manner by persons qualified to do so, using procedures generally accepted in the relevant profession to yield accurate and reliable results.

C. Misrepresenting, directly or by implication, the cost or expense of any infertility procedure.

II

It is further ordered that respondents Fertility Institute of Western Massachusetts and Ronald K. Burke, and respondents' officers, agents, representatives, and employees, directly or through any corporation, subsidiary, division, or other device, in connection with the advertising, promotion, sale, or

offering for sale of any service in or affecting commerce, as "commerce" is defined in the FTC Act, relating to the treatment of infertility, do forthwith cease and desist from misrepresenting, directly or by implication, their capacity or ability to perform any test or procedure relating to the treatment of infertility and cease and desist from misrepresenting, directly or by implication, any beneficial or therapeutic aspect of any test or procedure relating to the treatment of infertility.

III

It is further ordered that respondents shall maintain for a period of three (3) years after the date the representation was last made and, upon request, make available to the Federal Trade Commission business records supporting all claims for any infertility treatment service.

IV

It is further ordered that respondents shall notify the Commission at least thirty (30) days prior to any proposed change in respondents such as dissolution, assignment or sale resulting in the emergence of a successor sole proprietorship, or any other change in respondents which may affect compliance obligations arising out of this Order.

V

It is further ordered that respondents shall, within sixty (60) days after service of this Order, file with the Commission a report, in writing, setting forth in detail the manner and form in which they have complied with all requirements of this Order.

Analysis of Proposed Consent Order To Aid Public Comment

The Federal Trade Commission has accepted, subject to final approval, an agreement containing a consent order from Fertility Institute of Western Massachusetts ("Fertility Institute"), located in Springfield, Massachusetts, and Ronald K. Burke, M.D., the sole proprietor of Fertility Institute (collectively, the "respondents"). Under this agreement, the respondents will cease and desist from making certain claims concerning success rates for various infertility treatments and will not make any claims regarding such treatments unless they possess reliable scientific evidence that substantiates such claims.

The proposed consent order has been placed on the public record for sixty (60) days for the receipt of comments by interested persons. Comments received during this period will become part of the public record. After sixty (60) days, the Commission will again review the agreement and the comments received and will decide whether it should withdraw from the agreement and take other appropriate action, or make final the proposed order contained in the agreement.

This matter concerns claims made for various infertility treatments contained in Fertility Institute's promotional brochure "Understanding Your Fertility." The Complaint accompanying the proposed consent order alleges that respondents violated section 5 of the Federal Trade Commission Act in making certain representations contained in this brochure.

Specifically, according to the Complaint, respondents' brochure contained false and misleading statements regarding the success rate experienced by Fertility Institute's patients in undergoing treatment known as "Gamete Intra-fallopian Transfer" ("GIFT"), when success is defined as the ratio of the number of patients taking home babies compared to the number of patients entering the GIFT program. In addition, the Complaint alleges that respondents made certain representations in their brochure concerning the success rates and costs of other infertility treatments and claimed directly or indirectly that they possessed and relied upon a reasonable basis for these representations. In fact, according to the Complaint, respondents did not have a reasonable basis for making these representations at the time they were made.

Part I of the proposed consent order would prohibit respondents from misrepresenting the success rates of patients who have undergone infertility treatments and requires them to possess "competent and reliable" evidence in support of any representation concerning such success rates. Respondents are also prohibited from misrepresenting the cost or expense of fertility treatments.

In addition, part II of the proposed consent would prohibit respondents from misrepresenting their qualifications, their ability to provide infertility treatments, and the beneficial or therapeutic aspects of any test or procedure relating to the treatment of infertility.

Part III of the proposed consent requires respondents to maintain for three years any records supporting claims made for infertility treatment programs. Part IV of the proposed consent requires respondents to notify the Commission within 30 days of any proposed change in the operation of Fertility Institute, such as dissolution or sale resulting in a change of ownership.

The purpose of this analysis is to facilitate public comment on the proposed order, and it is not intended to constitute an official interpretation of the agreement and proposed order, or to modify in any way their terms.

Donald S. Clark,

Secretary.

BILLING CODE 6750-01-M

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Agency for Toxic Substances and Disease Registry

[ATSDR-19]

Extension of Public Comment Period for the Draft Health Assessment Guidance Manual

AGENCY: Agency for Toxic Substances and Disease Registry (ATSDR), Public Health Service, Department of Health and Human Services.

ACTION: Notice of extension of public comment period.

SUMMARY: This notice announces an extension of the public comment period for the draft Health Assessment Guidance Manual. ATSDR announced the availability of this manual in the Federal Register on August 30, 1990 (55 FR 35463) with a public comment period through October 31, 1990. This notice announces an extension of the public comment period through November 30, 1990, in order to allow the public additional time to review and submit written comments on the Guidance Manual.

ADDRESSES: Comments on this notice should bear the docket control number ATSDR-19, and should be submitted to the Division of Health Assessment and Consultation, Agency for Toxic Substances and Disease Registry, Mailstop E-32, 1600 Clifton Road, Atlanta, Georgia 30333.

Comments submitted in response to this notice will be available for public inspection at the Agency for Toxic Substances and Disease Registry, Building 31, Executive Park Drive, Atlanta, Georgia, from 8 a.m. until 4:30 p.m., Monday through Friday, except for legal holidays.

SUPPLEMENTARY INFORMATION: ATSDR is mandated to conduct health assessments under section 104(i) of the Comprehensive Environmental Response, Compensation, and Liability

Act (CERCLA) (42 U.S.C. 9604(i)) and the Resource Conservation and Recovery Act (RCRA) (42 U.S.C. 6939e(b)). The Guidance Manual sets forth in detail the health assessment process as developed by ATSDR and clarifies the methodologies and guidelines that will be used by ATSDR staff and agents of ATSDR in conducting health assessments.

DATES: Comments concerning this manual must be received by November 30, 1990.

FOR FURTHER INFORMATION CONTACT: The Division of Health Assessment and Consultation, Agency for Toxic Substances and Disease Registry, Mailstop E-32, 1600 Clifton Road, NE., Atlanta, Georgia 30333. Telephone: 404-639-0510.

Dated: October 12, 1990.

William L. Roper,

Administrator, Agency for Toxic Substances and Disease Registry.

BILLING CODE 4160-70-M

Centers for Disease Control

National Institute for Occupational Safety and Health (NIOSH), Centers for Disease Control (CDC), NIOSH Assessment of Performance Limits for Industrial Respirators: Prerulemaking Technical Conference; Meeting

NAME: NIOSH Assessment of Performance Levels for Industrial Respirators: Prerulemaking Technical Conference.

TIME AND DATE: 9 a.m.-5 p.m., January 9-11, 1991.

PLACE: Appalachian Laboratory for Occupational Safety and Health, room 138, NIOSH, CDC, 944 Chestnut Ridge Road, Morgantown, West Virginia 26505-2888.

STATUS: Open to the public, limited only by the space available.

PURPOSE: To solicit and present the available research and recommendations concerning the following technical issues and questions: (1) The feasibility and practicality of developing a detailed protocol (including analytical methods, facepiece sampling methods, statistical analysis of data, etc.) for conducting workplace protection factor tests that would apply to all workplace settings, all contaminants, and all respirator types, (2) the available techniques and procedures for measuring assigned protection factors for respirator types that offer very high levels of worker protection (such as positive pressure air-supplied respirators or high performance powered air-purifying respirators), (3) the need to standardize further the nomenclature associated with defining the workplace performance of respiratory protective devices, (4) the procedures and techniques for conducting workplace protection factor studies of gas and vapor respirators, (5) the procedures and techniques for conducting workplace protection factor studies of closed-circuit respirators, (6) the approaches for and benefits and limitations of assigning performance values to individual respirator models, and (7) any additional knowledge, gaps or issues relating to workplace performance testing as a condition of a respirator certification.

SUMMARY: In an associated regulatory activity (Improved Standards for Respirator Devices), NIOSH has undertaken a substantial revision of certification tests and criteria for industrial respirators (currently 30 CFR part 11). The first Notice of Proposed Rulemaking (NPRM) for this revision was published in August 1987 (52 FR 32401) as a proposed 42 CFR part 84 to replace 30 CFR part 11. In addition to requiring laboratory performance testing, provisions in the first NPRM would have required workplace or validated simulated-workplace testing of industrial respirators as a part of the certification process. Associated with these provisions was a plan for certifying makes and models at quantitative performance levels. However, because commenters believed that suitable protocols for workplace or validated simulated-workplace testing are not available, and to avoid needless delay in implementing critical advances in laboratory performance tests, NIOSH will remove these provisions from its second NPRM, which is currently under development. Therefore, appropriate data required for certifying respirator protection levels will not be initially available under the new 42 CFR part 84. The National Institute for Occupational Safety and Health be proposing a separate rulemaking activity to include workplace or validated simulated-workplace testing in the NIOSH Respiratory Protective Devices Certification Program at a later time. The National Institute for Occupational Safety and Health remains convinced that respirators that appear to have achieved effective performance in laboratory performance tests must still demonstrate adequate performance under workplace or validated simulated-workplace conditions. Protection values based solely on laboratory fit testing should be viewed and applied with particular caution. Therefore, NIOSH believes that federal certification requirements must include workplace or validated simulated-workplace testing. Only when results of these tests are available can NIOSH accurately assess the protection afforded by individual makes and models of respirators.

CONTACT PERSON FOR ADDITIONAL INFORMATION: Dr. Alfred A. Amendola, Deputy Director, Division of Safety Research, NIOSH, CDC, 944 Chestnut Ridge Road, Mailstop S118B, Morgantown, West Virginia 26505-2888, telephone 304/291-4594 or FTS 923-4595.

Anyone wishing to make an oral presentation should submit their request, in writing, to Dr. Amendola by close of business, December 14, 1990. The request should include the name, address, and telephone number of the participant, the approximate time needed and a brief summary of the topics to be presented. For those persons who cannot participate at the meeting, written comments should be submitted to Dr. Amendola by close of business, December 14, 1990.

SUPPLEMENTARY INFORMATION: Federally-certified respirators are relied upon by up to 6.6 million American workers, either full-time or part-time, to protect themselves from hazards in their workplaces. This number could go as high as 10 million in the mid-1990s. Occupational Safety and Health Administration regulations (29 CFR 1910.134) require that NIOSH-certified respirators be used by many of these workers. Regulations of the Environmental Protection Agency and the Nuclear Regulatory Commission also require the use of NIOSH-certified respirators. The National Institute for Occupational Safety and Health certifications have become de facto premarket approvals for industrial respirators in the United States. Therefore, it is imperative that NIOSH certifications be based on the most relevant and reliable test procedures and criteria. The objectives of this proposed regulatory revision are to establish rigorous and realistic performance testing of respirators in the workplace or simulated-workplaces and provide purchasers and users with meaningful performance information that is relevant to actual conditions experienced by users.

There is ample precedent for requiring workplace or validated simulated-workplace testing for federally-certified respirators. For the past 14 years, the manufacturer of any medical device regulated by the Food and Drug Administration (FDA) under the 1976

Medical Device Amendments to the Food, Drug, and Cosmetic Act has had to demonstrate both the safety and efficacy (i.e., adequate performance) of the device to receive the necessary government approval before marketing. For Class III devices, which are life-sustaining, life-supporting, or which are of substantial importance in preventing impairment of health (21 CFR part 860), FDA premarket approval depends upon the results of clinical studies showing the safety and efficacy of the device. Most, if not all, the respirators certified by NIOSH share the characteristics of Class III devices. The nature and complexity of industrial respirators prevent purchasers and users from personally assessing the safety and efficacy of the respirators they purchase or must wear. Thus, NIOSH believes that workplace or validated simulated-workplace testing requirements for federally-certified respirators are necessary to protect adequately the health and safety of respirator users.

Additionally, federal assessment of individual performance levels will stimulate market competition and result in both better-performing and more cost-effective respirators for purchasers and users. It will encourage manufacturers to develop and market better-performing and innovative respirators because better performance would be assessed by NIOSH and the information disseminated to the public. It will also enable purchasers and users to better protect themselves with respirators by providing them with information on the protection they might achieve with individual makes and models. The federal regulations for performance grading of automobile tires at multiple performance levels (49 CFR part 575) and noise reduction ratings for hearing protective devices (40 CFR part 211) are examples of this approach.

After the necessary technical methodologies are available, NIOSH will publish an NPRM presenting test requirements and evaluation criteria to implement requirements for workplace or validated simulated-workplace testing combined with NIOSH-assessed performance levels. This technical meeting and NPRM will provide ample opportunity for respirator manufacturers, purchasers, and users to comment on these issues.

Dated: October 15, 1990.

Elvin Hilyer,

Associate Director for Policy Coordination, Centers for Disease Control.

BILLING CODE 4160-19-M

CDC Advisory Committee on the Prevention of HIV Infection; Meeting

In accordance with section 10(a)(2) of the Federal Advisory Committee Act (Pub. L. 92-463), the Centers for Disease Control (CDC) announces the following committee meeting:

Name: CDC Advisory Committee on the Prevention of HIV Infection.

Time and date:

8:30 a.m.-5 p.m., November 7, 1990

8 a.m.-3 p.m., November 8, 1990.

Place: Colony Square Hotel, Peachtree and 14th Street, Atlanta, Georgia 30361.

Status: Open to the public, limited only by the space available.

Purpose: This committee is charged with advising the Director, CDC, regarding objectives, strategies, and priorities for HIV prevention efforts, including maintaining surveillance of AIDS and HIV infection, the epidemiologic and laboratory study of AIDS and HIV, information/education and risk reduction activities designed to prevent the spread of HIV infection, and other preventive measures that become available.

Matters to be discussed: The committee will discuss actions taken by CDC on the recommendations made by the committee during the May 16-17, 1990, meeting and current CDC approaches to HIV prevention for high-risk youth. In-depth discussions will lead to development of a preliminary list of recommendations regarding CDC methods and approaches.

Agenda items are subject to change as priorities dictate.

Contact Person for More Information: Connie Grasoff, Committee Assistant, Office of the Deputy Director (HIV), CDC, 1600 Clifton Road, NE., Mailstop E-40, Atlanta, Georgia 30333, telephone (404) 639-2918 or FTS 236-2918.

Dated: October 15, 1990.

Elvin Hilyer,

Associate Director for Policy Coordination Centers for Disease Control.

ADDRESSES: Written comments to the Dockets Management Branch (HFA-305), Food and Drug Administration, rm. 4-62, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: Rosalie M. Angeles, Center for Food Safety and Applied Nutrition (HFF-334), Food and Drug Administration, 200 C St. SW., Washington, DC 20204, 202-426-5487.

SUPPLEMENTARY INFORMATION: Under the Federal Food, Drug, and Cosmetic Act (sections 201(s), 409 (21 U.S.C. 321(s), 348)) and the regulations for affirmation of GRAS status in § 170.35 (21 CFR 170.35), notice is given that, Suddeutsche Zucker AG and Bayer AG c/o Center for Regulatory Services, 2347 Paddock Lane, Reston, VA 22091, have filed a petition (GRASP 6G0321), proposing that isomalt be affirmed as GRAS for use as a direct human food ingredient. The petition substance is manufactured by the action of sucrose glycosyl fructose-mutase enzyme from *P. rubrum* immobilized with a polyamine-epichlorohydrin resin, glutaraldehyde, and tannin.

The petition has been placed on display at the Dockets Management Branch (address above).

Any petition that meets the requirements outlined in §§ 170.30 and 170.35 (21 CFR 170.30 and 170.35) is filed by the agency. There is no prefiling review of the adequacy of data to support a GRAS conclusion. Thus, the filing of this petition for GRAS affirmation should not be interpreted as a preliminary indication of suitability of isomalt for GRAS affirmation.

The potential environmental impact of this action is being reviewed. If the agency finds that an environmental impact statement is not required and this petition results in a regulation, the notice of availability of the agency's finding of no significant impact and the evidence supporting that finding will be published with the regulation in the Federal Register in accordance with 21 CFR 25.40(c).

Interested persons may, on or before December 18, 1990, review the petition and/or file comments (two copies, identified with the docket number found in brackets in the heading of this document) with the Dockets Management Branch (address above). Comments should include any available information that would be helpful in determining whether the substance is, or is not, GRAS for the proposed use. A copy of the petition and received comments may be seen in the Dockets Management Branch between 9 a.m. and 4 p.m., Monday through Friday.

Dated: October 11, 1990.

Fred R. Shank,

Director, Center for Food Safety and Applied Nutrition.

BILLING CODE 4160-01-M

[Docket No. 90E-0266]

Determination of Regulatory Review Period for Purposes of Patent Extension; Ergamisol®

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) has determined the regulatory review period for Ergamisol® and is publishing this notice of that determination as required by law. FDA has made the determination because of the submission of an application to the Commissioner of Patents and Trademarks, Department of Commerce, for the extension of a patent which claims that human drug product.

ADDRESSES: Written comments and petitions should be directed to the Dockets Management Branch (HFA-305), Food and Drug Administration, rm. 4-62, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: Nancy E. Pirt, Office of Health Affairs (HFY-20), Food and Drug Administration, 5600 Fishers Lane, Rockville, MD 20857, 301-443-1382.

SUPPLEMENTARY INFORMATION: The Drug Price Competition and Patent Term Restoration Act of 1984 (Pub. L. 98-417) and the Generic Animal Drug and Patent Term Restoration Act (Pub. L. 100-670) generally provide that a patent may be extended for a period of up to 5 years so long as the patented item (human drug product, animal drug product, medical device, food additive, or color additive) was subject to regulatory review by FDA before the item was marketed. Under these acts, a product's regulatory review period forms the basis for determining the amount of extension an applicant may receive.

A regulatory review period consists of two periods of time: A testing phase and an approval phase. For human drug products, the testing phase begins when the exemption to permit the clinical investigations of the drug becomes effective and runs until the approval phase begins. The approval phase starts with the initial submission of an application to market the human drug product and continues until FDA grants permission to market the drug product. Although only a portion of a regulatory review period may count toward the actual amount of extension that the Commissioner of Patents and Trademarks may award (for example, half the testing phase must be subtracted as well as any time that may have occurred before the patent was issued), FDA's determination of the length of a regulatory review period for a human drug product will include all of the testing phase and approval phase as specified in 35 U.S.C. 156(g)(1)(B).

FDA recently approved for marketing the human drug product Ergamisol®. Ergamisol® (levamisole HCl) is indicated as adjuvant treatment in combination with fluorouracil after surgical resection in patients with Dukes' stage C colon cancer. Subsequent to this approval, the Patent and Trademark Office received a patent term restoration application for Ergamisol® (U.S. Patent No. 4,584,305) from Janssen Pharmaceutica N.V., and the Patent and Trademark Office requested FDA's assistance in determining this patent's eligibility for patent term restoration. FDA, in a letter dated August 23, 1990, advised the Patent and Trademark Office that this human drug product had undergone a regulatory review period. The letter also stated that the active ingredient, levamisole HCl, represented the first permitted commercial marketing or use under the provision of law governing regulatory review of human drug products. Levamisole HCl had previously received permission for commercial marketing or use under the provision of law governing regulatory review of animal drugs. Shortly thereafter, the Patent And Trademark Office requested that FDA determine the product's regulatory review period.

FDA has determined that the applicable regulatory review period for Ergamisol is 4,633 days. Of this time, 4,603 days occurred during the testing phase of the regulatory review period, while 230 days occurred during the approval phase. These periods of time were derived from the following dates:

1. *The date an exemption under section 505(i) of the Federal Food, Drug, and Cosmetic Act became effective:* March 27, 1977. The applicant claims April 8, 1977, as the date the investigational new drug (IND) application became effective. However, FDA records indicate that the IND effective date was March 27, 1977, which was 30 days after FDA receipt of the IND application.

2. *The date the application was initially submitted with respect to the human drug product under section 505(b) of the Federal Food, Drug, and Cosmetic Act:* November 1, 1989. FDA has verified the applicant's claim that new drug application (NDA) 20-035 was submitted on November 1, 1989.

3. *The date the application was approved:* June 18, 1990. FDA has verified the applicant's claim that NDA 20-035 was approved on June 18, 1990.

This determination of the regulatory review period establishes the maximum potential length of a patent extension. However, the U.S. Patent and Trademark Office applies several statutory limitations in its calculations of the actual period for patent extension. In its application for patent extension, this applicant seeks 422 days of patent term extension.

Anyone with knowledge that any of the dates as published is incorrect may, on or before December 18, 1990, submit to the Dockets Management Branch (address above) written comments and ask for a redetermination. Furthermore, any interested person may petition FDA, on or before April 19, 1991, for a determination regarding whether the applicant for extension acted with due diligence during the regulatory review period. To meet its burden, the petition must contain sufficient facts to merit an FDA investigation. (See H. Rept. 857, Part 1, 98th Cong., 2d Sess., pp. 41-42, 1984.) Petitions should be in the format specified in 21 CFR 10.30.

Comments and petitions should be submitted to the Dockets Management Branch (address above) in three copies (except that individuals may submit single copies) and identified with the docket number found in brackets in the heading of this document. Comments and petitions may be seen in the Dockets Management Branch between 9 am. and 4 pm., Monday through Friday.

Dated: October 12, 1990.

Stuart L. Nightingale,

Associate Commissioner for Health Affairs.

BILLING CODE 4160-01-M

[Docket No. 90P-0338]

Hoffmann Medizinische Technik GmbH; Premarket Approval of the Hoffmann Medizinische Technik 20/1500 Shock Plug

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) is announcing its approval of the application by Hoffmann medizinische Technik GmbH for premarket approval, under the Medical Device Amendments of 1976, of the Hoffmann medizinische Technik 20/1500 Shock Plug. After reviewing the recommendation of the Gastroenterology-Urology Devices Panel, FDA's Center for Devices and Radiological Health (CDRH) notified the applicant, by letter of September 6, 1990, of the approval of the application.

DATES: Petitions for administrative review by November 19, 1990.

ADDRESSES: Written requests for copies of the summary of safety and effectiveness data and petitions for administrative review to the Dockets Management Branch (HFA-305), Food and Drug Administration, rm. 4-62, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: Robert Gatling, Center for Devices and Radiological Health (HFZ-420), Food and Drug Administration, 1390 Piccard Dr., Rockville, MD 20850, 301-427-1220.

SUPPLEMENTARY INFORMATION: On June 17, 1988, Hoffmann medizinische Technik GmbH, Hans Heide 21, 5884 Halver, Federal Republic of Germany, submitted to CDRH an application for premarket approval of the Hoffmann medizinische Technik 20/1500 Shock Plug. The device is a replacement for the shock plug used in the HM3 Dornier Extracorporeal Shock Wave Lithotripter which is indicated for use in the fragmentation of upper urinary tract stones, i.e., renal calyx stones, renal pelvic stones, and upper ureteral stones.

On December 7, 1988, the Gastroenterology-Urology Devices Panel, an FDA advisory committee, reviewed and recommended approval of the application. On September 6, 1990, CDRH approved the application by a letter to the applicant from the Director of the Office of Device Evaluation, CDRH.

A summary of the safety and effectiveness data on which CDRH based its approval is on file in the Dockets Management Branch (address above) and is available from that office upon written request. Requests should be identified with the name of the device and the docket number found in brackets in the heading of this document.

A copy of all approved labeling is available for public inspection at CDRH—contact Robert Gatling (HFZ-420), address above.

Opportunity for Administrative Review

Section 515(d)(3) of the Federal Food, Drug, and Cosmetic Act (the act) (21 U.S.C. 360e(d)(3)) authorizes any interested person to petition, under section 515(g) of the act (21 U.S.C. 360e(g)), for administrative review of CDRH's decision to approve this application. A petitioner may request either a formal hearing under Part 12 (21 CFR part 12) of FDA's administrative practices and procedures regulations or a review of the application and CDRH's action by an independent advisory committee of experts. A petition is to be in the form of a petition for reconsideration under § 10.33(b) (21 CFR 10.33(b)). A petitioner shall identify the form of review requested (hearing or independent advisory committee) and shall submit with the petition supporting data and information showing that there is a genuine and substantial issue of material fact for resolution through administrative review. After reviewing the petition, FDA will decide whether to grant or deny the petition and will publish a notice of its decision in the **Federal Register**. If FDA grants the petition, the notice will state the issue to be reviewed, the form of review to be used, the persons who may participate in the review, the time and place where the review will occur, and other details.

Petitioners may, at any time on or before November 19, 1990, file with the Dockets Management Branch (address above) two copies of each petition and supporting data and information, identified with the name of the device and the docket number found in brackets in the heading of this document. Received petitions may be seen in the office above between 9 a.m. and 4 p.m., Monday through Friday.

This notice is issued under the Federal Food, Drug, and Cosmetic Act (sections 515(d), 520(h) (21 U.S.C. 360e(d), 360j(h))) and under authority delegated to the Commissioner of Food and Drugs (21 CFR 5.10) and redelegated to the Director, Center for Devices and Radiological Health (21 CFR 5.53).

Dated: October 10, 1990.

Elizabeth D. Jacobsen,

Acting Deputy Director, Center for Devices and Radiological Health.

BILLING CODE 4160-01-M

[Docket No. 90P-0318]

Devices for Vascular Intervention, Inc.; Premarket Approval of the Simpson Coronary Atherocath™

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) is announcing its approval of the application by Devices for Vascular Intervention, Inc., Redwood City, CA, for premarket approval, under the Medical Device Amendments of 1976, of the Simpson Coronary AtheroCath™. After reviewing the recommendation of the Circulatory System Devices Panel, FDA's Center for Devices and Radiological Health (CDRH) notified the applicant, by letter of September 14, 1990, of the approval of the application.

DATES: Petitions for administrative review by November 19, 1990.

ADDRESSES: Written requests for copies of the summary of safety and effectiveness data and petitions for administrative review to the Dockets Management Branch (HFA-305), Food and Drug Administration, rm. 4-62, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: Donald J. St. Pierre, Center for Devices and Radiological Health (HFZ-450), Food and Drug Administration, 1390 Piccard Dr., Rockville, MD 20850, 301-427-1197.

SUPPLEMENTARY INFORMATION: On August 18, 1989, Devices for Vascular Intervention, Inc., Redwood City, CA 94063, submitted to CDRH an application for premarket approval of the Simpson Coronary AtheroCath™. Coronary atherectomy with the AtheroCath is indicated in patients with coronary artery disease accessible to the AtheroCath. The AtheroCath can be used alone or in conjunction with percutaneous transluminal coronary angioplasty (PTCA). Generally, lesions most accessible to atherectomy are those in the proximal or mid-portion of coronary vessels. Patients selected for coronary atherectomy should be acceptable candidates for coronary artery bypass graft surgery and meet one of the following criteria:

1. Single vessel atherosclerotic coronary artery disease with a stenosis that is discrete and subtotal;
2. Multiple vessel coronary artery disease that in the physician's judgment does not pose undue risk to the patient;
3. Certain patients who have had prior coronary artery bypass graft surgery and who have a stenosis or restenosis of the graft; and

4. Certain patients who have had prior percutaneous transluminal coronary angioplasty, PTCA, and who have a restenosis of the native vessel.

On June 15, 1990 the Circulatory System Devices Panel, an FDA advisory committee, reviewed and recommended approval of the application. On September 14, 1990, CDRH approved the application by a letter to the applicant from the Director of the Office of Device Evaluation, CDRH.

A summary of the safety and effectiveness data on which CDRH based its approval is on file in the Dockets Management Branch (address above) and is available from that office upon written request. Requests should be identified with the name of the device and the docket number found in brackets in the heading of this document.

A copy of all approved labeling is available for public inspection at CDRH—contact Donald J. St. Pierre (HFZ-450), address above.

Opportunity for Administrative Review

Section 515(d)(3) of the Federal Food, Drug, and Cosmetic Act (the act) (21 U.S.C. 360e(d)(3)) authorizes any interested person to petition, under section 515(g) of the act (21 U.S.C. 360e(g)), for administrative review of CDRH's decision to approve this application. A petitioner may request either a formal hearing under part 12 (21 CFR part 12) of FDA's administrative practices and procedures regulations or a review of the application and CDRH's action by an independent advisory committee of experts. A petition is to be in the form of a petition for reconsideration under § 10.33(b) (21 CFR 10.33(b)). A petitioner shall identify the form of review requested (hearing or independent advisory committee) and shall submit with the petition supporting data and information showing that there is a genuine and substantial issue of material fact for resolution through administrative review. After reviewing the petition, FDA will decide whether to grant or deny the petition and will publish a notice of its decision in the Federal Register. If FDA grants the petition, the notice will state the issue to be reviewed, the form of review to be used, the persons who may participate in the review, the time and place where the review will occur, and other details.

Petitioners may, at any time on or before November 19, 1990, file with the Dockets Management Branch (address above) two copies of each petition and supporting data and information, identified with the name of the device and the docket number found in brackets in the heading of this document. Received petitions may be seen in the office above between 9 a.m. and 4 p.m., Monday through Friday.

This notice is issued under the Federal Food, Drug, and Cosmetic Act (sections 515(d), 520(h) (21 U.S.C. 360e(d), 360j(h))) and under authority delegated to the Commissioner of Food and Drugs (21 CFR 5.10) and redelegated to the Director, Center for Devices and Radiological Health (21 CFR 5.53).

Dated: October 10, 1990.

BILLING CODE 4160-01-M

Consumer Participation; Open Meetings

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) is announcing the following district consumer exchange meetings:

Buffalo District Office and the Erie County Consumer Protection Committee, joint sponsors, chaired by Lois M. Meyer, FDA District Consumer Affairs Officer, and Charles Kreiner, Chairman, Erie County Consumer Protection Committee. The topic to be discussed is food labeling.

DATES: Tuesday, October 30, 1990, 3:30 p.m. to 5:30 p.m.

ADDRESSES: Buffalo and Erie County Public Library Auditorium, Lafayette Square, Buffalo, NY 14203.

FOR FURTHER INFORMATION CONTACT: Lois M. Meyer, Consumer Affairs Officer, Food and Drug Administration, 599 Delaware Ave., Buffalo, NY 14202, 716-846-4461.

New York District Office, chaired by Edward T. Warner, District Director. The topic to be discussed is food labeling proposals.

DATES: Thursday, November 15, 1990, 1 p.m.

ADDRESSES: Fort Hamilton Officers' Club, Fort Hamilton, Brooklyn, NY 11252.

FOR FURTHER INFORMATION CONTACT: Herman B. Janiger, Consumer Affairs Officer, Food and Drug Administration, 850 Third Ave., Brooklyn, NY 11232-1593, 718-965-5043.

SUPPLEMENTARY INFORMATION: The purpose of these meetings is to encourage dialogue between consumers and FDA officials, to identify and set priorities for current and future health concerns, to enhance relationships between local consumers and FDA's district offices, and to contribute to the agency's policymaking decisions on vital issues.

Dated: October 15, 1990.

Alan L. Hoeting,

Acting Associate Commissioner for Regulatory Affairs.

BILLING CODE 4160-01-M

National Institutes of Health

National Institute of Allergy and Infectious Diseases; Meeting of Epidemiology and Technology Transfer Subcommittee of the Acquired Immunodeficiency Syndrome Research Review Committee

Pursuant to Public Law 92-463, notice is hereby given of the meeting of the Epidemiology and Technology Transfer Subcommittee of the Acquired Immunodeficiency Syndrome Research Review Committee, National Institute of Allergy and Infectious Diseases, October 31 through November 2, 1990, at the Crown Plaza Holiday Inn, 1750 Rockville Pike, Rockville, Maryland 20852.

The meeting will be open to the public from 8:30 a.m. to 9 a.m. on October 31 to discuss administrative details relating to committee business and for program review. Attendance by the public will be limited to space available. In accordance with the provisions set forth in sections 552b(c)(4) and 552b(c)(6), title 5, U.S.C. and section 10(d) of Public Law 92-463, the meeting will be closed to the public for the review, discussion, and evaluation of individual grant applications and contract proposals from 9 a.m. until recess on October 31, from 8:30 a.m. until recess on November 1, and from 8:30 a.m. until adjournment on November 2. These applications, proposals, and discussions could reveal confidential trade secrets or commercial property such as patentable material and personal information concerning individuals associated with the applications and proposals, the disclosure of which would constitute a clearly unwarranted invasion of personal privacy.

Ms. Patricia Randall, Office of Research Reporting and Public Responses, National Institute of Allergy and Infectious Diseases, Building 31, room 7A32, National Institutes of Health, Bethesda, Maryland 20892, telephone (301-496-5717), will provide a summary of the meeting and a roster of the committee members upon request.

Dr. Dianne E. Tingley, Executive Secretary, Acquired Immunodeficiency Syndrome Research Review Committee, NIAID, NIH, Westwood Building, Room 3A10, Bethesda, Maryland 20892, telephone (301–496–0812), will provide substantive program information.

National Center for Research Resources; Meeting of the Biomedical Research Technology Review Committee

Pursuant to Public Law 92–463, notice is hereby given of the meeting of the Biomedical Research Technology Review Committee, National Center for Research Resources, National Institutes of Health.

This meeting will be open to the public as listed below for a brief staff presentation on the current status of the Biomedical Research Technology Program and the selection of future meeting dates. Attendance by the public will be limited to space available.

In accordance with the provisions set forth in sections 552b(c)(4) and 552(c)(6), title 5, U.S.C. and section 10(d) of Public Law 92–463, the meeting will be closed to the public as listed below for the review, discussion and evaluation of individual grant application submitted to the Biomedical Research Technology Program. These applications and the discussions could reveal confidential trade secrets or commercial property such as patentable material and personal information concerning individuals associated with the applications, the disclosure of which would constitute a clearly unwarranted invasion of personal privacy.

Name of Committee: Biomedical Research Technology Review.

Date of Meeting: November 8–9, 1990.

Place of Meeting: Holiday Inn Crowne Plaza, 1750 Rockville Pike Rockville, MD 20852.

Open: November 8—8 a.m.–9 a.m.

Closed: November 8—9 a.m. to Recess, November 9—8 a.m. to Adjournment

Mr. James J. Doherty, Information Officer, National Center for Research Resources, 5333 Westbard Avenue, Room 10A15, Bethesda, Maryland 20892, (301) 496–5545, will provide a summary of the meeting and a roster of the committee members upon request.

Dr. Ismael Almodovar, Executive Secretary of the Biomedical Research Technology Review Committee, National Center for Research Resources, National Institutes of Health, 5333 Westbard Avenue, Room 10A10, Bethesda, Maryland 20892, (301) 402–0627 will furnish substantive program information upon request.

Dated: October 2, 1990.

BILLING CODE 4140-01-M

National Cancer Institute; Meeting of Developmental Therapeutics Contracts Review Committee

Pursuant to Public Law 92-463, notice is hereby given of the meeting of the Developmental Therapeutics Contracts Review Committee, National Cancer Institute, National Institutes of Health, November 1-2, 1990, Executive Plaza North, conference room J, 6130 Executive Boulevard, Rockville, Maryland 20852.

This meeting will be open to the public on November 1 from 8 a.m. to 9 a.m. to discuss administrative details. Attendance by the public will be limited to space available.

In accordance with provisions set forth in sections 552b(c)(4) and 552b(c)(6), title 5, U.S.C. and section 10(d) of Public Law 92-463, the meeting will be closed to the public on November 1 from 9 a.m. to recess and on November 2 from 8 a.m. to adjournment for the review, discussion and evaluation of individual contract proposals. These proposals and the discussions could reveal confidential trade secrets or commercial property such as patentable material and personal information concerning individuals associated with the proposals, disclosure of which would constitute a clearly unwarranted invasion of personal privacy.

The Committee Management Office, National Cancer Institute, Building 31, Room 10A06, National Institutes of Health, Bethesda, Maryland 20892 (301/496-5708) will provide summaries of the meeting and rosters of committee members upon request.

Dr. Susan E. Feinman, Executive Secretary, Developmental Therapeutics Contracts Review Committee, 5333 Westbard Avenue, Room 809, Bethesda, Maryland 20892 (301/402-0944) will furnish substantive program information.

Dated: October 9, 1990.

Betty J. Beveridge,

Committee Management Officer, NIH.

BILLING CODE 4140-01-M

National Cancer Institute; Meeting

Pursuant to Public Law 92-463, notice is hereby given of the meeting of the National Cancer Institute, Frederick Cancer Research and Development Center (FCRDC) Advisory Committee, November 29-30, 1990, Building 549, Executive Board Room, at the NCI-Frederick Cancer Research and Development Center, Frederick, Maryland 21702-1201. The meeting will be open to the public on November 29 from 8:30 a.m. to approximately 10:15 a.m. to discuss administrative matters and a concept review of scientific research. Attendance by the public will be limited to space available.

In accordance with the provisions set forth in sections 552b(c)(4) and 552b(c)(6), title 5, U.S.C. and section 10(d) of Public Law 92-463, the meeting will be closed to the public on November 29 from approximately 10:15 a.m. to recess and on November 30 from 8:30 a.m. to adjournment for site visit review of research being conducted by the Advanced BioScience Laboratories, Inc.-Basic Research Program's (ABL-BRP) Crystallography Laboratory. There will be a review and evaluation of reports of the previous site visit for the ABL-BRP's Laboratory of Eukaryotic Gene Expression and the Laboratory of Molecular Virology and Carcinogenesis. These discussions could reveal confidential trade secrets or commercial property such as patentable material, and personal information concerning individuals associated with the contractor, the disclosure of which would constitute a clearly unwarranted invasion of personal privacy.

Committee Management Officer, National Cancer Institute, Building 31, Room 10A06, National Institutes of Health, Bethesda, Maryland 20892 (301-496-5708) will provide summaries of the meeting and rosters of committee members, upon request.

Dr. Cedric W. Long, Executive Secretary, Frederick Cancer Research and Development Center Advisory Committee, National Cancer Institute, Frederick Cancer Research and Development Center, P.O. Box B, Frederick, Maryland 21702-1201 (Tel. 301-846-1308) will provide substantive program information upon request.

Dated: October 9, 1990.

National Institute of Child Health and Human Development; Meetings

Pursuant to Public Law 92-463, notice is hereby given of meetings of the review committees of the National Institute of Child Health and Human Development for November/December 1990.

These meetings will be open to the public to discuss items relative to committee activities including announcements by the Director NICHD, and executive secretaries, for

approximately one hour at the beginning of the first session of the first day of the meeting Attendance by the public will be limited to space available.

These meetings will be closed to the public as indicated below in accordance with the provisions set forth in sections 552b(c)(4) and 552b(c)(6), title 5, U.S.C. and section 10(d) of Public Law 92–463, for the review, discussion and evaluation of individual grant applications. These applications and the discussions could reveal confidential trade secrets or commercial property such as patentable material, and personal information concerning individuals associated with the applications, the disclosure of which would constitute a clearly unwarranted invasion of personal privacy.

Ms. Mary Plummer, Committee Management Officer, NICHD, Executive Plaza North Building, Room 520, National Institutes of Health, Bethesda, Maryland, Area Code 301, 496–1485, will provide a summary of the meeting and a roster of committee members.

Other information pertaining to the meetings may be obtained from the Executive Secretary indicated.

Name of committee: Maternal and Child Health Research Committee.

Executive secretary: Dr. Scott F. Andres, Room 520, Executive Plaza North Building, Telephone: 301, 496–1485.

Date of Meeting: November 6–7, 1990.

Place of Meeting: Holiday Inn Bethesda, 8120 Wisconsin Avenue, Bethesda, Maryland, Versailles Room 2.

Open: November 6, 1990, 9 a.m.–10 a.m.

Closed:

November 6, 1990, 10 a.m.–5 p.m.

November 7, 1990, 8:30 a.m.–adjournment.

Name of committee: Population Research Committee.

Executive secretary: Dr. A.T. Gregoire, Room 520, Executive Plaza North Building, Telephone: 301, 496–1096.

Date of meeting: December 6–7, 1990.

Place of meeting: Hyatt Regency Bethesda, One Bethesda Metro Center, Bethesda, Maryland.

Open: December 6, 1990, 8:30 a.m.–9:30 a.m.

Closed:

December 6, 1990, 9:30 a.m.–5 p.m.

December 7, 1990, 8:30 a.m.–adjournment.

(Catalog of Federal Domestic Assistance Program No. 13.864, Population Research and No. 13.865, Research for Mothers and Children, National Institutes of Health.)

Public Health Service

Misconduct in Science; Notice of Availability

AGENCY: Office of the Assistant Secretary for Health, HHS.

ACTION: Notice of Availability.

SUMMARY: Notice is hereby given that the Public Health Service (PHS) has revised its internal guidelines for dealings with misconduct in science. This document entitled "Policies and Procedures for Dealing with Possible Misconduct in Extramural Research" focuses on the responsibilities of PHS officials and the relationships among PHS offices that deal with possible misconduct in science.

FOR FURTHER INFORMATION CONTACT: Director, Office of Scientific Integrity, National Institutes of Health, Building 31, Room B1C39, 9000 Rockville Pike, Bethesda, Maryland 20892, (301) 496–2624—This is not a toll free number.

SUPPLEMENTARY INFORMATION: The responsibilities of PHS officials and the relationships among Federal offices that deal with possible misconduct in science are described in this internal guidance. This document may be subject to minor revisions when needed. The responsibilities of the applicant and awardee institutions are described in the *Final Rule* on "Responsibilities of Awardee and Applicant Institutions for Dealing With and Reporting Possible Misconduct in Science" (54 FR 32446, August 8, 1989).

These policies and procedures and the responsibilities outlined in the *Final Rule* apply to instances of possible misconduct in research, research training or research related activities for which funds have been provided or requested under the PHS Act.

This document is available upon request at the above address.

Dated: October 11, 1990.

Lyle W. Bivens,

Director, Office of Scientific Integrity Review.

BILLING CODE 4160–17–M

National Toxicology Program, Board of Scientific Counselors; Meeting

Pursuant to Public Law 92–463, notice is hereby given of a meeting on November 8–9, 1990, of the National Toxicology Program (NTP) Board of Scientific Counselors, Reproductive and Developmental Toxicology Program Review Subcommittee. The meeting will be held in Conference Room C, Alice B. Hamilton Laboratory, National Institute of Occupational Safety and Health, 5555 Ridge Road, Cincinnati, Ohio 45213.

The meeting will be open to the public from 8 a.m. to 6 p.m. on November 8 and from 8 a.m. to 12 noon on November 9. The primary agenda topics are reviews from the reproductive and developmental toxicology research efforts of the staff at the National Institute of Environmental Health Sciences (NIEHS) and the National Institute for Occupational Safety and Health (NIOSH).

In accordance with the provisions set forth in section 552b(c)(6) title 5 U.S. Code and section 10(d) of Public Law 92–463, the meeting will be closed to the public on November 9 from 1 p.m. to 3 p.m. for further evaluation of research activities at NIEHS and NIOSH including the consideration of personnel qualifications and performance, the competence of individual investigators, and similar items, the disclosure of which would constitute a clearly unwarranted invasion of personal privacy.

The Executive Secretary, Dr. Larry G. Hart, Office of the Director, National Toxicology Program, P.O. Box 12233, Research Triangle Park, North Carolina 27709, Telephone (919) 541–3971, will furnish the final agenda. The roster of subcommittee members and other program information will be available prior to and at the meeting, and summary minutes will be available subsequent to the meeting.

Dated: October 9, 1990.

David G. Hoel,

Acting Director, National Toxicology Program.

BILLING CODE 4140–01–M

National Toxicology Program Board of Scientific Counselors' Meeting; Review of Draft NTP Technical Reports

Pursuant to Public Law 92–463, notice is hereby given of the next meeting of the NTP Board of Scientific Counselors' Technical Reports Review Subcommittee and associated *ad hoc* Panel of Experts (Peer Review Panel) on November 19 and 20, 1990, in the Conference Center, Building 101, South Campus, National Institute of Environmental Health Sciences, 111 Alexander Drive, Research Triangle Park, North Carolina. The meeting will begin at 9:00 a.m. both days and is open to the public. The primary agenda topic is the peer review of draft Technical Reports of long-term toxicology and carcinogenesis studies and short-term

toxicity studies from the National Toxicology Program.

Tentatively scheduled to be peer reviewed on November 19 and 20 are draft Technical Reports of long-term studies on seven chemicals, listed alphabetically, along with supporting information in Table 1. All studies were done using Fischer 344 rats and B6C3F1 mice. The order of review is given in the far right column of the table.

Also scheduled to be peer reviewed are draft Technical Reports of toxicity studies on four chemicals, listed alphabetically, along with supporting information in Table 2. Order of presentation is given in the far right column of the table.

Persons wanting to make a formal presentation regarding a particular Technical Report must notify the Executive Secretary by telephone or by mail no later than November 13, 1990, and provide a written copy in advance of the meeting so copies can be made and distributed to all Panel members and staff and made available at the meeting for attendees. Oral presentations should supplement and not just repeat the written statement. Presentations should be limited to no more than seven minutes.

The Program would welcome receiving toxicology and carcinogenesis information from completed, ongoing or planned studies by others, as well as current production data, human exposure information, and use patterns on any of the studies listed in this announcement. Please contact the staff scientists as early as possible by telephone or by mail to: NIEHS, P.O. Box 12233, Research Triangle Park (RTP), North Carolina 27709.

The Executive Secretary, Dr. Larry G. Hart, P.O. Box 12233, RTP, North Carolina 27709 (telephone 919/541-3971, FTS 629-3971) will furnish final agenda, a roster of subcommittee and panel members, and other program information prior to the meeting. Summary minutes subsequent to the meeting be available upon request.

Attachment

Dated: October 12, 1990.

David G. Hoel,

Acting Director, National Toxicology Program.

TABLE 1.—SUMMARY DATA FOR LONG TERM NTP TOXICOLOGY AND CARCINOGENESIS STUDY TECHNICAL REPORTS SCHEDULED FOR PEER REVIEW AT THE BOARD OF SCIENTIFIC COUNSELORS' PEER REVIEW PANEL MEETING ON NOVEMBER 19–20, 1990

Chemical CAS Number	Staff scientist/technical report Number	Primary uses	Route/exposure levels	Study laboratory	Review order
Acetaminophen (4-Hydroxyacetanilide) 103-90-2.	Dr. R. Irwin, 919-541-3340; TR-394.	Manufacture of Azo Dyes, Analgesic, Intermediate for Pharmaceutical (HSDB 1990).	Oral in Feed (FEED): R&M: 0,.06,.3,.6%/60 Per Group.	T.S.I. Mason Research Institute.	4
Chloramine/Chlorine 10599-90-3/7782-50-5.	Dr. J. Dunnick, 919-541-4811; TR-392.	Drinking Water Disinfectant. Organic Synthesis. Intermediate in the Raschig Process for Hydrazine. (TDB).	Oral with Water (DI Water): Chloramine R&M: 0,50,100,200 PPM/Buff'd Chlorine H20 0,70,140,275 PPM/60 Per Group.	Southern Research Institute.	3
C.I. Direct Blue 15 2429-74-5.	Dr. J. Dunnick, 919-541-4811; TR-397.	Dye for Silk, Wool, Viscose, Leather, Paper, Cellulose Fibers. Biological Stain. Tint for Chromatographic Films. (TDB).	Oral with Water (Water): Rats Only: 0,625,1250,2500 PPM 60,45,75,70 Per Group Respectively).	Hazelton (Monroe)	2
Methyl Bromide 74-83-9	Dr. S. Eustis, 919-541-3231; TR-395.	Fumigant, Extractant, Wool Degreasing, in Ion. Chambers, Fire-Extinguishing Agent, Insecticide, Rodenticide.	Inhalation: Mice Only: 0,10,33,100 PPM.	Brookhaven National Lab (DOE).	1
Monochloroacetic Acid 79-11-8.	Dr. K. Abdo, 919-541-7819; TR-396.	Chemical Intermediate in the Manufacture of Various Dyes and Other Organic Materials. (TDB).	Oral, Gavage (Water) R: 0,15,30; M: 0,50,100 MG/KG/70 & 60 Per Group respectively..	International Research & Development Corp..	6
Probenecid 57-66-9	Dr. K. Abdo, 919-541-7819; TR-398.	Uricosuric Agent for Treatment of Gout and Gouty Arthritis. (TDB).	Oral, Gavage (Corn Oil): R&M: 0,100,400 MG/KG/70 Per Group.	T.S.I. Mason Research Institute.	7
Titanocene Dichloride 1271-19-8.	Dr. J. Dunnick, 919-541-4811; TR-399.	Research Chemical. Catalyst. (TDB)	Oral, Gavage (Corn Oil): Rats Only: 0,25,50 MG/KG/60 Per Group.	T.S.I. Mason Research Institute.	5

TABLE 2.—SUMMARY DATA FOR SHORT-TERM NTP TOXICITY STUDY TECHNICAL REPORTS SCHEDULED FOR PEER REVIEW AT THE BOARD OF SCIENTIFIC COUNSELORS' PEER REVIEW PANEL MEETING ON NOVEMBER 19–20, 1990

Chemical Cas Number	Staff scientist/technical report Number	Primary uses	Route/exposure levels	Study laboratory	Review Order
Antimony Potassium Tartrate, 28300-74-5.	Dr. M. Dieter, 919-541-3398; TOX-11.	Mordant in Textile Industry, Used as Pesticide, Insecticide, in Leathers, as Parasiticide (HSDB 1990).	Intraperitoneal Injection (SALINE): R&M: 0, 1.5, 3, 6, 12, 24 MG/KG/30 Per Group.	Battelle Columbus Laboratory.	9
Castor Oil 8001-79-4	Dr. R. Irwin, 919-541-3340; TOX-12.	Paint, Cathartic, Emollient, Starting Raw Material for Many Basic in Dust. Chemicals, Machine Lubricants, Embalming Fluids. In Soap Manufacture. For Dyeing Textiles. Plasticizer. In Manufacture of Fungicides. (Merck 1989).	Oral in Feed (NIH-07 Diet): R&M: 0, .62, 1.25, 2.5, 5.0, 10.0%.	Microbiological Associates.	11

TABLE 2.—SUMMARY DATA FOR SHORT-TERM NTP TOXICITY STUDY TECHNICAL REPORTS SCHEDULED FOR PEER REVIEW AT THE BOARD OF SCIENTIFIC COUNSELORS' PEER REVIEW PANEL MEETING ON NOVEMBER 19–20, 1990—Continued

Chemical Cas Number	Staff scientist/technical report Number	Primary uses	Route/exposure levels	Study laboratory	Review Order
Cresol (MIXED ISOMERS), 1319-77-3.	Dr. D. Dietz, 919-541-2272; TOX-09.	Household Disinfectant, Paintbrush Cleaner, in Lubricating Oils, Fumigant, Photographic Developers, Explosives, Organic Intermediate in Prod'n of Coumarin, Salicylaldehyde, Synthetic Resins, Degreasing Compounds, Obtained from Coal Tar (HSDB 1990).	Oral in Feed (NIH–07 Diet (POWDERED): R&M: 0, .03, .1, .3, 1.0, 3.0%.	Microbiological Associates.	10
O-Cresol 95-48-7	Dr. D. Dietz, 919-541-2272; TOX-09.	Chemical Intermed. For Epoxy Resins, Herbicides, Dyes, Disinfectant, Solvent, Pharmaceuticals, Photography, Paints, Explosives, Agricultural Chemicals, Obtained From Coal Tar (HSDB 1990).	Oral in Feed (NIH–07 Diet (Powdered): R&M: 0, .03, .1, .3, 1.0, 3.0%.	Microbiological Associates.	10
Ethylbenzene, 100-41-4.	Dr. P. Chan, 919-541-7561; TOX–10.	Manufacture of Synthetic Rubber. Solvent. Fuel Additive. Chemical Intermediate. (TDB).	Inhalation (AIR): R&M: 0, 100, 250, 500, 750, 1000 PPM.	IIT Research Institute	8

BILLING CODE 4140–01–M

Agency for Health Care Policy and Research; Statement of Organization, Functions and Delegations of Authority

Part H, Public Health Service (PHS), Chapter HP (Agency for Health Care Policy and Research), of the Statement of Organization, Functions, and Delegations of Authority for the Department of Health and Human Services (55 FR 12286–89, April 2, 1990), is amended to reflect establishment of the substructure organizations within the Agency for Health Care Policy and Research.

Agency for Health Care Policy and Research

Under the heading *Section HP–20, Functions*, following the statement for the *Office of Planning and Resource Management (HPA2)*, add the following statements:

Office of Management (HPA22). Provides direction and coordination of Agency-wide administrative management activities, including grants management, contract review and administration and financial management activities. Maintains close liaison with officials of the Agency, the Office of the Assistant Secretary for Health, and the Office of the Secretary on management and support activities. Specifically: (1) Serves as the Administrator's principal source for management and administrative advice and assistance; (2) provides advice, guidance, and coordinates personnel activities for the Agency with the Division of Personnel, OASH; (3) directs and coordinates the allocation of personnel resources; (4) provides organization and management analysis, develops policies and procedures for internal operation, and interprets and implements the Agency's management policies, procedures and systems; (5) develops and coordinates program and administrative delegations of authority activities; (6) plans and directs financial management activities, including budget formulation, presentation, and execution functions; (7) conducts all business management aspects of the review, negotiation, award and administration of Agency grant management activities; (8) manages the development, review, and administration of the Agency contracts; (9) provides Agency-wide support services such as supply management, equipment utilization, printing, and property, space, records and reports management; (10) manages the Agency's performance management systems; (11) coordinates and provides guidance on Privacy Act activities; and (12) serves as the Agency focal point for the analysis, selection and implementation of all ADP, word processing and telecommunication equipment and systems.

Office of Program Development (HPA23). Responsible for a broad range of program planning, evaluation, and legislative activities, and coordinates issues and programs that involve multiple Agency organizations. Specifically: (1) Stimulates, guides, and coordinates program planning, reporting, and evaluation activities of the Agency and maintains liaison with appropriate components of the Department; (2) develops and disseminates program objectives, alternatives, and policy positions; (3) provides staff services for program planning in relation to the budgetary process, the development of issue papers, and congressional reports; (4) develops the annual plan for evaluation and policy-relevant research (5) monitors ongoing research, demonstration, and evaluation activities of the Agency in relation to changing research and policy priorities; (6) stimulates, guides, and coordinates the development of research agendas and program notes, identifying gaps and initiating research development activities as needs arise; (7) coordinates activities pertaining to legislative policy development, interpretation, and implementation, including the development of legislative proposals, the analysis of existing and pending legislation, liaison with other agencies, and distribution of legislative materials; (8) coordinates activities pertaining to the development and clearance of regulations and public notices; (9) plans and manages the activities of the National Advisory Council for Health Care Policy, Research, and Evaluation; and (10) manages the process for responding to controlled correspondence within the outside the Agency.

Office of Scientific Review (HPA24). Provides leadership and coordination in the assignment and peer review of grant applications for the purpose of advising the Administrator on the scientific and technical merits of these applications and subsequent recommendations for approval or disapproval. Specifically: (1) Provides staffing and committee management resources to manage all chartered advisory committees of nonfederal scientists and advisors for the purpose of conducting first-level review of grant applications; (2) provides staffing and resources to manage the noncommittee review of small grant applications through the use

of federal and non-federal field readers; (3) responsible for the documentation of individual grant application reviews and the conduct of reviews in accordance with prescribed procedures and regulations; (4) makes decisions about the assignment of grant applications to the Agency and the appropriate peer review mechanism; (5) provides for the review of NIH and ADAMHA grant applications as a courtesy in cases when adequate review resources do not exist in these agencies, and in cases where Agency resources are not adequate makes arrangements for appropriate reviews outside the Agency.

Office of State and Local User Liaison (HPA25). Provides direction and coordination of the Agency's program to address the issues, problems, and information needs of leaders of State and local governments responsible for policy making that affects the planning, management, delivery and financing of health services as well as leaders of major health care delivery organizations, (e.g., health maintenance organizations, major purchasers of health care in the business world). Specifically: (1) Develops syntheses of research findings focused on particular issues dealing with policy concerns and operational problems; (2) plans and conducts workshops and seminars to provide research findings and related information and discuss options for dealing with these with State and local leaders to allow them to make better informed health care policy decisions; (3) maintains liaison with State and local government organizations and with the research community and provides information which may affect the Agency's research plan and priority setting process; (4) formulates, in collaboration with Agency staff, appropriate policies and activities to develop effective linkages with potential users of health services research; (5) communicates information regarding user research needs to the Agency Administrator and appropriate Agency staff to ensure user needs are adequately addressed in current and planned Agency intramural and extramural projects; (6) develops and implements mechanisms to identify and contact potential users of research findings and related information; (7) plans meetings and coordinates contacts between Agency staff and individual users and representatives of users groups and organizations; (8) provides assistance and advice to other Federal agencies and organizations in evaluating utility of federally-supported research to State and local government officials; and (9) provides technical assistance to design and implementation of research projects undertaken in State and local governments.

Following the statement for the Center for General Health Services Intramural Research (HPC), add the following:

Division of Long Term Care Studies (HPC2). Plans and conducts studies of institutional and noninstitutional care for the elderly and the chronically ill to provide the basis for policy research and analysis and for technical assistance that might be provided to other parts of the Agency, the Department, and other Government agencies, such as the Office of Management and Budget and the Congressional Budget Office. Specifically: (1) Obtains, organizes, and manages large data sets used for descriptive and analytic studies of the source, use, cost, and financing of long term care; (2) plans, designs, and conducts policy research and evaluation studies which examine critical issues and problems in the area of long term care identified in the research plan of the Center and the Agency; (3) prepares articles and reports which describe the purpose, methods, and findings of the research carried out by the Division and assists the Center for Research Dissemination and Liaison in preparing the reports for publication; (4) provides consultation and technical assistance within the Agency, to the Office of the Assistant Secretary for Health, the Office of the Secretary, and to the Health Care Financing Administration, as well as other Federal Agencies; (5) directs and analyzes program operations to ensure responsible administration of the resources allocated to the Division and the effective and efficient direction of the contracts managed by the Division; (6) advises other components of the Agency, and other PHS Agencies, such as the National Institute on Aging, NIH, on the availability, content, and utility of data bases useful in studies of long term care; and (7) maintains a working relationship with professional and scientific organizations, foundations, and other public and private groups engaged in activities related to the delivery of health services, the formulation of health policy, and research on health outcomes and health services.

Division of Medical Expenditure Studies (HPC3). Plans and conducts studies on how Americans use health services, what they pay for care, and how individuals finance these expenditures to provide the basis for policy research and analysis and for the provision of technical assistance within the Agency, the Department, and other Government agencies, especially the Office of Management and Budget and the Congressional Budget Office. Specifically: (1) Develops the plans for large survey projects to collect data from households, employers, insurers, providers, and long term care institutions on the use, cost of, and sources of payment for personal health care services; (2) organizes, edits, and manages large data sets based on survey data collected by the Center and by other survey and research organizations to facilitate the use of these data for descriptive and analytic studies of the health care industry and the markets for health care services; (3) plans, designs, and conducts policy research and evaluation studies which examine critical issues and problems in such areas as health insurance coverage, the expenditures for medical care, and factors that affect access to and use of medical services; (4) prepares articles and reports which describe the purpose, methods, and findings of the research carried out by the Division and assists the Center for Research Dissemination and Liaison in preparing the reports for publication; (5) provides consultation and technical assistance within the Agency, to the Office of the Assistant Secretary for Health, other Department components, as well as other Federal Agencies; (6) directs and analyzes program operations to ensure responsible administration of the resources allocated to the Division and the effective and efficient direction of the contracts managed by the Division; (7) advises other components of the Center, the Office of Science and Data Development in the Agency, and other PHS agencies such as the National Institutes of Health, the Alcohol, Drug Abuse and Mental Health Administration, and the Health Care Financing Administration on the availability, content, and utility of data bases useful in studies of personal health care services; and (8) maintains a working relationship with professional and scientific organizations, foundations, and other public and private groups engaged in activities related to the delivery of health services, the formulation of health policy, and research on the health care sector.

Division of Provider Studies (HPC4). Plans and conducts studies of the structure, conduct, and performance of the health care industry with particular emphasis on the hospital sector to provide the basis for policy research and analysis and for the provision of technical assistance within the Agency, the Department, and other Government

agencies. Specifically: (1) Plans, assembles, and manages large data sets which include patient records, sociodemographic information and provider characteristics that can be used for descriptive and analytic studies of the way providers compete, produce medical care, and use resources; (2) plans and conducts policy research and evaluation projects which address critical issues associated with the delivery of medical services, such as the effectiveness of medical services, the cost and variations in hospital care for AIDS, rural-urban differences in hospital services and patterns of treatment, the use of medical technology, and the source of payment for health care problems identified in the research plan of the Center and the Agency; (3) prepares articles and reports which describe the purpose, methods, and findings of the research carried out by the Division and assists the Center for Research Dissemination and Liaison in preparing the reports for publication; (4) provides consultation and technical assistance within the Agency, to the Office of the Assistant Secretary for Health, other Department components, as well as other Federal Agencies; (5) directs and analyzes program operations to ensure responsible administration of the resources allocated to the Division and effective and efficient direction of the contracts managed by the Division; (6) advises other components of the Agency on the structure, confidentiality, and management of large, complex health data bases; and (7) maintains a working relationship with professional and scientific organizations, foundations, and other public and private groups engaged in activities related to the delivery of health services, the formulation of health policy, and research on health outcomes, health services, and health technology.

Division of Statistics and Research Methodology (HPCS). Plans and conducts studies on the statistical methods and the use of statistics in survey design and in health services research to provide the basis for policy research and analysis and for technical assistance provided within the Agency, the Department, and to other Government agencies such as the Bureau of the Census and the Office of Management and Budget. Specifically: (1) Plans and conducts studies on such problems as sampling design, estimation strategies, sampling weight specifications, survey design, measurement error, and matching techniques; (2) prepares articles and reports which describe the purpose, methods, and findings of the research carried out by the Division and assists the Center for Research Dissemination and Liaison in preparing the reports for publication; (3) provides statistical direction and support to all Divisions within the Center for General Health Services Intramural Research, to other Agency components, and the Department on analytical and statistical strategies employed in health care, health expenditures, and epidemiologic surveys and studies; (4) reviews and evaluates grant and contract proposals and final reports where sophisticated, advanced, and complex methologogical techniques are central to establishing that the techniques used or proposed are valid; (5) prepares and oversees the specifications for statistical tabulations and the presentation of statistical results in reports prepared or published by the Agency; (6) directs and analyzes program operations to ensure responsible administration of the resources allocated to the Division and the effective and efficient direction of the contracts managed by the Division; and (7) maintains a working relationship with professional and scientific organizations, foundations, and other public and private groups engaged in activities related to the delivery of health services, the formulation of health policy, and research on health outcomes and health services.

Following the statement for the Center for General Health Services Extramural Research (HPE), add the following:

Office of the Director (HPE1). Plans and manages health services and health care technology research, demonstration, and evaluation activities supported by means of grants and contracts. Specifically: (1) Promulgates, plans, administers, coordinates and evaluates overall Center research and management programs, plans and policies; (2) provides leadership and direction for all Center activities; and (3) coordinates and directs the Center management, planning, and evaluation/reporting systems to assure optimum utilization of Center manpower, financial resources and facilities.

Division of Cost and Financing (HPE2). Plans and manages health services research on the role of market forces in the health care system in restraining cost increases and improving the availability and quality of care. Initiates, monitors, and evaluates both theoretical and empirical research on the competitive nature, structure, and performance of the market for health care services. Specifically: (1) Determines the structure and content of research studies supported by contract which address the critical issues and research questions identified in the research plan of the Agency; (2) develops and administers a program to monitor research studies supported by grants or contracts; (3) provides general guidance and assistance to groups and individuals seeking support for research, demonstration, or evaluation projects; (4) participates in the preparation of periodic reports which describe, analyze, and integrate the results of various research, demonstration, and evaluation projects supported by the Agency; (5) provides a summary of current extramural studies and informs other Agency components of results that might affect health policy and legislation; and (6) maintains liaison with professional and scientific organizations, foundations, and other groups engaged in health services research, demonstration, and evaluation activities.

Division of Technology and Quality (HPE3). Plans and manages health services research on health care technology and health care information systems, and health care quality improvement. Specifically: (1) Determines the structure and content of research studies supported by contract which address the critical issues and research questions identified in the research plan of the Agency; (2) develops and administers a program to monitor research studies supported by grants or contracts; (3) provides general guidance and assistance to groups and individuals seeking support for research, demonstration, or evaluation projects; (4) participates in the preparation of periodic reports which describe, analyze, and integrate the results of various research, demonstration, and evaluation projects supported by the Agency; (5) provides a summary of current extramural studies and informs other Agency components of results that might affect health policy and legislation; and (6) maintains liaison with professional and scientific organizations, foundations, and other groups engaged in health services research, demonstration, and evaluation activities.

Division of Primary Care (HPE4). Conducts activities associated with research and improvement of the delivery of health services and the effect of health systems on patient outcomes and to increase access to quality care. Specifically: (1) Determines the structure and content of research studies supported by contract which address the critical issues and research questions identified in the research plan of the Agency; (2) develops and administers a program to monitor research studies

supported by grants or contracts; (3) provides general guidance and assistance to groups and individuals seeking support for research, demonstration, or evaluation projects; (4) participates in the preparation of periodic reports which describe, analyze, and integrate the results of various research, demonstration, and evaluation projects supported by the Agency; (5) provides a summary of current extramural studies and informs other Agency components of results that might affect health policy and legislation; and (6) maintains liaison with professional and scientific organizations, foundations, and other groups engaged in health services research, demonstration, and evaluation activities.

Following the statement for the Center for Research Dissemination and Liaison (HPG), add the following:

Division of Education, Evaluation, and Demonstration (HPG2). Develops and evaluates the effectiveness of Agency dissemination strategies and its educational and training programs and maintains the Agency's minority health and training programs. Specifically: (1) Conducts evaluations of dissemination strategies to determine the most appropriate methods for disseminating Agency information; (2) conducts studies to determine optimal methods for achieving cost-effective dissemination strategies and information penetration into specific segments of the health field; (3) determines the gaps in information transfer; (4) evaluates adoption/acceptance of information transfer in health care; (5) designs and supports new information systems and evaluates new technologies to improve the diffusion of Agency research products; (6) recommends the most effective and efficient approaches to information dissemination; (7) provides technical assistance to the Agency on optimal strategies for disseminating practice guidelines, clinical findings and research analyses; (8) conducts programs to support increased development of health service researchers, and improve the capacity for health services research training; (9) administers the National Research Service Awards and other training funds; (10) ensures that the Agency complies with pertinent Executive Orders and other directives that attend to and promote minority health issues and research capacity; (11) provides for liaison with other Federal agencies, provider groups and continuing medical education programs on health professions activities; (12) develops effective state-of-the-art information transfer systems, and appropriate document retrieval terminology; and (13) works closely with the National Library of Medicine, the National Technical Information Service, and commercial computer data bases to provide health research information to the Agency's constituencies.

Division of Information and Publications (HPG3). Makes Agency-funded research findings and information promptly available to the public and private sectors and transmits it in forms useful to the recipients. Responsible for disseminating all of the Agency's many and varied informational products. Specifically: (1) Prepares documents that are scientifically sound and appropriately targeted to various audiences; (2) edits and controls review and publication of all Agency documents; (3) maintains indexing, abstracting, and retrieval services; (4) ensures proper clearance procedures consistent with Departmental rules; (5) provides interface with the Government Printing Office and National Technical Information Service; (6) carries on the Agency's Freedom of Information Act activities; (7) maintains computerized information systems for the Agency on users of information, and available publications; (8) analyzes Agency audiences and recommending new outreach programs that meet the Agency's dissemination goals; (9) prepares and controls graphics production for the Agency; (10) works with and assists the National Library of Medicine in efforts to improve the availability of health services information to the public; (11) carries out the public affairs and liaison activities for the Agency; (12) organizes and conducts the Agency's conferences and prepares exhibits for the Agency; (13) promotes the research of the Agency through effective media and public affairs activities; and (14) develops and revises Agency documents as needed to keep the public adequately informed on Agency activities and priorities.

Section HP-30, Delegations of Authority. All delegations and redelegations of authority made to National Center for Health Services Research and Health Care Technology Assessment officials which were in effect immediately prior to the reorganization of April 2, 1990, and which are consistent with the reorganization, shall continue in effect pending further redelegation.

Dated: October 3, 1990.

J. Jarrett Clinton,

Acting Administrator.

Social Security Administration

Agency Forms Submitted to the Office of Management and Budget for Clearance

Each Friday the Social Security Administration publishes a list of information collection packages that have been submitted to the Office of Management and Budget (OMB) for clearance in compliance with Public Law 96-511, The Paperwork Reduction Act. The following clearance packages have been submitted to OMB since the last list was published in the Federal Register on September 28, 1990.

Department of Health and Human Services

Social Security Administration

(Call Reports Clearance Officer on (301) 965-4149 for copies of package)

1. *Annual Report of Earnings*—0960-0057—The information collected on the forms SSA-777 and SSA-7770 is used by the Social Security Administration to obtain information from beneficiaries so that the proper amount of benefits can be paid. The affected public is comprised of Social Security beneficiaries under age 70 who earned over the exempt amount as prescribed by law for the year and received any benefits for the year.

Number of Respondents: 1,200,000.

Frequency of Response: 1.

Average Burden Per Response: 6 minutes.

Estimated Annual Burden: 120,000 hours.

OMB Desk Officer: Allison Herron.

Social Security Administration

Written comments and recommendations regarding these information collections should be sent directly to the appropriate OMB Desk Officer designated above at the following address: OMB Reports Management Branch, New Executive Office Building, room 3208, Washington, DC 20503.

Dated: October 12, 1990.

Ron Compston,

Social Security Administration, Reports Clearance Officer.

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

Office of the Assistant Secretary for Community Planning and Development

[Docket No. N-90-1917; FR-2966-N-01]

Federal Property Suitable as Facilities to Assist the Homeless

AGENCY: Office of the Assistant Secretary for Community Planning and Development, HUD.

ACTION: Notice.

SUMMARY: This Notice identified unutilized and underutilized Federal property determined by HUD to be suitable for possible use for facilities to assist the homeless.

EFFECTIVE DATE: October 9, 1990.

ADDRESSES: For further information, contact James Forsberg, Department of Housing and Urban Development, Room 7262, 451 Seventh Street SW., Washington, DC 20410; telephone (202) 708-4300; TDD number for the hearing- and speech-impaired (202) 708-2565. (These telephone numbers are not toll-free.)

SUPPLEMENTARY INFORMATION: In accordance with the December 12, 1988 court order in *National Coalition for the Homeless* v. *Veterans Administration*, No. 88-2503-OG (D.D.C.), HUD publishes a Notice, on a weekly basis, identifying unutilized and underutilized Federal buildings and real property determined by HUD to be suitable for use for facilities to assist the homeless. Today's Notice is for the purpose of announcing that no additional properties have been determined suitable this week.

Dated: October 12, 1990.

Andrew E. Scott,

Deputy Assistant Secretary for Program Development.

BILLING CODE 4210-29-M

Office of the Assistant Secretary for Housing—Federal Housing Commissioner

[Docket No. N-90-3161; FR-2916-N-01]

Nehemiah Housing Opportunity Grants; Announcement of Funding Awards

AGENCY: Office of the Assistant Secretary for Housing—Federal Housing Commissioner, HUD.

ACTION: Announcement of funding awards.

SUMMARY: In accordance with section 102(a)(4)(C) of the Department of Housing and Urban Development Reform Act of 1989, this document notifies the public of funding awards made under the Nehemiah Housing Opportunity Grants Program (NHOP). The purpose of this document is to announce the names and addresses of the award winners and the amount of the awards to be used to enable nonprofit organizations to provide loans to families purchasing homes that are constructed or substantially rehabilitated in accordance with a HUD-approved program.

FOR FURTHER INFORMATION CONTACT: Morris E. Carter, Director, Single Family Development Division, Office of Insured Single Family Housing, Department of Housing and Urban Development, room 9272, 451 Seventh Street SW., Washington, DC 20410, telephone (202) 707-3700. A telecommunications device for deaf persons (TDD) is available at (202) 708-4594. (These are not toll-free telephone numbers.)

SUPPLEMENTARY INFORMATION: Title VI of the Housing and Community Development Act of 1987 (Pub. L. 100-242, approved February 5, 1988) established the Nehemiah Housing Opportunities Grant Program (NHOP). On May 22, 1989, HUD published a final rule establishing the requirements for NHOP at 54 FR 22248. This final rule became effective on July 13, 1989.

Organizations funded under NHOP will make loans to eligible moderate-income families to purchase homes in selected neighborhoods. The program is designed to encourage home ownership by families who otherwise would not be able to afford home ownership; to help rebuild depressed areas of cities and create sound and attractive neighborhoods; and to increase employment opportunities of residents of these neighborhoods.

The loans to families cannot exceed $15,000 and will be secured by a second mortgage held by HUD on the property. The loans are interest-free and are repayable to HUD upon the sale, lease or other transfer of the property. To be eligible for the program, families must not have an income higher than the median income in the area, and cannot have owned a home during the three years before purchase.

The non-profit organizations will develop the homes, which must be constructed or substantially rehabilitated in accordance with a HUD-approved program. The homes are required to be located in neighborhoods where the median income is 80% or less of the area median income.

On May 16, 1990 (55 FR 20311), the Department announced the availability of $25.2 million in funds appropriated for NHOP in the Urban Development-Independent Agencies Appropriations Act, 1990, (Pub. L. 101-144, approved November 9, 1989). Applications for funding, which were due July 16, 1990, were reviewed, evaluated and scored based on the criteria in the final rule. As a result, HUD has awarded 21 non-profit organizations $21.3 million in grants to be used as loans to eligible moderate-income families to purchase homes in selected neighborhoods. Awards have been made only to those applicants who met the threshold requirements of the selection criteria. Therefore, all of the available funds have not been awarded.

In accordance with section 102(a)(4)(C) of the Department of Housing and Urban Development Reform Act of 1989 (Pub. L. 101-235, approved December 15, 1989), the Department is publishing details concerning the recipients of these awards, as follows:

NEHEMIAH HOUSING OPPORTUNITY GRANTS

[Pursuant to Title VI of the Community Development Act of 1987]

Region	Funding recipient (name and address)	Project name/location	Amount approved	No. of units

BILLING CODE 4210-27-M

DEPARTMENT OF THE INTERIOR

Office of the Secretary

School Construction Priority List, FY 1992

AGENCY: Office of Construction Management, Interior.

ACTION: Notice of new school construction priority list for fiscal year 1992.

The new school construction project list has been prepared for FY 1992 as required by Public Law 95–561 (92 Stat. 2319 section 1125 (O)) which requires that: "At the time any budget request for school construction is presented, the Secretary shall publish in the Federal Register and submit with the budget request the current list of all school construction priorities."

This notice for FY 1992 provides the current revised list of proposed new school construction projects. Construction of these projects is subject to the availability of funds and/or the status of currently committed construction projects approved by the Congress. These proposed projects are also subject to further review in terms of either replacement or rehabilitation.

The current list of school construction projects applies to FY 1992 and is based upon the evaluation criteria developed by the Office of Construction Management and the Bureau of Indian Affairs, as noticed in the Federal Register (Vol. 53, No. 72, 12470–12471) on April 14, 1988. A revised list will be developed and published for each succeeding year.

The new school construction priority list for FY 1992 is:

Pinon Community School Dorm
Eastern Cheyenne River Consolidated School
Rock Point Community School
Many Farms High School*
Tucker Day School
Shoshone-Bannock/Fort Hall School
Standing Pine Day School
Chief Leschi School Complex
Seba Dalkai Boarding School
Sac & Fox Settlement School

Fiscal Year 1993 may be submitted during the period of September 15, 1990 through December 15, 1990. The "Instructions and Application for New School Construction" is available upon request through the Office of Construction Management (OCM) and from the Bureau of Indian affairs (BIA) Area and Agency offices and the BIA Facilities Management and Construction Center, P.O. Box 1248, Albuquerque, New Mexico, 87103.

Supplemental information being requested on data in the application may also be obtained from these locations. This supplemental information is entirely optional, is not required as part of the application form, and applicants will not in any way be penalized by not providing information in this format. It is being requested, however, to enable easier evaluation of data by the evaluation panel.

Applications must be received by OCM by December 15, 1990 to be considered for Fiscal Year 1993 budget consideration. The new school construction priority list is revised each year based on the evaluation of applications received that year. Tribal entities may submit a new school construction application each year.

FOR FURTHER INFORMATION CONTACT: David J. Matheson, Director, Office of Construction Management, Department of the Interior, 1849 C Street, NW., Mail Stop 2415, Washington, DC 20240, (202) 208-3405.

Charles E. Kay

Principal Deputy Assistant Secretary, Policy Management and Budget.

[FR Doc. 90-24709 Filed 10-18-90; 8:45 am]

BILLING CODE 4310-10-M

*Enrollment figures for this school have required a follow-up validation. The final site validation indicates enrollment figures below the level indicated in the application and preliminary site validation. Rankings are based on the percentage of unhoused students, as defined in the enrollment criteria published in the Federal Register.

Bureau of Indian Affairs

Fiscal Year 1991 Indian Child Welfare Act Grant Program; Availability of Title II Funds.

October 15, 1990.

AGENCY: Bureau of Indian Affairs, Interior.

ACTION: Notice of availability of title II funds.

SUMMARY: The Indian Child Welfare Act makes available grant funds from the Bureau of Indian Affairs (BIA), Department of the Interior, for the purpose of improving child welfare services to Indian children and families.

DATES: The closing date for receipt of applications for this program is December 17, 1990.

ADDRESSES: Bureau of Indian Affairs' area offices are listed in part IV of this announcement. BIA/Division of Social Services, room 310 SIB, 1849 C Street NW., Washington, DC 20240.

FOR FURTHER INFORMATION CONTACT: The Bureau of Indian Affairs' area office nearest to the applicant, or the Chief, Division of Social Services at the address listed above; Telephone (202) 208-2721.

SUPPLEMENTARY INFORMATION: The Assistant Secretary—Indian Affairs is announcing procedures necessary to apply for grant funds under title II of the Indian Child Welfare Act.

Applications for single-year programs and renewal applications for existing multi-year projects will be accepted. Although the final Fiscal Year 1991 appropriation bill has not been enacted by Congress, the Bureau of Indian Affairs requested $8.9 million for grants under the Indian Child Welfare Act. It is important that applicants carefully review requirements detailed in this announcement related to deadlines, indirect costs, and page limitations. If an application is not received by the close of business on December 17, 1990, it will not be reviewed. If the applicant does not itemize indirect costs in its proposed budget a total of five points will automatically be deducted from Criteria V—"Fiscal Capabilities, Budget and Budget Justification, Part (b)." If an application is longer than the established page limitation, only the first forty pages of the application will be reviewed.

Authority

The Indian Child Welfare Act, Public Law 95-608 authorized the utilization of funds for grants to Indian tribes, organizations, and multi-service Indian centers. This notice is published in exercise of authority delegated by the Secretary of the Interior to the Assistant Secretary—Indian Affairs by 209 DM 8.

Part I. General Information

A. Background

This announcement provides information on opportunities to apply for Indian Child Welfare Act (ICWA) grant funds for FY 1991. The Indian Child Welfare Act of 1978 (Pub. L. 95-608, 25 U.S.C. 1902, 25 U.S.C. 1931 and 1932) limits the use of grant funds for the following activities:

(1) To prevent separation of Indian children from their families when possible;

(2) When separation is necessary, to reunite Indian children with their families as soon as possible;

(3) When reunification is not possible, to arrange permanent placements with extended families or through adoption; and

(4) To carry out work with Indian children and their families in accordance with the preferences of the ICWA, following procedures and practices which reflect the unique values of Indian culture.

An applicant for an Indian Child Welfare Act Grant may submit only one grant application for this program during this application period (refer to 25 CFR 23.21(b)).

B. BIA Indian Child Welfare Act Grant Program Purpose

The objective of every Indian child and family service program shall be to prevent the breakup of Indian families, and insure that the permanent removal of an Indian child from the custody of his/her parent or Indian custodian shall be a last resort.

The specific purposes of the Bureau of Indian Affairs' Indian Child Welfare grants as stated in the law are:

(1) The establishment and operation of Indian child and family service programs which promote the stability of Indian families, and

(2) The provision of non-Federal matching shares for the other Federal financial assistance programs which contribute to the same purpose.

These purposes are further defined in Public Law 95-608, sections 201 and 202; 25 U.S.C. 1931 and 1932; and 25 CFR 23.22.

C. Eligible Applicants

The governing body of any tribe or tribes, or any nonprofit off-reservation Indian organization or multi-service Indian center, may apply individually or as a consortium for a grant. No applicant may submit more than one application.

A consortium is created by an agreement or association between two or more eligible applicants.

New applications for projects of one year duration and renewal applications for multi-year applications funded in FY 1990 may be submitted in response to this announcement.

Part II. Available Funds

Subject to the availability of funds through appropriations for this program in Fiscal Year 1991, grants will be awarded to individual tribes, organizations, or to consortia of tribes and organizations within the following categories:

(a) A maximum of up to $50,000 for eligible applicants with a total service area population of 2,500 or less;

(b) A maximum of up to $75,000 for eligible applicants with a total service area population greater than 2,500 but less than 5,000;

(c) A maximum of up to $100,000 for eligible applicants with a total service area population greater than 5,000 but less than 7,500;

(d) A maximum of up to $150,000 for eligible applicants with a total service area population greater than 7,500 but less than 15,000;

(e) A maximum of $300,000 for eligible applicants with a total service area of greater than 15,000.

Applicants in the State of Alaska will be allowed a 25 percent cost of living adjustment to the total maximum amount for which they may apply.

Notwithstanding the above grant guidelines, consortia having a total service area population of 5,000 or less may apply for a maximum grant of up to $100,000 because of the greater administrative costs associated with operating a small consortium. Consortia with service area populations greater than 5,000 must comply with the grant guidelines set above.

Service area population means the total number of Indians eligible for service under 25 CFR 23.2(d) (2) and/or (3), in the geographical area to which the tribe, or organization, or multi-service center can realistically provide the services proposed in the application. The service area population is used only to determine maximum grant allocations that a tribe, multi-service center, or organization may be eligible to receive. These population figures must be based on identifiable statistical resources.

All costs associated with the administration of proposed projects shall be line itemized. Indirect cost as well as all other administrative costs

BEST COPY AVAILABLE

must be broken down by percentage and dollar amounts. All administrative costs will be carefully scrutinized in relation to proposed funds used for direct services. If the applicant does not itemize indirect costs in its proposed budget, a total of five points will automatically be deducted from Criteria V–"Fiscal Capabilities. Budget and Budget Justification, Part (b)."

In accordance with 25 CFR 23.25(a)(8), the reasonableness and relevance of the estimated costs for the project are considered in the rating of all project applications. Administrative costs are only allowable within the funding specified by the grant formula and limitations specified in this announcement.

Applicants will not be funded for more than their demonstrated need, as specifically addressed in 25 CFR 23.24 and 23.25. The statistical requirements established in these regulations, as well as the tribe's multi-service center's or organization's prior service record will be used in determining need. Examples of necessary data include the number of actual or estimated Indian family breakups, and the number of persons who will receive direct services from any portion of the proposed program, by program area.

In accordance with 25 CFR 23.27(c)(3), if an applicant has been a grantee during the preceding fiscal year and proposes to continue essentially the same service program, the applicant, at the time of application, must provide a satisfactory evaluation from the area office along with the other materials required in this subsection.

Minimum standards for receiving a satisfactory evaluation include the timely submission of all fiscal and programmatic reports, as well as utilizing the corrective analysis form when programmatic changes are necessary. At no time may any Indian tribe, organization, or multi-service center which is either an eligible individual applicant in accordance with 25 CFR 23.21 or a member of a consortium, receive Indian Child Welfare Act grant funds greater than a maximum grant of $300,000 through a direct grant or through subgranting procedures with approved applicants.

Part III. Application and Selection Criteria

A. Statutory Authority

The Indian Child Welfare Program from the Bureau of Indian Affairs is authorized by title II of Public Law 95–608, the Indian Child Welfare Act (25 U.S.C. 1901 *et seq.*, 25 CFR part 23). The Central Office will retain 10 percent of the total available funding, to assure funding for any applicant who may appeal a denial at the area office level. If these funds are not utilized for appeals, they will be distributed through the area offices to approved applicants.

B. The Closing Date for Receipt of Applications For All Single-Year and Multi-year Applications

The closing date for receipt of all single-year and multi-year renewal applications under this Program Announcement is December 17, 1990. All applications or renewals for Indian Child Welfare Act Grants must be received in the appropriate Bureau of Indian Affairs' Social Services Area/Agency Office, as specified in 25 CFR 23.28, on/or before 4:15 p.m. or the applicable close of business for that office on the closing date of the application period. Postmarks will not be considered as meeting the timeframe for applications received after the application deadline. The names and addresses of Bureau Social Service Area Offices and staff are listed at the end of this announcement. Hand delivered applications are accepted during normal working hours Monday through Friday. Applications which do not meet this criteria are considered late applications and will not be considered in the current competition.

C. Program Priorities

Indian Child Welfare Act grants are for the purpose of: (1) Establishment and operation of Indian child and family service programs. In accordance with the policy in 25 CFR 23.3 to emphasize the design and funding of programs to promote the stability of Indian families, program priorities have been established to be utilized by area offices in the competitive review process when more than one application obtains the same competitive score. These priorities reemphasize the programmatic interest in maintaining the family and preventing out-of-home placements.

Program priorities are listed below in descending order:

(a) Operation and maintenance of facilities for the counseling and treatment of Indian families and for the temporary custody of Indian children.

(b) Family Assistance (including homemaker and home counselors), daycare, after-school care, recreational activities, respite-care, and employment.

(c) A system for the tribes and Indian organizations to license or otherwise regulate Indian foster and adoptive homes or the preparation and implementation of child welfare codes within their legal jurisdictional authority, or pursuant to a state-tribal and/or Indian organization agreement.

(d) Guidance, legal representation and advice to Indian families involved in tribal, state or federal child custody proceedings.

(e) Employment of professional and other trained personnel to assist the tribal court in the disposition of domestic relations and child welfare matters. (Funding of tribal court staff is not allowable.)

(f) Education and training of Indians (including tribal court judges and staff) in skills relating to child and family assistance and service programs.

(g) Subsidy programs under which Indian adoptive children may be provided support comparable to that for which they could be eligible as foster children, taking into account the appropriate state standards of support for maintenance and medical needs.

(h) Home improvement programs.

(i) Other programs designed to meet the purpose of the Act. Planning or feasibility grants may be undertaken for any one of the above listed program purposes. These applications will be ranked according to the priority of the program under consideration.

(2) Providing non-Federal matching shares for other Federal financial assistance programs as prescribed in 25 CFR 23.43. The order of priorities of matching share grants will correlate with the purpose of the program receiving the match.

D. Content of the Single-year Application

The single-year application shall be no longer than 40 pages, double spaced, excluding the appendix. The table of contents and appendices will not be counted toward the maximum length. It is recommended that the appendix be no longer than 20 pages. Any application whose narrative exceeds 40 pages will not be reviewed past page 40.

The application shall include standard form 424 and the following information:

(1) Name and address of Indian tribal governing body(ies) or Indian organization applying for a grant,

(2) Descriptive name of project,

(3) Grant funds requested,

(4) The unduplicated client service population directly benefiting from the project,

(5) Length of project,

(6) Beginning date,

(7) Project budget categories or items,

(8) Program narrative statement (including three year plans if current multi-year grantee),

(9) Certification or evidence of request by Indian tribe or board of Indian

organization (preferably covering the duration of the proposed project).

(10) Evidence of substantial community support for the proposed program. This request may be in the form of a tribal resolution, an endorsement included in the grant application or such other forms as the tribal constitution or current practice requires.

(11) Name and address of the Bureau office to which an application is submitted.

(12) Date application is submitted to the Bureau, and

(13) Additional information pertaining to grant applications for funds to be used as matching shares.

Information included in the appendix should relate specifically to the application. The appendix may include, but is not limited to the following: Resolutions, support letters, position descriptions, fiscal management/accounting certification, operational monitoring system, non-profit status documentation.

E. Evaluation Criteria for Single-Year Applications

The content of the application and the following factors are considered in the competitive review of these grant applications:

(1) The degree to which an applicant demonstrates in the program narrative an understanding of the social service problems or issues impacting the client population which the applicant proposes to serve. (If an applicant identifies alcohol or drug abuse as a major problem or issue impacting Indian children and families, they must also clearly address current efforts to coordinate existing resources to attack these problems. This may include information on the development or contents of the Tribal Action Plan specified under section 4206 of the Omnibus Drug and Alcohol Abuse Act of 1988.)

(2) The degree to which and the methods by which the applicant intends to fulfill the purpose of the grant, specifically relating to the goals and objectives of the program to the issues and problems impacting the client population. (The proposed methods outlined in the application should have an established basis for operation, e.g., a tribal placement program requires tribally established licensing or placement standards on which to operate, or a program to assist the tribal court requires a tribal code and a tribal court with which to work, etc.)

(3) Whether the applicant presents narrative, quantitative data and demographics of the client population to be served. Examples of such data include:

(a) The number of actual or estimated Indian child placements outside the home;

(b) The number of actual or estimated Indian family breakups; and

(c) The need for a directly related preventive program. (Refer to part II for further explanation.)

(4) The relative accessibility which the Indian population to be served under a specific proposal already has to existing child and family service programs emphasizing prevention of Indian family breakup. Factors to be considered in determining accessibility include:

(a) Cultural barriers;

(b) Discrimination against Indians;

(c) Inability of potential Indian clientele to pay for service;

(d) Lack of programs which provide free service to indigent families;

(e) Technical barriers created by existing public or private programs;

(f) Availability of transportation to existing programs;

(g) Distance between the Indian community to be served under the proposal and nearest existing programs;

(h) Quality of service provided to Indian clientele; and

(i) Relevance of service provided to specific needs of Indian clientele.

(5) The proper justification of the extent to which the proposed program would duplicate any existing child and family service program emphasizing prevention of family breakup, taking into consideration all the factors listed in paragraphs (1), (2), (3), and (4) of this section. Proper justification must be given for any duplication of services.

(6) Evidence of substantial community support for the proposed program from the Indian community or communities to be served. Such support may be evidenced by:

(a) Letters of support from individuals and families to be served;

(b) Local Indian community representation in and control over the Indian entity requesting the grant;

(c) Letters from local social service or social service related agencies familiar with the applicant's past work experience;

(7) The explanation of proposed facilities and of the structure of the tribal or Indian organization requesting grant funds, and the position description of any position to be funded with grant funds, identifying qualifications, responsibilities, and lines of supervision.

(8) The reasonableness and relevance of the estimated costs of the proposed program or service.

An application shall not receive a preliminary approval unless a review of the application determines that it:

(a) Contains all the information required in "D. Content of an Application";

(b) Receives a minimum score of 80 in a competitive review under the scoring process using the selection criteria established in regulation.

(c) If an applicant has been a grantee during the year immediately preceding the year for which an application is being made, and has made an application to continue essentially the same service program, satisfactory evaluation(s) from the area office review of the program must be provided in addition to the other materials required in this subsection.

F. Single Year Grant Review Process

The Assistant Secretary—Indian Affairs or his/her designated representative shall select for grants under the Indian Child Welfare Act those proposals which will in his/her judgment best promote the purposes of the Act. Such selection will be made through a review process in which each application will be scored competitively using the BIA review criteria listed above at the appropriate Bureau Social Service Office referred to in 25 CFR 23.30, 23.31, or 23.33. Grant applications will be reviewed by a panel of reviewers qualified by training and/or experience in human services to Indian populations. These recommendations will be used by the Assistant Secretary—Indian Affairs' designated representative to preliminarily approve or disapprove all single year grant applications, and make funding recommendations to the Central Office. The assistant Secretary—Indian Affairs has final funding authority.

G. Procedures for Submission of Multi-Year Renewal Applications

The Assistant Secretary—Indian Affairs may award grants for the third and final year of approved multi-year project proposals as authorized in 25 CFR 23.37. *No new multi-year projects shall be considered in the FY 1991 application period. Funding of projects is subject to the availability of funds in accordance with 25 CFR 23.27(e). Only current grantees who have FY 1990 approved multi-year projects may submit renewal applications.*

Current multi-year project grantees must submit three copies of renewal applications which contain the following information to the appropriate agency or area office:

(1) New SF-424;

(2) Updated information required in 25 CFR 23.24, 23.25, 23.26 and 23.27(c)(3);

(3) Updated Operational Monitoring System (OMS);

(4) Proposed budget.

Grantees must have a satisfactory evaluation of the current year of their multi-year project from the Area Office in order to be considered for continued funding in FY 1991 (25 CFR 23.27(c)(3)).

As stated in 25 CFR 23.37(e), requests (e.g., resolutions) from tribal governing bodies or Indian organizations which cover the duration of the multi-year project will fulfill the requirements specified in 25 CFR 23.26 and do not need to be resubmitted on an annual basis. Resolutions that covered only one year of the project must be updated for the year which the grantee is submitting a renewal application.

Grantees must comply with 25 CFR part 276 in terms of both financial and performance reporting requirements. Failure to meet and comply with regulatory requirements may result in suspension, cancellation and/or termination of program funds. The OMS for a multi-year renewal application must demonstrate a developmental approach to the delivery of the proposed child and family service project (25 CFR 23.37(d)(2)). In revising or updating the OMS, renewal applicants shall submit an OMS–2. Applicants may specify that the OMS–2 does not require updating and should note such in the renewal application.

H. Multi-year Renewal Application Review

Upon submission of the initial application and the renewal application, the area/agency certification form will be completed by the appropriate area/agency office specified in 25 CFR 23.30 or 23.31. The applicant must include a satisfactory evaluation of their existing ICWA program (25 CFR 23.27(c)(3)) with their renewal application.

Materials submitted for renewal shall not be subject to competitive review. The area social worker or designated social services staff review renewal applications for compliance with 25 CFR part 23 and 25 CFR part 276. The area social worker or designated social services staff shall make recommendations based on this review.

I. Multi-year Renewal Application Funding

Funding shall be in accordance with the formula published in the Federal Register (25 CFR 23.27(e)(1)). Funding after the first year of a multi-year project will depend upon the submission of a current satisfactory evaluation for an existing program which will attest to the grantee's progress in achieving the objectives of the project according to the approved work plan submitted in the previous year(s) of the project (25 CFR 23.73(f)), demonstrated need, and the availability of funds.

J. Appeals

In accordance with 25 CFR 2.20(c), 23.63, and 23.64, the Assistant Secretary—Indian Affairs has made a determination to assume administrative jurisdiction over all Fiscal Year 1991 Indian Child Welfare Act Grant Application appeals.

Notice(s) of appeals must be filed within 30 days of the appellant's receipt of the decision being appealed. The notice is filed in the office of the official whose decision is being appealed. The date of filing is the date the notice of appeal is postmarked or the date it is personally delivered to the official's immediate office. (25 CFR 2.9(a), 2.13(a)). No extension of time will be granted for filing a notice of appeal. (25 CFR 2.9(a), 2.16).

The Statement of Reasons must be filed within the next 30 days in the office of the official whose decision is being appealed. It may be included in or filed with the notice of appeal. (25 CFR 2.10). The Assistant Secretary—Indian Affairs shall take action and render a final decision for the Department in accordance with the provisions required in 25 CFR 2.20.

Part IV. BIA Area Offices—Area Social Workers

Aberdeen—Dean Krahulec, 115 4th Avenue, SE., Aberdeen, SD 57401; (605) 226–7351.

BILLING CODE 4310-JB-M

[AZ-942-01-4730-12]

Arizona; Filing of Plats of Survey

October 10, 1990.

1. The plats of survey of the following described lands were officially filed in the Arizona State Office, Phoenix, Arizona, on the dates indicated:

A plat, (in three sheets), representing a dependent resurvey of a portion of the west and north boundaries and a portion of the subdivisional lines; and the survey of the subdivisions in sections 2, 3, 5, 8 and 9 in Township 5 North, Range 11 East, Gila and Salt River Meridian, Arizona, was accepted July 17, 1990 and was officially approved July 20, 1990.

A plat, (in two sheets), representing the dependent resurvey of a portion of the east, west and north boundaries and a portion of the subdivisional lines, and a survey of the subdivisions in section 2, 3, 12 and 31, in Township 6 North, Range 11 East, Gila and Salt River Meridian, Arizona, was accepted July 17, 1990, and was officially filed July 20, 1990.

A plat representing a metes-and-bounds survey of Tract 37, in unsurveyed Township 8 North, Range 12 East, Gila and Salt River Meridian, Arizona, was accepted September 12, 1990, and was officially filed September 14, 1990.

These plats were prepared at the request of the Forest Service, Tonto National Forest.

A plat, (in four sheets), representing the dependent resurvey of a portion of the south boundary and a portion of the subdivisional lines; and a survey of the subdivisions of sections 14, 22, 23, 27, 34 and 35, in Township 23 North, Range 6 East, Gila and Salt River Meridian, Arizona was accepted July 17, 1990 and was officially filed July 20, 1990.

This plat was prepared at the request of the Forest Service, Coconino National Forest.

A plat, [in four sheets], representing a dependent resurvey of the south boundary, a portion of the east boundary, a portion of the abandoned south boundary of the Navajo Indian Reservation, and a portion of the subdivisional lines and a survey of the north boundary, a portion of the subdivisional lines, and the subdivision of certain sections in Township 28 North, Range 20 East, Gila and Salt River Meridian, Arizona, was accepted September 28, 1990 and was officially filed October 2, 1990.

A plat representing a dependent resurvey of a portion of the Arizona-New Mexico State line between Astronomical Station No. 3 and the 100 mile post, and a portion of section 7, Township 26 North, Range 31 East, and a survey of the south boundary and a completion survey of the subdivisional lines in Township 26 North, Range 31 East, Gila and Salt River Meridian, Arizona, was accepted September 28, 1990, and was officially filed October 2, 1990.

These plats were prepared at the request of the BIA, Navajo Project Office.

A plat, (in two sheets), representing the dependent resurvey of portions of the west and north boundaries, portions of the subdivisional lines and the U.S. Customs and Immigration Reserve, and the subdivision of section 6, and the survey of certain lots, and a metes-and-bounds survey in sections 6 and 7, of a fractional Township 13 South, Range 5 West, Gila and Salt River Meridian, Arizona was accepted July 20, 1990 and was officially filed July 24, 1990.

This plat was prepared at the request of the National Park Service.

2. These plats will immediately become the basic records for describing the land for all authorized purposes. These plats have been placed in the open files and are available to the public for information only.

3. All inquiries relating to these lands should be sent to the Arizona State Office, Bureau of Land Management, P.O. Box 16563, Phoenix, Arizona 85011.

James P. Kelley,

Chief, Branch of Cadastral Survey.

BILLING CODE 7035-01-M

[Finance Docket No. 31781]

Burlington Northern Railroad Co.; Trackage Rights Exemption

Duluth, Missabe and Iron Range Railway Company has agreed to grant overhead trackage rights to Burlington Northern Railroad Company (BN) over its line of railroad between Pokegama (milepost 13) and Saunders (milepost 17.45), WI, a distance of 4.45 miles. The trackage rights were to become effective on October 5, 1990.

This notice is filed under 49 CFR 1180.2(d)(7). Petitions to revoke the exemption under 49 U.S.C. 10505(d) may be filed at any time. The filing of a petition to revoke will not stay the transaction. Pleadings must be filed with the Commission and served on: A.C. Saylor, Duluth, Missabe and Iron Range Railway Company, P.O. Box 68, 135 Jamison Lane, Monroeville, PA 15146.

As a condition to the use of this exemption, any employees affected by the trackage rights will be protected pursuant to *Norfolk and Western Ry. Co.—Trackage Rights—BN*, 354 I.C.C. 605 (1978), as modified in *Mendocino Coast Ry., Inc.—Lease and Operate*, 360 I.C.C. 653 (1980).

Dated: October 11, 1990.

By the Commission, David M. Konschnik, Director, Office of Proceedings.

BILLING CODE 7035-01-M

[Finance Docket No. 31680]

Mokena Illinois Railroad Company—Construction Exemption—Will County, IL

AGENCY: Interstate Commerce Commission.

ACTION: Notice of availability of environmental assessment.

SUMMARY: By decision served October 4, 1990 in this proceeding, the Commission granted, subject to environmental review, Mokena Illinois Railroad Company's petition for exemption from the requirements of 49 U.S.C. 10901 for the construction of 3,250 feet of rail line in Will County, Illinois. The effective date of the decision was postponed until

completion of the Commission's environmental review and further decision. The Commission has prepared its environmental assessment which concludes that the proposed action will not significantly affect either the quality of the human environment or the conservation of energy resources. The Commission will consider any comments to the conclusions reached in the environmental assessment before rendering a final decision in this proceeding.

DATES: Written comments must be filed by November 19, 1990.

ADDRESSES: Send an original and 10 copies of comments referring to Finance Docket No. 31680 to:

(1) Section of Energy and Environment, room 3219, Interstate Commerce Commission, Washington, DC 20423, and one copy of the comments to:

(2) Petitioner's representative: Andrew P. Goldstein; 1200 Eighteenth Street, NW., Washington, DC 20036.

FOR FURTHER INFORMATION CONTACT: Tawanna Glover-Sanders (202) 275-7918 or Elaine K. Kaiser, Section Chief (202) 275-7884. [TDD for hearing impaired: (202) 275-1721].

SUPPLEMENTARY INFORMATION: Copies of the Environmental Assessment may be obtained from the Section of Energy and Environment, Office of Economics, room 3219, Interstate Commerce Commission, Washington, DC 20423. Telephone (202) 275-7884. Assistance for the hearing impaired is available through TDD Services at (202) 275-1721.

By the Commission, Howard K. Face, Director, Office of Economics.

Sidney L. Strickland, Jr.,

Secretary.

BILLING CODE 7035-01-M

[Docket No. AB-6 (Sub-No. 322X)]

Burlington Northern Railroad Co., Abandonment Exemption—in Cherokee County, KS, and Ottawa County, OK

AGENCY: Interstate Commerce Commission.

ACTION: Notice of exemption.

SUMMARY: The Commission exempts from the prior approval requirements of 49 U.S.C. 10903-10904 the abandonment by the Burlington Northern Railroad Company of a 5.29-mile line of railroad between Baxter Junction, in Cherokee County, KS, and Picher, in Ottawa County, OK, subject to standard labor protective conditions.

DATES: Provided no formal expression of intent to file an offer of financial assistance has been received, this exemption will be effective on November 18, 1990. Formal expressions of intent to file an offer[1] of financial assistance under 49 CFR 1152.27(c)(2) must be filed by October 29, 1990, petitions to stay must be filed by November 5, 1990, and petitions for reconsideration must be filed by November 15, 1990. Requests for a public use condition must be filed by October 29, 1990.

ADDRESSES: Send pleadings referring to Docket No. AB-6 (Sub-No. 322X) to:

(1) Office of the Secretary, Case Control Branch, Interstate Commerce Commission, Washington, DC 20423 and

(2) Petitioner's representative: Sarah J. Whitley, Burlington Northern Railroad Company, 3800 Continental Plaza, 777 Main Street, Fort Worth, TX 76102.

FOR FURTHER INFORMATION CONTACT: Joseph H. Dettmar, (202) 275-7245, [TDD for hearing impaired: (202) 275-1721].

SUPPLEMENTARY INFORMATION: Additional information is contained in the Commission's decision. To purchase a copy of the full decision, write to, call, or pick up in person from: Dynamic Concepts, Inc., room 2229, Interstate Commerce Commission Building, Washington, DC 20423. Telephone: (202) 289-4357/4359. (Assistance for the hearing impaired is available through TDD services (202) 275-1721).

Decided: October 9, 1990.

By the Commission, Chairman Philbin, Vice Chairman Phillips, Commissioners Simmons, Lamboley, and Emmett. Commissioner Lamboley did not participate in the disposition of this proceeding.

Sidney L. Strickland, Jr.,

Secretary.

DEPARTMENT OF LABOR

Office of the Secretary

Agency Recordkeeping/Reporting Requirements Under Review by the Office of Management and Budget (OMB)

Background: The Department of Labor, in carrying out its responsibilities under the Paperwork Reduction Act (44 U.S.C. Chapter 35), considers comments on the reporting and recordkeeping requirements that will affect the public.

List of Recordkeeping/Reporting Requirements Under Review: As necessary, the Department of Labor will publish a list of the Agency recordkeeping/reporting requirements under review by the Office of Management and Budget (OMB) since the last list was published. The list will have all entries grouped into new collections, revisions, extensions, or reinstatements. The Departmental Clearance Officer will, upon request, be able to advise members of the public of the nature of the particular submission they are interested in.

Each entry may contain the following information:

The Agency of the Department issuing this recordkeeping/reporting requirement.

The title of the recordkeeping/reporting requirement.

The OMB and Agency identification numbers, if applicable.

How often the recordkeeping/reporting requirement is needed.

Who will be required to or asked to report or keep records.

Whether small businesses or organizations are affected.

An estimate of the total number of hours needed to comply with the recordkeeping/reporting requirements and the average hours per respondent.

The number of forms in the request for approval, if applicable.

An abstract describing the need for and uses of the information collection.

Comments and Questions: Copies of the recordkeeping/reporting requirements may be obtained by calling the Departmental Clearance Officer, Paul E. Larson, telephone (202) 523-6331. Comments and questions about the items on this list should be directed to Mr. Larson, Office of Information Management, U.S. Department of Labor, 200 Constitution Avenue, NW., room N-1301, Washington, DC 20210. Comments should also be sent to the Office of Information and Regulatory Affairs, Attn: OMB Desk Officer for (BLS/DM/ESA/ETA/OLMS/MSHA/OSHA/PWBA/VETS), Office of Management and Budget, room 3208, Washington, DC 20503 (Telephone (202) 395-6880).

Any member of the public who wants to comment on a recordkeeping/reporting requirement which has been submitted to OMB should advise Mr. Larson of this intent at the earliest possible date.

Extension

Employment and Training Administration.

Occupational Code Request. 1205-0127; ETA 741.

As needed.
State or local governments.
52 respondents; 52 burden hours; 1 form.
Provided as a public service to obtain occupational codes and titles for jobs not included in the DOL.

Occupational Safety and Health Administration.
Temporary Labor Camps Standard.
1218-0000.
On Occasion.
State or local governments; farms, business or other for-profit small businesses or organizations.
1,379 respondents; 138 burden hours; .10 hours per response; 0 Form.
The purpose of this standard and its information collection requirement is to request clearance for requiring temporary labor camp superintendents to notify local health officials of incidence of communicable diseases and of occurrences in which sore throat, fever, diarrhea, vomiting or jaundice is a prevalent symptom among temporary labor camp residents. These reporting requirements are necessary to minimize the possibility of communicable disease epidemics spreading throughout the camps and endangering the health of the camp residents.

Revision

Bureau of Labor Statistics.
Cognitive Research on the Consumer Expenditure Surveys.
Questionnaires.
1220-0117; CE-302, CE-305, CE-601.
1600 responses; 1600 hours; 60 minutes per response.
The proposed 'Laboratory Research on CE Questionnaires' will determine ways to improve the wording of questions and/or interview procedures to facilitate the respondents' participations with the surveys. In addition, the results of this research will also guide the next sample redesign efforts.
Pension and Welfare Benefits Administration.
Employee Benefit Plan Annual Report (Form 5500).
Businesses or other for-profit; non-profit institutions; small businesses or organizations.
850,000 responses; 1,668,870 hours; 1.2 hours per response; 3 forms.
Section 104(a)(1)(A) of ERISA requires plan administrators to file an annual report containing the information described in section 103 of ERISA. The Form 5500 Series provides a standard format for fulfilling that requirement.

Extension

Mine Safety and Health Administration.
Ventilation Tests and Examinations in Underground Coal Mines (30 CFR 75.300, 75.300-4, 75.303, 75.305, 75.306 and 75.309-4).
1219-0088.
Weekly; daily.
Businesses or other for profit; Small businesses or organizations.
Number of Respondents: 1,979 mines.
Regulatory.

Section	Factor	Average Time		
		Day/Week	Per Response	Total Hours
75.300	1.65 fans	220 days	2.1667 hours	1,556,507
75.300-4				
75.303	1.64 shifts	220 days	5 hours	2,142,870
75.305		44 weeks	3.5 hours	304,776
75.306		44 weeks	4 hours	348,304
75.309-4	1.7 mines x 1.64 shifts	220 days	1 hour	1,213,840
Total Burden Hours				5,565,487

Requires that records be kept of certain tests and examinations which are required to be performed to monitor the ventilation system in underground coal mines. The information is used to ensure that the integrity of the ventilation system is being maintained and that a safe working environment is being provided to miners.
Employment Standards Administration.
Request for Examination and/or Treatment.
1215-0066; LS-1.
On occasion.
Individuals or households.
16,500 respondents; 178,200 total hours; 1.08 hrs. per response; 1 form.
Form is used by employers to authorize medical treatment for injured workers and by physicians to report findings of physical examinations and treatment recommended.

Reinstatement

Pension and Welfare Benefits Administration.
Class Exemption 77-4 for Certain Transactions.
1210-0049.
Annually when exemption is used.
Business or other for profit; small businesses or organizations.
16,150 responses; 1,633 hours; 1/10th hours per response.
This class exemption exempts from the prohibited transaction restrictions of ERISA the purchase and sale by an employee benefit plan of shares of a registered open-end mutual fund when a fiduciary with respect to the plan (e.g., an investment manager) is also investment adviser for the mutual fund.
Pension and Welfare Benefits Administration.
DOL Regulation Section 2560.503-1 Claims Procedure.
1210-0053.
On occasion.
Individuals or households; Business or other for-profit; non-profit institutions; small business organizations.
75,567 responses; 20,694 hours; ¼ hour for 90 percent of the responses and ½ hour for 10 percent of the responses.
The regulation requires employee benefit plans to establish procedures which provide adequate written notice to any participant or beneficiary of an employee benefit plan whose claim has been denied. An opportunity for a review of a denied claim must also be provided; the decision upon a review must also be in writing.

Reinstatement

Office of Pension and Welfare Benefits Association.
Prohibited Transaction Exemption 76-19.
1210-0024.
Recordkeeping.
Business or other for-profit; small businesses or organizations.
1 Respondent; 1 hour.

This exemption allows parties in interest of an employee benefit plan that invests in an insured pooled separate account to engage in transactions with the separate account if the plan's participation in the separate account does not exceed specified limits. Six year recordkeeping is required.

Pension and Welfare Benefits Administration.

Prohibited Transaction Class Exemption 90-63.

1210-0064.

Recordkeeping.

Businesses or other for-profit.

1 hour; 1 respondent; 1 hour per response; 0 forms.

This class exemption accompts from the prohibited transactions provisions of ERISA certain transactions involving an employee benefit plan's purchase of securities which may aid the issuer of the securities to reduce or retire indebtedness to a party in interest.

Signed at Washington, DC this 16th day of October, 1990.

Paul E. Larson,

Departmental Clearance Officer.

[FR Doc. 90-24748 Filed 10-18-90; 8:45 am]

BILLING CODE 4510-29-M

Employment Standards Administration; Wage and Hour Division

Minimum Wages for Federal and Federally Assisted Construction; General Wage Determination Decisions

General wage determination decisions of the Secretary of Labor are issued in accordance with applicable law and are based on the information obtained by the Department of Labor from its study of local wage conditions and data made available from other sources. They specify the basic hourly wage rates and fringe benefits which are determined to be prevailing for the described classes of laborers and mechanics employed on construction projects of a similar character and in the localities specified therein.

The determinations in these decisions of prevailing rates and fringe benefits have been made in accordance with 29 CFR part 1, by authority of the Secretary of Labor pursuant to the provisions of the Davis-Bacon Act of March 3, 1931, as amended (46 Stat. 1494, as amended, 40 U.S.C. 276a) and of other Federal statutes referred to in 29 CFR part 1, appendix, as well as such additional statutes as may from time to time be enacted containing provisions for the payment of wages determined to be prevailing by the Secretary of Labor in accordance with the Davis-Bacon Act. The prevailing rates and fringe benefits determined in these decisions shall, in accordance with the provisions of the foregoing statutes, constitute the minimum wages payable on Federal and federally assisted construction projects to laborers and mechanics of the specified classes engaged on contract work of the character and in the localities described therein.

Good cause is hereby found for not utilizing notice and public comment procedure thereon prior to the issuance of these determinations as prescribed in 5 U.S.C. 553 and not providing for delay in the effective date as prescribed in that section, because the necessity to issue current construction industry wage determinations frequently and in large volume causes procedures to be impractical and contrary to the public interest.

General wage determination decisions, and modifications and supersedes decisions thereto, contain no expiration dates and are effective from their date of notice in the Federal Register, or on the date written notice is received by the agency, whichever is earlier. These decisions are to be used in accordance with the provisions of 29 CFR parts 1 and 5. Accordingly, the applicable decision, together with any modifications issued, must be made a part of every contract for performance of the described work within the geographic area indicated as required by an applicable Federal prevailing wage law and 29 CFR part 5. The wage rates and fringe benefits, notice of which is published herein, and which are contained in the Government Printing Office (GPO) document entitled "General Wage Determinations Issued Under The Davis-Bacon And Related Acts," shall be the minimum paid by contractors and subcontractors to laborers and mechanics.

Any person, organization, or governmental agency having an interest in the rates determined as prevailing is encouraged to submit wage rate and fringe benefit information for consideration by the Department. Further information and self-explanatory forms for the purpose of submitting this data may be obtained by writing to the U.S. Department of Labor, Employment Standards Administration, Wage and Hour Division, Division of Wage Determinations, 200 Constitution Avenue, NW., Room S-3014, Washington, DC 20210.

Modifications to General Wage Determination Decisions

The numbers of the decisions listed in the Government Printing Office document entitled "General Wage Determinations Issued Under the Davis-Bacon and Related Acts" being modified are listed by Volume, State, and page number(s). Dates of publication in the Federal Register are in parentheses following the decisions being modified.

Volume I

Florida:
- FL90-15 (Jan. 5, 1990) ..... pp. 137, 138.
- FL90-17 (Jan. 5, 1990) ..... pp. 143, 145.

Massachusetts:
- MA90-1 (Jan. 5, 1990) ..... pp. 399, 400, 405-412.
- MA90-2 (Jan. 5, 1990) ..... pp. 417, 420.

Pennsylvania, PA90-2 pp. 921, 924. (Jan. 5, 1990).

Volume II

Illinois, IL90-17 (Jan. 5, 1990). pp. 215, 216-217, 220.

Michigan, MI90-2 (Jan. 5, 1990). pp. 441, 442, 449-452.

Volume III

Idaho, ID90-1 (Jan. 5, 1990).. pp. 147, 152.

Montana, MT90-1 (Jan. 5, 1990). pp. 171, 173-174.

Washington, WA90-1 (Jan. 5, 1990). pp. 369, 381-383.

General Wage Determination Publication

General wage determinations issued under the Davis-Bacon and related Acts, including those noted above, may be found in the Government Printing Office (GPO) document entitled "General Wage Determinations Issued Under The Davis-Bacon And Related Acts". This publication is available at each of the 50 Regional Government Depository Libraries and many of the 1,400 Government Depository Libraries across the country. Subscriptions may be purchased from: Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402, (202) 783-3238.

When ordering subscription(s), be sure to specify the State(s) of interest, since subscriptions may be ordered for any or all of the three separate volumes, arranged by State. Subscriptions include an annual edition (issued on or about January 1) which includes all current general wage determinations for the States covered by each volume. Throughout the remainder of the year, regular weekly updates will be distributed to subscribers.

Signed at Washington, DC, this 12th Day of October 1990.

Alan L. Moss,

Director, Division of Wage Determinations.

BILLING CODE 4510-27-M

Employment and Training Administration

Investigations Regarding Certifications of Eligibility To Apply for Worker Adjustment Assistance

Petitions have been filed with the Secretary of Labor under section 221(a) of the Trade Act of 1974 ("the Act") and are identified in the appendix to this notice. Upon receipt of these petitions, the Director of the Office of Trade Adjustment Assistance, Employment and Training Administration, has instituted investigations pursuant to section 221(a) of the Act.

The purpose of each of the investigations is to determine whether the workers are eligible to apply for adjustment assistance under title II, chapter 2, of the Act. The investigations will further relate, as appropriate, to the determination of the date on which total or partial separations began or threatened to begin and the subdivision of the firm involved.

The petitioners or any other persons showing a substantial interest in the subject matter of the investigations may request a public hearing, provided such request is filed in writing with the Director, Office of Trade Adjustment Assistance, at the address shown below, not later than October 29, 1990.

Interested persons are invited to submit written comments regarding the subject matter of the investigations to the Director, Office of Trade Adjustment Assistance, at the address shown below, not later than October 29, 1990.

The petitions filed in this case are available for inspection at the Office of the Director, Office of Trade Adjustment Assistance, Employment and Training Administration, U.S. Department of Labor, 200 Constitution Avenue, NW., Washington, DC 20210.

Signed at Washington, DC, this 5th day of October 1990.

Marvin M. Fooks,

Director, Office of Trade Adjustment Assistance.

BILLING CODE 4510-30-M

Determinations Regarding Eligibility To Apply for Worker Adjustment Assistance

In accordance with section 223 of the Trade Act of 1974 (19 U.S.C. 2273) the Department of Labor herein presents summaries of determinations regarding eligibility to apply for adjustment assistance issued during the period of October 1990.

In order for an affirmative determination to be made and a certification of eligibility to apply for adjustment assistance to be issued, each of the group eligibility requirements of section 222 of the act must be met.

(1) That a significant number or proportion of the workers in the workers' firm, or an appropriate subdivision thereof, heave become totally or partially separated.

(2) That sales or production, or both, of the firm or subdivision have decreased absolutely, and

(3) That increases of imports of articles like or diretly competitive with articles produced by the firm or appropriate subdivision have contributed importantly to the separations, or threat thereof, and to the absolute decline in sales or production.

Negative Determinations

In each of the following cases the investigation revealed that criterion (3) has not been met. A survey of customers indicated that increased imports did not contribute importantly to worker separations at the firm.

TA-W-24,691; Electronic Processors, Inc., Englewood, CO

TA-W-24,712; Mercury Manufacturing Co., Wyandotte, MI

TA-W-24,696; Homestead Industries, Claremont, NH

TA-W-24,713; Goodyear Tire & Rubber Co., Lincoln, NE

TA-W-24,694; E.H. Hall Co., Williamsport, PA

TA-W-24,658; Woodstock Die Cast, Woodstock, IL

In the following cases, the investigation revealed that the criteria for eligibility has not been met for the reasons specified.

TA-W-24,708; Avalone Corp, Avalon Energy, Denver, CO

Increased imports did not contribute importantly to worker separations at the firm.

TA-W-24,755; Malapai Resources Co., Bruni, TX

Increased imports did not contribute importantly to worker separations at the firm.

TA-W-24,692; Maxon Systems, Inc., St. Joseph, MO

The workers' firm does not produce an article as required for certification under section 222 of the Trade Act of 1974.

TA-W-24,740; Integrated Resources Energy Group, Denver, CO

The workers' firm does not produce an article as required for certification under section 222 of the Trade Act of 1974.

TA-W-24,720; Westinghouse Electric Corp., Buffaalo, NY

The workers' firm does not produce an article as required for certification under section 222 of the Trade Act of 1974.

TA-W-24,727; Westinghouse Electric Corp., Syracuse, NY

The workers' firm does not produce an article as required for certification under section 222 of the Trade Act of 1974.

TA-W-24,710; Cole Office Environment, York PA

Increased imports did not contribute importantly to worker separations.

Affirmative Determinations

TA-W-24,718; L & G Drilling Co., Mt. Pleasant, MI

A certification was issued covering all workers separated on or after July 30, 1989.

TA-W-24,693; Milliken & Co., Inc., Robbins Plant, Robbins, NC

A certification was issued covering all workers separated on or after July 20, 1989.

TA-W-24,591; Anderson Bolling Manufacturing Co., Spring Lake, MI

A certification was issued covering all workers separated on or after April 11, 1989.

TA-W-24,714; Greenville Pants Manufacturing Co., Greenville, TX

A certification was issued covering all workers separated on or after July 27, 1989.

I hereby certify that the aforementioned determinations were issued during the month of October 1990. Copies of these determinations are available for inspection in room C4318, U.S. Department of Labor, 200 Constitution Avenue, NW. Washington, DC 20210 during normal business hours or will be mailed to persons to write to the above address.

Dated: October 15, 1990.

Marvin M. Fooks,

Director, Office of Trade Adjustment Assistance.

BILLING CODE 4510-30-M

Review Panel for the Job Training Partnership Act (JTPA) Presidential Awards; Renewal

In accordance with the provisions of the Federal Advisory Committee Act, and after consultation with the General Services Administration, the Secretary of Labor has determined that the renewal of the Review Panel for the JTPA Presidential Awards is in the public interest in connection with the performance of duties imposed on the Department by section 172 of the Job Training Partnership Act.

The Panel will advise the Secretary of Labor on the selection of the Presidential Awards recipients. The panel will perform an expert review of the nominations for each of the award categories and will provide the Secretary with its views and recommendations on the top nominations.

The Panel will consist of training and employment representatives of the private sector, labor, private industry councils, community-based organizations and Federal, State, and local governments. Other than the Federal Government members, the members shall not be compensated and shall not be deemed to be employees of the United States.

The Panel will function solely as an advisory body and in compliance with the provisions of the Federal Advisory Committee Act. Its charter will be filed under the Act 15 days from the date of this publication.

Interested persons are invited to submit comments regarding the renewal of the Review Panel for the JPTA Presidential Awards. Such comments should be addressed: Mr. Hugh Davies, Acting Director, Office of Employment and Training Programs, U.S. Department of Labor, ETA, 200 Constitution Avenue, NW., Room N-4703, Washington, DC 20210, Telephone: (202) 535-0580.

Signed at Washington, DC, this 26th day of September 1990.

Elizabeth Dole,

Secretary of Labor.

BILLING CODE 4510-30-M

Dictionary of Occupational Titles, Issue Paper and Initiative; Reopening and Extension of Comment Period

AGENCY: Employment and Training Administration, Labor.

ACTION: Notice; reopening and extension of comment period.

SUMMARY: On August 10, 1990, the Employment and Training Administration (ETA) published in the **Federal Register** for notice and comment an issue paper on the *Dictionary of Occupational Titles (DOT)*. The paper described the components of a review of the *DOT* and raised key *DOT* issues. The ETA sought public comment, recommendations and/or suggestions from interested parties.

ETA has received a number of comments requesting additional time to study and comment on the key issues, and has determined to reopen and extend the comment period through November 19, 1990.

DATES: The comment period on the DOT key issues published at 55 FR 32868–32871 (August 10, 1990) is reopened and comments are invited to be received by November 19, 1990.

ADDRESSES: Comments shall be mailed to Robert A. Schaerfl, Director, U.S. Employment Service, Employment and Training Administration, U.S. Department of Labor, room N–4470, Washington, DC 20210.

FOR FURTHER INFORMATION CONTACT: Robert A. Schaerfl, Director, U.S. Employment Service, Employment and Training Administration, telephone: (202) 535–0157 (this is not a toll free number).

Signed at Washington, DC, this 10th day of October, 1990.

Roberts T. Jones,

Assistant Secretary for Employment and Training.

BILLING CODE 4510-30-M

Labor Surplus Area Classifications Under Executive Orders 12073 and 10582; Annual List of Labor Surplus Areas

AGENCY: Employment and Training Administration, Labor.

ACTION: Notice.

DATE: The annual list of labor surplus areas is effective October 1, 1990, through September 30, 1991.

SUMMARY: The purpose of this notice is to announce the annual list of labor surplus areas.

FOR FURTHER INFORMATION CONTACT: William J. McGarrity, Labor Economist, Employment and Training Administration, 200 Constitution Avenue, NW., room N–4470, Attention: TEESS, Washington, DC 20210. Telephone: 202–535–0160.

SUPPLEMENTARY INFORMATION: Executive Order 12073 requires executive agencies to emphasize procurement set-asides in labor surplus areas. The Secretary of Labor is responsible under that Order for classifying and designating areas as labor surplus areas. Executive agencies should refer to Federal Acquisition Regulation part 20 (48 CFR part 20) in order to assess the impact of the labor surplus area program on particular procurements.

Under Executive Order 10582 executive agencies may reject bides or offers of foreign materials in favor of the lowest offer by a domestic supplier, provided that the domestic supplier undertakes to produce substantially all of the materials in areas of substantial unemployment as defined by the Secretary of Labor. The preference given to domestic suppliers under Executive Order 10582 has been modified by Executive Order 12260. Federal Acquisition Regulation part 25 (48 CFR part 25) implements Executive Order 12260. Executive agencies should refer to Federal Acquisition Regulation part 25 in procurements involving foreign businesses or products in order to assess its impact on the particular procurements.

The Department of Labor regulations implementing Executive Orders 12073 and 10582 are set forth at 20 CFR part 654, subparts A and B. Subpart A requires the Assistant Secretary of Labor to classify jurisdictions as labor surplus areas pursuant to the criteria specified in the regulations and to publish annually a list of labor surplus areas. Pursuant to those regulations the Assistant Secretary of Labor is publishing the annual list of labor surplus areas.

Subpart B of part 654 states that an area of substantial unemployment for purposes of Executive Order 10582 is any area classified as a labor surplus area under subpart A. Thus, labor surplus areas under Executive Order 12073 are also areas of substantial unemployment under Executive Order 10582.

The areas described below have been classified by the Assistant Secretary of Labor as labor surplus areas pursuant to 20 CFR 654.5(b) (48 FR 15615 April 12, 1983) and are effective October 1, 1990, through September 30, 1991.

The list of labor surplus areas is published for the use of all Federal agencies in directing procurement activities and locating new plants or facilities.

Signed at Washington, DC, on September 30, 1990.

Roberts T. Jones,

Assistant Secretary of Labor.

Eligible labor surplus areas	Civil jurisdictions included

BILLING CODE 4510-30-M

Mine Safety and Health Administration

[Docket No. M-90-146-C]

Clinchfield Coal Co. Petition for Modification of Application of Mandatory Safety Standard

Clinchfield Coal Company, P.O. Box 7, Dante, Virginia 24237, has filed a petition to modify the application of 30 CFR 75.1710-1 (canopies or cabs; self-propelled electric face equipment; installation requirements) to its Triple C No. 1 Mine (I.D. No. 44-06375) located in Dickenson County, Virginia. The petition is filed under section 101(c) of the Federal Mine Safety and Health Act of 1977.

A summary of the petitioner's statements follows:

1. The petition concerns the requirement that approved canopies be installed on electric face equipment at certain minimum heights.

2. The height of the coal seam is irregular, ranging from 24 to 60 inches, and the haulage roadways are very uneven.

3. The installation of canopies on the shuttle cars and scoops used in the mine would cause roof supports to be dislodged, decrease the operator's visibility, and create discomfort to the operator, resulting in a diminution of safety.

4. For these reasons, petitioner requests a modification of the standard.

Request for Comments

Persons interested in this petition may furnish written comments. These comments must be filed with the Office of Standards, Regulations and Variances, Mine Safety and Health Administration, Room 627, 4015 Wilson Boulevard, Arlington, Virginia 22203. All comments must be postmarked or received in that office on or before November 19, 1990. Copies of the petition are available for inspection at that address.

Dated: October 12, 1990.

Patricia W. Silvey,

Director, Office of Standards, Regulations and Variances.

[Docket No. M-90-15-M]

Coggins/Continental Granite, Inc.; Petition for Modification of Application of Mandatory Safety Standard

Coggins/Continental Granite, Inc., P.O. Box 250, Elberton, Georgia 30635, has filed a petition to modify the application of 30 CFR 56.14211 (blocking equipment in a raised position) to its Berkeley Quarry (I.D. No. 0900004) located in DeKalb County, Georgia; its Oglesby Quarry (I.D. No. 0900990) located in Elbert County, Georgia; and its Elberta Quarry (I.D. No. 0901052) located in Elbert County, Georgia. The petition is filed under section 101(c) of the Federal Mine Safety and Health Act of 1977.

A summary of the petitioner's statement follows:

1. The petition concerns the requirement that persons not work on top of, under, or work from a raised component of mobile equipment until the component has been blocked or mechanically secured to prevent accidental lowering. The equipment must also be blocked or secured to prevent rolling.

2. As an alternate method, the petitioner proposes to suspend the work platforms from cranes and derricks by attaching them to the load lines.

3. In support of this request, the petitioner states that:

(a) Miners have to periodically work on platforms eight feet wide and twelve to forty feet long, two to twelve feet above the quarry floor.

(b) Lowering the platform to five and a half feet below the top of the ledge would cause the angle of the cables to be very sharp and place the cables in the way of the workers.

(c) The placement of legs on the platform would not be feasible due to the varied heights involved and the uneven quarry floor.

4. The petitioner states that the proposed alternate method will provide the same degree of safety for the miners affected as that afforded by the standard.

Request for Comments

Persons interested in this petition may furnish written comments. These comments must be filed with the Office of Standards Regulations and Variances, Mine Safety and Health Administration, room 627, 4015 Wilson Boulevard, Arlington, Virginia 22203. Coggins/Continental Granite, Inc.; Petition for Modification of Application of Mandatory Safety Standard

Coggins/Continental Granite, Inc., P.O. Box 250, Elberton, Georgia 30635, has filed a petition to modify the application of 30 CFR 56.14211 (blocking equipment in a raised position) to its Royalty Quarry (I.D. No. 0900028) located in Madison County, Georgia, and to its Millstone Quarry (I.D. No. 0900680) located in Oglethorpe County, Georgia. The petition is filed under section 101(c) of the Federal Mine Safety and Health Act of 1977.

A summary of the petitioner's statements follows:

1. The petition concerns the requirement that persons not work on top of, under, or work from a raised component of mobile equipment until the component has been blocked or mechanically secured to prevent accidental lowering. The equipment must also be blocked or secured to prevent rolling.

2. As an alternate method, the petitioner proposes to suspend the work platforms from cranes and derricks by attaching them to the load lines.

3. In support of this request, the petitioner states that:

(a) Miners have to periodically work on platforms eight feet wide and twelve to forty feet long, two to twelve feet above the quarry floor.

(b) Lowering the platform to five and a half feet below the top of the ledge would cause the angle of the cables to be very sharp and place the cables in the way of the workers.

(c) The placement of legs on the platforms would not be feasible due to the varied heights involved and the uneven quarry floor.

4. The petitioner states that the proposed alternate method will provide the same degree of safety for the miners affected as that afforded by the standard.

[Docket No. M-90-149-C]

Consolidation Coal Co., Petition for Modification of Application of Mandatory Safety Standard

Consolidation Coal Company, Consol Plaza, Pittsburgh, Pennsylvania 15241-1421, has filed a petition to modify the application of 30 CFR 75.305 (weekly examinations for hazardous conditions) to its Osage No. 3 Mine (I.D. No. 46-01455) located in Monongalia County, Pennsylvania. The petition is filed under section 101(c) of the Federal Mine Safety and Health Act of 1977.

A summary of the petitioner's statements follows:

1. The petition concerns the requirement that aircourses be examined in their entirety on a weekly basis by a certified person.

2. Due to roof falls and adverse conditions, certain areas of the mine cannot be safely traveled.

3. As an alternate method, petitioner proposes to establish monitoring stations at specific locations.

4. In support of this request, petitioner states that:

(a) Tests for methane and the quantity of air would be made by a certified person on a weekly basis and a record maintained in a book kept on the surface and made available for inspection.

(b) Monitoring stations and the approaches to such stations would at all times be maintained in safe condition.

5. Petitioner states that the proposed alternate method would at all times provide the same measure of protection to the miners as would be provided by the standard.

BILLING CODE 4510-43-M

[Docket No. M-90-12-M

Kosmos Cement Co.; Petition for Modification of Application of Mandatory Safety Standard

Kosmos Cement Company, Neville Island, Pittsburgh, Pennsylvania 15225, has filed a petition to modify the application of 30 CFR 56.14211 (blocking equipment in a raised position) to its Deckers Creek Mine (I.D. No. 3606078) located in Allegheny County, Pennsylvania. The petition is filed under section 101(c) of the Federal Mine Safety and Health Act of 1977.

A summary of the petitioner's statements follows:

1. The petition concerns the requirement that equipment be blocked in a raised position.

2. The petitioner states that application of the standard would result in a diminution of safety for the following reasons:

(a) Employees must be lifted and lowered into areas that require maintenance, and the work basket cannot be rigidly attached to the hydraulic boom of the crane or attached to the boom with fixed cables.

(b) Employees would have to use a 55-foot extension ladder to enter some work areas.

(c) The petitioner proposes to use a hydraulic boom crane to lift and lower employees.

4. For these reasons, the petitioner requests a modification of the standard.

Request for Comments

Persons interested in this petition may furnish written comments. These comments must be filed with the Office

of Standards, Regulatoins and Variances, Mine Safety and Health Administration, room 627, 4015 Wilson Boulevard, Arlington, Virginia 22203. BILLING CODE 4510-43-M

[Docket No. M-90-142-C]

Minton Hickory Coal Co., Inc., Petition for Modification of Application of Mandatory Safety Standard

Minton Hickory Coal Company, Inc., P.O. Box 922, Barbourville, Kentucky 40906, has filed a petition to modify the application of 30 CFR 75.313 (methane monitor) to its No. 5 Mine (I.D. No. 15-16962) located in Knox County, Kentucky. The petition is filed under section 101(c) of the Federal Mine Safety and Health Act of 1977.

A summary of the petitioner's statements follows:

1. The petition concerns the requirement that a methane monitor be installed on electric face cutting equipment, continuous mining machines, longwall face equipment and loading machines. The monitor is required to be property maintained and frequently tested.

2. As an alternate method, petitioner proposes to use handheld continuous oxygen and methane monitors instead of methane monitors on three-wheel tractors as outlined in the petition.

3. In support of this request, petitioner states that:

(a) No methane has been detected in the mine;

(b) Each three-wheel tractor would be quipped with a handheld continous monitoring methane and oxygen detector and all persons would be trained in the use of the detector;

(c) Prior to allowing the coal loading tractor in the face area, a gas test would be performed to determine the methane concentration in the atmosphere.

(d) If one percent methane is detected, an audible alarm would sound. The tractor operator would manually deenergize the battery tractor immediately. Production would cease and would not resume until the methane level is lower than one percent.

4. Petitioner states that the proposed alternate method will provide the same degree of safety for the miners affected as that provided by the standard.

Request for Comments

Persons interested in this petition may furnish written comments. These comments must be filed with the Office of Standards, Regulations and Variancnes, Mine Safety and Health Administration, room 627, 4015 Wilson Boulevard, Arlington, Virginia 22203. Director, Office of Standards, Regulations and Variances.

[FR Doc. 90-24757 Filed 10-18-90; 8:45 am]

BILLING CODE 4510-43-M

[Docket No. M-90-139-C]

Peabody Coal Co.; Petition for Modification of Application of Mandatory Safety Standard

Peabody Coal Company, P.O. Box 373, St. Louis, Missouri 63166, has filed a petition to modify the application of 30 CFR 75.1105 (housing of underground transformer stations, battery-charging stations, substations, compressor stations, shops, and permanent pumps) to its Marissa Mine (I.D. No. 11-02440) located in Washington County, Illinois; its Baldwin Mine (I.D. No. 11-01008) located in Randolph County, Illinois; and its Eagle No. 2 Mine (I.D. No. 11-00566) located in Gallatin County, Illinois. The petition is filed under section 101(c) of the Federal Mine Safety and Health Act of 1977.

A summary of the petitioner's statements follows:

1. The petition concerns the requirement that air currents used to ventilate structures or areas enclosing electrical installations be coursed directly into the return.

2. Petitioner states that application of the standard would result in a diminution of safety for the following reasons:

(a) Airborne dust would be deposited in and on the electrical components of the transformers, causing arcing between components;

(b) Air velocities would be increased on track and belt entries; and

(c) Areas of unstable roof could fall, pushing out return stoppings and causing return air to be coursed over electrical installations.

3. As an alternate method, the petitioner proposes to use dry type, sheet steel enclosed electrical transformers equipped with safety equipment, installed in crosscuts adjacent to the track entry where they can be observed, maintained, and kept clean and dusted. Fire sensors would be placed above the transformers. Belt and track entries would not be used to ventilate the working sections.

4. For these reasons, the petitioner requests a modification of the standard.

Request for Comments

Persons interested in this petition may furnish written comments. These comments must be filed with the Office of Standards, Regulations and Variances, Mine Safety and Health Administration, room 627, 4015 Wilson Boulevard, Arlington, Virginia 22203. BILLING CODE 4510-43-M

[Docket No. M-90-144-C]

Wolf-Creek Collieries Co.; Petition for Modification of Application of Mandatory Safety Standard

Wolf-Creek Collieries Company, Caller 802, Lovely, Kentucky 41231, has filed a petition to modify the application of 30 CFR 75.1002 (location of trolley wires, trolley feeder wires, high-voltage cables and transformers) to its Mine No. 4, Longwall Panel J (I.D. No. 15-04020) located in Martin County, Kentucky. The petition is filed under section 101(c) of the Federal Mine Safety and Health Act of 1977.

A summary of the petitioner's statements follows:

1. The petition concerns the requirement that trolley wires and trolley feeder wires, high-voltage cables and transformers not be located inby the last open crosscut and be kept at least 150 feet from pillar workings.

2. Petitioner wishes to amend existing petition M-89-138, which permits the use of high-voltage cables to supply power to permissible longwall face equipment in or inby the last open crosscut.

3. Petitioner states that the proposed changes would at all times guarantee no less than the same measure of protection for the workers.

Request for Comments

Persons interested in this petition may furnish written comments. These comments must be filed with the Office of Standards, Regulations and Variances, Mine Safety and Health Administration, room 627, 4015 Wilson Boulevard, Arlington, Virginia 22203. BILLING CODE 4510-43-M

NATIONAL FOUNDATION ON THE ARTS AND THE HUMANITIES

Meeting of the Humanities Panel

AGENCY: National Endowment for the Humanities.

ACTION: Notice of meetings.

SUMMARY: Pursuant to the provisions of the Federal Advisory Committee Act (Pub. L. 92-463, as amended), notice is hereby given that the following meetings of the Humanities Panel will be held at the Old Post Office, 1100 Pennsylvania Avenue, NW., Washington, DC 20506:

FOR FURTHER INFORMATION CONTACT: Stephen J. McCleary, Advisory Committee Management Officer, National Endowment for the Humanities, Washington, DC 20506; telephone 202/786-0322.

SUPPLEMENTARY INFORMATION: The proposed meetings are for the purpose of panel review, discussion, evaluation and recommendation on applications for financial assistance under the National Foundation on the Arts and the Humanities Act of 1965, as amended, including discussion of information given in confidence to the agency by grant applicants. Because the proposed meetings will consider information that is likely to disclose: (1) Trade secrets and commercial or financial information obtained from a person and privileged or confidential; or (2) information of a personal nature the disclosure of which would constitute a clearly unwarranted invasion of personal privacy, pursuant to authority granted me by the Chairman's Delegation of Authority to Close Advisory Committee meetings, dated January 15, 1978, I have determined that these meetings will be closed to the public pursuant to subsections (c) (4), and (6) of section 552b of title 5, United States Code.

1. *Date:* November 1-2, 1990
Time: 9:00 a.m. to 5:30 p.m.
Room: 430
Program: This meeting will review applications submitted to Public Humanities Projects program for the September 1990 deadline for the Division of General Programs, for projects beginning after April 1, 1991.

2. *Date:* November 1-2, 1990
Time: 8:30 a.m. to 5:30 p.m.
Room: 415
Program: This meeting will review applications submitted for Humanities Projects in Media, submitted to the Division of General Programs, for projects beginning after April 1, 1991.

3. *Date:* November 2, 1990
Time: 8:30 a.m. to 5:00 p.m.
Room: 315
Program: This meeting will review Texts/ Translations applications in Classics & Philosophy, submitted to the Division of Research Programs, for projects beginning after April 1, 1991.

4. *Date:* November 5, 1990
Time: 9:00 a.m. to 5:00 p.m.
Room: 316-2
Program: This meeting will review Texts/ Translations applications in American & African Studies, submitted to the Division of Research Programs, for projects beginning after April 1, 1991.

5. *Date:* November 6, 1990
Time: 9:00 a.m. to 5:30 p.m.
Room: 315
Program: This meeting will review applications, submitted to the October 1 deadline in Higher Education in the Humanities Program, submitted to the Division of Education Programs, for projects beginning after March 1, 1991.

6. *Date:* November 6-7, 1990
Time: 8:30 a.m. to 5:30 p.m.
Room: 415
Program: This meeting will review applications submitted for Humanities Projects in Media, submitted to the division of General Programs, for projects beginning after April 1, 1991.

7. *Date:* November 13, 1990
Time: 9:30 a.m. to 5:30 p.m.
Room: 315
Program: This meeting will review applications submitted to the October 1 deadline in the Higher Education in the Humanities Program, submitted to the Division of Education Programs, for projects beginning after March 1, 1991.

8. *Date:* November 14, 1990
Time: 9:00 a.m. to 5:30 p.m.
Room: 315
Program: This meeting will review applications submitted to the October 1 deadline in the Higher Education in the Humanities Program, submitted to the Division of Education Programs, for projects beginning after March 1, 1991.

9. *Date:* November 15-16, 1990
Time: 8:30 a.m. to 5:30 p.m.
Room: 415
Program: This meeting will review applications submitted for Humanities Projects in Media, submitted to the Division of General Programs, for projects beginning after April 1, 1991.

10. *Date:* November 15, 1990
Time: 9:00 a.m. to 5:30 p.m.
Room: 315
Program: This meeting will review applications submitted to the October 1 deadline in the Higher Education in the Humanities Program, submitted to the Division of Education Programs, for projects beginning after March 1, 1991.

11. *Date:* November 30, 1990
Time: 8:30 a.m. to 5:00 p.m.
Room: 415
Program: This meeting will review Exemplary applications submitted by state humanities councils to the Division of State Programs for projects beginning after February 1991.

Stephen J. McCleary,

Advisory Committee, Management Officer.

BILLING CODE 7536-01-M

NATIONAL SCIENCE FOUNDATION

Forms Submitted for OMB Review

In accordance with the Paperwork Reduction Act and OMB Guidelines, the National Science Foundation is posting this notice of information collection that will affect the public. Interested persons are invited to submit comments by October 31, 1990. Comments may be submitted to:

1. *Agency Clearance Officer:* Herman G. Fleming, (202) 357-9520. Written comments to: Reports Clearance Officer, Division of Personnel and Management, National Science Foundation, 1800 G St. NW., Washington, DC 20550.

2. *OMB Desk Officer:* Written comments to: Office of Information and Regulatory Affairs, ATTN: Dan Chenok, Desk Officer, OMB, 722 Jackson Place, Room 3208, NEOB, Washington, DC 20503.

Title: National Science Foundation Reviewer Background and Proposal Evaluation Process.

Affected Public: Individuals.

Reponese/Burden Hours: 15,000 responses to the background data sheets at 5 minutes per response; 120,000 proposal evaluations at 5 hours per evaluation.

Abstract: The National Science Foundation's scientists, engineers and other officials evaluate all proposals submitted to the agency. To assist them in the evaluation process, the Foundation obtains the advice of scientists, engineers and others who are specialists in the fields covered in the proposals. Assistance is obtained

through mail review and assembled panels.

Dated: October 15, 1990.

Herman G. Fleming,

NSF Clearance Officer.

BILLING CODE 7555-01-M

Advisory Committee for Biological, Behavioral, and Social Sciences; Meeting

The National Science Foundation announces the following meeting:

Name: Advisory Committee for Biological, Behavioral, and Social Sciences (BBS).

Date and Time: November 6, 1990; 9 a.m. to 5 p.m.; November 8, 1990; 8 a.m. to 12 p.m.

Place: Room 1242-1248, National Science Foundation, 1800 G Street NW., Washington, DC 20550.

Type of Meeting: Open.

Contact Person: Dr. Mary E. Clutter, Assistant Director, Biological, Behavioral, and Social Sciences, (202) 357-9854, Room 306, National Science Foundation, Washington, DC 20550.

Summary of Minutes: May be obtained from the contact person.

Purpose of Advisory Committee: The Advisory Committee for BBS provides advice, recommendations, and oversight concerning major program emphases, directions, and goals for the research-related activities of the divisions that make up BBS.

Agenda: Briefing on the NSF/BBS FY 1991 Budget; discussion of directorate-wide priorities and activities.

Dated: October 15, 1990.

M. Rebecca Winkler,

Committee Management Officer.

[FR Doc. 90-24631 Filed 10-18-90; 8:45 am]

BILLING CODE 7555-01-M

Advisory Panel for Cell Biology Program; Meeting

The National Science Foundation announces the following meeting:

Name: Advisory Panel for Cell Biology Program.

Date and Time: November 5-7, 1990, 8:30 a.m. to 5 p.m.

Place: National Science Foundation, 1800 G Street NW., Washington, DC 20550.

Type of Meeting: Part Open—Closed 11/5-8:30 a.m. to 5 p.m.; Open 11/6-12 p.m. to 1:30 p.m.; Closed 11/7-8:30 a.m. to 5 p.m. All other times the meeting is closed.

Contact Person: Dr. Maryanne P. Henkart, Program Director, Cell Biology Program, Room 321, National Science Foundation, Washington, DC 20550.

Purpose of Advisory Panel: To provide advice and recommendations concerning support for research in Cell Biology.

Agenda: Open—General discussion of current status and future plans of the Cell Biology Program. Closed—To review and evaluate research proposals as part of the selection process for awards.

Reason for Closing: The proposals being reviewed include information of a proprietary or confidential nature, including technical information; financial data, such as salaries and personal information concerning individuals associated with the proposals. These matters are within exemptions (4) and (6) of U.S.C. 552b(c), Government in the Sunshine Act.

Dated: October 15, 1990.

M. Rebecca Winkler,

Committee Management Officer.

BILLING CODE 7555-01-M

Advisory Committee for Earth Sciences; Meeting

The National Science Foundation announces the following meeting:

Name: Advisory Committee for Earth Sciences.

Date: November 7-9, 1990.

Time: 8:30 a.m. to 5 p.m., November 7; 8:30 a.m. to 5 p.m., November 8; 8:30 a.m. to 5 p.m., November 9.

Place: The National Science Foundation, Room 543, 1800 G Street, NW., Washington, DC 20550.

Type of Meeting: Open—November 8—8:30 a.m. to 5 p.m.; November 9—8:30 a.m. to 5 p.m. Closed—November 7—8:30 a.m. to 5 p.m.

Contact Person: Dr. James F. Hays, Division Director, Division of Earth Sciences, Room 602, National Science Foundation, Washington, DC 20550. Telephone: (202) 357-7958.

Purpose of Meeting: To provide advice, recommendations, and oversight concerning support for research and research-related activities in the Earth Sciences.

Agenda: Closed—Oversight review of Continental Dynamics Program, including examination of proposals, reviewer comments, and other privileged material. Open—Review ACES resolutions; report on EAR role in Education and Human Resource programs; discuss EAR's response to Global Change programs, International decade of Natural Hazard Reduction and other environmental concerns; review the Continental Dynamics Program; discuss EAR responses to NSF policy statement on Sharing of Research Materials, and general discussion.

Reason for Closing: The proposals being reviewed include information of proprietary or confidential nature, including technical information, financial data, such as salaries, and personal information concerning individuals associated with the proposals. These matters are within exemptions (4) and (6) of 5 U.S.C. 552b(c), Government in the Sunshine Act.

Dated: October 15, 1990.

M. Rebecca Winkler,

Committee Management Officer.

BILLING CODE 7555-01-M

Meeting: Engineering Advisory Committee

The National Science Foundation announces the following meeting:

NAME: Advisory Committee for Engineering.

DATE AND TIME: November 7-8, 1990. 9 a.m.-5 p.m., November 7, 1990 (open). 8 a.m.-9 a.m., November 8, 1990 (closed). 9 a.m.-12 Noon, November 8, 1990 (open).

PLACE: National Science Foundation, 1800 "G" Street, NW., room 540, Washington, DC 20550.

TYPE OF MEETING: Partially closed.

CONTACT PERSON: Dr. William S. Butcher, Advisory Committee for Engineering, room 537, National Science Foundation, Washington, DC 20550, Telephone: (202) 357-9832.

MINUTES: Dr. William S. Butcher at the above address.

PURPOSE OF MEETING: To provide advice, recommendations, and counsel on major goals and policies pertaining to Engineering programs and activities.

REASON FOR CLOSING: The personnel matters being discussed include information of a personal nature where disclosure would constitute unwarranted invasions of personal privacy. These matters are within exemption 6 of U.S.C. 552b(c), Government in the Sunshine Act.

AUTHORITY TO CLOSE MEETING: The determination made on October 11, 1990 by the Acting Director of the National Science Foundation pursuant to the provisions of section 10(d) of Public Law 92-463.

AGENDA: *Thursday, November 8, 1990, room 540, 8 a.m. to 9 a.m.—Closed*

Discussion of personnel issues including candidates for vacancies.

Wednesday, November 7, 1990, room 540, 8:30 a.m. to 5 p.m., and Thursday, November 8, 1990, room 540, 9 a.m. to 12 Noon—Open

Discussion on issues, opportunities and future directions for the Engineering Directorate; discussion of Engineering Directorate budget situation as well as other items.

M. Rebecca Winkler,

Committee Management Officer.

Materials Research Advisory Committee; Meeting

The National Science Foundation announces the following meeting:

Name: Materials Research Advisory Committee (MRAC).

Place: Room 540, National Science Foundation, 1800 G Street, NW., Washington, DC 20550.

Date: Monday, November 5, and Tuesday, November 6, 1990.

Time: 8:30 a.m.–5 p.m. (Monday), 9 a.m.–6 p.m. (Tuesday).

Type of Meeting: Open.

Contact Person: Dr. J. Narayan, Division Director, Division of Materials Research (DMR); room 408, National Science Foundation, Washington, DC 20550. Telephone: (202) 357-9794.

Minutes: May be obtained from the Contact Person, Dr. J. Narayan, at the above stated address.

Purpose of Committee: To provide advice and recommendations concerning support of materials research.

Agenda:

Monday, November 5, 1990

8:30 a.m. Introductory Remarks and Adoption of Minutes.
9 a.m. DMR Status Reports and Budget Briefing.
12 Noon. Working Lunch.
1 p.m. Discussion of Response to the NRC Materials Science and Engineering Study.
3:30 p.m. Meeting with Frederick Bernthal, Acting Director, NSF.
4 p.m. Discussion of Materials Synthesis and Processing Initiative.
5 p.m. Adjourn.

Tuesday, November 6, 1990

9 a.m. Meeting with Luther Williams, Assistant Director, Education and Human Resources.
10 a.m. Meeting with David Sanchez, Assistant Director, Mathematical and Physical Sciences.
11 a.m. Further Discussion on new DMR Initiatives.
12 Noon. Working Lunch.
1:30 p.m. Meeting with John White, Acting Deputy Director, NSF.
2:30 p.m. Further Discussion and Future MRAC Activities.
5 p.m. Adjourn.

Dated: October 15, 1990.

M. Rebecca Winkler,

Committee Management Officer.

Special Emphasis Panels; Notice of Meetings

SUMMARY: In accordance with the Federal Advisory Committee Act (Pub. L. 92-463, as amended), the National Science Foundation announces the following meeting(s) to be held at 1800 G. Street, NW., Washington, DC 20550 (except where otherwise indicated).

SUPPLEMENTARY INFORMATION: The purpose of the meetings is to provide advice and recommendations to the National Science Foundation concerning the support of research, engineering, and science education. The agenda is to review and evaluate proposals as part of the selection process for awards. The entire meeting is closed to the public because the panels are reviewing proposals that include information of a proprietary or confidential nature, including technical information; financial data, such as salaries; and personal information concerning individuals associated with the proposals. These matters are within exemptions (4) and (6) of 5 U.S.C. 552b (c), the Government in the Sunshine Act.

CONTACT PERSON: M. Rebecca Winkler, Committee Management Officer, room 208, 357-7555.

Dated: October 15, 1990.

M. Rebecca Winkler,

Committee Management Officer.

Sociology Advisory Panel; Meeting

The National Science Foundation announces the following meeting:

Name: Advisory Panel for Sociology.

Date/Time:

November 8, 1990, 8:30 to 5 p.m.
November 9, 1990, 8:30 to 5 p.m.

Place: Room 523, National Science Foundation, 1800 G Street, NW., Washington, DC 20550.

Type of Meeting: Part open—November 8, 1990; 9–10 a.m. Closed remainder.

Contact Persons: Dr. Murray Webster, Program Director for Sociology; Dr. Gwendolyn Lewis, Associate Program Director for Sociology; Telephone (202) 357-7802.

Purpose of Meeting: To provide advice and recommendations concerning research in Sociology.

Agenda: To review and evaluate research proposals and projects as part of the selection process for awards. (Closed) (Open)—General Discussion of current status and future plans of the Sociology Program.

Reason for Closing: The proposals being reviewed include information of a proprietary or confidential nature, including technical information; financial data, such as salaries, and personal information concerning individuals associated with the proposals. These matters are within exemptions (4) and (6) of 5 U.S.C. 552b, Government in the Sunshine Act.

Dated: October 15, 1990.

BILLING CODE 7555-01-M

NUCLEAR REGULATORY COMMISSION

[Docket No. 50-029]

Yankee Atomic Electric Co., Yankee Nuclear Power Station; Environmental Assessment and Finding of No Significant Impact

The U.S. Nuclear Regulatory Commission (the Commission) is considering issuance of a one-time exemption from the requirements of 10 CFR 55.59(c)(3)(i), Items A through L, to Yankee Atomic Electric Company (the licensee) for Yankee Nuclear Power Station (Yankee) located at the licensee's site near Rowe, Massachusetts.

Environmental Assessment

Identification of Proposed Action

By letter dated August 2, 1990, the Yankee Atomic Electric Company (the licensee) requested a one-time exemption from the requirement in 10 CFR 55.59(c)(3)(i)(A)–(L) to conduct annual simulator training of reactor operators and senior reactor operators on certain control manipulations. Simulator training of Yankee-Rowe licensed operators was last conducted on a non-plant specific simulator from September 1989 to October 1989. Yankee-Rowe anticipates having a plant specific simulator available for operator training on or about October 1, 1990. The required training would commence when the simulator is available, and the required training in control manipulations would be completed by

March 1, 1991. The exemption from the requirements of the regulations would therefore be for a period of five months.

Immediate compliance with the annual training requirement would entail all the licensed operators traveling to a non-plant specific simulator in Illinois and covering all twelve evolutions in a time span of 30 hours of simulator time for each crew. With the imminent arrival of the plant specific simulator, the licensee believes more effective and thorough training can be provided using the combination of control room based job performance measures, static simulator walkthroughs and, once it is available for training, the plant specific simulator.

Requiring the licensee's operators to travel to the non-plant specific simulator would result in the completion of the simulator training on time. However, since the quality of the training the operators would receive by performing the control manipulations on a plant specific simulator would be higher, it would be in the public interest to grant this exemption.

The staff has reviewed the licensee's request for exemption and finds that since a plant specific simulator will be available on site in the very near future, requiring the licensee to meet the annual requirement to perform the control manipulations of 10 CFR 55.59(c)(3)(i)(A)–(L) on a non-plant specific simulator would not enhance the protection of the environment and would result in an expenditure of licensee resources not required for public health and safety.

The staff also concludes that issuance of this exemption will not endanger life or property and will have no significant effect on the safety of the public or the plant.

The Need for the Proposed Action

The exemption is needed to allow the licensee to utilize its site-specific simulator for 1990 operator training requirements.

Environmental Impacts of the Proposed Action

The proposed action will have no incremental impact relative to current practice because the exemption will allow Yankee to conduct more effective training by using its site-specific simulator.

Alternative to the Proposed Action

It has been concluded that there is no measurable impact associated with the proposed exemption; any alternatives to the exemption will have either no environmental impact or greater environmental impact.

Alternative Use of Resources

This action does not involve the use of resources beyond the scope of resources used during normal plant operation.

Agencies and Persons Consulted

The Commission's staff reviewed the licensee's request that supports the proposed exemption. The staff did not consult other agencies or persons.

Finding of No Significant Impact

Based upon the foregoing environmental assessment, we conclude that the proposed action will not have a significant effect on the quality of the human environment. Accordingly, the Commission has determined not to prepare an environmental impact statement for the proposed exemption.

For further details with respect to this action, see the licensee's letter, dated August 2, 1990 which is available in the Commission's Public Document Room, 2120 L Street, NW., Washington, DC 20555, and at the Greenfield Community College, 1 College Drive, Greenfield, Massachusetts 01301.

Dated at Rockville, Maryland, this 12th day of October 1990.

For the Nuclear Regulatory Commission

Richard H. Wessman,

Director, Project Directorate I–3, Division of Reactor Projects I/II, Office of Nuclear Reactor Regulation.

[FR Doc. 90-24715 Filed 10-18-90; 8:45 am]

BILLING CODE 7590-01-M

[Docket Nos. 50-220 AND 50-410]

Niagara Mohawk Power Corp; Notice of Consideration of Issuance of Amendments to Facility Operating Licenses and Proposed No. Significant Hazards Consideration Determination and Opportunity for Hearing

The U.S. Nuclear Regulatory Commission (the Commission) is considering issuance of amendments to Facility Operating License Nos. DPR–63 and NPF–69 issued to the Niagara Mohawk Power Corporation (the licensee) for operation of the Nine Mile Point Nuclear Station Units 1 and 2, located in Oswego County, New York.

The proposed amendments would make changes to the Technical Specifications (TS) to reflect management changes due to the reorganization of the Niagara Mohawk Power Corporation (NMPC) Nuclear Division. They include revision to TS Sections 6.1, "Responsibility," 6.2, "Organization," 6.4, "Training," 6.5, "Review and Audit," 6.6, "Reportable Occurrence Action," 6.7, "Safety Limit Violation," 6.8 "Procedures" for Unit 1; "Procedures and Programs" for Unit 2 and 6.12 "High Radiation Areas."

The types of changes are generally characterized as follows. The former organization included Station Superintendents for Units 1 and 2 reporting to a General Superintendent. The General Superintendent reported to the Executive Vice President—Nuclear Operations. The revised organization retitles the Executive Vice President—Nuclear Operation to Executive Vice President—Nuclear, the Station Superintendent to Plant Manager, eliminates the General Superintendent position, and adds a position of Vice President—Nuclear Generation to whom the two Plant Managers report. Those reporting directly to the Plant Managers are now all designated as "manager" versus the previous "superintendent" or "supervisor" designation for some positions.

Certain responsibilities previously held by the General Superintendent have been reassigned to the Vice President—Nuclear Generation or to the Plant Managers. In particular, the Station (formerly "Site") Operations Review Committee (SORC) will now be chaired by and report to the Plant Manager. SORC will also be expanded to ten members for each unit. The same functional areas will continue to be represented on the SORC and several will be added to bring the total to ten members.

Certain responsibilities and designations previously assigned to the Executive Vice President—Nuclear Operations will now be assigned to the Vice President—Nuclear Generation.

The corporate safety review committee, the Safety Review and Audit Board (SRAB), composition is being changed to eliminate the Staff Engineer—Environmental since Unit 2 is no longer in the construction and initial startup phase.

Editorial changes to implement these types of changes to provide consistency with the Standard Technical Specifications and several other staff position title changes are also included.

Before issuance of the proposed license amendments, the Commission will have made findings required by the Atomic Energy Act of 1954, as amended (the Act) and the Commission's regulations.

The Commission has made a proposed determination that the request for amendments involve no significant hazards consideration. Under the Commission's regulations in 10 CFR 50.92, this means that operation of the facility in accordance with the proposed amendments would not (1) involve a

significant increase in the probability or consequences of an accident previously evaluated; or (2) create the possibility of a new or different kind of accident from any accident previously evaluated; or (3) involve a significant reduction in a margin of safety. The licensee has provided the following analysis in response to the above 3 standards.

Nine Mile Point—Unit 1

Standard 1: The proposed changes are intended to enhance the overall management capability and performance of Nine Mile Point Unit 1 by freeing up senior level people from administrative responsibilities. These changes also reflect Niagara Mohawk's intent to provide the highest level of management expertise and experience in the Nuclear Division and to assure that the goals of improved overall performance are achieved.

The proposed amendments do not involve a significant increase in the probability or consequences of an accident previously evaluated because the proposed changes are administrative in nature and do not affect plant operation.

Standard 2: The proposed amendments do not create the possibility of a new or different kind of accident than previously evaluated because the proposed changes are administrative in nature and no physical alterations of plant configuration or changes to setpoints or operating parameters are proposed.

Standard 3: The proposed amendments do not involve a significant reduction in a margin of safety because Niagara Mohawk, through its Quality Assurance programs, its commitment to maintain only qualified personnel in positions of responsibility, and other required controls, assures that safety functions will be performed at the high level of competence. Therefore, the proposed administrative changes to the Technical Specifications will not affect the margin of safety.

Nine Mile Point—2

Standard 1: The proposed changes are intended to enhance the overall management capability and performance of Nine Mile Point Unit 2 by freeing up senior level people from administrative responsibilities. These changes also reflect Niagara Mohawk's intent to provide the highest level of management expertise and experience in the Nuclear Division and to assure that the goals of improved overall performance are achieved.

The proposed amendments do not involve a significant increase in the probability or consequences of an accident previously evaluated because the proposed changes are administrative in nature and do not affect plant operation.

Standard 2: The proposed amendments do not create the possibility of a new or different kind of accident than previously evaluated because the proposed changes are administrative in nature and no physical alterations of plant configuration changes to setpoints or operating parameters are proposed.

Standard 3: The proposed amendments do not involve a significant reduction in a margin of safety because Niagara Mohawk, through its Quality Assurance programs, its commitment to maintain only qualified personnel in positions of responsibility, and other required controls, assures that safety functions will be performed at a high level of competence. Therefore, the proposed administrative changes to the Technical Specifications will not affect the margin of safety.

The staff has reviewed the licensee's no significant hazards determination and agrees with the licensee's analysis. Therefore, the staff proposes to determine that the application for amendments involve no significant hazards consideration.

Therefore, based on the above considerations, the Commission has made a proposed determination that the amendments request involve no significant hazards consideration.

The Commission is seeking public comments on this proposed determination. Any comments received within 30 days after the date of publication of this notice will be considered in making any final determination. The Commission will not normally make a final determination unless it receives a request for a hearing.

Written comments may be submitted by mail to the Regulatory Publications Branch, Division of Freedom of Information and Publications Services, Office of Administration, U.S. Nuclear Regulatory Commission, Washington, DC 20555, and should cite the publication date and page number of this Federal Register notice. Written comments may also be delivered to room P-223, Phillips Building, 7920 Norfolk Avenue, Bethesda, Maryland, from 7:30 a.m. to 4:15 p.m. Copies of written comments received may be examined at the NRC Public Document Room, the Gelman Building, 2120 L Street NW., Washington, D.C. The filing of requests for hearing and petitions for leave to intervene is discussed below.

By November 19, 1990, the licensee may file a request for a hearing with respect to issuance of the amendments to the subject facility operating licenses and any person whose interest may be affected by this proceeding and who wishes to participate as a party in the proceeding must file a written petition for leave to intervene. Request for a hearing and petitions for leave to intervene shall be filed in accordance with the Commission's "Rules of Practice for Domestic Licensing Proceedings" in 10 CFR part 2. Interested persons should consult a current copy of 10 CFR 2.714 which is available at the Commission's Public Document Room, the Gelman Building, 2120 L Street, NW., Washington, DC 20555 and at the Local Public Document Room located at Reference and Documents Department, Penfield Library, State University of New York, Oswego, New York 13126. If a request for a hearing or petition for leave to intervene is filed by the above date, the Commission or an Atomic Safety and Licensing Board, designated by the Commission or by the Chairman of the Atomic Safety and Licensing Board Panel, will rule on the request and/or petition and the Secretary or the designated Atomic Safety and Licensing Board will issue a notice of hearing or an appropriate order.

As required by 10 CFR 2.714, a petition for leave to intervene shall set forth with particularity the interest of the petitioner in the proceeding, and how that interest may be affected by the results of the proceeding. The petition should specifically explain the reasons why intervention should be permitted with particular reference to the following factors: (1) The nature of the petitioner's right under the Act to be made party to the proceeding; (2) the nature and extent of the petitioner's property, financial, or other interest in the proceeding; and (3) the possible effect of any order which may be entered in the proceeding on the petitioner's interest. The petition should also identify the specific aspect(s) of the subject matter of the proceeding as to which petitioner wishes to intervene. Any person who has filed a petition for leave to intervene or who has been admitted as a party may amend the petition without requesting leave of the Board up to fifteen (15) days prior to the first prehearing conference scheduled in the proceeding, but such an amended petition must satisfy the specificity requirements described above.

Not later than fifteen (15) days prior to the first prehearing conference scheduled in the proceeding, a petitioner shall file a supplement to the petition to intervene which must include a list of

the contentions which are sought to be litigated in the matter. Each contention must consist of a specific statement of the issue of law or fact to be raised or controverted. In addition, the petitioner shall provide a brief explanation of the bases of the contention and a concise statement of the alleged facts or expert opinion which support the contention and on which the petitioner intends to rely in proving the contention at the hearing. The petitioner must also provide references to those specific sources and documents of which the petitioner is aware and on which the petitioner intends to rely to establish those facts or expert opinion. Petitioner must provide sufficient information to show that a genuine dispute exists with the applicant on a material issue of law or fact. Contentions shall be limited to matters within the scope of the amendment under consideration. The contention must be one which, if proven, would entitle the petitioner to relief. A petitioner who fails to file such a supplement which satisfies these requirements with respect to at least one contention will not be permitted to participate as a party.

Those permitted to intervene become parties to the proceeding, subject to any limitations in the order granting leave to intervene, and have the opportunity to participate fully in the conduct of the hearing, including the opportunity to present evidence and cross-examine witnesses.

If a hearing is requested, the Commission will make a final determination on the issue of no significant hazards consideration. The final determination will serve to decide when the hearing is held.

If the final determination is that the request for amendments involve no significant hazards consideration, the Commission may issue the amendments and make them effective, notwithstanding the request for a hearing. Any hearing held would take place after issuance of the amendments.

If a final determination is that the amendments involve a significant hazards consideration, any hearing held would take place before the issuance of any amendments.

Normally, the Commission will not issue the amendments until the expiration of the 30-day notice period. However, should circumstances change during the notice period such that failure to act in a timely way would result, for example, in derating or shutdown of the facility, the Commission may issue the license amendment before the expiration of the 30-day notice period, provided that its final determination is that the amendments involve no significant hazards consideration. The final determination will consider all public and State comments received. Should the Commission take this action, it will publish a notice of issuance and provide for opportunity for a hearing after issuance. The Commission expects that the need to take this action will occur very infrequently.

A request for a hearing or a petition for leave to intervene must be filed with the Secretary of the Commission, U.S. Nuclear Regulatory Commission, Washington, DC 20555, Attention: Docketing and Services Branch, or may be delivered to the Commission's Public Document Room, the Gelman Building, 2120 L Street, NW., Washington, DC, by the above date. Where petitions are filed during the last ten (10) days of the notice period, it is requested that the petitioner promptly so inform the Commission by a toll-free telephone call to Western Union at 1–(800) 325–6000 (in Missouri 1–(800) 342–6700). The Western Union operator should be given Datagram Identification Number 3737 and the following message addressed to Robert A. Capra: (petitioner's name and telephone number), (date petition was mailed), (plant name), and (publication date and page number of this Federal Register notice). A copy of the petition should also be sent to the Office of the General Counsel, U.S. Nuclear Regulatory Commission, Washington, D.C. 20555, and to Mr. Mark J. Wetterhahn, Esquire, Bishop, Cook, Purcell and Reynolds, 1400 L Street, NW., Washington, DC 20005–3502, attorney for the licensee.

Nontimely filings of petitions for leave to intervene, amended petitions, supplemental petitions and/or requests for hearing will not be entertained absent a determination by the Commission, the presiding officer or the Atomic Safety and Licensing Board that the petition and/or request should be granted based upon a balancing of the factors specified in 10 CFR 2.714(a)(1)(i)–(v) and 2.714(d).

For further details with respect to this action, see the applications for amendments dated September 21, 1990, as revised on October 4, 1990, which is available for public inspection at the Commission's Public Document Room, the Gelman Building, 2120 L Street, NW., Washington, DC 20555 and at the Local Public Document Room located at the Reference and Documents Department, Penfield Library, State University of New York, Oswego, New York 13126.

Dated at Rockville, Maryland, this 12th day of October 1990.

Robert E. Martin,

Senior Project Manager, Project Directorate I–1 Division of Reactor Projects—I/II Office of Nuclear Reactor Regulation

[FR Doc. 90–24713 Filed 10–18–90; 8:45 am]

BILLING CODE 7590–01–M

[Docket No. 50–315]

Indiana Michigan Power Co.; Notice of Consideration of Issuance of Amendment to Facility Operating License and Opportunity for Hearing

The United States Nuclear Regulatory Commission (the Commission) is considering issuance of an amendment to Facility Operating License No. DPR–58, issued to the Indiana Michigan Power Company (the licensee), for operation of Donald C. Cook Nuclear Plant, Unit No. 1, located in Berrien County, Michigan.

The amendment would allow the licensee to use steam generator sleeves to repair defective steam generator tubes. The Technical Specifications currently require all defective steam generator tubes to be plugged and removed from service.

Prior to issuance of the proposed license amendment, the Commission will have made findings required by the Atomic Energy Act of 1954, as amended (the Act) and the Commission's regulations.

By November 19, 1990, the licensee may file a request for a hearing with respect to issuance of the amendment to the subject facility operating license and any person whose interest may be affected by this proceeding and who wishes to participate as a party in the proceeding must file a written request for hearing and a petition for leave to intervene. Requests for a hearing and petitions for leave to intervene shall be filed in accordance with the Commission's "Rules of Practice for Domestic Licensing Proceedings" in 10 CFR part 2. Interested persons should consult a current copy of 10 CFR 2.714 which is available at the Commission's Public Document Room, the Gelman Building, 2120 L Street, NW., Washington, DC 20555 and at the Local Public Document Room located at the Maude Preston, Palenske Memorial Library, 500 Market Street, St. Joseph, Michigan 49085. If a request for a hearing or petition for leave to intervene is filed by the above date, the Commission or an Atomic Safety and Licensing Board, designated by the Commission or by the Chairman of the Atomic Safety and Licensing Board

Panel, will rule on the request and/or petition, and the Secretary or the designated Atomic Safety and Licensing Board will issue a notice of hearing or an appropriate order.

As required by 10 CFR 2.714, a petition for leave to intervene shall set forth with particularity the interest of the petitioner in the proceeding and how that interest may be affected by the results of the proceeding. The petition should specifically explain the reasons why intervention should be permitted with particular reference to the following factors: (1) The nature of the petitioner's right under the Act to be made a party to the proceeding; (2) the nature and extent of the petitioner's property, financial, or other interest in the proceeding; and (3) the possible effect of any order which may be entered in the proceeding on the petitioner's interest. The petition should also identify the specific aspect(s) of the subject matter of the proceeding as to which petitioner wishes to intervene. Any person who has filed a petition for leave to intervene or who has been admitted as a party may amend the petition without requesting leave of the Board up to fifteen (15) days prior to the first prehearing conference scheduled in the proceeding, but such an amended petition must satisfy the specificity requirements described above.

Not later than fifteen (15) days prior to the first prehearing conference scheduled in the proceeding, a petitioner shall file a supplement to the petition to intervene, which must include a list of the contentions that are sought to be litigated in the matter. Each contention must consist of a specific statement of the issue of law or fact to be raised or controverted. In addition, the petitioner shall provide a brief explanation of the bases of the contention and a concise statement of the alleged facts or expert opinion which support the contention and on which the petitioner intends to rely in proving the contention at the hearing.

The petitioner must also provide references to those specific sources and documents of which the petitioner is aware and on which the petitioner intends to rely to establish those facts or expert opinion. Petitioner must provide sufficient information to show that a genuine dispute exists with the applicant or a material issue of law on fact. Contentions shall be limited to matters within the scope of the amendment under consideration. The contention must be one which, if proven, would entitle the petitioner to relief. A petitioner who fails to file such a supplement which satisifies these requirements with respect to at least one contention will not be permitted to participate as a party.

Those permitted to intervene become parties to the proceeding, subject to any limitations in the order granting leave to intervene, and have the opportunity to participate fully in the conduct of the hearing, including the opportunity to present evidence and cross-examine witnesses.

A request for a hearing or a petition for leave to intervene must be filed with the Secretary of the Commission, U.S. Nuclear Regulatory Commission, Washington, DC 20555, Attention: Docketing and Service Branch, or may be delivered to the Commission's Public Document Room, 2120 L Street, NW., Washington, DC 20555, by the above date. Where petitions are filed during the last ten (10) days of the notice period, it is requested that the petitioner promptly so inform the Commission by a toll-free telephone call to Western Union at 1-800-325-6000 (in Missouri 1-800-342-6700). The Western Union operator should be given Datagram Identification Number 3737 and the following message addressed to Robert Pierson: petitioner's name and telephone number; date petition was mailed; plant name; and publication date and page number of this Federal Register notice. A copy of the petition should also be sent to the Office of the General Counsel, U.S. Nuclear Regulatory Commission, Washington, DC 20555, and to Gerald Charnoff, Esq., Shaw, Pittman, Potts and Trowbridge, 2300 N Street, NW., Washington, DC 20037.

Nontimely filings of petitions for leave to intervene, amended petitions, supplemental petitions and/or requests for hearing will not be entertained absent a determination by the Commission, the presiding officer or the presiding Atomic Safety and Licensing Board that the petition and/or request should be granted based upon a balancing of the factors specified in 10 CFR 2.714(a)(1)(i)-(v) and 2.714(d).

If a request for hearing is received, the Commission's staff may issue the amendment after it completes its technical review and prior to the completion of any required hearing if it publishes a further notice for public comment of its proposed finding of no significant hazards consideration in accordance with 10 CFR 50.91 and 50.92.

For further details with respect to this action, see the application for amendments dated June 27, 1990, which is available for public inspection at the Commission's Public Document Room, 2120 L Street, NW., Washington, DC 20555, and at the Maude Preston Palenske Memorial Library, 500 Market Street, St. Joseph, Michigan 49085.

Dated at Rockville, Maryland, this 12th day of October 1990.

For the Nuclear Regulatory Commission

Robert Pierson,

Director, Project Directorate III-1, Division of Reactor Projects—III, IV, V & Special Projects, Office of Nuclear Reactor Regulation.

[FR Doc. 90-24714 Filed 10-18-90; 8:45 am]

BILLING CODE 7590-01-M

[Docket Nos. 72-10, 50-282/306]

Northern States Power Co.; Notice of Consideration of Issuance of a Materials License for the Storage of Spent Fuel and Notice of Opportunity for a Hearing

The Nuclear Regulatory Commission (the Commission) is considering an application dated August 31, 1990, for a materials license, under the provisions of 10 CFR part 72, from Northern States Power Company (the applicant or NSP) to possess spent fuel and other radioactive materials associated with spent fuel storage in an independent spent fuel storage installation (ISFSI) located in the City of Red Wing, in Goodhue County, Minnesota. If granted, the license will authorize the applicant to store spent fuel from the Prairie Island Nuclear Generating Plant Units 1 and 2 in dry storage casks at an ISFSI to be constructed at the applicant's Prairie Island Nuclear Generating Plant stite (Operating Licenses DPR-3013 and 2014). Pursuant to the provisions of 10 CFR part 72, the term of the license for the ISFSI would be twenty (20) years.

Prior to issuance of the requested license, the Commission will have made the findings required by the Atomic Energy Act of 1954, as amended (the Act), and the Commission's rules and regulations. The issuance of the materials license will not be approved until the Commission has reviewed the proposal and has concluded that approval of the license will not be inimical to the common defense and security and will not constitute an unreasonable risk to the health and safety of the public. The NRC will complete an environmental evaluation, in accordance with 10 CFR part 51, to determine if the preparation of an environmental impact statement is warranted or if an environmental assessment and Finding of No Significant Impact are appropriate. This action will be the subject of a subsequent notice in the Federal Register.

Pursuant to 10 CFR 2.105 and 2.1107, by November 19, 1990, the licensee may file a request for a hearing and any person whose interest may be affected by this proceeding and who wishes to participate as a party in the proceeding must file a written request for a hearing and a petition for leave to intervene with respect to the subject materials license in accordance with the provisions of 10 CFR 2.714. If a request for hearing or petition for leave to intervene is filed by the above date, the Commission or an Atomic Safety and Licensing Board designated by the Commission or by the Chairman of the Atomic Safety and Licensing Board Panel will rule on the request and/or petition, and the Secretary or the designated Atomic Safety and Licensing Board will issue a notice of hearing or an appropriate order. In the event that no request for hearing or petition for leave to intervene is filed by the above date, the Commission may, upon satisfactory completion of all evaluations, issue the materials license without further prior notice.

A petition for leave to intervene shall set forth with particularity the interest of the petitioner in the proceeding and how that interest may be affected by the results of the proceeding. The petition should specifically explain the reasons why intervention should be permitted with particular reference to the following factors: (1) The nature of the petitioner's right under the Act to be made a party to the proceeding; (2) the nature and extent of the petitioner's property, financial, or other interest in the proceeding; and (3) the possible effect of any order that may be entered in the proceeding on the petitioner's interest. The petition should also identify the specific aspect(s) of the subject matter of the proceeding as to which petitioner wishes to intervene. Any person who has filed a petition for leave to intervene or who has been admitted as a party may amend a petition, without requesting leave of the Board up to 15 days prior to the holding of the first prehearing conference scheduled in the proceeding, but such an amended petition must satisfy the specificity requirements described above.

Not later than fifteen (15) days prior to the first prehearing conference scheduled in the proceeding, a petitioner shall file a supplement to the petition to intervene which must include a list of contentions which are sought to be litigated in the matter. Each contention must consist of a specific statement of the issue of law or fact to be raised or controverted. In addition, the petitioner shall provide a brief explanation of the bases of the contention and a concise statement of the alleged facts or expert opinion which support the contention and on which the petitioner intends to rely in proving the contention at the hearing. The petitioner must also provide references to those specific sources and documents of which the petitioner is aware and on which the petitioner intends to rely to establish those facts or expert opinion. The petitioner must provide sufficient information to show that a genuine dispute exists with the applicant on a material issue of law or fact. Contentions shall be limited to matters within the scope of the action under consideration. The contention must be one which, if proven, would entitle the petitioner to relief. A petitioner who fails to file such a supplement which satisfies these requirements with respect to at least one contention will not be permitted to participate as a party.

Those permitted to intervene become parties to the proceeding, subject to any limitations in the order granting leave to intervene, and have the opportunity to participate fully in the conduct of the hearing.

A request for a hearing or a petition for leave to intervene must be filed with the Secretary of the Commission, U.S. Nuclear Regulatory Commission, Washington, DC 20555, Attention: Docketing and Service Branch, or may be delivered to the Commission's Public Document Room, the Gelman Building, 2120 L Street, NW., Washington, DC, by the above date. Where petitions are filed during the last ten (10) days of the notice period, it is requested that the petitioner promptly so inform the Commission by a toll-free telephone call to Western Union at 1–(800) 325–6000 (in Missouri 1–(800) 342–6700). The Western Union operator should be given Datagram Identification Number 3737 and the following message addressed to Richard E. Cunningham, Director, Division of Industrial and Medical Nuclear Safety, Office of Nuclear Material Safety and Safeguards: Petitioner's name and telephone number; date petition was mailed; plant name; and publication date and page number of this Federal Register notice. A copy of the petition should also be sent to the Office of the General Counsel, U.S. Nuclear Regulatory Commission, Washington, DC 20555, and to Gerald Charnoff, Esq., Shaw, Pittman, Potts & Trowbridge, 2300 N Street, NW., Washington, DC, 20037, attorney for the applicant.

Nontimely filings of petitions for leave to intervene, amended petitions, supplemental petitions and/or requests for hearing will not be entertained absent a determination by the Commission, the presiding officer or the presiding Atomic Safety and Licensing Board that the petition and/or request should be granted based upon a balancing of the factors specified in 10 CFR 2.714(a)(1)(i)–(v) and 2.714(d).

The Commission hereby provides notice that this proceeding concerns an application for a license falling within the scope of section 134 of the Nuclear Waste Policy Act of 1982 (NWPA), 42 U.S.C. 10154. Under section 134 of NWPA, the Commission, at the request of any petitioner or any party to the proceeding, must use hybrid hearing procedures with respect to "any matter which the Commission determines to be in controversy among the parties." The hybrid procedures in section 134 provide for oral argument on matters in controversy, preceded by discovery under the Commission's rules, and the designation, following argument, of only those factual issues that involve a genuine and substantial dispute, together with any remaining questions of law, to be resolved in an adjudicatory hearing. Actual adjudicatory hearings are to be held on only those issues found to meet the criteria of section 134 and set for hearing after oral argument.

The Commission's rules implementing section 134 of the NWPA are found in 10 CFR part 2, subpart K, "Hybrid Hearing Procedures for Expansion of Spent Nuclear Fuel Capacity at Civilian Nuclear Power Reactors," (published at 50 FR 41662, October 15, 1985). Under those rules, any party to the proceeding may invoke the hybrid hearing procedures by filing with the presiding officer a written request for oral argument under 10 CFR 2.1109. To be timely, the request must be filed within ten (10) days of an order granting a request for hearing or petition to intervene. (As outlined above, the Commission's rules in 10 CFR part 2, subpart G, and § 2.714 in particular, continue to govern the filing of requests for a hearing or petitions to intervene, as well as the admission of contentions.) The presiding officer may grant an untimely request for oral argument only upon a showing of good cause by the requesting party for the failure to file on time and after providing the other parties an opportunity to respond to the untimely request. If the presiding officer grants a request for oral argument, and hearing held on the application shall be conducted in accordance with the hybrid hearing procedures. In essence, those procedures limit the time available for discovery and require that an oral

argument be held to determine whether any contentions must be resolved in an adjudicatory hearing. If no party to the proceeding requests oral argument, of if all untimely requests for oral argument are denied, then the usual procedures in 10 CFR part 2, subpart G apply.

For further details with respect to this action, see the application dated August 31, 1990, which is available for public inspection at the Commission's Public Document Room, the Gelman Building, 2120 L Street, NW., Washington, DC 20555, and at the local public document room at the Technology & Science Department, Minneapolis Public Library, 300 Nicollet Mall, Minneapolis, Minnesota 55401. The Commission's license and Safety Evaluation Report, when issued, may be inspected at the above locations.

Dated at Rockville, Maryland, this 12th day of October, 1990.

SMALL BUSINESS ADMINISTRATION

[Declaration of Disaster Loan Area #2989]

California; Declaration of Disaster Loan Area

Mariposa County and the contiguous counties of Madera, Merced, Stanislaus, and Tuolumne in the State of California constitute a disaster area as a result of damages caused by wildfires which began on August 9 and continued through August 20, 1990. Applications for loans for physical damage as a result of this disaster may be filed until the close of business on December 7, 1990 and for economic injury until the close of business on July 5, 1991 at the address listed below:

Disaster Area 4 Office, Small Business Administration, P.O. Box 13795, Sacramento, CA 95853-4795.

or other locally announced locations.

The interest rates are:

	Percent
For Physical Damage:	
Homeowners with credit available elsewhere	8.000
Homeowners without credit available elsewhere	4.000
Businesses with credit available elsewhere	8.000
Businesses and non-profit organizations without credit available elsewhere	4.000
Others (including non-profit organizations) with credit available elsewhere	8.250
For Economic Injury:	
Businesses and small agricultural cooperatives without credit available elsewhere	4.000

The number assigned to this disaster for physical damage is 246005 and for economic injury the number is 714500.

(Catalog of Federal Domestic Assistance Program Nos. 59002 and 59006)

Dated: October 5, 1990.

Susan Engeleiter,

Administrator.

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

FAA Approval of Noise Compatibility Program; Burlington International Airport, Burlington, VT

AGENCY: Federal Aviation Administration, DOT.

ACTION: Notice.

SUMMARY: The Federal Aviation Administration (FAA) announces its findings on the noise compatibility program submitted by the City of Burlington, Vermont under the provisions of title I of the Aviation Safety and Noise Abatement Act of 1979 (Pub. L. 96-193) and 14 CFR part 150. These findings are made in recognition of the description of Federal and non-federal responsibilities in Senate Report No. 96-52 (1980). On March 27, 1990, the FAA determined that the noise exposure maps, submitted by the City of Burlington, Vermont, under part 150, were in compliance with applicable requirements. On September 21, 1990, the Administrator approved the Burlington International (BTV) noise compatibility program. All 15 of the proposed program elements were approved.

EFFECTIVE DATE: The effective date of the FAA's approval of the BTV noise compatibility program is September 21, 1990.

FOR FURTHER INFORMATION CONTACT: John C. Silva, Federal Aviation Administration, New England Region, Airports Division, ANE-602, 12 New England Executive Park, Burlington, Massachusetts 01803, Telephone (617) 273-7000.

Documents reflecting this FAA action may be obtained from the same individual.

SUPPLEMENTARY INFORMATION: This notice announces that the FAA has

given its overall approval to the BTV noise compatibility program, effective September 21, 1990.

Under section 104(a) of the Aviation Safety and Noise Abatement Act of 1979 (hereinafter the Act), an airport operator who has previously submitted a noise exposure map may submit to the FAA a noise compatibility program which sets forth the measures taken or proposed by the airport operator for the reduction of existing non-compatible land uses and prevention of additional non-compatible land uses within the area covered by the noise exposure maps. The Act requires such programs to be developed in consultation with interested and affected parties including local communities, government agencies, airport users, and FAA personnel.

Each airport noise compatibility program developed in accordance with Federal Aviation Regulation (FAR), part 150 is a local program, not a federal program. The FAA does not substitute its judgment for that of the airport proprietor with respect to which measures should be recommended for action. The FAA's approval or disapproval of FAR part 150 program recommendations is measured according to the standards expressed in part 150 and the Act, and is limited to the following determinations:

(a) The noise compatibility program was developed in accordance with the provisions and procedures of FAR part 150;

(b) Program measures are reasonably consistent with achieving the goals of reducing existing non-compatible land uses around the airport and preventing the introduction of additional non-compatible land uses;

(c) Program measures would not create an undue burden on interstate or foreign commerce, unjustly discriminate against types or classes of aeronautical uses, violate the terms of airport grant agreements, or intrude into areas preempted by the federal government; and

(d) Program measures relating to the use of flight procedures can be implemented within the period covered by the program without derogating safety, adversely affecting the efficient use and management of the navigable airspace and air traffic control systems, or adversely affecting other powers and responsibilities of the Administrator as prescribed by law.

Specific limitations with respect to FAA's approval of an airport noise compatibility program are delineated in FAR part 150, § 150.5. Approval is not a determination concerning the acceptability of land uses under Federal, State, or local law. Approval does not by itself constitute an FAA implementing action. A request for Federal action or approval to implement specific noise compatibility measures may be required, and an FAA decision on the request may require an environmental assessment of the proposed action. Approval does not constitute a commitment by the FAA to financially assist in the implementation of the program nor a determination that all measures covered by the program are eligible for grant-in-aid funding from the FAA under the Airport and Airway Improvement Act of 1982. Where Federal funding is sought, requests for project grants must be submitted to the FAA Regional Office in Burlington, Massachusetts.

The City of Burlington submitted to the FAA, on January 30, 1990 the noise exposure maps, descriptions, and other documentation produced during the noise compatibility planning study conducted from July 1, 1987 to January 1990. The BTV noise exposure maps were determined by FAA to be in compliance with applicable requirements on March 27, 1990. Notice of this determination was published in the Federal Register on May 1, 1990.

The BTV study contains a proposed noise compatibility program comprised of actions designed for phase implementation by airport management and adjacent jurisdictions from the date of study completion to beyond the year 1993. It was requested that the FAA evaluate and approve this material as a noise compatibility program as described in section 104(b) of the Act. The FAA began its review of the program on March 27, 1990, and was required by a provision of the Act to approve or disapprove the program within 180 days (other than the use of new flight procedures for noise control). Failure to approve or disapprove such a program within the 180-day period shall be deemed to be an approval of such a program.

The submitted program contained 15 proposed actions for noise mitigation on and off the airport. The FAA completed its review and determined that the procedural and substantive requirements of the Act and FAR part 150 have been satisfied. The overall program, therefore, was approved by the Administrator effective September 21, 1990. Approval was granted for all 15 specific program elements.

The 15 approved program elements include taxiway construction, terminal power installation, nighttime bi-directional runway use, noise abatement flight tracks, voluntary limits on training activity, voluntary limitation of multiple-aircraft military flights, voluntary military helicopter controls, monitoring and review, and various lands use measures which include land acquisition and relocation, soundproofing and related easement acquisition, airport zoning, easement acquisition for new development, and real estate disclosure.

FAA's determinations are set forth in detail in a Record of Approval endorsed by the Assistant Administrator on September 21, 1990. The Record of Approval, as well as other evaluation materials and the documents comprising the submittal, are available for review at the FAA office listed above and at the office of the Director of Aviation, Burlington International Airport, Airport Drive, South Burlington, Vermont.

Issued in Burlington, Massachusetts on October 10, 1990.

Vincent A. Scarano,

Manager, Airports Division, New England Region.

BILLING CODE 4910-13-M

Radio Technical Commission for Aeronautics (RTCA) Special Committee 167, Digital Avionics Software; Meeting

Pursuant to section 10(a)(2) of the Federal Advisory Committee Act (Pub. L. 92-463, 5 U.S.C., appendix I), notice is hereby given for the Fourth meeting of RTCA Special Committee 167 on Digital Avionics Software held on November 7-9, 1990, in the software Productivity Consortium (SPC), 2214 Rock Hill Road, Herndon, VA 22070, Commencing at 9:30 a.m.

The agenda for this meeting is as follows: (1) Chairman's Remarks; (2) Approval of the Third Meeting's Minutes, RTCA Paper No. 191-90/SC167-25; (3) Review and Discuss EUROCAE WG-12 Activities; (4) Presentation and Panel Session on Formal Methods; (5) WG/SC-approved Position Paper Presentations; (6) WG5/SC5 Presentation of Software Change Categorization Issues; (7) Working Group Sessions; (8) SAE Avionics Subcommittee (Systems Development Standard Update); (9) Working Group Reports, (a) WG-1, Documentation Integration and Production, (b) WG-2 Systems Issues, (c) WG-3, Software Development, (d) WG-4, Software Verification, (e) WG-5, Configuration Management and Quality Assurance; (10) Review of New Issues identified by the Chairman, and Task Assignments Not Covered in Working Group Reports; (11) Other Business; (12) Date and place of next meeting.

Attendance is open to the interested public but limited to space available. With the approval of the Chairman, members of the public may present oral statements at the meeting. Persons wishing to present statements or obtain information should contact the RTCA Secretariat, One McPherson Square, 1425 K Street, NW., Suite 500, Washington, DC 20005; (202) 682-0266. Any member of the public may present a written statement to the committee at any time.

Issued in Washington, DC, on October 10, 1990.

Geoffrey R. McIntyre,

Designated Officer.

BILLING CODE 4910-13-M

Maritime Administration

[Docket No. S-671]

American Maritime Transport, Inc.; Applications for Amendments of Operating-Differential Subsidy Contracts for Fuel Subsidy

Notice is hereby given that American Maritime Transport, Inc., Aquarius Marine Company, Atlas Marine Company, Brookville Shipping Company, Chestnut Shipping Company, Margate Shipping Company, and Mormac Marine Transport, Inc., have applied for an adjustment to their respective operating-differential subsidy contracts to provide for a fuel subsidy, for voyages in foreign commerce commencing on or after January 1, 1990, in an amount equal to the excess of the cost of fuel needed to operate their vessels over the cost of fuel required for operation of vessels of foreign registry and flag with which they compete in foreign commerce.

The applicants indicate that the fuel subsidy for which applications are made is required to meet foreign-flag competition and to promote the foreign commerce of the United States and that the granting of the aid applied for is necessary to place the operations of the vessels on a parity with those of foreign competitors.

Any person, firm, or corporation having any interest in the applications for fuel subsidy may review them in the Office of and the Secretary, Maritime Administration, Room 7300, Nassif Building, 400 Seventh Street, SW., Washington, DC. Written comments concerning the applications must be filed with the Secretary, Maritime Administration by the close of business December 17, 1990.

The Maritime Subsidy Board, as a matter of discretion, will consider any comments submitted and take such action with respect thereto as may be deemed appropriate.

(Catalog of Federal Domestic Assistance Program No. 20.804 Operating-Differential Subsidies (ODS))

By Order of the Maritime Subsidy Board.

Dated: October 16, 1990.

James E. Saari,

Secretary.

BILLING CODE 4910-81-M

DEPARTMENT OF THE TREASURY

[No. 27-16]

Organization and Functions of the Office of the Assistant Secretary (Tax Policy)

Date: October 15, 1990.

1. *Purpose:* This directive describes the organization and functions of the Assistant Secretary (Tax Policy).

2. *The Assistant Secretary (Tax Policy)* reports through the Deputy Secretary to the Secretary and is responsible for the following functions.

a. Assists the Secretary and Deputy Secretary of the Treasury through the development and implementation of Federal tax policies and programs.

b. Provides official estimates of all government receipts for the President's budget, for fiscal policy decisions, and for Treasury cash management decisions.

c. Develops and reviews regulations and rulings to administer the tax code.

d. Negotiates tax treaties for the United States.

e. Provides economic and legal policy analysis for domestic and international tax policy decisions.

f. Prepares congressionally and Presidentially mandated reports of tax policy issues.

g. Analyzes and monitors class lives of business assets for depreciation purposes.

3. *Organization Structure.* Under the supervision of the Assistant Secretary are two Deputy Assistant Secretaries: Tax Policy and Tax Analysis. The structural organization and functions designed to accommodate the mission of the Office of the Assistant Secretary (Tax Policy) are as follows:

a. The Office of the Deputy Assistant Secretary (Tax Policy) serves as deputy to the Assistant Secretary in the conduct of the above functions and acts for the Assistant Secretary in that official's absence. The Tax Legislative Counsel, the International Tax Counsel, and the Benefits Tax Counsel provide counsel directly to the Assistant Secretary (Tax Policy) but are supervised by the General Counsel as part of the Department's Legal Division.

(1) The Office of the Tax Legislative Counsel is responsible for providing the Assistant Secretary (Tax Policy) with legal and policy analysis and assistance on matters of domestic taxation, including:

(a) Formulating the Administration's tax initiatives;

(b) Commenting on tax policy aspects of proposals and initiatives of other executive departments;

(c) Preparing testimony on domestic taxation issues for presentation before the congressional tax writing committees;

(d) Assisting congressional staff in drafting legislative language and preparing legislative history, including relevant committee reports;

(e) Assisting in the development of regulations, rulings, and other administrative guidance and advising the Assistant Secretary regarding any policy issues that arise as the regulations are developed; and

(f) Undertaking policy studies and serving on Treasury or interagency task forces on issues related to the Office's area of responsibility.

(2) The Office of the International Tax Counsel is responsible for providing the Assistant Secretary (Tax Policy) with legal and policy analysis and assistance on matters of international taxation, including:

(a) Developing recommendations for Treasury legislative initiatives and formulating of Treasury positions on other legislative proposals involving international taxation;

(b) Preparing testimony on international taxation issues for presentation before congressional tax writing committees;

(c) Overseeing the development of the policy aspects of all Internal Revenue Service administrative lawmaking pronouncements involving international tax issues, including rulings, regulations, and announcements;

(d) Conducting the Treasury's tax treaty and tax information exchange agreement program, including negotiating with foreign governments, supplying legal and policy input to the ratification process, and establishing general treaty policy;

(e) Participating in international meetings of government tax authorities; and

(f) Undertaking policy studies and serving on Treasury or interagency task

forces on issues related to the Office's areas of responsibility.

(3) The Office of the Benefits Tax Counsel is responsible for providing the Assistant Secretary (Tax Policy) with legal and policy analysis and assistance on matters relating to the taxation and regulation of employee benefits programs, both private and public, including:

(a) Formulating and reviewing legislative proposals relating to private and public employee benefits issues;

(b) Preparing testimony on private and public employee benefits issues for presentation before congressional tax writing committees;

(c) Overseeing policy aspects of Internal Revenue Service administrative guidance documents involving employee benefit issues, including rulings, regulations, and announcements;

(d) Commenting and advising on policy aspects of proposals and initiatives of other executive departments relating to private and public employee benefits issues;

(e) Undertaking policy studies and serving on Treasury or interagency task forces on issues related to the Office's areas of responsibility; and

(f) Assisting congressional staff in drafting legislative language and preparing legislative history, including committee reports, on private and public employee benefits issues.

b. The Office of the Deputy Assistant Secretary (Tax Analysis) serves as deputy to the Assistant Secretary (Tax Policy) in the conduct of the functions listed in paragraph 2, and provides economic analysis to facilitate the development, analysis, and implementation of tax policies and programs. Within this Office is the Office of Tax Analysis.

The Office of Tax Analysis is responsible for providing the Assistant Secretary (Tax Policy) with economic and policy analysis and assistance on matters of domestic and international taxation, including:

(1) Providing economic analyses of tax legislation and studying the effects of the existing tax law and alternative tax programs;

(2) Preparing testimony for Treasury officials, writing Presidentially and congressionally mandated reports, and serving on interagency task forces on issues related to the Office's areas of responsibility;

(3) Providing official Administration estimates of all current and future levels of Federal Government receipts for the President's Annual Budget and interim budget revisions, actual and proposed tax legislation, earmarked revenue allocated to various Federal trust funds, Treasury cash management decisions, and the Tax Expenditure Budget and working with the Office of the Assistant Secretary (Management) to estimate funding proposals for bureaus within the Treasury whose activities directly affect budget receipts;

(4) Assisting in the development and review of tax regulations and tax forms and overseeing the IRS Statistics of Income Division tax return studies;

(5) Participating in the Treasury's tax treaty and tax information exchange agreement program, and in international meetings of government tax authorities;

(6) Conducting specialized statistical and econometric studies of depreciation of assets and furnishing Treasury officials with analyses and recommendations regarding the assignment or revisions of asset classifications and class lives; and

(7) Assembling statistical and analytical information, data bases, models, and econometric and statistical techniques to analyze tax policy issues through the development and maintenance of large microdata files of tax returns, economic databases, and major simulation models for analyzing the economic effects of alternative tax proposals and tax systems.

4. *References.* a. Treasury Order (TO) 111-01, "Issues of Tax Policy," dated March 16, 1961.

b. TO 101-05, "Reporting Relationships and Supervision of Officials, Offices and Bureaus, Delegation of Certain Authority, and Order of Succession in the Department of the Treasury."

c. Treasury Directive (TD) 18-02, "Authority to Approve Internal Revenue Regulations," dated September 4, 1986.

5. *Cancellation.* TD 27-10, "Organization and Functions of the Office of the Assistant Secretary (Tax Policy)," dated September 20, 1989, is superceded.

6. *Office of Primary Interest.* Office of the Assistant Secretry (Tax Policy).

DEPARTMENT OF VETERANS AFFAIRS

Privacy Act of 1974; Proposed Amendment of Systems Notice New Routine Use Statements

Notice, is hereby given that the Department of Veterans Affairs (VA) is considering adding two new routine use statements to the systems of records entitled, "General Personnel Records (Title 38)–VA" (76VA05) set forth at 53 FR 27258–27262, July 19, 1988, and the following 18 systems of records which are contained in "Privacy Act Issuances, 1987 Compilation, Volume V" on the pages indicated:

02VA135 Applicants for Employment Under Title 38, U.S.C.–VA on page 788 and amended at 54 FR 53031–53033, December 28, 1989.

08VA05 Employee Medical File System Records (Title 38)–VA on page 789 and amended at 53 FR 19065–19068, May 25, 1988.

08VA05 Employee Unfair Labor Practice Charges and Complaints, Negotiated Agreement Grievances and Arbitrations–VA on pages 769 and 770.

11VA51 Investigation Reports of Persons Allegedly Involved in Irregularities Concerning VA Laws, Regulations, Etc.–VA on pages 770–772.

13VA047 Individuals Submitting Invoices/Vouchers For Payment–VA on pages 772 and 773 and amended at 55 FR 37580–37585, September 12, 1990.

14VA135 Individuals Serving on a Fee Basis or Without Compensation (Consultants, Attendings, Others) Personnel Records–VA on pages 773 and 774.

23VA136 Patient Fee Basis Medical and Pharmacy Records–VA on pages 779 and 780.

24VA136 Patient Medical Records–VA on pages 780–782 and amended at 53 FR 42818, December 8, 1988, 55 FR 5112–5113, February 13, 1990, and 55 FR 37604–37605, September 13, 1990.

27VA047 Personnel and Accounting Pay System–VA on pages 782–784.

28VA119 Personnel Registration Under Controlled Substance Act–VA on page 784.

29VA11 Physician, Dentist and Supervisory Nurse Professional Standards Board Action File–VA on pages 784 and 785.

32VA00 Veteran, Employee and Citizen Health Care Facility Investigation Records–VA on pages 786 and 787.

34VA11 Veteran, Patient, Employee, and Volunteer Research and Development Project Records–VA on pages 787 and 788.

65VA05 Grievance Records–VA on pages 814 and 815

66VA53 Inspector General Complaint Center Records–VA on pages 816–818.

73VA14 Health Professional Scholarship Program–VA on pages 821 and 822.

The Health Care Quality Improvement Act of 1986 (Title IV of Public Law 99–660) set forth requirements for private sector health care facilities and organizations to report to the Secretary of the Department of Health and Human Services (HHS) adverse actions taken against physicians and licensed health care practitioners. Reports on medical malpractice, sanctions taken by State Licensing Boards, and reduction of clinical privileges following peer review are to be reported to the National Practitioner Data Bank operated by a private contractor (The Unisys Corporation) on behalf of the Secretary.

Congressional concern regarding the quality of medical care available to citizens gave rise to the legislation. Concerned with the increasing incidence of medical malpractice, coupled with the ability of incompetent practitioners to move from one state to another, Congress suggested that appropriate peer review processes and a national repository of practitioner specific information would improve the quality of medical care within the United States. Hospitals and other health care organizations will be required to access the Bank at the time of hiring and reprivileging health care practitioners.

Information to be maintained in the Bank includes malpractice payments and settlements made on behalf of all physicians, dentists and licensed health care practitioners, State licensing Board actions taken against practitioners, and peer review actions taken by health care entities which adversely affect a practitioner's clinical privileges or professional society membership. Reportable incidents include questions of professional competence and conduct, as well as voluntary licensure surrenders and voluntary privilege surrenders in lieu of investigation.

Participation in the reporting provisions of Public L. 99–660 is not binding on VA. However, through a Memorandum of Understanding with the Secretary of HHS, the Secretary of Veterans Affairs may apply the requirements to VA physicians, health care practitioners, applicants for employment and health care facilities. VA participation will include accessing the Bank at the time of hiring and clinical privileging/reprivileging health care practitioners and other times as deemed necessary by VA and to report payments for medical malpractice claims and decisions that adversely affect clinical privileges for more than 30 days.

The professional performance history of VA personnel or other relevant information is contained in several VA Privacy Act systems of records. Two routine uses are being proposed for all systems of records that contain information which the Department may wish to disclose to the Bank.

Interested persons are invited to submit written comments, suggestions, or objections regarding the proposed routine uses to the Secretary, Department of Veterans Affairs (271A), 810 Vermont Avenue NW., Washington, DC 20420. All relevant material received before November 19, 1990, will be considered. All written comments received will be available for public inspection only in Room 132 of the above address only between the hours of 8 a.m. and 4:30 p.m. Monday through Friday (except holidays) until November 28, 1990.

If no public comment is received during the 30-day review period allowed for public comment or unless otherwise published in the Federal Register by VA, the routine uses in the systems are effective November 19, 1990.

Approved: October 10, 1990.

Edward Derwinski,

Secretary of Veterans Affairs.

Notice of System of Records

1. In the system identified as 02VA135, "Applicants for Employment Under Title 38, U.S.C.–VA" appearing on page 788 of the Federal Register publication, "Privacy Act Issuances, 1987 Compilation, Volume V," and amended at 54 FR 53031–53033, December 28, 1989, the following routine uses are added:

23. Identifying information in this system, including name, address, social security number and other information as is reasonably necessary to identify such individual, may be disclosed to the National Practitioner Data Bank at the time of hiring and/or clinical privileging/reprivileging of health care practitioners, and other times as deemed necessary by VA, in order for VA to obtain information relevant to a Department decision concerning the hiring, privileging/reprivileging, retention or termination of the applicant or employee.

24. Relevant information from this system of records may be disclosed to the National Practitioner Data Bank or to a State or local government licensing board which maintains records concerning the issuance, retention or revocation of licenses, certifications, or registrations necessary to practice an occupation, profession or specialty when under the following circumstances, through a peer review process that is undertaken pursuant to VA policy, negligence, professional incompetence, responsibility for improper care, and/or professional misconduct has been assigned to a physician or licensed or certified health care practitioner: (1) On any payment in settlement (or partial settlement) of, or in satisfaction of a judgment in, a medical malpractice action or claim; or, (2) on any final decision that adversely affects the clinical privileges of a physician or practitioner for a period of more than 30 days. These records may also be disclosed as part of a computer matching program to accomplish these purposes.

10. In the system identified as 28VA118, "Personnel Registration Under Controlled Substance Act-VA" appearing on page 784 of the Federal Register publication, "Privacy Act Issuances, 1987 Compilation, Volume V," the following routine uses are added:

BILLING CODE 8320-01-M

DEPARTMENT OF VETERANS AFFAIRS

Privacy Act of 1974; Amendment of System Notice

AGENCY: Department of Veterans Affairs.

ACTION: Notice.

Notice is hereby given that the Department of Veterans Affairs (VA) is considering revising routine use 29 in the system of records entitled Compensation, Pension, Education and Rehabilitation Records—VA (58 VA 21/22) as set forth in Federal Register publication, "Privacy Act Issuances," 1987 Compilation, Volume V, page 810. Routine use 29 would be revised by adding provisions to allow the release of relevant information (including changes in disability ratings) to Federal agencies for the review of administrative tort claims and potential tort claims filed under the Federal Tort Claims Act, 28 U.S.C. 2672, the Military Claims Act, 10 U.S.C. 2733 and other similar claims statutes.

Frequently, we receive requests for information from other Federal agencies investigating administrative tort claims or potential claims under the Federal Tort Claims Act or a similar statute. The information is usually contained in VA medical records or C-files. We believe it appropriate to honor these agency requests for information.

Information contained in C-files is germane to a number of issues raised in administrative tort claims, including prior employment and income, number of marriages and dependents, and educational history of the veteran and dependents. Information in the C-file may also show that the veteran or survivors of a deceased veteran are receiving compensation or pension for the same injury or death that is the subject of the claim. The courts have held that the United States is entitled to a credit against tort damages for VA benefits paid and to be paid so as to prevent a double recovery from the government. See *Brooks* v. *United States*, 337 U.S. 49 (1949); *Johnson* v. *United States*, 510 F. Supp. 1039 (D. Montana 19810; aff'd in part, 704 F. 2d 1431 (9th Cir. 1983) (active duty serviceman's tort award reduced by past and future VA compensation calculated at over $1.4 million).

Because agencies investigate and settle tort claims under claims statutes other than the Federal Tort Claims Act; *e.g.*, the Military Claims Act, and investigate potential claims events as well as filed claims, it would also seem appropriate to include these in the routine use in order to permit disclosure.

VA has determined that release of information under the circumstances described above is a necessary and proper use of information in this system of records and that a specific routine use for transfer of this information is appropriate. The proposed revision to routine use 29 also restates with nonsubstantive changes the information currently in routine use 29 which provides that any information in this system may be disclosed to the United States Department of Justice or United States Attorneys in order for the foregoing parties to prosecute or defend litigation involving or pertaining to the United States.

Interested persons are invited to submit written comments, suggestions, or objections regarding the proposed amended routine use statements to the Secretary of Veterans Affairs (271A), Department of Veterans Affairs, 810 Vermont Avenue, NW., Washington, DC 20420. All relevant material received before November 19, 1990, will be considered. All written comments received will be available for public inspection at the above address only between the hours of 8 a.m. and 4:30 p.m., Monday through Friday (except holidays) until November 19, 1990.

If no public comment is received during the 30 day review period allowed for public comment or unless otherwise published in the Federal Register by the Department of Veterans Affairs, the amendments to 58 VA 21/22 included herein are effective November 19, 1990.

Approved: October 10, 1990.

Edward Derwinski,

Secretary of Veterans Affairs.

Notice of Amendment to System of Records

Routine use 29 in the system of records identified as 58 VA 21/22, "Compensation, Pension, Education and Rehabilitation records—VA" as set forth in Federal Register publication, Privacy Act Issuances," 1987 Compilation, Volume V, page 810, is revised to read as follows:

58 VA 21/22

SYSTEM NAME:

Compensation, Pension, Education and Rehabilitation Records—VA.

* * * * *

ROUTINE USES OF RECORDS MAINTAINED IN THE SYSTEM, INCLUDING CATEGORIES OF USERS AND THEIR PURPOSES OF SUCH USES:

* * * * *

29. Any relevant information (including changes in disability ratings) may be disclosed to the Department of Justice and United States Attorneys in the defense or prosecution of litigation involving the United States, and to Federal agencies upon their request in connection with review of administrative tort claims and potential tort claims filed under the Federal Tort Claims Act, 28 U.S.C. 2672, the Military Claims Act, 10 U.S.C. 2733, and other similar claims statutes.

Sunshine Act Meetings

Federal Register
Vol. 55, No. 203
Friday, October 19, 1990

This section of the FEDERAL REGISTER contains notices of meetings published under the "Government in the Sunshine Act" (Pub. L. 94-409) 5 U.S.C. 552b(e)(3).

FEDERAL RESERVE SYSTEM BOARD OF GOVERNORS

TIME AND DATE: 10:00 a.m., Wednesday, October 24, 1990.

PLACE: Marriner S. Eccles Federal Reserve Board Building, C Street entrance between 20th and 21st Streets, N.W., Washington, DC 20551.

STATUS: Closed.

MATTERS TO BE CONSIDERED:

1. Personnel actions (appointments, promotions, assignments, reassignments, and salary actions) involving individual Federal Reserve System employees.
2. Any items carried forward from a previously announced meeting.

CONTACT PERSON FOR MORE INFORMATION: Mr. Joseph R. Coyne, Assistant to the Board; (202) 452-3204. You may call (202) 452-3207, beginning at approximately 5 p.m. two business days before this meeting; for a recorded announcement of bank and bank holding company applications scheduled for the meeting.

Dated: October 16, 1990.

Jennifer J. Johnson,

Associate Secretary of the Board.

[FR Doc. 90-24852 Filed 10-16-90; 4:24 pm]

BILLING CODE 6210-01-M

SECURITIES AND EXCHANGE COMMISSION

Agency Meeting

Notice is hereby given, pursuant to the provisions of the Government in the Sunshine Act, Pub. L. 94-409, that the Securities and Exchange Commission will hold the following meeting during the week of October 15, 1990.

A closed meeting will be held on Tuesday, October 16, 1990, at 2:30 p.m.

The Commissioners, Counsel to the Commissioners, the Secretary to the Commission, and recording secretaries will attend the closed meeting. Certain staff members who have an interest in the matters may also be present.

The General Counsel of the Commission, or his designee, has certified that, in his opinion, one or more of the exemptions set forth in 5 U.S.C. 552b(c)(4), (8), (9)(A) and (10) and 17 CFR 200.402(a)(4), (8), (9)(i) and (10), permit consideration of the scheduled matters at a closed meeting.

Commissioner Lochner, as duty officer, voted to consider the items listed for the closed meeting in closed session.

The subject matter of the closed meeting scheduled for Tuesday, October 16, 1990, at 2:30 p.m., will be:

Institution of injunctive actions.
Institution of administrative proceedings of an enforcement nature.
Formal order of investigation.

At times, changes in Commission priorities require alterations in the scheduling of meeting items. For further information and to ascertain what, if any, matters have been added, deleted or postponed, please contact: Daniel Gray at (202) 272-2300.

Dated: October 16, 1990.

Jonathan G. Katz,

Secretary.

BILLING CODE 8010-01-M

TENNESSEE VALLEY AUTHORITY

[Meeting No. 1434]

TIME AND DATE: 10 a.m. (EDT), October 23, 1990.

PLACE: TVA Knoxville Office Complex, 400 West Summit Hill Drive, Knoxville, Tennessee.

STATUS: Open.

AGENDA: Approval of minutes of meeting held on September 19, 1990.

ACTION ITEMS:

New Business

A—Budget and Financing

A1. Authority to Write Off Uncollectible Account Receivable.

B—Purchase Awards

B1. Purchase Contract with Combustion Engineering, Inc., for Replacement Boiler Waterwall Panels for Widows Creek Power Plant.

B2. Coal Purchase for Allen, Colbert, Shawnee, and Widows Creek Power Plants (Requisition 22).

C—Power

C1. Arrangements with Associated Electric Cooperative, Inc.

C2. Interconnection Agreement with Nantahala Power and Light Company.

E—Real Property Transactions

E1. Deed Modification Affecting Approximately 0.01 Acre of Chickamauga Reservoir Land in Hamilton County, Tennessee.

F—Unclassified

F1. Contract with B&W Nuclear Service Company for Services Associated with Bellefonte Nuclear Plant.

F2. Filing of Condemnation Cases.

F3. Approval to Issue Suspension and Debarment Procedures.

F4. Supplement No. 4 to Personal Services Contract No. TV-77633A with Law Engineering, Incorporated.

F5. Personal Services Contract No. TV-78647T with Manpower Temporary Services.

INFORMATION ITEMS:

1. TVA Contribution to the TVA Retirement System for Fiscal Year 1991.
2. Contract with Systems Engineering Solutions, Inc., for Automatic Data Processing Equipment Support Services (Proposal YD-95404C).
3. Performance Increases for Employees on the Manager and Specialist Salary Schedule and Revisions to the Pay Rates for Excluded Positions.
4. Sale of Old Post Office Property in Chattanooga, Tennessee.
5. Increase Contract Amount with ABB Power T&D Company for Purchase of Transformers (Contract 90NLB-74678B).

CONTACT PERSON FOR MORE INFORMATION: Alan Carmichael, Manager, Media Relations, or a member of his staff can respond to requests for information about this meeting. Call (615) 632-6000, Knoxville, Tennessee. Information is also available at TVA's Washington Office (202) 479-4412.

Dated: October 16, 1990.

William L. Osteen, Jr.,

Associate General Counsel and Assistant Secretary.

Title 3—

The President

Proclamation 6287 of October 17, 1990

Veterans Day, 1990

By the President of the United States of America

A Proclamation

The Bible tells us that no greater love has a man than this: to lay down his life for a friend. Our Nation's military veterans are brave and selfless individuals who, when duty called, were willing to put themselves in harm's way to defend the lives and liberty of others. Each November 11, we pause with solemn pride and heartfelt gratitude to honor this special group of Americans. The sacrifices they have made for our sake—and, indeed, for the sake of millions of freedom-loving men and women around the world—can never be forgotten. Their abiding patriotism and enduring devotion to the ideals on which the United States is founded can never fail to inspire us.

This Nation's veterans have made their stand for freedom and democratic ideals from the Argonne Forest to the windswept Aleutian Islands, from the searing deserts of North Africa to the steep hills and dense jungles of Southeast Asia. Some have defended the cause of individual liberty and self-government in more recent conflicts and less remote places, such as Grenada and Panama. They have seen comrades-in-arms fall on the field of battle, giving "the last full measure of devotion" for our country and the vision of freedom and justice we hold dear. They, too, have suffered and sacrificed, carrying on the light of liberty with efforts that have been equally selfless and heroic.

It is fitting that we pause on the anniversary of "Armistice Day," a day of peace and celebration, to honor America's veterans and to express our gratitude for their courage and sacrifice. World War I, which ended with the signing of the Armistice on November 11, 1918, did not, as millions of people hoped, prove to be "The War to End All Wars." Nevertheless, we know that our world is safer, freer, and more peaceful today thanks to the vigilance and resolve of our Armed Forces. Indeed, our Nation's veterans have helped to bring peace and freedom to regions of the world that once suffered under the shadow of hostility and oppression. The triumph of democratic ideals in Eastern Europe and other parts of the world provides powerful evidence that their sacrifices were not made in vain.

Although the dramatic social and political changes we have witnessed around the world during the past year provide a resounding affirmation of the ideals our veterans have fought to uphold, current events in the Persian Gulf region underscore the need for continued strength and vigilance on the part of free nations. As veterans have so often reminded us, eternal vigilance is, indeed, the price of liberty. These great heroes who have left their own "footprints on the sands of time" know that preparedness deters aggression, and they understand the important task before those American service men and women now keeping watch along the sands and off the shores of Saudi Arabia.

On this Veterans Day, mindful of President Wilson's call to honor our Nation's war heroes with a 2-minute interval of silence at 11:00 a.m. on November 11, 1919, let us pause to remember and pray for all those men and women who have since served in the United States Armed Forces. Through special services, programs, and ceremonies held in their honor on this day, let us affirm that their singular contributions to our country are cherished and remembered.

Let us also strive, each and every day of the year, to ensure that ours remains a land worthy of the great love our veterans have shown for it.

In order that we may pay due tribute to those who have served in our Armed Forces, the Congress has provided (5 U.S.C. 6103(a)) that November 11 of each year shall be set aside as a legal public holiday to honor America's veterans.

NOW, THEREFORE, I, GEORGE BUSH, President of the United States of America, do hereby proclaim Sunday, November 11, 1990, as Veterans Day. I urge all Americans to honor our veterans through appropriate public ceremonies and private prayers. I also call upon Federal, State, and local government officials to display the flag of the United States and to encourage and participate in patriotic activities in their communities. I invite civic and fraternal organizations, churches, schools, businesses, unions, and the media to support this national observance with suitable commemorative expressions and programs.

IN WITNESS WHEREOF, I have hereunto set my hand this seventeenth day of October, in the year of our Lord nineteen hundred and ninety, and of the Independence of the United States of America the two hundred and fifteenth.

George Bush

Executive Order 12731 of October 17, 1990

Principles of Ethical Conduct for Government Officers and Employees

By virtue of the authority vested in me as President by the Constitution and the laws of the United States of America, and in order to establish fair and exacting standards of ethical conduct for all executive branch employees, it is hereby ordered that Executive Order 12674 of April 12, 1989, is henceforth modified to read as follows:

"EXECUTIVE ORDER

"_____

"PRINCIPLES OF ETHICAL CONDUCT FOR GOVERNMENT OFFICERS AND EMPLOYEES

"By virtue of the authority vested in me as President by the Constitution and the laws of the United States of America, and in order to establish fair and exacting standards of ethical conduct for all executive branch employees, it is hereby ordered as follows:

"Part I—Principles of Ethical Conduct

"Section 101. *Principles of Ethical Conduct.* To ensure that every citizen can have complete confidence in the integrity of the Federal Government, each Federal employee shall respect and adhere to the fundamental principles of ethical service as implemented in regulations promulgated under sections 201 and 301 of this order:

"(a) Public service is a public trust, requiring employees to place loyalty to the Constitution, the laws, and ethical principles above private gain.

"(b) Employees shall not hold financial interests that conflict with the conscientious performance of duty.

"(c) Employees shall not engage in financial transactions using nonpublic Government information or allow the improper use of such information to further any private interest.

"(d) An employee shall not, except pursuant to such reasonable exceptions as are provided by regulation, solicit or accept any gift or other item of monetary value from any person or entity seeking official action from, doing business with, or conducting activities regulated by the employee's agency, or whose interests may be substantially affected by the performance or nonperformance of the employee's duties.

"(e) Employees shall put forth honest effort in the performance of their duties.

"(f) Employees shall make no unauthorized commitments or promises of any kind purporting to bind the Government.

"(g) Employees shall not use public office for private gain.

"(h) Employees shall act impartially and not give preferential treatment to any private organization or individual.

"(i) Employees shall protect and conserve Federal property and shall not use it for other than authorized activities.

"(j) Employees shall not engage in outside employment or activities, including seeking or negotiating for employment, that conflict with official Government duties and responsibilities.

"(k) Employees shall disclose waste, fraud, abuse, and corruption to appropriate authorities.

"(l) Employees shall satisfy in good faith their obligations as citizens, including all just financial obligations, especially those—such as Federal, State, or local taxes—that are imposed by law.

"(m) Employees shall adhere to all laws and regulations that provide equal opportunity for all Americans regardless of race, color, religion, sex, national origin, age, or handicap.

"(n) Employees shall endeavor to avoid any actions creating the appearance that they are violating the law or the ethical standards promulgated pursuant to this order.

"**Sec. 102.** *Limitations on Outside Earned Income.*

"(a) No employee who is appointed by the President to a full-time noncareer position in the executive branch (including full-time noncareer employees in the White House Office, the Office of Policy Development, and the Office of Cabinet Affairs), shall receive any earned income for any outside employment or activity performed during that Presidential appointment.

"(b) The prohibition set forth in subsection (a) shall not apply to any full-time noncareer employees employed pursuant to 3 U.S.C. 105 and 3 U.S.C. 107(a) at salaries below the minimum rate of basic pay then paid for GS–9 of the General Schedule. Any outside employment must comply with relevant agency standards of conduct, including any requirements for approval of outside employment.

"Part II—Office of Government Ethics Authority

"**Sec. 201.** *The Office of Government Ethics.* The Office of Government Ethics shall be responsible for administering this order by:

"(a) Promulgating, in consultation with the Attorney General and the Office of Personnel Management, regulations that establish a single, comprehensive, and clear set of executive-branch standards of conduct that shall be objective, reasonable, and enforceable.

"(b) Developing, disseminating, and periodically updating an ethics manual for employees of the executive branch describing the applicable statutes, rules, decisions, and policies.

"(c) Promulgating, with the concurrence of the Attorney General, regulations interpreting the provisions of the post-employment statute, section 207 of title 18, United States Code; the general conflict-of-interest statute, section 208 of title 18, United States Code; and the statute prohibiting supplementation of salaries, section 209 of title 18, United States Code.

"(d) Promulgating, in consultation with the Attorney General and the Office of Personnel Management, regulations establishing a system of nonpublic (confidential) financial disclosure by executive branch employees to complement the system of public disclosure under the Ethics in Government Act of 1978. Such regulations shall include criteria to guide agencies in determining which employees shall submit these reports.

"(e) Ensuring that any implementing regulations issued by agencies under this order are consistent with and promulgated in accordance with this order.

"**Sec. 202.** *Executive Office of the President.* In that the agencies within the Executive Office of the President (EOP) currently exercise functions that are

not distinct and separate from each other within the meaning and for the purposes of section 207(c) of title 18, United States Code, those agencies shall be treated as one agency under section 207(c) of title 18, United States Code.

"Part III—Agency Responsibilities

"Sec. 301. *Agency Responsibilities.* Each agency head is directed to:

"(a) Supplement, as necessary and appropriate, the comprehensive executive branch-wide regulations of the Office of Government Ethics, with regulations of special applicability to the particular functions and activities of that agency. Any supplementary agency regulations shall be prepared as addenda to the branch-wide regulations and promulgated jointly with the Office of Government Ethics, at the agency's expense, for inclusion in Title 5 of the Code of Federal Regulations.

"(b) Ensure the review by all employees of this order and regulations promulgated pursuant to the order.

"(c) Coordinate with the Office of Government Ethics in developing annual agency ethics training plans. Such training shall include mandatory annual briefings on ethics and standards of conduct for all employees appointed by the President, all employees in the Executive Office of the President, all officials required to file public or nonpublic financial disclosure reports, all employees who are contracting officers and procurement officials, and any other employees designated by the agency head.

"(d) Where practicable, consult formally or informally with the Office of Government Ethics prior to granting any exemption under section 208 of title 18, United States Code, and provide the Director of the Office of Government Ethics a copy of any exemption granted.

"(e) Ensure that the rank, responsibilities, authority, staffing, and resources of the Designated Agency Ethics Official are sufficient to ensure the effectiveness of the agency ethics program. Support should include the provision of a separate budget line item for ethics activities, where practicable.

"Part IV—Delegations of Authority

"Sec. 401. *Delegations to Agency Heads.* Except in the case of the head of an agency, the authority of the President under sections 203(d), 205(e), and 208(b) of title 18, United States Code, to grant exemptions or approvals to individuals, is delegated to the head of the agency in which an individual requiring an exemption or approval is employed or to which the individual (or the committee, commission, board, or similar group employing the individual) is attached for purposes of administration.

"Sec. 402. *Delegations to the Counsel to the President.*

"(a) Except as provided in section 401, the authority of the President under sections 203(d), 205(e), and 208(b) of title 18, United States Code, to grant exemptions or approvals for Presidential appointees to committees, commissions, boards, or similar groups established by the President is delegated to the Counsel to the President.

"(b) The authority of the President under sections 203(d), 205(e), and 208(b) of title 18, United States Code, to grant exemptions or approvals for individuals appointed pursuant to 3 U.S.C. 105 and 3 U.S.C. 107(a), is delegated to the Counsel to the President.

"Sec. 403. *Delegation Regarding Civil Service.* The Office of Personnel Management and the Office of Government Ethics, as appropriate, are delegated the authority vested in the President by 5 U.S.C. 7301 to establish general regulations for the implementation of this Executive order.

"Part V—General Provisions

"Sec. 501. *Revocations.* The following Executive orders are hereby revoked:

"(a) Executive Order No. 11222 of May 8, 1965.

"(b) Executive Order No. 12565 of September 25, 1986.

"Sec. 502. *Savings Provision.*

"(a) All actions already taken by the President or by his delegates concerning matters affected by this order and in force when this order is issued, including any regulations issued under Executive Order 11222, Executive Order 12565, or statutory authority, shall, except as they are irreconcilable with the provisions of this order or terminate by operation of law or by Presidential action, remain in effect until properly amended, modified, or revoked pursuant to the authority conferred by this order or any regulations promulgated under this order. Notwithstanding anything in section 102 of this order, employees may carry out preexisting contractual obligations entered into before April 12, 1989.

"(b) Financial reports filed in confidence (pursuant to the authority of Executive Order No. 11222, 5 C.F.R. Part 735, and individual agency regulations) shall continue to be held in confidence.

"Sec. 503. *Definitions.* For purposes of this order, the term:

"(a) 'Contracting officers and procurement officials' means all such officers and officials as defined in the Office of Federal Procurement Policy Act Amendments of 1988.

"(b) 'Employee' means any officer or employee of an agency, including a special Government employee.

"(c) 'Agency' means any executive agency as defined in 5 U.S.C. 105, including any executive department as defined in 5 U.S.C. 101, Government corporation as defined in 5 U.S.C. 103, or an independent establishment in the executive branch as defined in 5 U.S.C. 104 (other than the General Accounting Office), and the United States Postal Service and Postal Rate Commission.

"(d) 'Head of an agency' means, in the case of an agency headed by more than one person, the chair or comparable member of such agency.

"(e) 'Special Government employee' means a special Government employee as defined in 18 U.S.C. 202(a).

"Sec. 504. *Judicial Review.* This order is intended only to improve the internal management of the executive branch and is not intended to create any right or benefit, substantive or procedural, enforceable at law by a party against the United States, its agencies, its officers, or any person.".

THE WHITE HOUSE,
October 17, 1990.

LIST OF PUBLIC LAWS

Last List October 18, 1990

This is a continuing list of public bills from the current session of Congress which have become Federal laws. It may be used in conjunction with "P L U S" (Public Laws Update Service) on 523-6641. The text of laws is not published in the Federal Register but may be ordered in individual pamphlet form (referred to as "slip laws") from the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402 (phone 202-275-3030).

H.R. 5841/Pub. L. 101-428

Capitol Police Retirement Act. (Oct. 15, 1990; 104 Stat. 922; 3 pages) Price: $1.00

S. 647/Pub. L. 101-429

Securities Enforcement Remedies and Penny Stock Reform Act of 1990. (Oct. 15, 1990; 104 Stat. 931; 28 pages) Price: $1.00

S. 1230/Pub. L. 101-430

To authorize the acquisition of additional lands for inclusion in the Knife River Indian Villages National Historic Site, and for other purposes. (Oct. 15, 1990; 104 Stat. 959; 1 page) Price: $1.00

S. 1974/Pub. L. 101-431

Television Decoder Circuitry Act of 1990. (Oct. 15, 1990; 104 Stat. 960; 3 pages) Price: $1.00

H.R. 3657/Pub. L. 101-432

Market Reform Act of 1990. (Oct. 16, 1990; 104 Stat. 963; 15 pages) Price: $1.00

S. 1511/Pub. L. 101-433

Older Workers Benefit Protection Act. (Oct. 16, 1990; 104 Stat. 978; 7 pages) Price: $1.00

H.R. 438/Pub. L. 101-434

To amend the Appalachian Regional Development Act of 1965 to include Columbiana County, Ohio, as part of the Appalachian region. (Oct. 17, 1990; 104 Stat. 985; 1 page) Price: $1.00

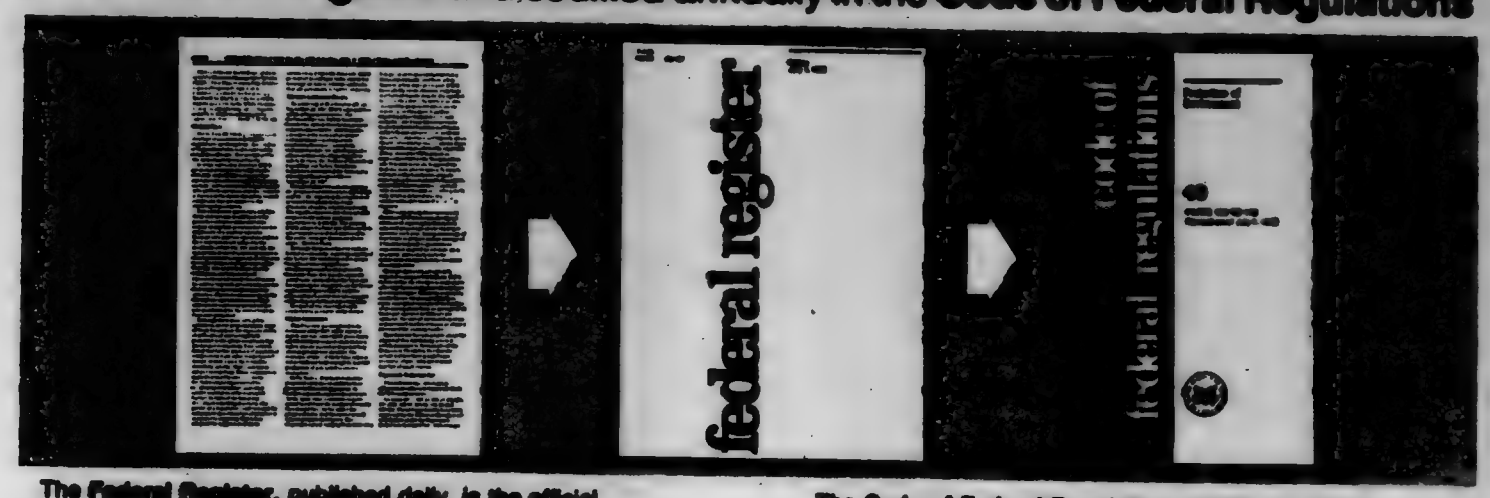
The Federal Register

Regulations appear as agency documents which are published daily in the **Federal Register** and codified annually in the **Code of Federal Regulations**



The **Federal Register**, published daily, is the official publication for notifying the public of proposed and final regulations. It is the tool for you to use to participate in the rulemaking process by commenting on the proposed regulations. And it keeps you up to date on the Federal regulations currently in effect.

Mailed monthly as part of a Federal Register subscription are: the LSA (List of CFR Sections Affected) which leads users of the Code of Federal Regulations to amendatory actions published in the daily Federal Register; and the cumulative Federal Register Index.

The Code of Federal Regulations (CFR) comprising approximately 196 volumes contains the annual codification of the final regulations printed in the Federal Register. Each of the 50 titles is updated annually.

Individual copies are separately priced. A price list of current CFR volumes appears both in the Federal Register each Monday and the monthly LSA (List of CFR Sections Affected). Price inquiries may be made to the Superintendent of Documents, or the Office of the Federal Register.

Public Laws

are now available for the 101st Congress, 2nd Session, 1990

Pamphlet prints of public laws, often referred to as slip laws, are the initial publication of Federal laws upon enactment and are printed as soon as possible after approval by the President. Legislative history references appear on each law. Subscription service includes all public laws, issued irregularly upon enactment, for the 101st Congress, 2nd Session, 1990.

(Individual laws also may be purchased from the Superintendent of Documents, Washington, DC 20402-9328. Prices vary. See Reader Aids Section of the Federal Register for announcements of newly enacted laws and prices).

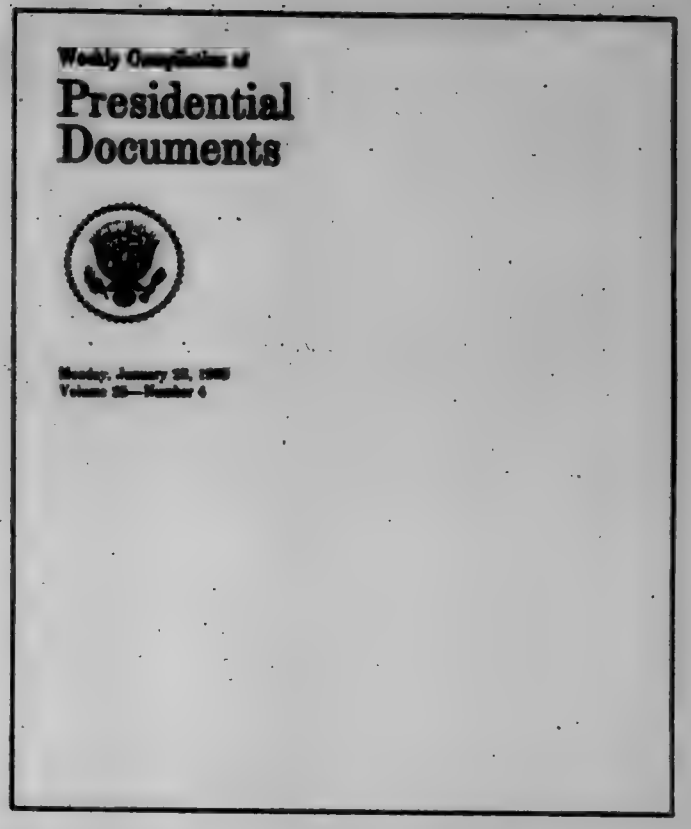
The authentic text behind the news . . .

The Weekly Compilation of **Presidential Documents**

Administration of George Bush



This unique service provides up-to-date information on Presidential policies and announcements. It contains the full text of the President's public speeches, statements, messages to Congress, news conferences, personnel appointments and nominations, and other Presidential materials released by the White House.

The Weekly Compilation carries a Monday dateline and covers materials released during the preceding week. Each issue contains an Index of Contents and a Cumulative Index to Prior Issues.

Separate indexes are published periodically. Other features include lists of acts approved by the President, nominations submitted to the Senate, a checklist of White House press releases, and a digest of other Presidential activities and White House announcements.

Published by the Office of the Federal Register, National Archives and Records Administration.

Guide to Record Retention Requirements

in the Code of Federal Regulations (CFR)

GUIDE: Revised January 1, 1989
SUPPLEMENT: Revised January 1, 1990

The GUIDE and the SUPPLEMENT should be used together. This useful reference tool, compiled from agency regulations, is designed to assist anyone with Federal recordkeeping obligations.

The various abstracts in the GUIDE tell the user (1) what records must be kept, (2) who must keep them, and (3) how long they must be kept.

The GUIDE is formatted and numbered to parallel the CODE OF FEDERAL REGULATIONS (CFR) for uniformity of citation and easy reference to the source document.

Compiled by the Office of the Federal Register, National Archives and Records Administration.

Order from Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402–9325.

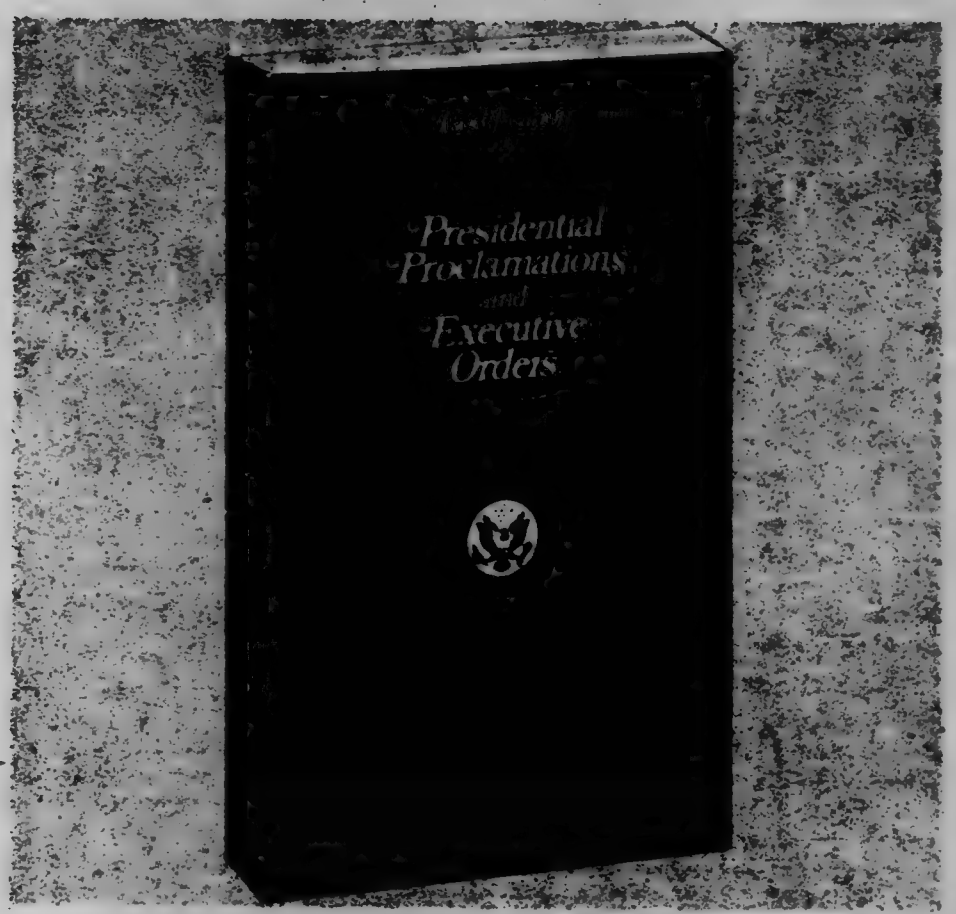
New edition .... Order now !



For those of you who must keep informed about Presidential Proclamations and Executive Orders, there is a convenient reference source that will make researching these documents much easier.

Arranged by subject matter, this edition of the *Codification* contains proclamations and Executive orders that were issued or amended during the period April 13, 1945, through January 20, 1989, and which have a continuing effect on the public. For those documents that have been affected by other proclamations or Executive orders, the codified text presents the amended version. Therefore, a reader can use the *Codification* to determine the latest text of a document without having to "reconstruct" it through extensive research.

Special features include a comprehensive index and a table listing each proclamation and Executive order issued during the 1945–1989 period—along with any amendments—an indication of its current status, and, where applicable, its location in this volume.

Published by the Office of the Federal Register, National Archives and Records Administration

FEDERAL REGISTER Published daily, Monday through Friday, (not published on Saturdays, Sundays, or on official holidays), by the Office of the Federal Register, National Archives and Records Administration, Washington, DC 20408, under the Federal Register Act (49 Stat. 500, as amended; 44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). Distribution is made only by the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402.

The Federal Register provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders and Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress and other Federal agency documents of public interest. Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless earlier filing is requested by the issuing agency.

The seal of the National Archives and Records Administration authenticates this issue of the Federal Register as the official serial publication established under the Federal Register Act. 44 U.S.C. 1507 provides that the contents of the Federal Register shall be judicially noticed.

The Federal Register will be furnished by mail to subscribers for $340 per year in paper form; $195 per year in microfiche form; or $37,500 per year for the magnetic tape. Six-month subscriptions are also available at one-half the annual rate. The charge for individual copies in paper or microfiche form is $1.50 for each issue, or $1.50 for each group of pages as actually bound, or $175.00 per magnetic tape. Remit check or money order, made payable to the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402, or charge to your GPO Deposit Account or VISA or Mastercard.

There are no restrictions on the republication of material appearing in the Federal Register.

How To Cite This Publication: Use the volume number and the page number. Example: 55 FR 12345.

Rules and Regulations

Federal Register
Vol. 55, No. 204
Monday, October 22, 1990

This section of the FEDERAL REGISTER contains regulatory documents having general applicability and legal effect, most of which are keyed to and codified in the Code of Federal Regulations, which is published under 50 titles pursuant to 44 U.S.C. 1510.
The Code of Federal Regulations is sold by the Superintendent of Documents. Prices of new books are listed in the first FEDERAL REGISTER issue of each week.

DEPARTMENT OF AGRICULTURE

Federal Crop Insurance Corporation

7 CFR Part 401

[Amdt. No. 63; Doc. No. 90083]

General Crop Insurance Regulations

AGENCY: Federal Crop Insurance Corporation, USDA.

ACTION: Interim rule with request for comment.

SUMMARY: The Federal Crop Insurance Corporation (FCIC) hereby amends the General Crop Insurance Regulations (7 CFR Part 401), effective for the 1991 and succeeding crop years by changing the current end of insurance period for certain soybean producing states from December 31 to December 10. The intent of this rule is to preserve the credibility of the crop insurance program with respect to preventing a situation where adverse selectivity may result in leaving soybeans in the field after optimum harvest time has been reached.

DATES: This interim rule is effective on October 22, 1990. Written comments, data, and opinions on this interim rule must be submitted not later than December 21, 1990, to be sure of consideration.

ADDRESSES: Written comments on this interim rule should be sent to Peter F. Cole, Office of the Manager, Federal Crop Insurance Corporation, room 4090, South Building, U.S. Department of Agriculture, Washington, DC 20250.

FOR FURTHER INFORMATION CONTACT: Peter F. Cole, Secretary, Federal Crop Insurance Corporation, U.S. Department of Agriculture, Washington, DC 20250, telephone (202) 447–3325.

SUPPLEMENTARY INFORMATION: This action has been reviewed under USDA procedures established by Departmental Regulation 1512–1. This action does not constitute a review as to the need, currency, clarity, and effectiveness of the regulations affected by this rule under those procedures. The sunset review date established for these regulations is October 1, 1992.

David W. Gebriel, Acting Manager, FCIC, (1) has determined that this action is not a major rule as defined by Executive Order 12291 because it will not result in: (a) an annual effect on the economy of $100 million or more; (b) major increases in costs or prices for consumers, individual industries, Federal, State, or local governments, or a geographical region; or (c) significant adverse effects on competition, employment, investment, productivity, innovation, or the ability of U.S.-based enterprises to compete with foreign-based enterprises in domestic or export markets; and (2) certifies that this action will not increase the Federal paperwork burden for individuals, small businesses, and other persons and will not have a significant economic impact on a substantial number of small entities.

This action is exempt from the provisions of the Regulatory Flexibility Act; therefore, no Regulatory Flexibility Analysis was prepared.

This program is listed in the Catalog of Federal Domestic Assistance under No. 10.450.

This program is not subject to the provisions of Executive Order 12372 which requires intergovernmental consultation with State and local officials. See the Notice related to 7 CFR part 3015, subpart V, published at 48 FR 29115, June 24, 1983.

This action is not expected to have any significant impact on the quality of the human environment, health, and safety. Therefore, neither an Environmental Assessment nor an Environmental Impact Statement is needed.

FCIC herewith amends the General Crop Insurance Regulations (7 CFR part 401) to provide that the end of insurance period for soybeans in those states currently listed as December 31, be changed to December 10. This earlier date is consistent with the December 10 end of insurance period in all other states where soybean crop insurance is available, and is consistent with soybean growing practices.

FCIC has determined that, in some instances, a soybean producer may elect not to harvest timely, even though conditions for harvest are good, because the crop insurance policy provides coverage that extends until December 31. Harvest delays increase the risk that a deterioration in crop quality will occur, which will result in an increase in indemnity claims. This practice, while not widespread, has: increased the cost of the crop insurance program that is borne by the taxpayer; adversely impacted actuarial soundness of the soybean program; and, contributed to the poor insurance experience for the crop.

FCIC is committed to operate a sound program of crop insurance protection to equally benefit all producers as mandated by the Federal Crop Insurance Act, as amended. Therefore, FCIC has determined to change the current policy date for the end of insurance period to December 10 in all states.

FCIC has further determined that, while the earliest soybean contract change date is November 30, unless an immediate change is made to the provisions for insuring soybeans to lessen this unnecessary exposure, an opportunity to limit needless risk and exposure of taxpayer funds will be missed and FCIC will likely incur avoidable losses.

For the reasons outlined above, FCIC has determined that, notwithstanding the provisions on 5 U.S.C. 553, with respect to public notice and comment, good cause exists for making this rule effective upon publication in the Federal Register.

This rule is effective on publication in the Federal Register. FCIC is soliciting public comment on this proposed rule for 60 days following publication in the Federal Register. Written comment should be sent to Peter F. Cole, Office of the Manager, Federal Crop Insurance Corporation, room 4090, South Building, U.S. Department of Agriculture, Washington, DC 20250.

All written comments received pursuant to this proposed rule will be available for public inspection and copying in the Office of the Manager, Federal Crop Insurance Corporation, room 4090, South Building, U.S. Department of Agriculture, Washington, DC 20250, during regular business hours, Monday through Friday.

This rule will be scheduled for review so that any amendment made necessary by public comment will be published in

the Federal Register as quickly as possible.

List of Subjects in 7 CFR Part 401

Crop insurance; Soybeans.

Interim Rule

Accordingly, pursuant to the authority contained in the Federal Crop Insurance Act, as amended (7 U.S.C. 1501 *et seq.*), the Federal Crop Insurance Corporation hereby amends the General Crop Insurance Regulations (7 CFR part 401), effective for the 1991 and succeeding crop years, by amending the Soybean Endorsement (7 CFR 401.117) in the following instances:

PART 401—[AMENDED]

1. The authority citation for 7 CFR part 401 continues to read as follows:

Authority: 7 U.S.C. 1506, 1516.

2. Paragraph 4 of 7 CFR 401.117, the Soybean Endorsement, is revised to read as follows:

§ 401.117 Soybean endorsement.

* * * * *

4. Insurance Period.

In accordance with the provisions of section 7 of the general crop insurance policy the calendar date for the end of the insurance period in all states is December 10 immediately following planting.

Done in Washington, DC, on October 2, 1990.

David W. Gabriel,

Manager, Federal Crop Insurance Corporation.

[FR Doc. 90-24873 Filed 10-19-90; 8:45 am]

BILLING CODE 3410-08-M

Agricultural Marketing Service

7 CFR Part 910

[Lemon Reg. 740]

Lemons Grown in California and Arizona; Limitation of Handling

AGENCY: Agricultural Marketing Service, USDA.

ACTION: Final rule.

SUMMARY: This regulation establishes the quantity of California-Arizona lemons that may be shipped to domestic markets during the period from October 21 through October 27, 1990. Consistent with program objectives, such action is needed to balance the supplies of fresh lemons with the demand for such lemons during the period specified. This action was recommended by the Lemon Administrative Committee (Committee), which is responsible for local administration of the lemon marketing order.

EFFECTIVE DATE: Regulation 740 (7 CFR part 910) is effective for the period from October 21 through October 27, 1990.

FOR FURTHER INFORMATION CONTACT: Beatriz Rodriguez, Marketing Specialist, Marketing Order Administration Branch, Fruit and Vegetable Division, Agricultural Marketing Service, U.S. Department of Agriculture (Department), Room 2524–S, P.O. Box 96456, Washington, DC 20090–6456; telephone: (202) 475–3861.

SUPPLEMENTARY INFORMATION: This final rule is issued under Marketing Order 910 (7 CFR part 910), as amended, regulating the handling of lemons grown in California and Arizona. This order is effective under the Agricultural Marketing Agreement Act of 1937, as amended, hereinafter referred to as the Act.

This final rule has been reviewed by the Department in accordance with Departmental Regulation 1512–1 and the criteria contained in Executive Order 12291 and has been determined to be a "non-major" rule.

Pursuant to requirements set forth in the Regulatory Flexibility Act (RFA), the Administrator of the Agricultural Marketing Service (AMS) has considered the economic impact of this action on small entities as well as larger ones.

The purpose of the RFA is to fit regulatory actions to the scale of business subject to such actions in order that small businesses will not be unduly or disproportionately burdened. Marketing orders issued pursuant to the Act, and rules issued thereunder, are unique in that they are brought about through group action of essentially small entities acting on their own behalf. Thus, both statutes have small entity orientation and compatibility.

There are approximately 70 handlers of lemons grown in California and Arizona subject to regulation under the lemon marketing order and approximately 2,000 lemon producers in the regulated area. Small agricultural producers have been defined by the Small Business Administration (13 CFR 121.2) as those having annual receipts of less than $500,000 and small agricultural service firms are defined as those whose annual receipts are less than $3,500,000. The majority of handlers and producers of California-Arizona lemons may be classified as small entities.

The California-Arizona lemon industry is characterized by a large number of growers located over a wide area. The Committee's estimate of the 1990–91 production is 42,140 cars (one car equals 1,000 cartons at 38 pounds net weight each), compared to 37,881 cars during the 1989–90 season. The production area is divided into three districts which span California and Arizona. The Committee estimates District 1, central California, 1990–91 production at 6,600 cars compared to the 4,158 cars produced in 1989–90. In District 2, southern California, the crop is expected to be 24,700 cars compared to the 24,292 cars produced last year. In District 3, the California desert and Arizona, the Committee estimates a production of 10,840 cars compared to the 9,436 cars produced last year. According to the National Agricultural Statistics Service, 1990–91 lemon production is expected to total 40,200 cars, 6 percent above the 1989–90 season and 1 percent more than the crop utilized in 1988–89.

The three basic outlets for California-Arizona lemons are the domestic fresh, export, and processing markets. The domestic (regulated) fresh market is a preferred market for California-Arizona lemons. Based on its crop estimate of 42,140 cars, the Committee estimates that about 42.5 percent of the 1990–91 crop will be utilized in fresh domestic channels (17,900 cars), compared with the 1989–90 total of 16,600 cars, about 44 percent of the total production of 37,881 cars in 1989–90. Fresh exports are projected at 20.1 percent of the total 1990–91 crop utilization compared with 22 percent in 1989–90. Processed and other uses would account for the residual 37.4 percent compared with 34 percent of the 1989–90 crop.

Volume regulations issued under the authority of the Act and Marketing Order No. 910 are intended to provide benefits to growers and consumers. Reduced fluctuations in supplies and prices result from regulating shipping levels and contribute to a more stable market. The intent of regulation is to achieve a more even distribution of lemons in the market throughout the marketing season and to avoid unreasonable fluctuations in supplies and prices.

Based on the Committee's marketing policy, the crop and market information provided by the Committee, and other information available to the Department, the costs of implementing the regulations are expected to be more than offset by the potential benefits of regulation.

Reporting and recordkeeping requirements under the lemon marketing order are required by the Committee from handlers of lemons. However, handlers in turn may require individual growers to utilize certain reporting and recordkeeping practices to enable handlers to carry out their functions.

Costs incurred by handlers in connection with recordkeeping and reporting requirements may be passed on to growers.

The Committee submitted its marketing policy for the 1990–91 season to the Department on June 19. The marketing policy discussed, among other things, the potential use of volume and size regulations for the ensuing season. The Committee considered the use of volume regulation for the season. This marketing policy is available from the Committee or Ms. Rodriguez. The Department reviewed that policy with respect to administrative requirements and regulatory alternatives in order to determine if the use of volume regulations would be appropriate.

The Committee met publicly on October 16, 1990, in Los Angeles, California, to consider the current and prospective conditions of supply and demand and unanimously recommended that 325,000 cartons is the quantity of lemons deemed advisable to be shipped to fresh domestic markets during the specified week. The marketing information and data provided to the Committee and used in its deliberations were compiled by the Committee's staff or presented by Committee members at the meeting. This information included, but was not limited to, price data for the previous week from Department market news reports and other sources, the preceding week's shipments and shipments to date, crop conditions, weather and transportation conditions, and a reevaluation of the prior week's recommendation in view of the above.

The Department reviewed the Committee's recommendation in light of the Committee's projections as set forth in its 1990–91 marketing policy. This recommended amount is 26,000 cartons above the estimated projections in the Committee's current shipping schedule.

During the week ending on October 13, 1990, shipments of lemons to fresh domestic markets, including Canada, totaled 312,000 cartons compared with 294,000 cartons shipped during the week ending on October 14, 1989. Export shipments totaled 176,000 cartons compared with 196,000 cartons shipped during the week ending on October 14, 1989. Processing and other uses accounted for 267,000 cartons compared with 218,000 cartons shipped during the week ending on October 14, 1989.

Fresh domestic shipments to date for the 1990–91 season total 3,358,000 cartons compared with 3,209,000 cartons shipped by this time during the 1989–90 season. Export shipments total 1,467,000 cartons compared with 1,637,000 cartons shipped by this time during 1989–90. Processing and other use shipments total 2,479,000 cartons compared with 1,548,000 cartons shipped by this time during 1989–90.

For the week ending on October 13, 1990, regulated shipments of lemons to the fresh domestic market were 312,000 cartons on an adjusted allotment of 344,000 cartons which resulted in net undershipments of 32,000 cartons. Regulated shipments for the current week (October 14 through October 20, 1990) are estimated at 325,000 cartons on an adjusted allotment of 345,000 cartons. Thus, undershipments of 20,000 cartons could be carried over into the week ending on October 27, 1990.

The average f.o.b. shipping point price for the week ending on October 13, 1990, was $13.48 per carton based on a reported sales volume of 306,000 cartons compared with last week's average of $14.03 per carton on a reported sales volume of 310,000 cartons. The 1990–91 season average f.o.b. shipping point price to date is $13.16 per carton. The average f.o.b. shipping point price for the week ending on October 14, 1989, was $14.69 per carton; the season average f.o.b. shipping point price at this time during 1989–90 was $14.71 per carton.

The Department's Market News Service reported that, as of October 16, the demand for lemons is moderate and the market is "about steady". At the meeting, some Committee members commented that the current demand for lemons is good. It was noted that there is some inventory build-up on small-sized (165's), first grade fruit and some slight increase in inventory on large-sized (115's and larger), second grade lemons. One Committee member indicated that volume regulation is needed to help maintain market stability. Another member supported the utilization of volume regulation due to the increase in storage and the transition between districts. The Committee unanimously recommended volume regulation for the period from October 21 through October 27, 1990.

Based upon fresh utilization levels indicated by the Committee and an econometric model developed by the Department, the California-Arizona 1990–91 season average fresh on-tree price is estimated at $8.83 per carton, 107 percent of the projected season average fresh on-tree parity equivalent price of $8.24 per carton. The California-Arizona 1989–90 season average fresh on-tree price is estimated at $9.02, 121 percent of the projected season average fresh on-tree parity equivalent price of $7.47 per carton.

Limiting the quantity of lemons that may be shipped during the period from October 21 through October 27, 1990, would be consistent with the provisions of the marketing order by tending to establish and maintain, in the interest of producers and consumers, an orderly flow of lemons to market.

Based on considerations of supply and market conditions, it is found that this action will tend to effectuate the declared policy of the Act.

Based on the above information, the Administrator of the AMS has determined that issuance of this rule will not have a significant economic impact on a substantial number of small entities.

Pursuant to 5 U.S.C. 553, it is further found and determined that it is impracticable, unnecessary, and contrary to the public interest to give preliminary notice and engage in further public procedure with respect to this action and that good cause exists for not postponing the effective date of this action until 30 days after publication in the Federal Register. This is because there is insufficient time between the date when information became available upon which this regulation is based and the effective date necessary to effectuate the declared policy of the Act.

In addition, market information needed for the formulation of the basis for this action was not available until October 16, 1990, and this action needs to be effective for the regulatory week which begins on October 21, 1990. Further, interested persons were given an opportunity to submit information and views on the regulation at an open meeting, and handlers were apprised of its provisions and effective time. It is necessary, therefore, in order to effectuate the declared purposes of the Act, to make this regulatory provision effective as specified.

PART 910—LEMONS GROWN IN CALIFORNIA AND ARIZONA

For the reasons set forth in the preamble, 7 CFR part 910 is amended as follows:

1. The authority citation for 7 CFR part 910 continues to read as follows:

Authority: Secs. 1–19, 48 Stat. 31, as amended; 7 U.S.C. 601–674.

2. Section 910.1040 is added to read as follows:

Note: This section will not appear in the Code of Federal Regulations.

§ 910.1040 Lemon Regulation 740.

The quantity of lemons grown in California and Arizona which may be handled during the period from October 21 through October 27, 1990, is established at 325,000 cartons.

Dated: October 17, 1990.

Robert C. Keeney,

Deputy Director, Fruit and Vegetable Division.

7 CFR Part 1230

[No. LS-90-108]

Pork Promotion, Research, and Consumer Information

AGENCY: Agricultural Marketing Service; USDA.

ACTION: Final rule.

SUMMARY: This final rule adopts without modification an interim final rule which amended regulations issued under the Pork Promotion, Research, and Consumer Information Order (Order) by revising the table which lists the Harmonized Tariff System (HTS) numbers for imported pork and pork products to conform to changes in the HTS for imported pork and pork products implemented by U.S. Customs Service (USCS). This change will facilitate the collection of assessments due on imported pork and pork products by USCS.

EFFECTIVE DATE: Effective November 21, 1990.

FOR FURTHER INFORMATION CONTACT: Ralph L. Tapp, Chief; Marketing Program Branch; Livestock and Seed Division; Agricultural Marketing Service; USDA, room 2624-S; P.O. Box 96456; Washington, DC 20090-6456; Telephone — 202/382-1115.

SUPPLEMENTARY INFORMATION: This final rule has been reviewed under USDA procedures established to implement Executive Order No. 12291 and Departmental Regulation 1512-1 and is hereby classified as a non-major rule under the criteria contained therein.

This action was also reviewed under the Regulatory Flexibility Act (RFA) (5 U.S.C. 601 *et seq.*) Many importers may be classified as small entities. This final rule merely (1) revises the numbers identifying imported pork and pork products listed in the table in § 1230.110 (55 FR 21848) in the regulations to conform to recent USCS changes in the HTS numbering system for imported pork and pork products. In addition, the action will not impose any requirements on importers beyond those previously discussed in the September 5, 1986, issue of the **Federal Register** (51 FR 31898) when it was determined that the Order would not have a significant effect upon a substantial number of small entities. The change in the HTS numbers for imported pork and pork products is merely a technical change and will impose no new requirements on the industry. Accordingly, the Administrator of the Agricultural Marketing Service has determined that this action will not have a significant economic impact upon a substantial number of small entities.

The Pork Promotion, Research, and Consumer Information Act of 1985 (7 U.S.C. 4801-4819) approved December 23, 1985, authorizes the establishment of a national pork promotion, research, and consumer information program. The program is funded by an assessment of 0.25 percent of the market value of live porcine animals sold in the United States and an equivalent amount on imported live porcine animals, pork, and pork products. The final Order establishing a pork promotion, research, and consumer information program was published in the September 5, 1986, issue of the **Federal Register** (51 FR 31898) and assessments began on November 1, 1986. The Order requires importers of live porcine animals to pay an amount equal to 0.25 percent of their market value and importers of pork and pork products to pay an amount which represents 0.25 percent of the value of the live porcine animals from which the pork and pork products were derived based upon the most recent annual seven-market average price for barrows and gilts, as published by the Department. As a matter of practicality, the assessments on imported pork and pork products are expressed in cents per pound. The formula for converting the live animal equivalent of 0.25 percent of the value of the live animals to an assessment per pound is described in the supplementary information accompanying the Order and published in the September 5, 1986, issue of the **Federal Register** (51 FR 31901). The schedule of assessments is listed in a table in section 1230.110 of the regulations (55 FR 21848) for each type of pork and pork product identified by a HTS number.

The purpose of this final rule is to revise the present table found under section 1230.110 of the regulations (55 FR 21848) to reflect the most recent changes USCS has implemented in the HTS numbers for imported pork and pork products.

These changes delete seven HTS numbers and subdivide each of the categories represented by those seven HTS numbers into two new categories and renumbers each new category. The cents per pound and per kilogram assessments are the same for the 14 new HTS numbers as they were for the corresponding deleted seven HTS numbers contained in the table in § 1230.110 (55 FR 21848). A comparison of the deleted and replacement numbers may be found in the following table:

Deleted HTS No.	New HTS No.	HTS article description
0203.12.10000	0203.12.10107	Hams and cuts thereof (processed).
	0203.12.10205	Shoulders and cuts thereof (processed).
0203.12.90002	0203.12.90100	Hams and cuts thereof (other).
	0203.12.90206	Shoulders and cuts thereof (other).
0203.19.20000	0203.19.20108	Spareribs (processed).
	0203.19.20901	Other (processed).
0203.19.40006	0203.19.40104	Bellies.
	0203.19.40907	Other.
0210.11.00003	0210.11.00101	Hams and cuts thereof (bone-in).
	0210.11.00209	Shoulders and cuts thereof (bone-in). Salted, in brine, dried, or smoked.
0210.19.00005	0210.19.00103	Canadian style bacon.
	0210.19.00905	Other.
1601.00.20007	1601.00.20105	Pork, Canned.
	1601.00.20908	Pork, Other.

The other 19 HTS numbers and the per-pound and per-kilogram assessments listed in the table in § 1230.110 remain unchanged. These changes in the HTS numbers for imported pork and pork products do not

affect the assessments on imported swine. As a result of these changes the 26 HTS numbers listed in the table in § 1230.110 of the regulations (55 FR 21848) are increased to 33 HTS numbers for imported pork and pork products.

An interim final rule published on July 13, 1990, in the **Federal Register** requested comments from interested persons by August 20, 1990. No comments were received. This final rule adopts without modification the provisions of the interim final rule.

List of Subjects in 7 CFR Part 1230

Administrative practice and procedure, Advertising, Agricultural research, Live porcine animal, Marketing agreement, Meat and meat products, Pork and pork products, Recordkeeping requirements.

For the reasons set forth in the preamble, 7 CFR part 1230 is amended as follows:

PART 1230—PORK PROMOTION, RESEARCH, AND CONSUMER INFORMATION

1. The authority citation for 7 CFR part 1230 continues to read as follows:

Authority: 7 U.S.C. 4801–4819.

§ 1230–110 [Confirmed]

2. Accordingly, the interim rule amending § 1230.110 of 7 CFR part 1230, which was published at 55 FR 29341 on July 19, 1990, is adopted as a final rule without change.

Rural Telephone Bank

7 CFR Part 1610

Determination of the 1990 Fiscal Year Interest Rate on Rural Telephone Bank Loans

AGENCY: Rural Telephone Bank, USDA.

ACTION: Notice of 1990 fiscal year interest rate determination.

SUMMARY: In accordance with 7 CFR 1610.10, the Rural Telephone Bank's Fiscal Year 1990 cost of money rate has been established at 5.00%. Except for loans approved from October 1, 1987 through December 21, 1987 where borrowers elected to remain at interest rates set at loan approval, all loan advances made from October 1, 1989 through September 30, 1990 under Bank loans approved on or after October 1, 1987 shall bear interest at the rate of 5.00%.

The calculation of the Bank's cost of money rate for Fiscal Year 1990 is provided in Table 1. Since the calculated rate (4.75%) is less than the minimum rate allowed under 7 U.S.C. 948(b)(3)(A), the cost of money rate is set at the minimum rate of 5.00%. The methodology required to calculate the cost of money rate is established in 7 CFR 1610.10(c).

FOR FURTHER INFORMATION CONTACT: F. Lamont Heppe, Jr., Chief, Telephone Loans and Management Staff, Rural Electrification Administration, room 2250, South Building, U.S. Department of Agriculture, Washington, DC 20250, telephone number (202) 382–9550.

SUPPLEMENTARY INFORMATION: The cost of money rate methodology develops a weighted average rate for the Bank's cost of money by considering total fiscal year loan advances; the excess of fiscal year loan advances over amounts received in the fiscal year from issuances of Class A, B, and C stocks, debentures and other obligations; and the costs to the Bank of obtaining funds from these sources. During Fiscal Year 1990, the Bank paid the following dividends: the dividend on Class A stock was 2.00% as established in amended section 406(c) of the Rural Electrification Act; no dividends were payable on Class B stock as specified in 7 CFR 1610.10(c); and the dividend on Class C stock was established by the Bank at 8.5%.

The total amount received by the Bank in Fiscal Year 1990 from the issuance of Class A stock was $28,710,000. Total advances for the purchase of Class B stock and cash purchases for Class B stock were $8,688,650. Rescissions of loan funds advanced for Class B stock amounted to $1,033,871. Thus, the amount received by the Bank from the issuance of Class B stock, per 7 CFR 1610(c), was $7,654,779 ($8,688,650–$1,033,871). The total amount received by the Bank in Fiscal Year 1990 from the issuance of Class C stock was $10,066.

The Bank did not issue debentures or any other obligations during Fiscal Year 1990. Consequently, no cost was incurred related to the issuance of debentures subject to 7 U.S.C. 948(b)(3)(D).

The excess of Fiscal Year 1990 loan advances over amounts received from issuances of Class A, B, and C stocks and debentures and other obligations amounted to $71,320,146. The cost associated with this excess is the historical cost of money rate as defined in 7 U.S.C. 948(b)(3)(D)(v). The calculation of the Bank's historical cost of money rate is provided in Table 2. The methodology required to perform this calculation is described in 7 CFR 1610.10(c). The cost of money rates for fiscal years 1974 through 1987 are defined in section 406(b) of the RE Act, as amended by Public Law 100–203, and are listed in 7 CFR 1610.10(c) and Table 2 herein.

Dated: October 16, 1990.

Gary C. Byrne,
Governor, Rural Telephone Bank.

TABLE 1 RURAL TELEPHONE BANK FY 1990 COST OF MONEY RATE

Source of bank funds	Amount	Cost rate (percent)	Amount X cost rate	(Amount X rate)/ advances (percent)
FY 1990 Issuance of Class A Stock	$28,710,000	2.00	$574,200	0.5332
FY 1990 Issuance of Class B Stock	7,654,779	0.00	0	0.0000
FY 1990 Issuance of Class C Stock	10,066	8.50	856	0.0008
FY 1990 Issuance of Debentures and Other Obligations	0		0	0.0000

Customs Regulations Amendments Relating to the Steel Voluntary Restraint Arrangement Program; Correction

AGENCY: U.S. Customs Service, Department of the Treasury.

ACTION: Interim rule; correction.

SUMMARY: A document was published in the **Federal Register** (55 FR 37701) on September 13, 1990, setting forth interim regulations regarding the entry requirements applicable to imported steel products under the steel voluntary restraint arrangement program. This document corrects an error that appears in that document.

EFFECTIVE DATE: September 13, 1990.

FOR FURTHER INFORMATION CONTACT: Frank Crowe, Office of Trade Operations (202-566-8262).

SUPPLEMENTARY INFORMATION:

Background

A document was published in the **Federal Register** (55 FR 37701) on September 13, 1990, setting forth interim regulations regarding the entry requirements applicable to imported steel products under the steel voluntary restraint arrangement program. Included as § 10.323(d) was a requirement that, at the time of filing an application for admission of a covered steel product into a foreign trade zone, an application for privileged foreign status shall also be made for the steel product. This requirement was included in error and therefore should be removed. The effect of the removal of § 10.323(d) will be that imported steel products accompanied by the required export certificate or license may be admitted into a foreign trade zone in any status as may be appropriate under other existing requirements.

Corrections

1. On page 37702, third column, the last paragraph should be removed.

§ 10.323 [Corrected]

2. On page 37703-37704, in § 10.323, paragraph (d) should be removed.

Dated: October 15, 1990.

Harvey B. Fox,

Director, Office of Regulations and Rulings.

RIN 1515-AA97

Amendment to the Customs Regulations Regarding Access To Customs Security Areas

AGENCY: U.S. Customs Service, Department of the Treasury.

ACTION: Final rule.

SUMMARY: This document amends the Customs Regulations regarding access to Customs security areas to grant discretion to the district director of Customs to waive the Airport Security Area Bond for State or local government related agencies which operate airports. Such agencies must agree to comply with all applicable security regulations. This amendment does not relieve such agencies of the duty to comply with all other security provisions. In addition, the restructuring of these provisions in a separate subpart will clarify the responsibilities of employers who

employ persons to work in security areas of airports handling international commerce.

EFFECTIVE DATE: October 22, 1990.

FOR FURTHER INFORMATION CONTACT: Samuel McLinn, Office of Inspection and Control (202–566–2140).

SUPPLEMENTARY INFORMATION:

Background

Section 122.14 (19 CFR 122.14) is being revised as a separate subpart governing security areas at airports handling international arrivals, with minor editorial changes. These provisions are presented in essentially the same order as the paragraphs of § 122.14, with the addition of the airport security bond waiver provision cited below. The format of the subpart clarifies the Customs security area requirements and procedures by making the information contained in the regulations easier to locate and understand.

In a final rule published as T.D. 88–174 in the **Federal Register** of September 12, 1988 (51 FR 32448), Customs set forth provisions governing an identification system for all employees whose duties require access to Customs security areas at airports handling international air commerce. These provisions specified that unescorted access to security areas of airports accommodating international air commerce would be restricted to authorized employees for whom employers had conducted a background check and concluded that the presence of these employees would neither endanger the revenue nor threaten the security of the area. In response to frequent violations of these regulations, Customs amended § 122.14, Customs Regulations (19 CFR 122.14), by T.D. 88–46, 53 FR 29231, effective September 2, 1988, to require employers to post a bond sufficient to pay liquidated damages in the event of security regulation violations by the employers or their employees. Customs employees and employees of State or local government related agencies operating in some airports, however, frequently work so closely in insuring airport security that the cooperative nature of the relationship and the scrutiny under which such employees of these agencies perform their duties in Customs security areas combine to make the posting of bonds unnecessary for these agencies.

This document amends that portion of § 122.14(c), which under this final rule becomes § 122.182(c), to allow the district director of Customs discretion to waive the requirement for an Airport Security Area Bond from such State or local government related agencies to support applications for identification cards of agency employees who, regardless of title, the agency certifies via a background check to be an agency employee. The waiver of the bond requirement does not exempt such agencies or agency employees from filling out applications, completing background checks, wearing identification cards, strips, or seals or complying with all other applicable security regulations. The only discretion permitted the district director is the waiver of the bond requirement; further, the district director specifically retains the right to require a bond.

Inapplicability of Notice and Delayed Effective Date Provisions

Inasmuch as these regulations grant a benefit in permitting the district director to waive the requirement for a bond in certain cases and otherwise merely restructure existing regulations without change, it is in the public interest to make the regulatory changes as soon as possible. Accordingly, notice and public procedure are unnecessary pursuant to 5 U.S.C. 553(b)(B). For the same reasons, a delayed effective date is not required, pursuant to 5 U.S.C. 553(d)(3).

Executive Order 12291

Because this amendment does not meet the criteria for a "major rule" within the meaning of Executive Order 12291, a regulatory impact analysis is not required.

Regulatory Flexibility Act

Because no notice of proposed rulemaking is required by 5 U.S.C. 553 or any other statute the provisions of the Regulatory Flexibility Act (5 U.S.C. 601, *et seq.*) do not apply to the amendment.

Drafting Information

The principal author of this document was Michael Smith, Regulations and Disclosure Law Branch, Office of Regulations and Rulings, U.S. Customs Service. However, personnel from other offices participated in its development.

List of Subjects in 19 CFR Part 122

Air transportation, Airports, Airport Security.

Amendment to the Regulations

Accordingly, Part 122, Customs Regulations (19 CFR part 122) is amended as follows:

PART 122—AIR COMMERCE REGULATIONS

1. The authority citation for part 122 is revised to read as follows:

Authority: 5 U.S.C. 301; 19 U.S.C. 58b, 66, 1433, 1436, 1459, 1590, 1594, 1623, 1624, 1644, 49 U.S.C. App. 1509.

§ 122.14 [Removed and Reserved]

2. Section 122.14 is removed and reserved.

3. Subpart S consisting of §§ 122.161 through 122.168 is added to read as follows:

Subpart S—Access to Customs Security Areas

122.161 Definition of Customs security area.
122.162 Security provisions.
122.163 Denial of access.
122.164 Change of identification.
122.165 Report of loss or theft of identification cards.
122.166 Presentation of identification by other person.
122.167 Revocation or suspension of access.
122.168 Issuance of temporary identification.

Subpart S—Access to Customs Security Areas

§ 122.161 Definition of customs security area.

For purposes of this section, the term "Customs security area" means the Federal inspection services area at any airport accommodating international air commerce designated for processing passengers, crew, their baggage and effects arriving from foreign countries, as well as the aircraft deplaning and ramp area and other restricted areas designated by the district director of Customs. These areas will be posted as restricted to the extent possible and are established for the purpose of prohibiting unauthorized entries or contact with persons or objects.

§ 122.162 Security provisions.

(a) *Identification cards required.* With the exception of all Federal and uniformed State and local law enforcement personnel, all persons located at, operating out of, or employed by any airport accommodating international air commerce or its tenants or contractors, including air carriers, who have unescorted access to the Customs security area, must openly display or produce upon demand an approved identification card, strip, or seal issued by Customs. The approved identification card, strip, or seal shall be in the possession of the person in whose name it is issued whenever the person is in the Customs security area. The identification card, strip or seal remains the property of Customs, and any bearer must immediately surrender it upon demand by any authorized Customs officer.

(b) *Employers responsibility and liability.* Employers operating in Customs airport security areas shall advise all employees of the provisions of the Customs regulations relative to

those areas, require employees to familiarize themselves with those provisions and insure employee compliance. The employer shall also advise the district director of any changes of employment pursuant to § 122.182(g). The failure to comply with these regulations shall be considered a default of the conditions of the employer's bond, as hereafter specified, and shall make the employer liable for liquidated damages as specified in its bond.

(c) *Application and bond.* An application for an approved identification card, strip, or seal, as required by this section, shall be filed by the applicant with the district director on Customs Form 3078. The application requirement applies to all employees required to display an approved identification card by this section, regardless of the length of their employment. The application shall be supported by the bond of the applicant's employer or principal on Customs Form 301 containing the bond conditions set forth in §§ 113.62, 113.63, or 113.64 of this chapter, relating to importers or brokers, custodians of bonded merchandise, or international carriers. If the applicant's employer is not the principal on a Customs bond on Customs Form 301 for one or more of the activities stated above, the application shall be supported by an Airport Customs Security Area Bond, as set forth in appendix A of part 113 of this chapter. This bond may be waived, however, for State or local government-related agencies in the discretion of the district director. Waiver of this bond does not relieve any such agency or its employees from compliance with all other provisions of this subpart.

(d) *Background check.* For employees hired on or after November 1, 1985, an authorized official of the employer shall attest in writing that a background check has been conducted on the applicant, to the extent allowable by law. The background check shall include, at a minimum, references and employment history, to the extent necessary to verify representations made by the applicant relating to employment in the preceding 5 years. For employees hired before November 1, 1985, the authorized official of the employer need only attest to the fact that the employee was hired before that date. The authorized official of the employer shall attest that, to the best of his knowledge, the applicant meets the conditions necessary to perform functions associated with employment in the Customs security area. The fingerprints of the applicant may be required on fingerprint card form FD-258 at the time of the filing of the application. Proof of citizenship or authorized residency and a photograph may also be required. Additionally, the application may be investigated by Customs and a report prepared concerning the character of the applicant. Records of background investigations conducted by employers must be retained for a period of one year following cessation of employment and made available upon request of the district director.

(e) *Law Enforcement officers and other governmental officials.* Law enforcement officers and other Federal, State, or local officials whose official duties require access to the Customs security area may request from the district director the issuance of an approved identification card, strip, or seal. They need not make application nor submit to background checks for security area access. An Airport Customs Security Area Bond is not required.

(f) *Replacement identification.* A new identification card, strip or seal may be obtained from the district director in the following circumstances, without the completion of an additional application, except as determined by the district director in his discretion:

(1) A change in employee name or address;

(2) A change in the name or ownership of the employing company;

(3) A change in employer or airport authority identification card format; or

(4) Loss or theft of the identification card, strip, or seal (see § 122.185 of this part).

(g) *Surrender of cards.* Where the employee no longer requires access to the Customs security area for an extended period of time at the airport of issuance due to a change in duties, termination of employment, or other reason, the employer shall notify the district director in writing, at the time of such change, and shall return the identification card, strip, or seal to Customs. The notification shall include information regarding the disposition of the approved identification card, strip, or seal of the employee who no longer requires access. A summary of such information shall be filed quarterly or at such shorter intervals as established by the district director. If the employee returns to duties in the Customs security area at the airport for the same employer within 1 year, a Customs Form 3078, as required in § 122.182(c), need not be submitted.

§ 122.183 Denial of access.

(a) *Grounds for denial.* An approved identification card, strip, or seal shall not be issued to any person whose employment necessitates access to the Customs security area and whose access will, in the judgment of the district director, endanger the revenue or the security of the area. Grounds for denial of access shall include but are not limited to:

(1) Any cause which would justify suspension or revocation of the identification card, strip, or seal under the provisions of § 122.187 of this Part; or

(2) Evidence of a pending or past investigation which establishes criminal, or dishonest conduct, or a verified record of such conduct.

(b) *Notification of denial.* The district director shall give written notification to any person whose application for access to the Customs security area has been denied, fully stating the reasons for denial and setting forth specific appeal procedures. The employer shall be notified in writing that the applicant has been denied access to the area and that the detailed reasons for the denial have been furnished to the applicant. Detailed reasons regarding the denial, however, shall not be furnished to the employer by Customs.

(c) *Appeal of denial.* The denial will be final unless the applicant files with the district director a written notice of appeal within 10 days following receipt of the notice of denial. The notice of appeal shall be filed in duplicate and shall set forth the response of the applicant to the statement of the district director. The district director shall render his decision on the appeal to the applicant within 30 days of receipt of the notice of appeal.

(d) *Further appeal of denial.* Where the application on appeal is denied by the district director, the applicant may file a further written notice of appeal to the Commissioner of Customs within 10 days of receipt of the district director's decision on the appeal. The further notice of appeal shall be filed in duplicate and shall set forth the response of the applicant to the decision of the district director. The Commissioner or his designee shall review the appeal and render a written decision. The final decision shall be transmitted to the district director and served by him on the applicant.

§ 122.184 Change of identification.

The identification card, strip, or seal may be removed from the employee by the district director where, for security

reasons, a change in the nature of the identification is necessitated.

§ 122.185 Report of loss or theft of identification cards.

The loss or theft of an identification card, strip, or seal shall be promptly reported in writing by the employee to the district director. The card, strip, or seal may be replaced, as provided in § 122.182(f) of this part.

§ 122.186 Presentation of identification by other person.

If an approved identification card, strip, or seal is presented by a person other than the one to whom it was issued, the identification card, strip, or seal shall be removed and destroyed. An approved identification card, strip, or seal may be removed from an employee by any Customs officer designated by the district director.

§ 122.187 Revocation or suspension of access.

(a) *Grounds for revocation or suspension of access.* The district director may revoke or suspend access to the Customs security area and demand that the identification card, strip, or seal be surrendered in the following instances:

(1) The approved identification card, strip, or seal was obtained through fraud or the misstatement of a material fact;

(2) The employee is convicted of a felony or convicted of a misdemeanor involving theft, smuggling, or any theft connected crime;

(3) The employee permits the approved identification card, strip, or seal to be used by any other person or refuses to openly display or produce it upon the proper demand of a Customs officer;

(4) The continuation of privileges would, in the judgment of the district director, endanger the revenue or security of the area;

(5) The employee refuses or neglects to obey any proper order of a Customs officer, or any Customs order, rule, or regulation;

(6) The bond required by § 122.182(c) of this part is determined to be insufficient in amount or lacking sufficient sureties, and a satisfactory new bond with good and sufficient sureties is not furnished within a reasonable time.

(7) The employee no longer requires access to the Customs security area for an extended period of time at the airport of issuance because of a change in duties, termination of employment, or other reason.

(b) *Notice.* The district director shall suspend or revoke access to the Customs security area by giving notice of the proposed action in writing to the employee, with a copy of the notice to the employer. The notice shall be in the form of a statement specifically setting forth the grounds for revocation or suspension of the privilege and shall be final and conclusive upon the employee, unless a written notice of appeal as provided in paragraph (c) of this section is filed with the district director.

(c) *Appeal.* The employee may file a written notice of appeal of the revocation or suspension within 10 days following receipt of the notice of revocation or suspension. The notice of appeal shall be filed in duplicate and shall set forth the response of the employee to the statement of the district director. A hearing may be requested in the notice of appeal.

(d) *Hearing.* If a hearing is requested, it shall be held before a hearing officer designated by the Commissioner, or his designee, within 30 days following the request. The employee shall be notified of the time and place of the hearing at least 5 days before the hearing. The employee may be represented by counsel at the revocation or suspension hearing. All evidence and testimony of witnesses in such proceeding, including substantiation of charges and the answer thereto, shall be presented. Both parties shall have the right of cross-examination. A stenographic record of the proceedings shall be made upon request and a copy furnished to the employee. At the conclusion of the proceedings or review of a written appeal, the hearing officer or the district director shall promptly transmit all papers and the stenographic record to the Commissioner or his designee, together with the recommendation for final action. If neither the employee nor his attorney appear for a scheduled hearing, the hearing officer shall record that fact, accept any appropriate testimony, and conclude the hearing. The hearing officer shall promptly transmit all papers, together with his recommendations, to the Commissioner or his designee.

(e) *Additional written views.* Within 10 days after delivery of a copy of the stenographic record of the hearing to the Commissioner, or his designee, the employee may submit to the Commissioner, or his designee, additional written views and arguments on matters in the record.

(f) *Decision.* After consideration of the recommendation of the hearing officer or the district director, the Commissioner, or his designee, shall render a written decision. The decision shall be transmitted to the district director and served by the district director on the employee.

§ 122.188 Issuance of temporary identification.

(a) *Conditions for issuance.* When an approved identification card, strip, or seal is required under § 122.182(a) of this part and the district director determines that the application cannot be administratively processed in a reasonable period of time, an employer may, upon written request, be issued a temporary identification card, strip, or seal for his employee. The employer must satisfy the district director that a hardship would result if the request is not granted. Surety on the bond, as required by § 122.182(c), may be waived in the discretion of the district director but only for the period of the temporary identification card and its renewal period.

(b) *Validation period.* The temporary identification card, strip, or seal shall be valid for a period of 60 days. The district director may renew the temporary identification card, strip, or seal for additional 30 day periods where the circumstances under which the temporary identification card, strip, or seal was originally issued continue to exist. The temporary identification card, strip, or seal shall be destroyed by the district director when the permanent approved identification card, strip, or seal is issued, or the privileges granted thereby are withdrawn.

(c) *Temporary employees and official visitors.* The provisions of this section shall also apply to temporary employees and official visitors requiring access to the Customs security area. In the case of temporary employees, the identification card, strip, or seal shall be valid for a period of 30 days. In the case of official visitors, the temporary identification card, strip, or seal shall be valid for the day of issuance only. Temporary employee and official visitor identification cards, stripe, or seals are renewable for periods equal to their original period of validity.

(d) *Revocation of denial and access.* The temporary identification card, strip, or seal may be revoked and access to the Customs security area denied at any time if the holder of the temporary identification card, strip, or seal refuses or neglects to obey any proper order of a Customs officer, or any Customs order, rule, or regulation, or if, in the judgment of the district director, continuation of the privileges granted thereby would

endanger the revenue or pose a threat to the Customs security area.

Michael H. Lane,

Acting Commissioner of Customs.

Approved.

John P. Simpson,

Acting Assistant Secretary of the Treasury.

BILLING CODE 4820-02-M

DEPARTMENT OF DEFENSE

Office of the Secretary

32 CFR Part 199

[DoD Regulation 6010.8-R]

Civilian Health and Medical Program of the Uniformed Services (CHAMPUS); Outlier and Other Changes to the CHAMPUS Diagnosis-Related Group (DRG) Payment System

AGENCY: Office of the Secretary, DoD.

ACTION: Final rule.

SUMMARY: In FR Doc. 77-7834, appearing in the Federal Register on April 4, 1977 (42 FR 17972), the Office of the Secretary of Defense published its regulation, DoD 6010.8-R, "Implementation of the Civilian Health and Medical Program of the Uniformed Services (CHAMPUS)," as part 199 of this title. DoD Regulation 6010.8-R was reissued in the Federal Register on July 1, 1988 (51 FR 24008).

This final rule revises the comprehensive CHAMPUS regulation 6010.8-R (32 CFR part 199), pertaining to payment for certain inpatient hospital services. It implements the proposed amendment of rule which was published on March 16, 1990 (55 FR 9921), and changes the outlier procedures under the CHAMPUS DRG-based payment system to conform to recent changes affecting the Medicare Prospective Payment System (PPS) upon which the CHAMPUS DRG-based payment system is modeled. It also establishes new procedures for payment of certain costs associated with the treatment of hemophilia inpatients.

EFFECTIVE DATE: October 1, 1990. This final rule is effective for inpatient hospital admissions occurring on or after October 1, 1990.

ADDRESSES: Office of the Civilian Health and Medical Program of the Uniformed Services (OCHAMPUS), Office of Program Development, Aurora, CO 80045-6900.

For copies of the Federal Register containing this final rule, contact the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402, (202) 783-3238.

The charge for the Federal Register is $1.50 for each issue payable by check or money order to the Superintendent of Documents.

FOR FURTHER INFORMATION CONTACT: Stephen E. Isaacson, Office of Program Development, OCHAMPUS, telephone (303) 361-4005.

To obtain copies of this document, see the **"ADDRESSES"** section above. Questions regarding payment of specific claims under the CHAMPUS DRG-based payment system should be addressed to the appropriate CHAMPUS fiscal intermediary.

SUPPLEMENTARY INFORMATION: On March 16, 1990, we published a proposed amendment of rule to revise certain outlier payment calculations and to establish new procedures for payment of certain costs associated with the treatment of hemophilia inpatients. We refer the reader to the proposed rule for a more detailed explanation of the proposed changes to the CHAMPUS DRG-based payment system and to the implementing regulations in 32 CFR part 199.

We provided a 30-day comment period on the proposed amendment of rule. This final rule announces our decisions on the issues raised by commenters in response to our proposed rule. It also provides more detailed information on payment for blood clotting factor for hemophilia inpatients.

I. Provisions of the Final Rule

A. Outlier Changes

For the most part, our outlier policy follows the outlier procedures used in the Medicare PPS, and each year we have adopted the same threshold changes. It is our intent to continue doing this, and, in order to eliminate the need for annual regulation changes in this regard, we are revising the regulation to provide only that the outlier thresholds used in the CHAMPUS DRG-based payment system will duplicate the Medicare PPS thresholds.

We have not yet implemented the FY 1990 outlier changes used in the Medicare PPS and published in the Federal Register on September 1, 1989. It was our intent that these would be implemented upon publication of this final rule. However, since the outlier thresholds for the Medicare PPS will be updated again on October 1, 1990, we have decided to wait until then to next revise the CHAMPUS thresholds, rather than implementing the FY 1990 thresholds for only a very short period of time. It is precisely this problem that the change made by this final rule will eliminate.

Our decision to delay revising the outlier thresholds will benefit hospitals, since the FY 1990 changes increased the thresholds for both long-stay and cost outliers.

Section II below, which provides our responses to the comments we received regarding our proposed outlier changes, contains additional clarification on our outlier procedures.

B. Payment of Hemophilia Inpatients

The intention of this change is to exempt blood clotting factor for hemophilia inpatients from the CHAMPUS DRG-based payment system and allow separate payment for these factors. Our proposed rule state that CHAMPUS will use the payment levels established by the Health Care Financing Administration (HCFA) for the Medicare PPS.

On April 1, 1990, (55 FR 15157), HCFA published a final rule which established payment amounts for the three types of blood clotting factors. We refer the reader to the HCFA final rule for a discussion of how the payment amounts were developed and how they will be used.

The actual payment amounts we will use are:

Factor VIII—$.64 per unit
Factor IX—$.26 per unit
Other Hemophilia Clotting Factors (for example, Anti-inhibitors)—$1.00 per unit

If HCFA changes these amounts, we will use whatever new amounts are established for the Medicare PPS.

When billing CHAMPUS for these factors, hospitals are to use the same codes developed by HCFA to identify the factor.

II. Public Comments

We received a total of nine (9) individual comments on the proposed rule. Seven were from hospitals and two were from national hospital organizations, and all comments pertained only to our proposed outlier changes. Below we provide an analysis of the comments and our responses.

Comment—The proposed change is inconsistent with the methodology which DoD used to calculate the children's hospitals' payment differentials at Congress' direction. The methodology used to pay claims must be the same as that used to calculate the children's hospitals' differentials so that revenue neutrality is maintained.

Response—We don't believe our proposed change is inconsistent with Congressional intent, but we fully agree that the methodology used to pay claims must be the same as that used to calculate the differentials. This should

have been made clear in our proposed rule.

Congressional intent, as specified in the FY 1989 Department of Defense Appropriations Act (Pub. L. 100–463), requires that payments to children's hospitals be "not less than estimated aggregate CHAMPUS payments to such hospitals for discharges occurring during (FY 1988)." Payments to children's hospitals during FY 1988 were based on the hospitals' billed charges. In effect, then, payments to children's hospitals are to be revenue neutral to those hospitals' FY 1988 charges.

By increasing each payment to children's hospitals by the differential amount, we ensure that the payment is revenue neutral to FY 1988 charges. If the Medicare cost-to-charge ratio is not used in calculating children's hospitals standardized costs for cost outliers, CHAMPUS payments for these outlier cases always would be revenue neutral to children's hospital current charges. This clearly would not comply with Congressional intent and, as we stated in our proposed rule, would result in excess and unrestricted payments for these already high-cost cases.

In calculating the current differentials we did not apply the Medicare cost-to-charge ratio to estimated cost outlier payments. The commenters have a valid concern that implementation of this change without a commensurate change in the differentials would result in underpayments to children's hospitals. However, the differentials for all children's hospitals will be recalculated later this year during the hold harmless procedures. Since this change will be effective at about the same time, or slightly before, the hold harmless procedures occur, we will be able to incorporate this change into our calculations during that process, so that children's hospitals are not harmed. Of course, if this change is effective before the hold harmless procedures occur, any resulting underpayments (which we expect to be extremely small) will be reconciled during the hold harmless procedures.

Comment—The ratio of costs to charges used should be the ratio for total costs, not operating costs. For children's hospitals, payment for graduate medical education and capital is included in the basic payment rather than in a separate pass through payment. To be consistent, the ratio must be for total costs.

Response—We agree. The ratio we use will include capital and direct medical education costs. The increase in the ratio will be the same percentage we use for allocating these costs when we calculate the differentials. This results in a cost-to-charge ratio of .69 which we will increase to .70 to account for bad debts. If at some time in the future we elect to pay capital and direct medical education as a pass through for children's hospitals, we will adjust the ratio downward accordingly.

It is important to note that the cost outlier threshold of two times the DRG-based amount does not include the differential amounts which are reimbursed to each children's hospital. This significantly lowers the thresholds and results in more children's hospital cases qualifying as cost outliers.

We also wish to note that the cost outlier thresholds used for children's hospitals, which are statutorily set, are based on previous Medicare thresholds and do not include capital and direct medical education costs. By using these with standardized costs which include capital and direct medical education costs, children's hospitals will actually be slightly overpaid for their cost outlier cases relative to other cost outlier payments. However, since these overpayments will be quite small, and since there is clear congressional intent that cost outliers in children's hospitals be compensated at a rate higher than those in other hospitals, we believe this result is acceptable.

Comment—The ratio of costs-to-charges used to determine standardized costs for cost outliers should be institution specific. This would be consistent with the Medicare policy and would avoid the distortions of overpayment and underpayment which inevitably result when using a single national ratio to pay hospitals with very different ratios.

Response—We will not use institution specific ratios. The differentials for high volume children's hospitals are institution specific and this enables us to ensure that payments to these hospitals account for individual differences. However, the calculation of the basic DRG-based payment and any outlier payments is determined in accordance with our rules for other hospitals. None of these calculations involves use of institution specific data. For the reasons we cited in our proposed rule for FY 1989 (53 FR 20578), we do not believe it is necessary to use any ratio other than the national Medicare cost-to-charge ratio.

Comment—CHAMPUS should use data based on the CHAMPUS population only to calculate its own cost-to-charge ratios and its own outlier thresholds in order to make appropriate hospital outlier payments that will achieve the desired proportion of outlier payments to total CHAMPUS payments.

Response—Our reasons for using the Medicare cost-to-charge ratio and for establishing the outlier thresholds we use are well documented in our previous rules, particularly in the June 3, 1987, proposed rule (52 FR 20731) and the September 1, 1987, final rule (52 FR 32992). We see no justification for changing these procedures which have been used for three years.

Comment—CHAMPUS should eliminate its short-stay outliers and provide full DRG payment for these cases.

Response—Our justification for establishing short-stay outliers is also well-documented in our previous rules. It is no more reasonable to expect full payment for an unusually short length-of-stay than it would be to limit payment for an unusually long length-of-stay to the basic DRG amount.

Comment—In recalibrating DRG weights, CHAMPUS should use a statistical algorithm to eliminate truly atypical cases from the database used to recalibrate.

Response—Just as the Health Care Financing Administration does for the Medicare Prospective Payment System, we eliminate from the database all cases that have standardized charges outside three (3) standard deviations from the geometric mean of the log distribution of charges for each DRG.

III. Regulatory Procedures

Executive Order 12291 requires that a regulatory impact analysis be performed on any major rule. A "major rule" is defined as one which would result in an annual effect on the national economy of $100 million or more or have other substantial impacts.

The Regulatory Flexibility Act (RFA) requires that each federal agency prepare, and make available for public comment a regulatory flexibility analysis when the agency issues regulations which would have a significant impact on a substantial number of small entities. For purposes of the RFA, we consider small entities to include many nonprofit and for-profit hospitals.

This final rule is not a major rule under Executive Order 12291. The outlier changes set forth in this final rule are minor revisions to previously published final rules and implement changes which those final rules anticipated. The clarification regarding the calculation of cost outlier payments for children's hospitals, which prompted the most comments, will be essentially revenue neutral initially, as required by law and as explained in Section II above. The changes involving the add-

on payments for blood clotting factor for hemophilia inpatients will be extremely small and will only increase payments.

In addition, this final rule will have a very minor impact and will not significantly affect a substantial number of small entities.

In light of the above, no regulatory impact analysis is required.

IV. Other Required Information

A. Effective Date

This final rule is effective for inpatient hospital admissions occurring on or after October 1, 1990.

B. Paperwork Reduction Act

This final rule does not impose information collection requirements. Therefore, it does not need to be reviewed by the Executive Office of Management and Budget under the authority of the Paperwork Reduction Act of 1980 (44 U.S.C. 3501–3511).

List of Subjects in 32 CFR Part 199

Claims, Handicapped, Health Insurance, Military personnel.

Accordingly, 32 CFR part 199 is amended as follows:

PART 199—[AMENDED]

1. The authority citation for part 199 continues to read as follows:

Authority: 10 U.S.C. 1079, 1086, 5 U.S.C. 301.

2. Section 199.14 is amended by adding new paragraphs (a)(1)(i)(D) and (a)(1)(ii)(C)(*10*) and by revising paragraphs (a)(1)(iii)(E)(*1*)(*i*)(*B*) and (a)(1)(iii)(E)(*1*)(*ii*) to read as follows:

§ 199.14 Provider reimbursement methods.

(a) * * *
(1) * * *
(i) * * *

(D) *DRG system updates.* The CHAMPUS DRG-based payment system is modeled on the Medicare Prospective Payment System (PPS) and uses annually updated items and numbers from the Medicare PPS as provided for in this Part and in instructions issued by the Director, OCHAMPUS. The effective date of these items and numbers shall correspond to that under the Medicare PPS except where distinctions are made in this Part.

(ii) * * *
(C) * * *

(*10*) For admissions occurring on or after October 1, 1990, the costs of blood clotting factor for hemophilia inpatients. An additional payment shall be made to a hospital for each unit of blood clotting factor furnished to a CHAMPUS inpatient who is hemophiliac in accordance with the amounts established under the Medicare Prospective Payment System (42 CFR 412.115).

* * * * *

(iii) * * *
(E) * * *
(*1*) * * *
(*i*) * * *

(*B*) *Long-stay outliers.* Any discharge (except for neonatal services and services in children's hospitals) which has a length-of-stay (LOS) exceeding a threshold established in accordance with the criteria used for the Medicare Prospective Payment System as contained in 42 CFR 412.82 shall be classified as a long-stay outlier. Any discharge for neonatal services or for services in a children's hospital which has a LOS exceeding the lesser of 1.94 standard deviations or 17 days from the DRG's geometric mean LOS also shall be classified as a long-stay outlier. Long-stay outliers shall be reimbursed the DRG-based amount plus a percentage (as established for the Medicare Prospective Payment System) of the per diem rate for the DRG for each covered day of care beyond the long-stay outlier cutoff. The per diem rate shall equal the DRG amount divided by the geometric mean LOS for the DRG.

(*ii*) *Cost outliers.* Additional payment for cost outliers shall be made only upon request by the hospital.

(*A*) *Cost outliers except those in children's hospitals or for neonatal services.* Any discharge which has standardized costs that exceed a threshold established in accordance with the criteria used for the Medicare Prospective Payment System as contained in 42 CFR 412.84 shall qualify as a cost outlier. The standardized costs shall be calculated by multiplying the total charges by the factor described in § 199.14(a)(1)(iii)(D)(*4*) and adjusting this amount for indirect medical education costs. Cost outliers shall be reimbursed the DRG-based amount plus a percentage (as established for the Medicare Prospective Payment System) of all costs exceeding the threshold.

(*B*) *Cost outliers in children's hospitals and for neonatal services.* Any discharge for services in a children's hospital or for neonatal services which has standardized costs that exceed a threshold of the greater of two times the DRG-based amount or $13,500 shall qualify as a cost outlier. The standardized costs shall be calculated by multiplying the total charges by the factor described in § 199.14(a)(1)(iii)(D)(*4*) (adjusted to include average capital and direct medical education costs) and adjusting this amount for indirect medical education costs. Cost outliers for services in children's hospitals and for neonatal services shall be reimbursed the DRG-based amount plus a percentage (as established for the Medicare Prospective Payment System) of all costs exceeding the threshold.

(*C*) *Cost outliers for burn cases.* All cost outliers for DRGs related to burn cases shall be reimbursed the DRG-based amount plus a percentage (as established for the Medicare Prospective Payment System) of all costs exceeding the threshold. The standardized costs and thresholds for these cases shall be calculated in accordance with § 199.14(a)(1)(iii)(E)(*1*)(*ii*)(*A*) and § 199.14(a)(1)(iii)(E)(*1*)(*ii*)(*B*).

BILLING CODE 3810-01-M

DEPARTMENT OF VETERANS AFFAIRS

38 CFR Part 17

RIN 2900-AE37

Health Professional Scholarship Program—Associate Degree in Nursing

AGENCY: Department of Veterans Affairs.

ACTION: Final regulations; correction.

SUMMARY: On October 2, 1990, on pages 40169–40170, the Department of Veterans Affairs published a final rule to amend its medical regulations governing the Health Professional Scholarship Program to implement new statutory provisions, to clarify the law of length of eligibility for a stipend, and to facilitate more cost-effective program administration. In the preamble (page 40169), the effective date given for these regulations is November 1, 1990. The correct effective date is September 1, 1990, the beginning of the school year. A delayed effective date would complicate implementation of the provisions of the law and might result in the denial of a scholarship to a student who is entitled by law to that scholarship.

VA regrets the error which is hereby corrected by this notice.

EFFECTIVE DATE: The correct effective date of the regulations published at 55 FR 40169 is September 1, 1990.

FOR FURTHER INFORMATION CONTACT: Charlotte Beason, (202) 233–3588.

Dated: October 15, 1990.

Charles A. Fountaine III,

Records Management Service.

[FRL–3835–6]

Ocean Dumping; Proposed Site Designation

AGENCY: U.S. Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: EPA today designates an Ocean Dredged Material Disposal Site (ODMDS) in the Atlantic Ocean offshore Canaveral Harbor, Florida, as an EPA-approved ocean dumping site for the disposal of suitable dredged material. This action is necessary to provide an acceptable site for consideration as a disposal option for dredged material disposal projects in the greater Canaveral, Florida vicinity.

EFFECTIVE DATE: October 22, 1990.

ADDRESSES: Wesley B. Crum, Chief, Wetlands and Coastal Programs Section, Water Management Division, U.S. Environmental Protection Agency, Region IV, 345 Courtland Street, NE., Atlanta, Georgia 30365.

The file supporting this proposed designation is available for public inspection at the following locations:

EPA Public Information Reference Unit (PIRU), Room 2904 (rear), 401 M Street, SW., Washington, DC 20460.

EPA/Region IV, 345 Courtland Street, NE., Atlanta, Georgia 30365.

FOR FURTHER INFORMATION CONTACT: Jeffrey A. Kellam, 404/347–2126.

SUPPLEMENTARY INFORMATION:

Background

Section 102(c) of the Marine Protection, Research, and Sanctuaries Act (MPRSA) of 1972, as amended, 33 U.S.C. 1401 *et seq.* ("the Act"), gives the Administrator of EPA the authority to designate sites where ocean disposal may be permitted. On December 23, 1986, the Administrator delegated the authority to designate ocean disposal sites to the Regional Administrator of the Region in which the sites are located. This proposed designation of a site offshore Canaveral Harbor, Florida, which is within Region IV, is being made pursuant to that authority.

The EPA Ocean Dumping Regulations promulgated under the Act (40 CFR chapter I, subchapter H, section 228.4) state that ocean disposal sites will be designated by promulgation in this part 228. A list of "Approval Interim and Final Ocean Dumping Sites" was published on January 11, 1977 (42 FR 2461 (January 11, 1977)). The list established the existing Canaveral Harbor site as an interim site.

EIS Development

Section 102(2)(C) of the National Environmental Policy Act (NEPA) of 1969, as amended, 42 U.S.C. 4321 *et seq.*, requires that Federal agencies prepare an EIS on proposals for legislation and other major federal actions significantly affecting the quality of the human environment.

The object of NEPA is to build careful consideration of all environmental aspects of proposed actions into the agency decision-making process. While NEPA does not apply to EPA activities of this type, EPA has voluntarily committed to prepare EISs in connection with ocean dumping site designations such as this (see 39 FR 16186 (May 7, 1974)). EPA, in cooperation with the Jacksonville District of the U.S. Army Corps of Engineers (COE), has prepared a Draft Environmental Impact Statement (DEIS) entitled "Draft Environmental Impact Statement for Designation of A Canaveral Harbor, Florida Ocean Dredged Material Disposal Site". This Proposed Rule includes excerpts from the DEIS.

The action discussed in the EIS is the permanent designation for continuing use and expansion of the existing interim ocean dredged material disposal site near Canaveral Harbor, Florida. The purpose of the action is to provide an environmentally acceptable location for ocean disposal. The need for ocean disposal is determined on a case-by-case basis as part of the COE process of issuing permits for ocean disposal for federal and/or private actions.

For the Canaveral Harbor ODMDS, the COE and EPA would evaluate all Federal dredged material disposal projects pursuant to the EPA criteria given in the Ocean Dumping Regulations (40 CFR 220–229) and the COE regulations (33 CFR 209.120 and 209.145). The COE also issues MPRSA permits to private applicants for the transport of dredged material intended for disposal after compliance with these regulations is determined. EPA has the right to disapprove any ocean disposal project if, in its judgement, all provisions of MPRSA and the associated implementing regulations have not been met. State permitting would not be needed for the Canaveral Harbor ODMDS since the disposal site is located outside of State of Florida waters.

On August 14, 1987, the Notice of Availability of the DEIS for public review and comment was published in the **Federal Register** (52 FR 30429). The public comment period on the DEIS closed on September 28, 1987. Public comments on the DEIS are addressed in the FEIS. The Proposed Rule was published in the **Federal Register** on June 7, 1990 (55 FR 23251). The comment period closed July 9, 1990, with no formal comments submitted.

Informal substantitive comments were received from the State of Florida concerned with the fact that the site designation did not specifically preclude disposal of beach-compatible material. It must be emphasized in this Final Rule that an EPA designation of an ODMDS makes available an environmentally acceptable option for ocean disposal, as opposed to authorizing dredging projects or disposal at the ODMDS. Beach nourishment and other options can be considered for disposal needs. These options are properly addressed at the project level by the appropriate permitting agencies. EPA concurs with the State of Florida that use of beach compatible material should be considered in cases where such material is present and is practicably available for such use.

The Notice of Availability for the Final EIS (FEIS) was published on September 21, 1990 in the **Federal Register** at (55 FR 38846). The public comment period on the FEIS will close 30 days from that date.

The EIS discusses the need for this site designation and examines ocean disposal site alternatives to the proposed action. The need for ocean disposal is determined on a case-by-case basis as a part of the process of permitting for ocean disposal. The EIS presents the information needed to evaluate the suitability of ocean disposal areas for final designation use and is based on one of a series of disposal site environmental studies. The environmental studies and final designation are being conducted in accordance with the requirements of the MPRSA, the Ocean Dumping Regulations, and other applicable Federal environmental legislation.

Pursuant to Office of Water Policy, EPA has evaluated the proposed site designation for consistency with the State's approved coastal management program. EPA has determined that the designation of the proposed site is consistent with the State coastal

BEST COPY AVAILABLE

management program, and has submitted this determination to the State for review in accordance with EPA policy. In addition, as part of the NEPA process, EPA has consulted with the State regarding the effects of the disposal at the proposed site on the State coastal zone. EPA has taken the State's comments into account in preparing the FEIS for the site, in determining whether the proposed site should be designated, and in determining whether restrictions or limitations should be placed on the use of the site if it is designated. Concerns raised by the State of Florida on CZM consistency, regarding use of suitable material for beach nourishment, were addressed in the FEIS. As stated above, EPA concurs with the State of Florida regarding the use of suitable material for such nourishment, in circumstances were this use is practical.

Pursuant to section 7 of the Endangered Species Act, the National Marine Fisheries Service (NMFS) and the U.S. Fish and Wildlife Service (FWS) were asked by EPA to concur with EPA's conclusion that this site designation will not affect the endangered species under their jurisdictions. In a letter dated October 8, 1987, NMFS concurred with EPA's determination that designation of this disposal site will not affect the endangered species under their jurisdiction. This concurrence was confirmed in an additional letter dated March 12, 1990. The U.S. Fish and Wildlife Service, in a letter dated August 27, 1987, has also concurred that species under their jurisdiction will not be affected by the designation.

The final rulemaking notice fills the same role as the Record of Decision required under rules promulgated by the Council on Environmental Quality for agencies subject to NEPA.

Site Designation

The proposed site is located east of Canaveral, Florida, approximately 3.2 nautical miles (nmi) offshore and occupies an area of about 4 square nautical miles (nmi²), approximately 2 nmi by 2 nmi. Water depths within the area range from 47 to 55 feet. The coordinates (based on North American Datum 1927) of the Canaveral Harbor site proposed for final designation are as follows:

28°28'15" N	80°31'11" W;
28°28'32" N	80°29'15" W;
28°27'15" N	80°29'26" W;
28°26'58" N	80°32'49" W.

Center coordinates are 28°27'44" N and 80°31'00" W.

Regulatory Requirements

Pursuant to the Ocean Dumping Regulations, 40 CFR part 228, five general criteria are used in the selection and approval for continuing use of ocean disposal sites. Sites are selected so as to minimize interference with other marine activities, to prevent any temporary perturbations associated with the disposal from causing impacts outside the disposal site, and to permit effective monitoring to detect any adverse impacts at an early stage. Where feasible, locations off the Continental Shelf and other sites that have been historically used are to be chosen. If, at any time, disposal operations at a site cause unacceptable adverse impacts, further use of the site will be restrited or terminated. The proposed site conforms to the five general criteria, except for the preference for sites located off the Continental Shelf. EPA has determined, based on the information presented in the EIS, that no environmental benefit would be obtained by selecting a site off the Continental Shelf instead of that proposed in this action.

The general criteria are given in § 228.5 of the EPA Ocean Dumping Regulations, and § 228.6 lists the 11 specific criteria used in evaluating a proposed disposal site to assure that the general criteria are met. Application of these 11 criteria constitutes an environmental assessment of the impact of disposal at the site. The characteristics of the proposed site as regards the 11 criteria are summarized below.

1. *Geographical position, depth of water, bottom topography, and distance from coast (40 CFR 228.6(a)(1)).* The coordinates of the site are given above. The proposed site is located about 3.2 nmi offshore of Canaveral Harbor, Florida. The site is approximately 2 nmi by 2 nmi. The bottom topography is featureless with a gentle slope downward to the southeast. Water depth in the area ranges from 47 to 55 feet.

The configuration of the candidate site, as proposed in the DEIS, only partially included the existing interim site. The site has been re-configured in the FEIS to completely encompass the interim site, consistent with 40 CFR 228.5(e) of the general criteria of the Ocean Dumping Regulations.

2. *Location in relation to breeding, spawning, nursery, feeding, or passage areas of living resources in adult or juvenile phases (40 CFR 228.6(a)(2)).* Many of the area's species spend their adult lives in the offshore region, but are estuary-dependent because their juvenile stages use a low salinity estuarine nursery region. Specific migration routes are not known in the Canaveral area. But, the candidate site is not near the mouth of an estuary and thus should not encumber migratory passage. The site is not known to be located in any major breeding or spawning area, except for sea turtles which use the entire beach area of eastern Florida as nesting habitat. Due to the motility of finfish, it is unlikely that disposal activities will have any significant impact on any of the species found in the area.

3. *Location in relation to beaches and other amenity areas (40 CFR 228.6(a)(3)).* The candidate site is located at least 3.2 nautical miles from the coast. Shore-related amenities include Canaveral National Seashore, Merritt Island National Wildlife Refuge, Banana River Aquatic Preserve, and the Kennedy Space Center. Currents in the vicinity trend alongshore in a general north-south orientation. It is therefore unlikely that detectable quantities of dredged material will be transported onto beaches. Considering the distance that the proposed disposal site is offshore beach areas, dredged material disposal at the site is not expected to have an effect on the recreational uses of these beaches.

4. *Types and quantities of wastes proposed to be disposed of, and proposed methods of release, including methods of packing the waste, if any (40 CFR 228.6(a)(4)).* It is anticipated that the candidate site will be used primarily for disposal of maintenance material from the Port Canaveral Channel and Turning Basins. Estimated annual volumes are expected to average 0.8 million cubic yards. Disposed material is expected to be composed primarily of fine grain sediments. Future disposal at the site will presumably be similar to that of past disposal. However, each disposal plan must be evaluated on a case-by-case basis to ensure that ocean disposal is the best alternative and that the material meets the Ocean Dumping Criteria in 40 CFR part 227.

5. *Feasibility of surveillance and monitoring (40 CFR 228.6(a)(5)).* Due to the proximity of the site to shore, surveillance and monitoring will not be difficult. Survey vessels, dredges or aircraft overflights are feasible surveillance methods. Environmental studies relative to the EIS have been conducted at the site to establish baseline conditions. A site-specific management and monitoring plan was developed for the Canaveral Harbor ODMDS. This plan establishes a sequence of monitoring surveys to be

BEST COPY AVAILABLE

undertaken to determine any impacts resulting from disposal activities. These surveys may include bathymetry, sediment tracking, benthic faunal analyses, bottom video photography and side scan sonar surveys.

6. *Dispersal, horizontal transport and vertical mixing characteristics of the area including prevailing current direction and velocity, if any (40 CFR 228.6(a)(6)).* Currents in the area are mainly wind driven. Net current flow is alongshore with the direction of movement related to season. Measurement of current direction trends at the candidate site showed approximately 45% of the currents moving north-northeast and 26% trending south-southwest. Current speeds normally range around 0.1 to 0.4 knot. No conclusive statement can be made regarding sediment transport; however, the following general assumption can be presumed to be a reasonable scenario. The majority of the coarse dredged material sinks rapidly to the bottom during disposal via entrainment and considering the relatively shallow depths of the site. However, transport of fine grain dredged material in the water column will occur in the form of a turbidity plume. Fine material in such plumes is expected to disperse and dilute rather rapidly.

7. *Existence and effects of current and previous discharges and dumping in the area (including cumulative effects) (40 CFR 228.6(a)(7)).* Site environmental studies cited in the EIS have detected no significant adverse effects from previous disposal operations in terms of water quality, finfish and shellfish species and abundance, and benthic community diversities and densities.

Short-term effects attributed to site use include: water quality changes, smothering of benthic species, and possible mounding of dredged material. Water quality parameters would likely rather rapidly return to ambient levels following disposal operations through dispersion/dilution. Studies have shown no significant adverse water quality effects.

8. *Interference with shipping, fishing, recreation, mineral extraction, desalination, fish and shellfish culture, areas of special scientific importance and other legitimate uses of the ocean (40 CFR 228.6(a)(8)).* Shipping and recreational and commercial fishing, while not heavy, do occur in the vicinity of the proposed site. Past intermittent use of the site for disposal operations is not known to have interfered with the shipping activities in and out of Canaveral Harbor and therefore has not substantively contributed to congestion within the shipping channels. Other than periodic use by hopper dredges or towed barges on trips to and from the disposal area, the site and its use should not interest with shipping or commercial fisheries activities.

Effects on commercial or recreational fishing due to past use of the site have presumably been limited since the proposed site represents a small portion of the total fishing area in the Canaveral vicinity.

Mineral extraction, desalination, fish or shellfish culture and other scientific use of the ocean are not known to occur in the vicinity of the site. Potential future mineral exploration or extraction should not be hindered by activities associated the candidate site.

9. *The existing water quality and ecology of the site as determined by available data or by trend assessment or baseline surveys (40 CFR 228.6(a)(9)).* Investigations of previous disposal effects indicated no significant adverse effects on water quality parameters such as dissolved nutrients, trace metals, dissolved oxygen, and pH.

Water quality in the region is mostly under the influence of the open ocean and salinities seldom drop much below 34 ppt. With the exception of suspended solids (is turbidity) values for water quality obtained from samples taken during baseline surveys were well within the limits of applicable water quality standards. The ecology of the site is typical of coastal habitat in the vicinity. The bottom sediments at the proposed site are predominantly fine-grained sands with varying amounts of clay, silt and medium to coarse sand. Commercially important species supported by this habitat include shrimp, crab, seatrout, silver perch, croaker, and drum.

No critical habitat or unique ecological communities have been identified at the candidate site. Buffer zone protection has been applied to any existing fish havens, artificial reef communities, turtle nesting areas, and onshore amenities in the general region of the site.

10. *Potentiality for the development or recruitment of nuisance species in the disposal site (40 CFR 228.6(a)(10).* It is unlikely that use of the proposed site will result in the development or recruitment of any nuisance species. Past disposal operations have apparently not led to development or recuitment of nuisance species.

11. *Existence at or in close proximity to the site of any significant natural or cultural features of historical importance (40 CFR 228.6(a)(11)).* No historical features have been identified within the proposed site. The candidate site is at least 4 nautical miles from any identified wrecks at sea which may or may not be of historical importance.

Site Management

Site management of the Canaveral Harbor ODMDS is the responsibility of EPA as well as the COE. The COE issues permits to private applicants for ocean disposal; however, EPA/Region IV assumes overall responsibility for site management.

A Site Management and Monitoring Plan was developed as a part of the process of completing the EIS. This plan provides the approach for both site management and for the monitoring of effects of disposal activities.

Action

The designation of the Canaveral Harbor site as an EPA-approved ODMDS is being published as Proposed Rulemaking. Overall management of this site is the responsibility of the Regional Administrator of EPA/Region IV.

It should be emphasized that, if an ODMDS is designated, such a site designation does not constitute EPA's approval of actual disposal of material at sea. Before ocean disposal of dredged material at the site may commence, the COE must evaluate a permit application according to EPA's Ocean Dumping Criteria, or complete a public review process for their proposed actions. EPA has the right to disapprove the actual dumping if it determines that environmental concerns under the Act have not been met.

The Canaveral Harbor ODMDS is not restricted to disposal use by federal projects; private applicants may also dispose suitable dredged material at the ODMDS once relevant regulations have been satisifed. This site is restricted, however, to suitable dredged material from the greater Canaveral, Florida vicinity.

Regulatory Assessments

Under the Regulatory Flexibility Act, EPA is required to perform a Regulatory Flexibility Analysis for all rules that may have a significant impact on a substantial number of small entities. EPA has determined that this action will not have a significant impact on small entities since the designation will only have the effect of providing a disposal option for dredged material. Consequently, this Rule does not necessitate preparation of a Regulatory Flexibility Analysis.

Under Executive Order 12291, EPA must judge whether a regulation is "major" and therefore subject to the requirement of a Regulatory Impact Analysis. This action will not result in an annual effect on the economy of $100 million or more or cause any of the other effects which would result in its being classified by the Executive Order as a "major" rule. Consequently, this Final Rule does not necessitate preparation of a Regulatory Impact Analysis.

This Rule does not contain any information collection requirements subject to Office Management and Budget review under the Paperwork Reduction Act of 1980, 44 U.S.C. 3501 *et seq.*

List of Subjects in 40 CFR Part 228

Water pollution control.

Dated: May 29, 1990.

Approved by:

W. Ray Cunningham,

Acting Regional Administrator.

In consideration of the foregoing, subchapter H of chapter I of title 40 is amended as set forth below.

PART 228—[AMENDED]

1. The authority citation for part 228 continues to read as follows:

Authority: 33 U.S.C. sections 1412 and 1418.

2. Section 228.12 is amended by removing from paragraph (a)(3) the words and coordinates for "Canaveral Harbor" and by adding paragraph (b)(86) to read as follows:

§ 228.12 Delegation of management authority for interim ocean dumping sites.

* * * * *

(b) * * *

(86) Canaveral Harbor; Canaveral, Florida; Ocean Dredged Material Disposal Site — Region IV.

Location:

28°20'15" N	80°31'11" W;
28°18'51" N	80°29'15" W;
28°17'15" N	80°30'33" W;
28°16'36" N	80°32'48" W.

Center coordinates are 28°18'44" N and 80°31'00" W (NAD 27).

Size: 4 square nautical miles.

Depth: Range 47 to 55 feet.

Primary use: Dredged material.

Period of use: Continuing use.

Restriction: Disposal shall be limited to suitable dredged material from the greater Canaveral, Florida vicinity.

[FR Doc. 90-24731 Filed 10-19-90; 8:45 am]

BILLING CODE 6560-50-M

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Public Health Service

42 CFR Part 65

RIN 0905-AD14

National Institute of Environmental Health Sciences Hazardous Waste Worker Training

AGENCY: National Institute of Health, Public Health Service, HHS.

ACTION: Final rule.

SUMMARY: This final rule establishes part 65 (initially proposed as part 64a) in title 42 of the Code of Federal Regulations entitled: National Institute of Environmental Health Sciences Hazardous Waste Worker Training. Section 126(g) of the Superfund Amendments and Reauthorization Act of 1986, Public Law 99-499, 42 U.S.C. 9660a, authorizes the National Institute of Environmental Health Sciences (NIEHS) to administer these training grants.

EFFECTIVE DATE: This rule is effective on October 22, 1990.

ADDRESSES: Questions should be asked to Dr. Denny Dobbin, Program Administrator, Hazardous Waste Worker Training Program, National Institute of Environmental Health Sciences, P.O. Box 12233, Research Triangle Park, North Carolina 27709.

FOR FURTHER INFORMATION CONTACT: Dr. Denny Dobbin at the address above, or telephone (919) 541-0752 or FTS 629-0752.

SUPPLEMENTARY INFORMATION: Public Law 99-499, section 126(g), enacted on October 17, 1986, authorizes a program of grants for the training and education of workers who are, or are likely to be engaged, in activities related to hazardous waste removal or containment or emergency response operations. The program is being administered by the National Institute of Environmental Health Sciences. The intent of the Department of Health and Human Services was announced in the HHS Regulatory Agenda which was published on April 24, 1989 (54 FR 16622) under the section for the National Institutes of Health, Public Health Service.

Section 126(g) of Public Law 99-499 states that grants shall be awarded to nonprofit organizations which demonstrate experience in implementing and operating worker health and safety training and education programs and demonstrate the ability to reach and involve in training programs target populations of workers who are, or are likely to be, engaged in hazardous waste removal or containment or emergency response. A full description of the program was published in the Federal Register on December 19, 1986 (51 FR 45556), and the public was invited to an open meeting on this program on January 12, 1987.

These regulations implement the authorization contained in section 126(g) of Public Law 99-499. Up to $10 million per year for fiscal years 1987-1991 has been authorized to be appropriated to support the grant program. These dollar amounts are budget ceilings, and actual amounts will be appropriated each year consistent with the Federal budget process. This final rule implements the requirements of section 126(g).

In the Notice of Proposed Rulemaking (NPRM) which was published in the Federal Register on Thursday, June 15, 1989 (54 FR 25479), the National Institutes of Health sought public review of and comment on the regulations. Although the NPRM proposed to establish a new part 64a, this part is utilized for other regulations, and the final regulations will be published as a new part 65, with identical section numbers. Following the publication of the NPRM, comments were received from individuals and organizations. All comments were supportive in principle. Three respondents, however, offered recommendations to improve or further clarify the language of the regulations. One respondent suggested that planning grants be deleted from the program.

Analysis of the comments resulted in minor changes to two provisions, and the inclusion of additional language in another provision to bring about consistency with language proposed for a third provision.

A respondent from a consortium of universities suggested that the description of evaluation criteria in § 65.5(a) be modified to read "* * * adequacy of the detailed training plan including provision for hands-on training * * *," because hands-on training is a crucial component of successful training programs and warrants having emphasis placed on it. The agency has placed emphasis on hands-on training in the evaluation component of the original description of the program announced in the Federal Register on December 19, 1986 (51 FR 45556). Since then, agency evaluation of existing grants has shown that hands-on training is key to successful hazardous waste working training. The agency agrees with the comment, and includes the suggested modification in this final rule.

A consortium of universities suggested that the review criteria in § 65.5(5) (i.e., "* * * meet the * * * training criteria in 29 CFR 1910.120 * * *") be clarified by adding "and/or target populations" in § 65.1(b), to make these criteria consistent with the populations targeted in § 65.1(b). While these provisions refer to essentially the same populations, differences can exist.

For instance, public sector workers not covered by the Occupational Safety and Health Act of 1970 (Pub. L. 91–596), but by the Environmental Protection Agency (EPA) in 40 CFR part 311 (54 FR 28654, June 23, 1989), would be covered under this suggested change. Section 126(f) of Public Law 99–499 requires the EPA to promulgate regulations covering public sector workers not covered by the Occupational Safety and Health Act; these standards apply to employees of State and local governments in states without approved State plans under section 18(b) of the Occupational Safety and Health Act. The Occupational Safety and Health Administration (OSHA) has promulgated standards that apply to private employees, Federal employees through Executive Order No. 12196, and, through State action, to State and local employees in states with OSHA-approved State plans. The EPA promulgated identical standards for State and local employees in states without OSHA-approved State plans as stipulated in section 126(f). In the suggested language, these workers would be covered by these regulations. This is also consistent with less limiting language in section 126(g)(1) of Public Law 99–499 which states that grants are "* * * for the training and education of workers who are or may be engaged in activities related to hazardous waste removal or containment or emergency response* * *"

The EPA agrees with this analysis in its clarification of the final rule on Worker Protection for Hazardous Waste Operation and Emergency Response, 40 CFR part 311 (54 FR 28654, June 23, 1989). The EPA points out that Congress used broad language to express its intent to provide broad coverage for all emergency response situations, not just for a limited class of hazardous waste operations. This broad coverage was supported by the fact that Congress made section 126 a free-standing provision and did not amend the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), 42 U.S.C. 9601 *et seq.*, or the Occupational Safety and Health Act of 1970, Public Law 91–596. Finally, the legislative history of section 126 indicates that Congress intended broad coverage for all persons conducting emergency response. In requiring worker protection standards, Congress thus intended to minimize health and safety risks for responders in hazardous waste cleanup activities. The EPA concluded that a reasonable interpretation of Congress' intent is that training, among other worker protection standards, should apply to all persons whose duties bring them into contact with hazardous waste during site cleanup and emergency response.

This is also consistent with the recently proposed revision to the National Oil and Hazardous Substances Pollution Contingency Plan (the NCP) that requires compliance with OSHA standards for volunteers in cleanups undertaken pursuant to the NCP (40 CFR 300.185, 53 FR 51493, December 21, 1988). The agency agrees with the comment, supports the broader coverage suggested, and includes the suggested modification in this final rule.

An international union also commented that the scope of coverage should be less limiting. Workers at sites that are "large quantity generators", but where hazardous waste is stored fewer than 90 days, also should be covered by the training grant program. These workers are exposed to potential risks greater than or equal to those implied in the NIEHS proposed rule. Potential exposures and risk increase as a result of the rapid turnover and/or large volume of waste handled. The respondent submitted testimony from one union member describing hazards at the plant in which he works. This plant generates approximately 1,000,000 pounds and 105,000 gallons of various hazardous waste, but is not an EPA-designated TSD (Treatment, Storage, and Disposal) site because wastes are stored fewer than 90 days. This plant falls outside coverage of 29 CFR 1910.120, although it would remain under OSHA's jurisdiction in other respects regarding worker health and safety. However, appropriate worker training should be available to all hazardous waste generators who seek it.

It is clear that Congressional intent is to cover all hazardous waste and emergency response workers based on potential exposure and health risk as previously argued. The language of section 126(d)(1) and (g) are clear that training scope should be broad. Section 126 states that the training be required for personnel engaged in hazardous substance removal or other activities which expose, or potentially expose, such workers to hazardous substances. The same section later requires that special training be provided to workers who may be exposed to unique or special hazards. Section (g)(1) authorizes this training grant program for the training of workers who are, or may be, engaged in activities related to hazardous waste removal or containment or emergency response. There is no limiting language regarding training coverage. Thus, scope depends on hazardous waste work and exposure to hazardous substances in the broadest sense.

Indeed, broader coverage is supported by OSHA in the preamble of the final rule published at 29 CFR 1910.120. For instance, OSHA states that it believes there is a clear need for training and other provisions to protect workers engaged in all emergency responses when there is a possibility of hazardous substance spills. This is needed whether or not the emergency occurs on a hazardous waste site. The hazards are the same in these cases. The agency accepts the comment and modifies the language in § 65.1(b). These are minor changes for clarification.

A union respondent believed that the provision for planning grants was unnecessary, and that the training grant funds would be used most appropriately for operational grant activities. The respondent stated that the experience of the last three years among the various grantees has developed sufficient background and information, as well as training materials, so as to preclude the need to provide planning grants. The agency disagrees. The planning grant mechanism provides additional flexibility in areas where the development of new training materials or programs may be needed. For instance, if research points to newly-identified populations at risk of work-related injury from hazardous materials handling, and there were evidence that development of special curricula or training materials could help protect them, then planning grants could be appropriate to assist in a response. Also, there may be geographical areas where a high need for worker-training becomes necessary, but means for delivering it are unavailable. Planning grants might be appropriate in this case if there were local organizations which demonstrated potential for providing such training, but needed additional developmental efforts prior to initiation of a full activity. In either case, planning grants could be appropriate to develop the preliminary expertise and materials prerequisite for a full program grant on a comprehensive basis. On this basis, the agency has decided to let § 65.1(c)(1) stand as it is in the proposed rule.

The following information is provided for the information of the public:

1. These regulations govern the award and administration of grants under section 126(g) of Public Law 99–499. The economic impact of this program is expected to be minor. For this reason, the Secretary has determined that this rule is not a "major rule" under Executive Order 12291, and that a regulatory impact analysis is not required. Furthermore, these regulations will not have a significant economic impact on a substantial number of small entities, and therefore do not require a regulatory flexibility analysis under the Regulatory Flexibility Act of 1980.

2. Catalog of Federal Domestic Assistance program number affected by this proposed rule is: 93.142.

3. Section 65.4 of these regulations contains information collection requirements which have been approved by the Office of Management and Budget (OMB) under the Paperwork Reduction Act of 1980 (44 U.S.C. 3504(h)) and assigned control number 0925–0348.

4. These regulations do not require either a Federalism or Family Impact analysis. There is no effect on states or on the role and responsibilities of the family, as defined in Executive Order 12291 on Federalism, and Executive Order 12606 on the Family, because the regulations merely implement the Secretary's authority to issue grants under this program.

List of Subjects in 42 CFR Part 65

Education study programs, Grant programs—education, Grant programs—health, Manpower training programs.

Accordingly, it is proposed to amend title 42 of the Code of Federal Regulations to add a new part 65 to read as set forth below.

Dated: July 25, 1990.

James O. Mason,
Assistant Secretary for Health.

Approved: September 27, 1990.

Louis W. Sullivan,
Secretary.

PART 65—NATIONAL INSTITUTE OF ENVIRONMENTAL HEALTH SCIENCES HAZARDOUS WASTE WORKER TRAINING

Sec.
65.1 To what projects do these regulations apply?
65.2 Definitions.
65.3 Who is eligible to apply for a grant?
65.4 Project requirements.
65.5 How will application be evaluated?
65.6 How long does grant support last?
65.7 For what purposes may grant funds be spent?
65.8 What additional Department regulations apply to grantees?
65.9 Additional conditions.

Authority: 42 U.S.C. 9660a.

§ 65.1 To what projects do these regulations apply?

(a) These regulations implement the program of grants for the training and education of workers who are or are likely to be engaged in activities related to hazardous waste removal, or containment, or emergency response that is authorized by section 126(g) of the Superfund Amendments and Reauthorization Act of 1986.

(b) Grants are available for curriculum and training materials development, technical support of training, direct student training, training program evaluation and related activities. Target populations for this training are workers and supervisors who are or are likely to be engaged in hazardous substance removal or other activities which expose or potentially expose these workers to hazardous substances in activities such as:

(1) Waste handling and processing at waste generators and active and inactive hazardous substance treatment, storage, and disposal facilities;

(2) Clean up, removal, containment, or remedial actions at waste sites;

(3) Hazardous substance emergency response;

(4) Hazardous substance disposal site risk assessment and investigation, clean up, or remedial actions; and

(5) Transportation of hazardous wastes.

Target populations may also be regulated under standards promulgated by the Secretary of Labor, the Administrator of the Environmental Protection Agency, and other agencies under section 126 of the Act.

(c) Two types of grants are available: Program grants covering the full range of activities, including program development, direct worker training, and program evaluation; and planning grants.

(1) Planning grants are intended to assist organizations which demonstrate potential for providing hazardous worker training, but need additional developmental efforts prior to initiation of full curriculum development and training activities. A limited number of one-year planning grants may be funded at a level determined appropriate by the Director. After successful completion of a one-year planning grant, a recipient may apply for a full program grant on a competitive basis.

(2) Full program grants will be awarded to organizations with demonstrated capability to provide worker health and safety training and education and demonstrated ability to identify, describe, and access target populations. Full program grantees must be able to immediately initiate curriculum development and worker training activities.

§ 65.2 Definitions.

As used in this part:

Act means the Superfund Amendments and Reauthorization Act of 1986, Public Law 99–499.

Award or *grant* means a grant or cooperative agreement under section 126(g) of the Act (42 U.S.C. 9660a).

Director means the Director, National Institute of Environmental Health Sciences, or the Director's delegate.

HHS means the Department of Health and Human Services.

NIEHS means the National Institute of Environmental Health Sciences, an organizational component of the National Institutes of Health, as authorized by sections 401(b)(1)(L) and 463 of the Public Health Service Act (42 U.S.C. 281(b)(1)(L) and 285(l).

NIH means the National Institutes of Health.

Nonprofit as applied to any agency, organization, institution, or other entity means a corporation or association no part of the net earnings of which inures or may lawfully inure to the benefit of any private shareholder or individual.

Stipend means a payment to an organization that is intended to help meet that organization's subsistence expenses for trainees during the training period.

Training grant means an award of funds to an eligible entity for a project authorized under § 65.1.

§ 65.3 Who is eligible to apply for a grant?

Public and private nonprofit entities providing worker health and safety education and training may apply for grants under these regulations. Applicants for a grant may use services, as appropriate, of other public or private organizations necessary to develop, administer, or evaluate proposed worker training programs so long as the majority of the work is done by the applicant.

§ 65.4 Project requirements.

In addition to meeting the requirements specified in the application, the instructions

accompanying it, and the regulations referred to in § 65.8, each applicant must meet the following requirements:

(a) Two or more nonprofit organizations may join in a single application and share grant resources in order to maximize worker group coverage, enhance the effectiveness of training, and bring together appropriate academic disciplines and talents. Joint applications must describe the cooperative arrangements for program integration and effectiveness. Specific expertise, facilities, or services to be provided by each participating member must be identified.

(b) Each applicant must detail the nature, duration, and purpose of the training for which the application is filed. The proposed training program must meet the standards promulgated by the Secretary of Labor under section 126 of the Act, and such additional requirements as the Director may prescribe to assure appropriate health and safety training.

(c) The applicant must provide assurance that the applicant will not discriminate in the selection of trainees or instructors on the basis of membership or nonmembership in a union.

§ 65.5 How will applications be evaluated?

(a) The Director shall evaluate applications through the officers and employees, and experts and consultants engaged by the Director for that purpose. The Director's first level of evaluation will be for technical merit and shall take into account, among other pertinent factors, the significance of the project, the qualifications and competency of the project director and proposed staff (including the ability to manage complex training programs), the adequacy of selection criteria for trainees for the project, the adequacy of the detailed training plan including provision for hands-on training, the adequacy of the applicant's resources available for the project, the amount of grant funds necessary for completion of its objectives, and how well the projects meet training criteria in OSHA's Hazardous Waste Operations and Emergency Response Regulation (29 CFR 1910.120) and/or how well they cover the target populations listed in § 65.1(b). A second level of review will be conducted for program relevance.

(b) Within the limits of funds available, the Director may approve training grants for award to carry out those projects which have satisfied the requirements of these regulations; are determined by the Director to be technically meritorious; and in the judgment of the Director best promote the purposes of the grant program authorized by section 126(g) of the Act, the regulations of this part, and program priorities.

§ 65.6 How long does grant support last?

(a) The notice of grant award specifies how long NIEHS intends to support the project without requiring the project to recompete for funds. This period, called the project period, will usually be for 1–5 years.

(b) Generally, the grant will initially be for one year and subsequent continuation awards will also be for one year at a time. A grantee must submit a separate application to have the support continued for each subsequent year. Decisions regarding continuation awards and the funding level of such awards will be made after consideration of such factors as the grantee's progress and management practices and the availability of funds. In all cases, continuation awards require a determination by the NIEHS that continued funding is in the best interest of the Federal Government.

(c) Neither the approval of any application nor the award of any grant commits or obligates the Federal Government in any way to make any additional, supplemental, continuation, or other award with respect to any approved application or portion of an approved application.

§ 65.7 For what purposes may grant funds be used?

Individuals receiving training shall be entitled only to the stipends and allowances included in a budget approved by the Director, taking into account the cost of living and such other factors as the needs of the program and the availability of funds.

§ 65.8 What additional Department regulations apply to grantees?

Several other regulations and policies apply to grants under this part. These include, but are not limited to:

42 CFR part 50, subpart D.	Public Health Service grant appeals procedure.
45 CFR 16	Procedures of the Departmental Grant Appeals Board.
45 CFR part 74	Administration of grants.
45 CFR part 75	Informal grant appeals procedures.
45 CFR part 76, subparts A–F.	Government-wide debarment and suspension (nonprocurement) and government-wide requirements for drug-free workplace (grants).
45 CFR part 80	Nondiscrimination under programs receiving Federal assistance through the Department of Health and Human Services—Effectuation of title VI of the Civil Rights Act of 1964.
45 CFR part 81	Practice and procedure for hearings under part 80 of this title.
45 CFR part 84	Nondiscrimination on the basis of handicap in programs and activities receiving or benefiting from Federal financial assistance.
45 CFR part 86	Nondiscrimination on the basis of sex in education programs and activities receiving or benefiting from Federal financial assistance.
45 CFR part 91	Nondiscrimination on the basis of age in Health and Human Services programs and activities receiving Federal financial assistance.
45 CFR part 92	Uniform Administrative Requirements for Grants and Cooperative Agreements to State and local Governments.
45 CFR part 93	New restrictions on lobbying.

§ 65.9 Additional conditions.

The Director may with respect to any award impose additional conditions prior to, or at the time of, any award when, in the Director's judgment, such conditions are necessary to assure the carrying out of the purposes of the award, the interest of the public health, or the conservation of funds awarded.

BILLING CODE 4140-01-M

FEDERAL COMMUNICATIONS COMMISSION

47 CFR Part 73

[MM Docket No. 89-536; RM-7064]

Radio Broadcasting Services; Ashley, MI

AGENCY: Federal Communications Commission.

ACTION: Final rule.

SUMMARY: This document allots Channel 223A to Ashley, Michigan, as that community's first FM broadcast service, in response to a petition filed by William V. Constine. *See* 54 FR 50003, December 4, 1989. Canadian concurrence has been obtained for this allotment at coordinates 43-11-12 and 84-26-30.

DATES: Effective November 30, 1990; the window period for filing applications for Channel 223A at Ashley, Michigan, will open on December 3, 1990, and close on January 2, 1991.

FOR FURTHER INFORMATION CONTACT: Kathleen Scheuerle, Mass Media Bureau, (202) 634-6530.

SUPPLEMENTARY INFORMATION: This is a synopsis of the Commission's Report and Order, MM Docket No. 89-536, adopted September 27, 1990, and released October 16, 1990. The full text of this Commission decision is available for inspection and copying during normal business hours in the FCC Dockets Branch (Room 230), 1919 M Street, NW., Washington, DC. The complete text of this decision may also be purchased from the Commission's copy contractors, International Transcription Service, (202) 857-3800, 2100 M Street, NW., Suite 140, Washington, DC 20037.

47 CFR Part 90

[DA 90-1304]

Frequencies Available for Use in the United States/Canada Border

AGENCY: Federal Communications Commission.

ACTION: Final rule.

SUMMARY: This action adopts rules that put into effect Arrangements between the Federal Communications Commission and the Department of Communications of Canada concerning the use of the 821-824/866-869 MHz and 896-901/935-940 MHz bands in the vicinity of the United States/Canada border. Adoption of this Order paves the way for licensing of United States private land mobile radio stations in the area of the Canadian border.

The Order opens the way for filing applications for non-SMR private land mobile radio stations in the border area immediately upon publication of this Federal Register summary, outlines procedures for filing SMR applications in five border area cities, and adopts rules that specify the channels available and technical rules that must be followed for operation in the border areas.

EFFECTIVE DATE: October 22, 1990.

ADDRESSES: Federal Communications Commission, 1919 M Street, NW., Washington, DC 20554.

FOR FURTHER INFORMATION CONTACT: Edward R. Jacobs, Land Mobile and Microwave Division, Private Radio Bureau, (202) 632-7597.

SUPPLEMENTARY INFORMATION: On September 17, 1990, two Arrangements between the Department of Communications of Canada (DOC) and the Federal Communications Commission of the United States of America concerning use of these bands along the U.S./Canadian border were signed. The Arrangements specify which channels will be available for licensing by each administration within the border area. This Order modifies subpart S of part 90, 47 CFR part 90, to conform the Rules to the Arrangements and to permit licensing of radio systems in the Canadian border area.

The 821-824/866-869 MHz Public Safety channels are immediately available for licensing in the Canadian border zone upon publication of this Federal Register summary. Such licensing shall be pursuant to and in conformance with Regional Public Safety Plans that have been approved by the Commission.The 896-901/935-940 MHz channels are also available in the Canadian border area for licensing in the Business and Industrial/Land Transportation pools immediately upon publication of this summary. The processing procedures that will be used for the already filed and rank-ordered applications for SMR licenses in the Seattle, Detroit, Cleveland, Buffalo, and Rochester Designated Filing Areas will be delineated in letters to be sent directly to the selectees in those areas. No additional applications for 900 MHz SMR facilities will be accepted for filing with the Commission for any region within the United States pending adoption of a Public Notice specifically calling for such applications.

These rule changes will facilitate the construction of additional Private Land Mobile Radio stations in the Canadian border area. This should result in improved mobile communication service to the public without adversely affecting any party.

List of Subjects in 47 CFR Part 90

Private Land Mobile, 800/900 MHz, Frequencies, Radio.

Chief, Land Mobile and Microwave Division, Private Radio Bureau.

Rule Changes

47 CFR part 90 is amended as follows:

PART 90—[AMENDED]

1. The authority citation for part 90 continues to read as follows:

Authority: Sections 4, 303, 48 Stat., as amended, 1066, 1082; 47 U.S.C. 154, 303, unless otherwise noted.

2. 47 CFR 90.619 is amended by revising the introductory text of paragraph (b) and adding paragraphs (c) and (d) to read as follows:

§ 90.619 Frequencies available for use in the U.S./Mexico and U.S./Canada border areas.

* * * * *

(b) *U.S./Canda border area.* The following criteria shall govern the assignment of frequency pairs (channels) in the 806-821/851-866 and 896-901/935-940 MHz bands for stations located in the U.S./Canada border area. These channels are available for assignment for conventional or trunked systems in accordance with all applicable sections of this subpart. They are available for intercategory sharing as indicated in § 90.621(g). Specific provisions for use of the 821-824/866-869 MHz bands in the U.S./Canada border area are contained in paragraph (c) of this section, and provisions for use of the 896-901/935-940 MHz bands in

the U.S./Canada border are contained in paragraph (d) of this section.

* * * * *

(c) *Use of frequencies in the 821–824/866–869 MHz band (Channels 601–830) in the U.S./Canada border area.* The following criteria shall govern the assignment of frequency pairs (channels) in the 821–824/866–869 MHz band for stations located in the U.S./Canada border area. They are available for assignments for conventional or trunked systems in accordance with applicable sections of this subpart and the Report and Order in Gen. Docket No. 87–112. They are not available for intercategory sharing.

(1) Channels 601–830, as listed in § 90.613 Table of 806–824/851–869 MHz Channel Designations, are available to eligible applicants in the Public Safety Category for use in the U.S./Canada border area as shown in Table 25. Additionally, Channels 601, 639, 677, 715, and 753 are available in all regions only for mutual aid purposes.

TABLE 25—CHANNELS IN THE 821–824/866–869 MHz FREQUENCY BANDS AVAILABLE IN THE U.S./CANADA BORDER AREA

Region	Location (longitude)	Channels
1	68° W–71° W (0–100 km from border)	715–830
2	71° W–80°30′ W (0–100 km from border)	760–830
3	80°30′ W–85° W (0–100 km from border)	636–830
4	85° W–121°30′ W (0–100 km from border)	715–830
5	121°30′ W–127° W (0–140 km from border)	715–830
6	127° W–143° W (0–100 km from border)	715–830
7	85° W–121°30′ W (100–140 km from border)	601–830
8	127° W–143° W (100–140 km from border)	601–830

Note: For assignments in the 821–824/866–869 MHz bands, the cities of Akron, Ohio (41°05′00″ N, 81°30′40″ W) and Youngstown, Ohio (41°05′57″ N, 80°39′02″ W) are considered outside of Region 3, and Syracuse, New York (43°03′04″ N, 76°09′14″ W) is considered outside of Region 2. These cities are defined as an area with the given center coordinates and encompassing a circle of 30 km radius.

(2) All frequency assignments made pursuant to paragraph (c)(1) of this section shall comply with the requirements of § 90.619(b)(2).

(3) In Region 5, Channels 601–714 may be authorized in the United States under the following conditions:

(i) An assignment may be made if the predicted power flux density (PFD) of a proposed station's signal does not exceed −107 dBW/m [2] at the border. The prediction of the PFD is calculated based upon a modified Longley-Rice point-to-point propagation model with time and location variabilities of 10 percent [1] and 3-second digitized terrain data.[3]

(ii) Authorizations for Channels 601–714 in Region 5 are secondary to Canadian operations and conditioned to require that licensees take immediate action to eliminate any harmful interference resulting from the station's transmitted signal exceeding −107 dBW/m [2] at or beyond the U.S./Canada border.

(4) Channel assignments for stations to be located in the geographical area in Region 1 enclosed by the Unites States-Canada border, the meridian 71°W and the line beginning at the intersection of 44°25′ N, 71° W, then-running by great circle arc to the intersection of 45° N, 70° W, then North along meridian 70° W to the intersection of 45°45′ N, then running West along 45°45′ N to the intersection of the United States-Canada border, will be only for even numbered channels beginning with Channel 716 and ending with Channel 758.

(5) Channel assignments for stations to be located in the geographical area in Region 3 enclosed by the meridian 81° W longitude, the arc of a circle of 100 km radius centered at 42°39′30″ N latitude 81° W longitude at the northern shore of Lake Erie and drawn clockwise from the southerly intersection with 80°30′ W longitude to intersect the United States-Canada border West of 81° W, and the United States-Canada border, will be only for even numbered channels beginning with Channel 636 and ending with Channel 758. Coordination with Canada will be required for these channels. U.S. stations must protect Canadian stations operating on channels 636 through 758 within an area of 90 km radius from the center city coordinates of London, Ontario (42°59′ N, 81°14′ W).

(6) *Additional channels available.*—The channels listed in Table 26 are available for assignment in Regions 1–6 if the maximum power flux density (PFD) of the station's transmitted signal does not exceed the limits specified in Tables 27 and 28. The spreading loss shall be calculated using the free space formula taking into account an antenna discrimination in the direction of the border.

TABLE 26—ADDITIONAL CHANNELS AVAILABLE

[Regions 1–6]

Region	Channel No.[4]	Effective radiated power
1	601–714	See Table 29
2	601–759	See Table 29
3	601–635	See Table 29
4	601–714	See Table 29
5	601–714	See Table 30
6	601–714	See Table 29

Authorizations for stations using these channels will be secondary to Canadian operations and conditioned to require that licensees take immediate action to eliminate any harmful interference resulting from the station's transmitted signal exceeding the values specified in Tables 29 or 30 at or beyond the U.S./Canada border.

(d) *Use of frequencies in the 896–901/935–940 MHz band (Channels 1–399) in the U.S./Canada border area.*—The following criteria shall govern the assignment of frequency pairs (channels) in the 896–901/935–940 MHz

band for stations located in the U.S./Canada border area. They are available for assignments for conventional or trunked systems in accordance with applicable sections of this subpart.

(1) Channels 1–399, as listed in § 90.613 Table of 896–901/935–940 MHz Channel Designations, are available to eligible applicants for use in the U.S./Canada border area as shown in Table 27. Additionally, Channels 71, 75, 79, 151, 155, and 159 are available in all regions only for implementation of an Advanced Train Control System as defined in 3 FCC Rcd 427 (1988) (Advanced Train Control Waiver).

TABLE 27—CHANNELS IN THE 896–901/935–940 MHz FREQUENCY BANDS AVAILABLE IN THE U.S./CANADA BORDER AREA

Region	Location (longitude)	Channels
1	66° W–71° W. (0–100 km from border)	1–200, 396, 399
2	71° W–80°30′ W (0–100 km from border)	1–120
3	80°30′ W–85° W (0–100 km from border)	1–340
4	85° W–121°30′ W (0–100 km from border)	1–200,328,399
5	121°30′ W–127° W (0–140 km from border)	1–200, 396, 399
6	127° W–143° W (0–100 km from border)	1–200, 395, 399
7	66° W–121°30′ W (100–140 km from border)	1–399
8	127° W–143° W (100–140 km from border)	1–399

Note: For assignments in the 896–901/935–940 MHz bands, the cities of Akron, Ohio (41°05′00″ N, 81°30′40″ W) and Youngstown, Ohio (41°05′57″ N, 80°39′02″ W) are considered outside of Region 3, and Syracuse, New York (43°03′04″ N, 76°09′14″ W) is considered outside of Region 2. These cities are defined as an area with the given center coordinates and encompassing a circle of 30 km radius.

(2) All frequency assignments made pursuant to paragraph (d)(1) of this section shall comply with the requirements of § 90.619(b)(2).

(3) In Region 5, Channels 201–397 may be authorized in the United States under the following conditions:

(i) An assignment may be made if the predicted power flux density (PFD) of a proposed station's signal does not exceed –107 dBW/m[2] at the border. The prediction of the PFD is calculated based upon a modified Longley-Rice point-to-point propagation model with time and location variabilities of 10 percent[3] and 3-second digitized terrain date[4].

(ii) Authorizations for Channels 201–397 in Region 5 are secondary to Canadian operations and conditioned to require that licensees take immediate action to eliminate any harmful interference resulting from the station's transmitted signal exceeding –107 dBW/m[2] at or beyond the U.S./Canada border.

(4) Channel assignments for stations to be located in the geographical area in Region 1 enclosed by the United States-Canada border, the meridian 71° W and the line beginning at the intersection of 44°25′ N, 71° W, then running by great circle arc to the intersection of 45° N, 70° W, then North along meridian 70° W to the intersection of 45°45′ N, then running West along 45°45′ N to the intersection of the United States-Canada border, will be only for channels 121 through 160, inclusive, and will be limited to assignments with 11 kHz or less necessary bandwidth. Coordination with Canada will be required for these channels.

(5) Channel assignments for stations to be located in the geographical area in Region 3 enclosed by the meridian of 81° W longitude, the arc of a circle of 100 km radius centered at 42°39′30″ N latitude and 81° W longitude at the northern shore of Lake Erie and drawn clockwise from the southerly intersection with 80°30′ W longitude to intersect the United States-Canada border West of 81° W, and the United States-Canada border, will be only for channels 121 through 230, inclusive, and will be limited to assignments with 11 kHz or less necessary bandwidth. Coordination with Canada will be required for these channels. U.S. stations must protect Canadian stations operating on channels 121 through 230 within an area of 30 km radius from the center city coordinates of London, Ontario (42°59′ N, 81° 14′ W).

(6) *Additional channels available*—The channels listed in Table 28 are available for assignment in Regions 1–6 if the maximum power flux density (PFD) of the station's transmitted signal does not exceed the limits specified in Tables 29 and 30. The spreading loss shall be calculated using the free space formula taking into account any antenna discrimination in the direction of the border.

TABLE 28—ADDITIONAL CHANNELS AVAILABLE

[Regions 1–6]

Region	Channel No.'s	Effective radiated power
1	201–397	See Table 29
2	121–399	See Table 29
3	341–399	See Table 29
4	201–397	See Table 29
5	201–397	See Table 30

TABLE 28—ADDITIONAL CHANNELS AVAILABLE—Continued

[Regions 1–6]

Region	Channel No.'s	Effective radiated power
6	201–397	See Table 29

Authorizations for stations using these channels will be secondary to Canadian operations and conditioned to require that licensees take immediate action to eliminate any harmful interference resulting from the station's transmitted signal exceeding the values specified in Tables 29 or 30 at or beyond the U.S./Canada border.

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

50 CFR Part 675

[Docket No. 91048-0008]

Groundfish of the Bering Sea and Aleutian Islands Area

AGENCY: National Marine Fisheries Service (NMFS), NOAA, Commerce.

ACTION: Notice of redistribution of PSC allowance; request for comments.

SUMMARY: The Director, Alaska Region, NMFS (Regional Director), has determined that the prohibited species catch (PSC) allowance for *Chionoecetes bairdi* Tanner crab in Zone 2 will remain uncaught by the domestic annual processing (DAP) other fishery. Therefore, the Secretary of Commerce (Secretary) is redistributing PSC allowance for *C. bairdi* to the DAP flatfish fishery as specified in this notice. This action is necessary to prevent premature closure of the DAP flatfish fishery in Zone 2, and is intended to promote optimum use of groundfish.

DATES: *Effective* from noon, Alaska local time (a.l.t.), October 16, 1990, through midnight, a.l.t., December 31, 1990.

Comments are invited on or before October 31, 1990.

FOR FURTHER INFORMATION CONTACT: Jessica A. Gharrett (Resource Management Specialist), NMFS Alaska Region, P.O. Box 21668, Juneau, Alaska 99802-1668, telephone 907-586-7229.

SUPPLEMENTARY INFORMATION: The Secretary implemented Amendment 12A to the Fishery Management Plan for the Bering Sea/Aleutian Islands Groundfish (FMP) under authority of the Magnuson Fishery Conservation and Management Act (Magnuson Act) with a final rule promulgated August 9, 1989 (54 FR 32642) and effective September 3, 1989, through December 31, 1990.

Amendment 12A limits incidental catches of the prohibited species *C. bairdi* Tanner crab, red king crab, and Pacific halibut by the groundfish fisheries in the Bering Sea and Aleutian Islands (BSAI) area. The amendment establishes five prohibited species catch (PSC) limits, each of which is apportioned among four fisheries: "DAP flatfish", "DAP other", "JVP flatfish", and "JVP other." The 20 PSC allowances are listed in the initial specifications notice for 1990 for the BSAI area (55 FR 1434, January 16, 1990).

The Regional Director has determined that about 1.5 million of the 1.89 million *C. bairdi* Tanner crabs allocated to the "DAP other fishery" in Zone 2 will not be taken in 1990. The entire BSAI was closed to this fishery after the secondary Pacific halibut PSC allowance for the "DAP other fishery" was taken on June 30, 1990 (55 FR 27643, July 5, 1990).

At least 1,000,000 *C. bairdi* Tanner crabs are therefore available for transfer to the "DAP flatfish fishery" in Zone 2. The "DAP flatfish fishery" caught its PSC allowance of 110,000 *C. bairdi* Tanner crabs by September 29, 1990. Under § 675.20(e)(1)(iii) and (e)(4), the Secretary may adjust PSC allowances to allow redistribution of uncaught PSC allowances among fisheries. The proposed adjustment will allow the "DAP flatfish fishery" to be prosecuted, which otherwise would be closed and thus possibly leave substantial amounts of groundfish uncaught. Therefore, the *C. bairdi* PSC allowances specified for 1990 (55 FR 1434, January 16, 1990) will be revised as in Table 1.

Classification

This action is taken under § 675.20 (e)(1)(iii) and (e)(4) and complies with Executive Order 12291.

The Assistant Administrator for Fisheries, NOAA, finds for good cause that it is impractical and contrary to the public interest to provide prior notice and comment. Immediate effectiveness of this notice is necessary to benefit domestic fishermen whose fisheries would otherwise be closed from key fishing areas. Interested persons are invited to submit comments in writing to the previously cited address on or before October 31, 1990.

List of Subjects in 50 CFR 675

Proposed Rules

Federal Register
Vol. 55, No. 204
Monday, October 22, 1990

This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

DEPARTMENT OF AGRICULTURE

Agricultural Marketing Service

7 CFR Part 58

[DA-90-028]

Grading and Inspection, General Specifications for Approved Plants and Standards for Grades of Dairy Products; Proposed Increase in Fees

AGENCY: Agricultural Marketing Service, USDA.

ACTION: Proposed rule.

SUMMARY: The Agricultural Marketing Service proposes to increase the fees charged for services provided under the dairy grading program. The program is a voluntary, user-fee program conducted under the authority of the Agricultural Marketing Act of 1946, as amended. The proposed increase would result in a fee of $36.00 per hour for continuous resident services and $41.00 per hour for nonresident services between the hours of 6 a.m. and 6 p.m. These proposed fees represent a $2.00 per hour increase for resident services and a $3.00 per hour increase for nonresident services. The fee for nonresident services between the hours of 6 p.m. and 6 a.m. would be $45.00, representing an increase of $3.20 per hour.

The fees need to be increased to cover the anticipated increase in Federal salaries to be effective about January 1, 1991; to cover increases in nonsalary inflationary costs; and to cover severance, unemployment, and relocation costs associated with the recent restructuring of the program.

DATES: Comments must be received on or before November 21, 1990.

ADDRESSES: Comments should be sent to: Office of the Director, AMS/Dairy Division, room 2968–S, P.O. Box 96456, Washington, DC. 20090–6456.

Comments received will be available for public inspection at this location during regular business hours.

FOR FURTHER INFORMATION CONTACT: Lynn G. Boerger, USDA/AMS/Dairy Division, Dairy Grading Section, room 2750–S, P.O. Box 96456, Washington, DC 20090–6456, (202) 382–9381.

SUPPLEMENTARY INFORMATION: This proposed rule has been reviewed under USDA procedures implementing Executive Order 12291 and Departmental Regulation 1512–1 and has been classified a "non-major" rule under the criteria contained therein.

The proposed rule also has been reviewed in accordance with the Regulatory Flexibility Act, 5 U.S.C. 601 *et seq.* and the Administrator, Agricultural Marketing Service has determined that if promulgated it would not have a significant economic impact on a substantial number of small entities. The proposed changes will not significantly affect the cost per unit for grading and inspection services. The Agricultural Marketing Service estimates that overall this rule will yield an additional $242,000 during fiscal year 1991. The Agency does not believe the increases will affect competition. Furthermore, the dairy grading program is a voluntary program.

The Agricultural Marketing Act of 1946, as amended, authorizes the Secretary of Agriculture to provide Federal dairy grading and inspection services that facilitate marketing and help consumers obtain the quality of dairy products they desire. The Act provides that reasonable fees be collected from the users of the services to cover, as nearly as practicable, the cost of maintaining the program.

Since the costs of the grading program are covered entirely by user fees, it is essential that fees be increased when program costs exceed revenues. Program restructuring has resulted in revenues in closer balance to program obligations. However, it is anticipated that Federal salaries will increase by 3.5 percent on or about January 1, 1991. Also, nonsalary costs are projected to rise by 5.0 percent or more during 1991. In addition, the increased fees will cover relocation, severance and unemployment costs associated with the recent program restructuring. The current fees, which became effective on January 28, 1990, will not cover these increased costs.

The operating costs for 1991 are projected to exceed revenues by approximately $242,000. A proposed increase of $2.00 per hour for the resident program and $3.00 per hour for the nonresident program should cover the increased costs.

In connection with the nonresident fees, higher costs are reflected in the proposed fees with respect to the administration and supervision of those activities performed by nonresident personnel. These higher costs are identified as those associated with scheduling duty assignments, typing of certificates, supervision and training of personnel at the multiple locations, and the review and processing of paperwork for traveling to various duty assignments.

Proposed Changes

This rule proposes the following changes in the regulations implementing the dairy inspection and grading program:

1. Increase the hourly fee for nonresident services from $36.00 to $41.00 for services performed between 6 a.m. and 6 p.m. and from $41.80 to $45.00 for services performed between 6 p.m. to 6 a.m.

The nonresident hourly rate is charged to users who request an inspector or grader for particular dates and amounts of time to perform specific grading and inspection activities. These users of nonresident services are charged for the amount of time required to perform the task and undertake related travel, plus travel costs.

2. Increase the hourly fee for continuous resident services from $34.00 to $36.00.

The resident hourly rate is charged to those who are using grading and inspection services performed by an inspector or grader assigned to a plant on a continuous, year-round, resident basis.

Timing of Any Fee Increase

It is contemplated that any fees that might be implemented as a result of this action would be implemented on an expedited basis in order to minimize that period of time between the effective date of the Federal pay increase and the effective date of any fee increase. Accordingly, it is anticipated that the fee increases, if adopted, would become effective upon publication or very soon after publication of the final rule in the Federal Register and that postponing the effective date of the final rule until 30

days after publication in the Federal Register would not occur. An approximate effective date would be January 13, 1991.

All written submissions made pursuant to this notice will be available for public inspection at the Dairy Division, Agricultural Marketing Service, USDA, Washington, DC, during regular business hours.

List of Subjects in 7 CFR Part 58

Food grades and standards, Dairy products.

For the reasons set forth in the preamble, it is proposed that 7 CFR part 58, subpart A, be amended as follows:

PART 58—[AMENDED]

Subpart A—Regulations Governing the Inspection and Grading Services of Manufactured or Processed Dairy Products

1. The authority citation for part 58 continues to read as follows:

Authority: Sections 202–208, 60 Stat. 1087, as amended; 7 U.S.C. 1621–1627, unless otherwise noted.

2. Section 58.43 is revised to read as follows:

§ 58.43 Fees for inspection, grading, and sampling.

Except as otherwise provided in this section and §§ 58.38 through 58.46, charges shall be made for inspection, grading, and sampling service at the hourly rate of $41.00 for service performed between 6 a.m. and 6 p.m., and $45.00 for service performed between 6 p.m. and 6 a.m., for the time required to perform the service calculated to the nearest 15-minute period, including the time required for preparation of certificates and reports and the travel time of the inspector or grader in connection with the performance of the service. A minimum charge of one-half hour shall be made for service pursuant to each request or certificate issued.

3. Section 58.45 is revised to read as follows:

§ 58.45 Fees for continuous resident service.

Irrespective of the fees and charges provided in §§ 58.39 and 58.43, charges for the inspector(s) and grader(s) assigned to a continuous resident program shall be made at the rate of $36.00 per hour for services performed during the assigned tour of duty. Charges for service performed in excess of the assigned tour of duty shall be made at a rate of 1½ times the rate stated in this section.

Signed at Washington, DC, on October 10, 1990.

Daniel Haley,

Administrator, Agricultural Marketing Service.

[FR Doc. 90-24847 Filed 10-19-90; 8:45 am]

BILLING CODE 3410-02-M

Farmers Home Administration

7 CFR Part 1944

Section 502 Rural Housing Loan Policies, Procedures and Authorizations

AGENCY: Farmers Home Administration, USDA.

ACTION: Proposed rule.

SUMMARY: The Farmers Home Administration (FmHA) proposes to amend its regulations regarding administration of the Rural Housing loan making program. This action is necessary to improve underwriting criteria and reduce loan losses to the Government, provide for the consistent evaluation of processing of loan applications for creditworthiness, and reduce the workload of County Office staffs. The intended effect is to reduce eventual loan losses to the Government stemming from bad loans, and reduce the number of appeals by clarifying the credit requirements.

DATES: Comments must be received on or before December 21, 1990.

ADDRESSES: Submit written comments to the Office of the Chief, Regulations, Analysis, and Control Branch, Farmers Home Administration, U.S. Department of Agriculture, room 6348, South Agriculture Building, 14th and Independence SW., Washington, DC 20250. All written comments will be available for public inspection during regular working hours at the above address.

FOR FURTHER INFORMATION CONTACT: Karen S. Murray, Senior Loan Specialist, Farmers Home Administration, USDA, room 5334–S, South Agriculture Building, 14th and Independence SW., Washington, DC 20250, Telephone (202) 382–1474.

SUPPLEMENTARY INFORMATION: This action has been reviewed under USDA procedures established in Departmental Regulation 1512–1 which implements Executive Order 12291, and has been determined to be nonmajor because there is no substantial change from practices under existing rules that would have an annual effect on the economy of $100 million or more. There is no major increase in cost or prices for consumers, individual industries, Federal, State, or local government agencies or geographical regions, or significant adverse effects on competition, employment, productivity, innovation, or in the ability of United States-based enterprises to compete with foreign-based enterprises in domestic or export markets.

Discussion

In 1988, FmHA did a nationwide study to determine if FmHA personnel were consistently evaluating creditworthiness of applicants. The results indicated a great variance between County Offices. The Agency has decided to set guidelines stating what constitutes acceptable and unacceptable credit history. The proposed rule contains specific examples of what credit problems will be considered unacceptable, and under what circumstances poor credit may not be held against the applicant for FmHA loan making purposes.

Regulatory Flexibility Act

La Verne Ausman, Administrator of Farmers Home Administration, has determined that this action will not have a significant economic impact on a substantial number of small entities because the regulatory changes affect FmHA processing of section 502 loans and individual applicant eligibility for the program.

Environmental Impact Statement

This document has been reviewed in accordance with 7 CFR part 1940, subpart G, "Environmental Program." It is the determination of FmHA that this proposed action does not constitute a major Federal Action significantly affecting the quality of the human environment, and in accordance with the National Environmental Policy Act of 1969, Public Law 91–190, an Environmental Impact Statement is not required.

Programs Affected

This program is listed in the catalog of Federal Domestic Assistance under 10.410, Low Income Housing Loans.

Intergovernmental Consultation

For the reason set forth in the final rule related Notice to 7 CFR part 3015, subpart V, 48 FR 29115, June 24, 1983, this program/activity is excluded from the scope of Executive Order 12372 which requires intergovernmental consultation with State and local officials.

List of Subjects in 7 CFR Part 1944

Home improvement, Loan program—Housing and community development, Low and moderate income housing—rental, Mobile homes, Mortgages, Rural housing, Subsidies.

Therefore, it is proposed that chapter XVIII, title 7, Code of Federal Regulations be amended as follows:

PART 1944—HOUSING

1. The authority citation for part 1944 continues to read as follows:

Authority: 42 U.S.C. 1480, 5 U.S.C. 301, 7 CFR 2.23, 7 CFR 2.70.

Subpart A—Section 502 Rural Housing Loan Policies, Procedures, and Authorizations

2. Section 1944.9 is amended by revising paragraph (f) as follows:

§ 1944.9 Other eligibility requirements.

* * * * *

(f) Have a credit history which indicates a reasonable ability and willingness to meet obligations as they become due.

(1) Any or all of the following are indicators of an unacceptable credit history unless FmHA determines that the cause was beyond the applicant's control, or satisfies the criteria in paragraph (f)(2) of this section:

(i) Incidents of secured or unsecured debt payments being more than 30 days late if the incidents have occurred within the last 12 months.

(ii) Loss of security due to a foreclosure if the foreclosure has occurred within the last 36 months.

(iii) Outstanding tax liens or Government debts with no satisfactory arrangements for payments, no matter what their age, as long as they are currently due and payable.

(iv) A court-created or affirmed obligation (judgment) that is currently outstanding or has been outstanding within the last 12 months.

(v) Repeated incidents of rent payments being 30 days or more past due that have occurred within the last three years.

(vi) Accounts which have been converted to collections within the last 12 months (utility bills, hospital bills, etc.).

(vii) Collection accounts outstanding, with no satisfactory arrangements for payments, no matter what their age, as long as they are currently due and payable.

(viii) Non-FmHA debts written off within the last 24 months.

(2) The following will not indicate an unacceptable credit history:

(i) "No history" of credit transactions by the applicant.

(ii) A discharged bankruptcy, completed foreclosure or satisfied judgment which occurred more than 36 months before application, or delinquent payments which occurred more than 18 months before application if no recent delinquencies have occurred, and the account is now current or paid in full.

(iii) Isolated incidents of delinquent payments which do not represent a general pattern of unsatisfactory or slow payment.

(iv) Any bankruptcy, foreclosure, judgment or delinquent payment when the applicant can satisfactorily demonstrate that:

(A) The circumstances were of a temporary nature, were beyond the applicant's control and have been removed. Examples: loss of job; delay or reduction in government benefits, or other loss of income; increased expenses due to illness, death, etc.

(B) The adverse action or delinquency was the result of a refusal to make full payment because of defective goods or services or as a result of some other justifiable dispute relating to the goods or services purchased or contracted for.

* * * * *

Dated: August 29, 1990.

David T. Chen,

Acting Administrator, Farmers Home Administration.

[FR Doc. 90-24914 Filed 10-19-90; 8:45 am]

BILLING CODE 3410-07-M

Animal and Plant Health Inspection Service

9 CFR Part 113

[Docket No. 90-163]

Viruses, Serums, Toxins, and Analogous Products; Sampling of Autogenous Biologics

AGENCY: Animal and Plant Health Inspection Service, USDA.

ACTION: Proposed rule.

SUMMARY: We are proposing to amend the regulations pertaining to sampling of autogenous biologics as follows: (1) Producers would no longer be required to submit serial samples of autogenous biologics when the serial does not exceed 50 containers; and (2) for autogenous biologics serials that exceed 50 containers, the number of samples required per serial would be reduced from 12 to 10. Producers would still be required to select and maintain reserve samples of autogenous biologics for all serials regardless of size.

This proposed rule would eliminate unnecessary submission of autogenous biologics samples, thus reducing the burden on producers.

DATES: Consideration will be given only to comments received on or before December 21, 1990.

ADDRESSES: To help ensure that your written comments are considered, send an original and three copies to Chief, Regulatory Analysis and Development, PPD, APHIS, USDA, room 866, Federal Building, 6505 Belcrest Road, Hyattsville, MD 20782. Please state that your comments refer to Docket No. 90-163. Comments received may be inspected at USDA, room 1141, South Building, 14th and Independence Avenue, SW., Washington, DC, between 8 a.m. and 4:30 p.m., Monday through Friday, except holidays.

FOR FURTHER INFORMATION CONTACT: Dr. David A. Espeseth, Deputy Director, Veterinary Biologics, BBEP, APHIS, USDA, room 838, Federal Building, 6505 Belcrest Road, Hyattsville, MD 20782, (301) 436-8245.

SUPPLEMENTARY INFORMATION:

Background

The regulations in 9 CFR 113.3(b)(10) pertain to the number of samples of an autogenous biologic serial that a producer must select and send to the National Veterinary Services Laboratories. Currently, two samples are required if a serial does not exceed 50 containers, and 12 samples if a serial exceeds 50 containers.

In response to a request from industry, we reviewed the need for submitting samples from small serials of autogenous biologics. When a small serial of product is produced, it is usually intended for use in the herd or flock from which the seed organism was isolated. This usually involves a limited number of animals in a limited area. The producer is also required to retain reserve samples as provided in § 113.3(c) of the regulations in case the serial needs to be tested because of adverse reactions or other problems. The producing establishment is subject to inspection, and USDA testing of samples drawn from serials consisting of more than 50 containers assures that proper manufacturing techniques and quality control are being maintained. It is therefore our view that it would be appropriate to amend the regulations pertaining to the number of samples of an autogenous biologic which must be sent to the National Veterinary Services Laboratories.

The proposed rule would eliminate the requirement to submit samples for a

serial not exceeding 50 containers, and reduce the number of samples for a serial exceeding 50 containers from 12 to 10. This reduction in required samples would not adversely affect the product inspection activities of the veterinary biologics program.

Executive Order 12291 and Regulatory Flexibility Act

We are issuing this proposed rule in conformance with Executive Order 12991 and Departmental Regulation 1512–1 and have determined that it is not a "major rule." Based on information compiled by the Department, we have determined that this proposed rule would have an effect on the economy of less than $100 million; would not cause a major increase in costs or prices for consumers, individual industries, Federal, State, or local government agencies, or geographic regions, and would not cause a significant adverse effect on competition, employment, investment, productivity, innovation, or on the ability of United States-based enterprises to compete with foreign-based enterprises in domestic or export markets.

The proposed rule would eliminate the requirement for a producer to submit samples of an autogenous biologic serial if the serial includes no more than 50 containers. For an autogenous biologic serial with more than 50 containers, it would reduce the number of submitted samples from 12 to 10. Thus, any economic effect would be to reduce the cost of producing an autogenous biologic.

Under these circumstances, the Administrator of the Animal and Plant Health Inspection Service has determined that this action would not have a significant economic impact on a substantial number of small entities.

Paperwork Reduction Act

This proposed rule contains no new information collection or recordkeeping requirements under the Paperwork Reduction Act of 1980 (44 U.S.C. 3501 *et seq.*).

Executive Order 12372

This program/activity is listed in the Catalog of Federal Domestic Assistance under No. 10.025 and is subject to Executive Order 12372, which requires intergovernmental consultation with State and local officials. (See 7 CFR 3015, subpart V.)

List of Subjects in 9 CFR Part 113

Animal biologics.

Accordingly, title 9, Code of Federal Regulations, would be amended as follows:

PART 113—STANDARD REQUIREMENTS

1. The authority citation for part 113 would continue to read as follows:

Authority: 21 U.S.C. 151–159; 7 CFR 2.17, 2.15, and 371.2(d).

2. Section 113.3, paragraph (b)(10) would be revised to read as follows:

§ 113.3 Sampling of biological products.

* * * * *

(b) * * *

(10) *Autogenous biologics.* Ten samples shall be selected from each serial of autogenous biologic that exceeds 50 containers. No samples, other than those required by paragraph (c) of this section, are required for a serial of autogenous biologic with 50 or fewer containers.

* * * * *

Done in Washington, DC, this 16 day of October 1990.

RIN 0583–AA98

Ante-Mortem Inspection of Disabled Animals and Other Animals Unable to Move on Transport Vehicles

AGENCY: Food Safety and Inspection Service, USDA.

ACTION: Proposed rule.

SUMMARY: The Food Safety and Inspection Service (FSIS) is proposing to amend the Federal meat inspection regulations to allow ante-mortem inspection of disabled animals, and other animals unable to move, while the animals are still on a transport vehicle, if requested by the official establishment. Currently, the ante-mortem inspection of such animals may only be performed in designated, covered ante-mortem pens on the premises of an official establishment. During such inspections, the transport vehicle would be located on the premises of an official establishment. This proposal is intended to reduce the inhumane handling that may result when disabled animals, and other animals unable to move, are transferred from transport vehicles to the designated, covered ante-mortem pens for ante-mortem inspection.

DATES: Comments must be received on or before December 21, 1990.

ADDRESSES: Written comments to: Policy Office, Attn: Linda Carey, FSIS Hearing Clerk, Room 3171, South Agriculture Building, Food Safety and Inspection Service, U.S. Department of Agriculture, Washington, DC 20250. (See also "comments" under SUPPLEMENTARY INFORMATION.)

FOR FURTHER INFORMATION CONTACT: Dr. William James, Acting Director, Slaughter Inspection Standards and Procedures Division, Science and Technology, Food Safety and Inspection Service, U.S. Department of Agriculture, Washington, DC 20250, (202) 447–3219.

SUPPLEMENTARY INFORMATION:

Executive Order 12291

This proposed rule is issued in conformance with Executive Order 12291, and has been determined not to be a "major rule." It will not result in an annual effect on the economy of $100 million or more; a major increase in costs or prices for consumers, individual industries, Federal, State, or local government agencies, or geographic regions; or significant adverse effects on competition, employment, investment, productivity, innovation, or the ability of United States-based enterprises to compete with foreign-based enterprises in domestic or export markets. The proposal would permit ante-mortem inspection to be performed on disabled animals, and other animals unable to move, while the animals are still on a transport vehicle, if requested by the official establishment. Establishments may continue to have ante-mortem inspection of disabled animals, and other animals unable to move, conducted in designated, covered ante-mortem pens. The creation of an alternate location for ante-mortem inspection of disabled animals, and other animals unable to move, would enable establishments to handle such animals more humanely. This proposal will not have a significant impact on red meat establishments or on the national economy.

Effect on Small Entities

The Administrator, Food Safety and Inspection Service, has determined that this action will not have a significant economic impact on a substantial number of small entities, as defined by the Regulatory Flexibility Act (5 U.S.C. 601). Although a substantial number of small entities may be affected by this action, the economic effect will not be significant for several reasons. First, most of the establishments already own and use the types of equipment in their regular operations which are required

by this proposed regulation. The equipment necessary to perform ante-mortem inspection of disabled animals, and other animals unable to move, on transport vehicles includes a mobile platform or rolling ladder that extends to reach the second level of a two story truck and an outdoor floodlight which can be attached to the ladder or inside the vehicle. Also restraints, such as chains, may be needed to restrain an animal during ante-mortem inspection. Secondly, the cost of purchasing the equipment, if an establishment did not have such equipment, would not be significant. For example, the estimated cost of a platform or ladder is $400 and of a floodlight is $100. Additionally, any establishment may choose to continue to have ante-mortem inspection of disabled animals conducted exclusively in designated, covered pens.

Paperwork Requirements

The proposed rule would require each establishment that requests ante-mortem inspection on disabled animals, and other animals unable to move, while the animals are still on the transport vehicle, to submit a written request signed by a manager of the official establishment. The written request would contain three statements. The first statement would be a request from the establishment to the FSIS inspector for ante-mortem inspection on a transport vehicle, of disabled animals, and other animals unable to move. The second statement would be an agreement between this Agency and the establishment stating that (1) upon signing the request, the transport vehicle would be considered an ante-mortem pen, and part of the premises of the official establishment and (2) that once designated as part of the official establishment, the vehicle would not be moved from the establishment premises, until an ante-mortem inspection, disposition and humane removal, if necessary, of all the disabled animals, and other animals unable to move, on the vehicle had been completed. These two statements would be signed and dated by a manager of the establishment before the request was submitted to the FSIS inspector. The third statement would be an agreement by the FSIS inspector to perform ante-mortem inspection on disabled animals, and other animals unable to move, while they were on the transport vehicle. The Program employee would sign and date the third statement when he or she agreed to do the vehicle ante-mortem inspection. The request would contain the official establishment number and the license number of the vehicle containing the animals for which ante-mortem inspection was being requested. A request would have to be submitted for each vehicle holding disabled animals, and other animals unable to move, for which the establishment desired ante-mortem inspection while the animals were on the vehicle. The Agency is reviewing these paperwork requirements and will submit them to the Office of Management and Budget under the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*).

Comments

Interested persons are invited to submit written comments concerning this proposal. Written comments should be sent to the Policy Office and should refer to the docket number located in the heading of this document. All comments submitted in response to this proposal will be made available for public inspection in the Policy Office between 9 a.m. and 4 p.m., Monday through Friday.

Background

The Federal Meat Inspection Act (FMIA) (21 U.S.C. 601 *et seq.*) requires, among other things, that the Secretary of Agriculture, through appointed inspectors, conduct an ante-mortem inspection of certain livestock including cattle, when these animals are presented for slaughter at an official establishment that is subject to inspection. All cattle, sheep, swine, goats, horses, mules and other equines found upon ante-mortem inspection to show symptoms of disease shall be set apart and slaughtered separately from all other cattle, sheep, swine, goats, horses, mules, or other equines (21 U.S.C. 603). In addition, the Humane Methods of Slaughter Act of 1978 amended sections 3 and 10 of title 1 of the FMIA (21 U.S.C. 603 and 610) to require that all federally inspected slaughtering establishments adopt humane slaughter and handling practices for all cattle, swine, sheep, goats, horses, mules and other equines, in accordance with the provisions of that Act (7 U.S.C. 1901–1906).

Ante-mortem inspection of disabled animals, and other animals unable to move, is required to be performed in designated, covered pens on the premises of official establishments (9 CFR 313.1(c), 313.2(d)(1)). (For the purposes of this proposal, the term "disabled animals" includes disabled animals and other animals unable to move, including "downers".) As such, disabled animals must be removed from the transport vehicle and placed in these designated pens. FSIS is concerned that inhumane handling may result when animals under duress from an accident, injury, or other disabling factor, are transferred from the transport vehicle. It is currently prohibited to drag a conscious animal, thus, suitable equipment must be employed to move the animal (9 CFR 313.2(d)(2)). Only a stunned animal may be dragged.

FSIS has determined that when suitable equipment is not available to facilitate the removal of disabled animals in a humane manner in accordance with 9 CFR 313.2(d)(3), it would be more humane to inspect these animals while they are on the transport vehicle. This determination responds to a petition requesting that ante-mortem inspection be performed for disabled animals on transport vehicles parked on an official establishment's premises in instances when it would be difficult to remove these animals in a humane manner from the vehicle to official ante-mortem pens. FSIS has determined that a transport vehicle could be considered a part of the official establishment premises for purposes of ante-mortem inspection, once it is parked in an area that is indicated on the establishment's approved blueprints pursuant to § 304.2 of the Federal meat inspection regulations (9 CFR 304.2). Section 309.1(b) of the Federal meat inspection regulations (9 CFR 309.1(b)) states that holding pens of an establishment located in a public stockyard can be regarded as part of the premises of an official establishment for purposes of ante-mortem inspection. However, since, in public stockyards, inspection personnel cannot maintain control of the transport vehicle and disabled animals, an alternate location for ante-mortem inspection of disabled animals in public stockyards will not be permitted.

A written request for vehicle ante-mortem inspection would have to be submitted by a manager of the official establishment to the FSIS inspector assigned to do ante-mortem inspection of the establishment before ante-mortem inspection of animals on the transport vehicle would be considered. The written request would contain three statements. The first statement would be a request from the establishment to the FSIS inspector for ante-mortem inspection of all the disabled animals on that vehicle. The second would be a written agreement between this Agency and the establishment management, that (1) upon signing the request, the transport vehicle would be considered an ante-mortem pen, and as such part of the establishment, and (2) that once designated as part of the official establishment, the vehicle would not be moved from the establishment premises, until an ante-mortem inspection,

disposition, and humane removal, if necessary, of all of the disabled animals, and other animals unable to move, on the vehicle had been completed. These two statements would be signed and dated by a manager of the establishment before the request was submitted to the FSIS inspector. The third statement would be an agreement by the FSIS inspector to perform ante-mortem inspection on all the disabled animals, and other animals unable to move, while they were on the transport vehicle. This statement would be signed and dated by the Program employee if he or she agreed to do the vehicle ante-mortem inspection. The request would also contain the official establishment number and the license number of the vehicle containing the animals for which ante-mortem inspection was being requested.

By signing the request for vehicle ante-mortem inspection, the establishment would agree to maintain control over the vehicle and animals. The establishment would be responsible for keeping the animals and vehicle on the premises until an ante-mortem disposition has been made by the FSIS inspector and the disposition has been complied with by the establishment. Each signed request would be applicable to only one vehicle. A new request would be submitted for each subsequent vehicle arriving during the day holding disabled animals for which the establishment desired vehicle ante-mortem inspection. Upon signature of the request by the FSIS inspector, ante-mortem inspection would be performed on all the disabled animals on that vehicle. All other animals would be transported to another establishment for ante-mortem inspection or removed to ante-mortem pens for ante-mortem inspection at the establishment where the vehicle ante-mortem inspection is being performed. Some vehicle owners transport and deposit disabled animals on their vehicle to more than one establishment. Under this proposed rule, vehicle owners would not be able to continue this practice if the establishment requested ante-mortem inspection on the vehicle. To maintain control and identification of these animals, it would be necessary to require ante-mortem inspection and disposition of all the disabled animals on that vehicle.

If it is not possible to perform ante-mortem inspection on *all* the disabled animals on the vehicle, the FSIS inspector would not approve the request, and the disabled animals needing ante-mortem inspection would be humanely removed from the vehicle in accordance with 9 CFR 313.2(d)(3) and placed in the suspect ante-mortem pen for traditional ante-mortem inspection (9 CFR 313.2(d)(1)). The FSIS inspector would not be required to sign a request for vehicle ante-mortem inspection if: (1) The establishment failed to provide adequate lighting or other necessary equipment, (2) the FSIS inspector did not have enough time to conduct a proper ante-mortem inspection on a transport vehicle due to responsibilities in other areas of the establishment, (3) the safety of the FSIS inspector would be at risk if such inspection were performed, or (4) the FSIS inspector could not perform ante-mortem inspection on all of the animals on the transport vehicle because one or more of such animals is hidden from view.

The FSIS inspector-in-charge of the establishment requesting vehicle ante-mortem inspection would designate an area on the premises of the official establishment at which such ante-mortem inspection would be conducted.

Facility and Equipment Requirements

An FSIS inspector would perform ante-mortem inspection of disabled animals on a transport vehicle in one of two ways. Ante-mortem inspection could be performed by the inspector from inside the vehicle, or from outside the vehicle, when entering the vehicle, would be unsafe in the opinion of the inspector. From outside the vehicle, the inspector would perform ante-mortem inspection by viewing the animals over the sides of the vehicle or through the slats of the sides of the vehicle from a permanent or mobile platform alongside the vehicle allowing the inspector to observe the animals from a position above the animals. The facility and equipment requirements for ante-mortem inspection on a transport vehicle would comply with paragraphs (a) and (b) of § 307.2 of the Federal meat inspection regulations (9 CFR 313.2 (a) and (b)), to assure the efficient conduct of inspection and maintenance of sanitary conditions. These requirements currently applicable to all official establishments include providing satisfactory lighting and equipment for proper inspection and providing an employee to assist the FSIS inspector as he or she deems necessary. When conducting ante-mortem inspection on a transport vehicle, lighting must be sufficient both inside and outside the vehicle in the opinion of the FSIS inspector to conduct proper ante-mortem inspection. When the FSIS inspector chooses to perform vehicle ante-mortem inspection from the outside of the transport vehicle, an adjustable rolling ladder or platform would be provided by the establishment. The ladder or platform on which inspection would be performed would be of such design, material, and construction as to enable Program employees to conduct their inspection in a safe, efficient and clean manner in accordance with 9 CFR 307.2 (a) and (b). An employee would be provided by the establishment when needed to conduct ante-mortem inspection on transport vehicles. Where the FSIS inspector deems it necessary, the employee's duties would be, (1) rolling an adjustable ladder or a mobile platform to the vehicle where ante-mortem inspection is to be performed, (2) placing a light in the vehicle or on the ladder or platform, (3) inserting thermometers in the animals so that the FSIS inspector could read the animals' temperatures, and (4) restraining the animals.

Sanitation requirements for ante-mortem inspection on a transport vehicle would be in accordance with the provisions of §§ 308.1, 308.3 and 309.13 of the Federal meat inspection regulations (9 CFR 308.1, 308.3, and 309.13). Section 308.1 requires that the premises of an official establishment be examined by a Program employee prior to the inauguration of official inspection to ensure that the establishment has met the requirements for facilities and sanitation. Section 308.3 requires that official establishments be maintained in a sanitary condition with abundant light and sufficient ventilation. Section 309.13, which covers the disposition of condemned livestock, requires that livestock identified as U.S. condemned shall be killed by the official establishment if not already dead.

All disabled animals examined by the FSIS inspector on vehicle ante-mortem inspection would be tagged U.S. Suspect and would be retained on post-mortem inspection and handled in accordance with 9 CFR 309.2(b). Disabled animals which the FSIS inspector passed at ante-mortem inspection would be tagged U.S. Suspect, stunned on the vehicle, if necessary to prevent the animal from suffering, passed for slaughter, and then removed from the vehicle. Disabled animals needing further observation before slaughter would be tagged U.S. Suspect and then removed from the vehicle in accordance with 9 CFR 313.2(d)(3) and placed in the covered ante-mortem pens.

Transport vehicles would have to comply with 9 CFR 313.2(a) to assure that they are free of sharp or protruding objects, loose boards, or splintered or broken planking which may injure or cause pain to the animals. If ante-

mortem inspection of disabled animals was requested to be performed on a transport vehicle, the transport vehicle, like a covered pen in 9 CFR 313.1(c), would, in the opinion of the inspector, be required to protect the animals from adverse climatic conditions of the locale while awaiting disposition by the inspector. Ante-mortem inspection in covered pens would also be performed in instances where the FSIS inspector determines that the required equipment for vehicle ante-mortem inspection is not available or safe, or the animals are lying on top of one another making ante-mortem inspection unfeasible.

The handling and disposal of carcasses condemned during ante-mortem inspection on transport vehicles would be in accordance with the regulations under 9 CFR 314.1 and 314.3. These regulations cover the disposal of carcasses and parts of carcasses condemned at official establishments. Sections 314.1 and 314.3 would be amended by adding a provision in each section which would require that carcasses of disabled animals condemned during ante-mortem inspection on transport vehicles be disposed of in accordance with the regulations of part 314.

Proposed Rule

List of Subjects

9 CFR Part 307

Clothing, government employees, meat inspection, official establishment.

9 CFR Part 309

Animal diseases, livestock, meat inspection, ante-mortem inspection.

9 CFR Part 313

Humane slaughter, livestock, meat inspection, slaughter equipment.

9 CFR Part 314

Condemned products, meat inspection, official establishment.

For the reasons discussed in the preamble, FSIS is proposing to amend parts 307, 309, 313, and 314 of the Federal meat inspection regulations as set forth below.

PART 307—FACILITIES FOR INSPECTION

1. The authority citation for part 307 would continue to read as follows:

Authority: 7 U.S.C. 394, 21 U.S.C. 621, 695; 7 CFR 2.17(g) and (i), 2.55.

2. Section 307.2 would be amended by revising paragraph (a), redesignating paragraphs (b) through (d) as paragraphs (c) through (e), redesignating paragraphs (f) through (m) as paragraphs (g) through (n), adding a new paragraph (b) and revising the first portion of redesignated paragraph (e) to read as follows:

§ 307.2 Other facilities and conditions to be provided by establishment.

* * * * *

(a) Satisfactory pens, equipment, and assistants for conducting ante-mortem inspection and for separating, marking and holding apart from passed livestock those marked "U.S. condemned" (pens, alleys, and runways shall be paved, drained, and supplied with adequate hose connections for cleanup purposes). When an official establishment requests that ante-mortem inspection be performed on disabled animals, or other animals unable to move, while they are on a transport vehicle, the establishment shall provide, upon request by the inspector, an adjustment rolling ladder or platform, or permanent platform, and a floodlight that can be attached to the ladder or platform;

(b) When requested by the FSIS inspector, an employee of the official establishment shall assist the FSIS inspector in performing ante-mortem inspection by:

(1) Rolling an adjustable ladder or a mobile platform to the vehicle where ante-mortem inspection is to be performed;

(2) Placing a light in the vehicle or attaching it to a ladder or platform;

(3) Inserting thermometers in the animals so that the FSIS inspector can read the animals' temperatures; and

(4) Restraining the animals.

* * * * *

(e) Tables, benches, ladders, platforms, floodlights, * * *.

* * * * *

PART 309—ANTE-MORTEM INSPECTION

1. The authority citation for part 309 would continue to read as follows:

Authority: 34 Stat. 1260, 79 Stat. 903, as amended, 81 Stat. 584, 84 Stat. 91, 438; 21 U.S.C. 601 *et seq.*, 33 U.S.C. 1254(b).

2. Section 309.1 would be amended by revising the heading, paragraph (b), and by adding new paragraphs (c) and (d) to read as follows:

§ 309.1 Ante-mortem inspection in pens or on transport vehicles at official establishments.

* * * * *

(b) Such ante-mortem inspection shall be made in pens or on vehicles approved for ante-mortem inspection in accordance with paragraph (c) of this section. Such ante-mortem inspection shall be made on the premises of the establishment at which the livestock are offered for slaughter before the livestock shall be allowed to enter into any department of the establishment where they are to be slaughtered or dressed or in which edible products are handled. Except for purposes of ante-mortem inspection on a transport vehicle, as provided in paragraphs (c) and (d) of this section, when the holding pens of an official establishment are located in a public stockyard and are reserved for the exclusive use of the establishment, such pens shall be regarded as part of the premises of that establishment and the operator of the establishment shall be responsible for the compliance with all requirements of the regulations in this Subchapter with respect to such pens.

(c) Ante-mortem inspection of disabled animals, and other animals unable to move, shall be performed while such animals are on a transport vehicle, provided that:

(1) The vehicle is parked in an area that is located on the premises of the establishment;

(2) The area has been designated by the establishment for ante-mortem inspection to be performed on a vehicle;

(3) The area for such ante-mortem inspection is approved by the FSIS inspector-in-charge;

(4) A formal request for this inspection is signed and dated by the FSIS inspector at the establishment where the ante-mortem inspection will be performed in compliance with paragraph (d)(1) of this section;

(5) The sanitation requirements for ante-mortem pens are met within the vehicle in accordance with part 308 of this Subchapter, and the lighting, facility and equipment requirements comply with § 307.2 of this subchapter.

(d)(1) A request for vehicle ante-mortem inspection of disabled animals, and other animals unable to move, must be signed by a manager of the official establishment before approval may be obtained from the FSIS inspector. Upon signature of the request by the FSIS inspector, the transport vehicle is considered part of the official premises.

(2) The establishment management is responsible for keeping the vehicle on the establishment premises until ante-mortem inspection of each disabled animal, and other animals unable to move, is completed and disposition is made with regard to each such animal, and each such animal is removed from the vehicle.

(3) If a transport vehicle is moved after the FSIS inspector has signed a request for ante-mortem inspection of disabled animals, and other animals

unable to move, on that vehicle, but before such inspection is completed, the agreement is automatically terminated, and a new agreement must be signed before ante-mortem inspection may be conducted on any such animals on the transport vehicle.

(4) A request is needed for each vehicle with disabled animals, or other animals unable to move, requiring ante-mortem inspection on the transport vehicle. All disabled animals, and other animals unable to move, within that vehicle shall be inspected and removed from the vehicle.

(5) If the FSIS inspector determines that ante-mortem inspection cannot be performed on all the disabled animals, or other animals unable to move, on a vehicle, the FSIS inspector shall not approve the request and the animals shall be removed from the vehicle in accordance with § 313.2(d)(3) of this Subchapter and shall receive ante-mortem inspection in covered pens in accordance with § 313.1(c) and 313.2(d)(1) of this subchapter.

(6) An FSIS inspector shall not sign a request for ante-mortem inspection of disabled animals or other animals unable to move in any instance where he or she deems it necessary to perform ante-mortem inspection in covered pens. The following reasons would warrant an FSIS inspector's refusal to sign a request for ante-mortem inspection:

(i) Facilities such as lighting and equipment are not in compliance with § 307.2 of this subchapter;

(ii) The FSIS inspector does not have enough time to conduct a proper ante-mortem inspection on a transport vehicle due to responsibilities in other areas of the establishment;

(iii) The safety of the FSIS inspector would be put at risk if he or she performed such inspection; and

(iv) The FSIS inspector cannot observe all of the animals on the transport vehicle for ante-mortem inspection because one or more of such animals is hidden from view.

(v) The following request shall be completed, signed, and dated by a manager of the official establishment before it is submitted to the FSIS inspector:

The response to this information collection is voluntary. It is needed before Ante-mortem Inspection on Transport Vehicles can be granted. FSIS uses this information to determine whether establishments are in compliance. (9 CFR 313.2)

ESTABLISHMENT REQUEST FOR VEHICLE ANTE-MORTEM INSPECTION

P

ESTABLISHMENT NO	
VEHICLE LICENSE NO	

I hereby request vehicle ante-mortem inspection on all disabled animals on the licensed vehicle indicated above.

I understand that upon signing this request, this vehicle is considered an official USDA ante-mortem pen and may not be moved from this establishment premises until an inspection disposition by an FSIS inspector of the animal(s) within this vehicle has been made, and the animal(s) have been humanely removed from the vehicle.

ESTABLISHMENT MANAGEMENT SIGNATURE	DATE

I agree to perform vehicle ante-mortem inspection on all disabled animals within the licensed vehicle indicated above.

PROGRAM EMPLOYEE'S SIGNATURE	DATE

FSIS FORM 6200 17 (6/90)

3. Section 309.2 would be amended by revising paragraph (b), redesignating paragraphs (c) through (p) as paragraphs (d) through (q), and adding a new paragraph (c) to read as follows:

§ 309.2 Livestock suspected of being diseased or affected with certain conditions; identifying suspects; disposition on post-mortem inspection or otherwise.

* * * * *

(b) All disabled animals, and other animals unable to move, including those animals commonly termed "downers", shall be identified as U.S. Suspect and disposed of as provided in § 311.1 of this subchapter unless they are required to be classed as condemned under § 309.3 of this part.

(c) All disabled animals, or other animals unable to move, that receive ante-mortem inspection on a transport vehicle, shall be identified as U.S. Suspect, and if passed for slaughter by the FSIS inspector, shall be treated as U.S. Suspect during post-mortem inspection. Disabled animals, or other animals unable to move, that have been inspected on a transport vehicle and that need further observation before slaughter, shall be humanely removed from the vehicle and placed in covered pens in accordance with § 313.2(d) (2) and (3) of this Subchapter, where ante-mortem inspection will be performed. The animals shall be disposed of in accordance with paragraph (b) of this section.

* * * * *

4. Section 309.13(a) would be amended by revising the first sentence, adding a new sentence after the first sentence, and removing the words "Such animals" from what is now the third sentence to read as follows:

§ 309.13 Disposition of condemned livestock.

(a) Except as otherwise provided in this part, livestock identified as U.S. Condemned shall be killed by the official establishment, if not already dead. Livestock identified as U.S. Condemned while on a transport vehicle shall be removed from the vehicle by the official establishment before the vehicle leaves the establishment premises. Livestock identified as U.S. Condemned

* * *

* * * * *

PART 313—HUMANE SLAUGHTER OF LIVESTOCK

1. The authority citation for part 313 would continue to read as follows:

Authority: 92 Stat. 1069, 72 Stat. 862, 34 Stat. 1260, 79 Stat. 903, as amended, 81 Stat. 91, 438; 21 U.S.C. 71 *et seq.*; 601 *et seq.*; 7 U.S.C. 1901–1906.

2. Section 313.1 would be amended by revising the heading, the first sentence of paragraph (a), the first sentence of paragraph (b), and paragraph (c) to read as follows:

§ 313.1 Livestock pens, driveways, ramps, and transport vehicles used for ante-mortem inspection.

(a) Livestock pens, driveways, ramps, and transport vehicles used for ante-mortem inspection shall be maintained in good repair. * * *

(b) Floors of livestock pens, ramps, driveways, and transport vehicles shall be constructed and maintained so as to provide good footing for livestock. * * *

(c) U.S. Suspect (as defined in § 301.2(xxx) of this subchapter) and dying, diseased, or disabled livestock (as defined in § 301.1(y) of this subchapter) shall be provided with a covered pen sufficient, in the opinion of the inspector, to protect them from the adverse climatic conditions of the locale while awaiting disposition by the inspector. If ante-mortem inspection of U.S. Suspects is requested to be performed on or in a transport vehicle, the vehicle must also provide sufficient protection, in the opinion of the inspector, to protect the animals from the adverse climatic conditions of the locale to meet these requirements.

* * * * *

3. Section 313.2 would be amended by revising paragraph (d)(1) to read as follows:

§ 313.2 Handling of livestock.

* * * * *

(d) * * *

(1) Disabled animals and other animals unable to move shall be separated from normal ambulatory animals and placed in a covered pen in accordance with § 313.1(c) of this part, except when disabled animals and other animals unable to move are inspected on the transport vehicle in accordance with § 309.1 of this Subchapter. Disabled animals and other animals unable to move inspected on the transport vehicle shall be identified as U.S. Suspect, and stunned before removal from the transport vehicle, unless further observation is required by an FSIS veterinary medical officer. In this case, the animal(s) shall be humanely removed from the vehicle in accordance with § 313.2(d) (2) and (3) of this part and placed in ante-mortem pens for further observation.

* * * * *

PART 314—HANDLING AND DISPOSAL OF CONDEMNED OR OTHER INEDIBLE PRODUCTS AT OFFICIAL ESTABLISHMENTS

1. The authority citation for part 314 would continue to read as follows:

Authority: 34 Stat. 1260, 79 Stat. 903, as amended, 81 Stat. 584, 84 Stat. 91, 438; 21 U.S.C. 71 *et seq.*, 601 *et seq.*, 33 U.S.C. 466–466K.

2. Section 314.1 would be amended by redesignating paragraphs (a) through (c) as (b) through (d), changing the reference (c) to (e) within redesignated paragraph (b), changing the reference (a)(1) to (b)(1) within redesignated paragraph (b)(2), changing the reference (a) to (b) within redesignated paragraph (c), and adding a new paragraph (a) to read as follows:

§ 314.1 Disposition of condemned products at official establishments having tanking facilities; sealing of tanks.

(a) All carcasses of animals condemned upon ante-mortem inspection on a transport vehicle shall be condemned and tanked in accordance with the requirements of this section or elsewhere in this part except as provided in paragraph (e) of this section.

* * * * *

3. Section 314.3 would be amended by redesignating paragraph (b) as paragraph (c) and adding a new paragraph (b) to read as follows:

§ 314.3 Disposition of condemned products at official establishments having no tanking facilities.

* * * * *

(b) All carcasses of animals condemned upon ante-mortem inspection on a transport vehicle shall be removed from the vehicle and disposed of in accordance with paragraphs (a) and (c) of this section.

* * * * *

Done at Washington, DC, on October 16, 1990.

Lester M. Crawford,

Administrator, Food Safety and Inspection Service.

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

18 CFR Part 35

[Docket No. RM84-9-000]

Calculation of Cash Working Capital Allowance for Electric Utilities

Issued October 15, 1990.

AGENCY: Federal Energy Regulatory Commission.

ACTION: Notice of proposed rulemaking; termination order.

SUMMARY: The Federal Energy Regulatory Commission (Commission) is terminating a rulemaking docket instituted by a Notice of Proposed Rulemaking issued on April 5, 1984, in Docket No. RM84-9-000. 49 FR 14,384 (April 11, 1984). The proposed rulemaking would have amended the Commission's regulations by adding a new section relating to the cash working capital allowance for electric utilities. Under the proposed regulation, the cash working capital allowance would have been zero dollars unless a significant difference was demonstrated between a utility's average date of payment of certain operating expenses and average date of receipt of revenues for services to ratepayers. To demonstrate this difference, a utility or other party would have been required to submit a fully developed and reliable study.

The Commission has determined that the evidence supporting the proposed rule is insufficient to justify a change in the Commission's longstanding practice on cash working capital. The proposed rule is also not justified by the Commission's experience with the cash working capital issue since the proposed rule was issued. The Commission finds it appropriate to continue adjudicating this issue on a case-by-case basis and applying its longstanding principles for calculating the allowance for cash working capital.

EFFECTIVE DATE: This termination order is effective October 15, 1990.

FOR FURTHER INFORMATION CONTACT: Michael Bardee, Office of General Counsel, Federal Energy Regulatory Commission, 825 North Capitol Street, NE., Washington, DC 20426, (202) 208-0033.

SUPPLEMENTARY INFORMATION: In addition to publishing the full text of this document in the Federal Register, the Commission also provides all interested persons an opportunity to inspect or copy the contents of this document during normal business hours in room 3308, at the Commission's Headquarters, 941 North Capitol Street, NE., Washington, DC 20426. The Commission Issuance Posting System (CIPS), an electronic bulletin board service, provides access to the texts of formal documents issued by the Commission. CIPS is available at no charge to the user and may be accessed using a personal computer with a modem by dialing (202) 208-1397. To access CIPS, set your communications software to use 300, 1200 or 2400 baud, full duplex, no parity, 8 data bits, and 1 stop bit. The full text of this termination order will be available on CIPS for 10 days from the date of issuance.

The complete text on diskette in WordPerfect format may also be purchased from the Commission's copy contractor, La Dorn Systems Corporation, also located in room 3308, 941 North Capitol Street, NE., Washington, DC 20426.

Termination Order

Before Commissioners: Martin L. Allday, Chairman; Charles A. Trabandt, Elizabeth Anne Moler and Jerry J. Langdon.

The Federal Energy Regulatory Commission (Commission) is withdrawing a notice of proposed rulemaking issued on April 5, 1984, in Docket No. RM84-9-000 (NOPR).[1] The NOPR would have amended the Commission's regulations by adding a new § 35.24 relating to the cash working capital allowance for electric utilities.

When withdrawing a Notice of Proposed Rulemaking, an agency must adequately explain the facts and policy bases on which it relies,[2] must rationally consider the relevant evidence submitted and must respond to significant comments raised by the public.[3]

Background

Historically, the Commission has allowed the cash working capital allowance for electric utilities to be calculated according to some form of the "45-day convention."[4] Under this policy, the time between a utility's expenditure of a borrowed or investor-supplied dollar to pay for current operating expenses and the recovery of that dollar in rates for services is presumed to average one-eighth of a year, or 45 days. Accordingly, the historical 45-day convention allows a utility generally to include in its rate base a cash working capital allowance equal to one-eighth of its annual operation and maintenance expenses minus purchased power expenses.[5]

As a result of variations in utility experiences with the payment and recoupment of operating expenses, the Commission allows a participant in a ratemaking proceeding to file a study to establish a cash working capital allowance on the basis of a utility's actual leads and lags in revenue collections for major operating expenses.[6] In addition, recognizing certain limitations in the 45-day convention, it has been the Commission's practice also to provide for adjustments in applying the 45-day convention in the absence of a reliable lead-lag study and provided appropriate information is available.[7] Under this "modified 45-day convention," when actual lags in fuel payments are known, they have been substituted for the results otherwise obtained for that expense item using the 45-day convention.[8] Furthermore, if such an adjustment is made for fuel payment lags, a further adjustment is made to reflect the actual lag in payment of purchased power expenses.[9]

In the NOPR, the Commission questioned whether the 45-day convention is representative of industry requirements generally. The Commission noted that some utilities were experiencing an overall lead, instead of a lag, in the collection of revenues. The Commission pointed out that, although cash working capital is an element in nearly all rate filings, complete and reliable lead-lag studies are not commonly developed. As an example, the Commission noted that

[3] *Action on Smoking and Health* v. *C.A.B.*, 699 F.2d 1209, 1217 (D.C. Cir. 1983).

[4] This method of approximating utility cash working capital needs was first enunciated in Interstate Power Co., 2 FPC 71, 85 (1939).

[5] Carolina Power & Light Co., Opinion No. 19-A, 6 FERC ¶61,154 at 61,295, *reh'g denied*, 7 FERC ¶61,006 (1979). As we explained in the NOPR:

Purchased power expenses have historically been excluded from the allowance under the assumption that the lag by a utility in paying for purchase power usually was approximately equal to the lag in the receipt by a utility of revenue in turn from its customers. This assumption was based on the two types of transactions, *i.e.*, a utility's purchase of power or its wholesale sale of it, being similar and interrelated.

FERC Statutes and Regulations, Proposed Regulations 1982-87, at 32,994 n.1.

[6] 6 FERC at 61,296. If the collection of revenues for certain expenses occurs before the payment by the utility for those expenses, there is a "net expense payment lag" and, conversely, if the collection of revenues occurs after the payment by the utility for those expenses, there is a "net revenue receipt lag."

lead-lag studies were filed in only 12 of 21 electric rate cases in which Commission opinions were issued in 1982 or 1983 after a formal hearing and initial decision. Of these 12 studies, the Commission found that only eight were "fully developed" (including all relevant expense and revenue data) and "reliable" (accurately and appropriately computed). Four of these eight studies showed net revenue receipt lags ranging from 3 to 32 days. The other four showed net expense payment lags of 1 to 14 days.

Based on this evidence, the Commission proposed regulations stating that an electric utility's cash working capital requirements would be presumed to be zero dollars. A cash working capital allowance would be permitted only if a participant demonstrated that a utility's cash working capital requirement varied significantly from zero dollars. A 15-day threshold standard, or "no-allowance zone," also was proposed, under which no adjustment would be allowed unless the lead or lag were shown to exceed 15 days. The Commission also proposed a list of expense elements that would be considered in calculating the cash working capital allowance, as well as other criteria applicable to studies submitted in support of any request for an adjustment.

The Commission received 55 comments in response to the NOPR. The majority of these commenters (in large part consisting of 38 investor-owned utilities and the Edison Electric Institute, as well as three accounting firms) supported the Commission's longstanding policy of using a 45-day convention and opposed adoption of the zero dollar presumption. A number of other commenters (including four State commissions, the American Public Power Association and several municipalities) supported elimination of the 45-day convention.

Commenters opposing the zero dollar presumption argue that such a presumption is inconsistent with the actual day-to-day operations of electric utilities and, thus, fails to reflect the utilities' actual incurred costs. They also argue that the zero presumption will not reduce litigation and, in fact, is more likely to increase litigation because utilities will have to justify every cash allowance claimed. They contend that historically the 45-day convention has produced reasonable results, and that the presumption of a zero working capital allowance appears to be an arbitrary change in longstanding Commission policy with little or no evidentiary support.

These commenters also contend that the eight lead-lag studies relied on in the NOPR do not represent an adequate sample on which to base an assumption about utility cash needs. They point out that the eight studies involved only five companies, and that one-half of the studies were done on the Public Service Company of New Mexico. They argue that the proper inference, if any, to be drawn from this evidence is that more companies need a cash working capital allowance than do not.[10] In addition, these commenters also note that the five companies on which the studies were based were not selected because they were representative of the electric utility industry as a whole, but merely because the studies were accepted by the Commission as fully developed and reliable lead-lag studies.

Commenters supporting the zero dollar presumption and/or opposing the 45-day convention argue that the 45-day convention is contrary to the principle that the utility bears the burden of proof for each claimed cost. These commenters argue that the 45-day convention inappropriately shifts the burden of proof to customers opposing a rate base allowance for cash working capital and that the zero dollar presumption would properly return the burden of proof to the utility seeking the allowance. These commenters also argue that the 45-day convention is no longer reflective of the cash working capital needs of utilities and that utilities increasingly experience a zero or slightly negative need for a cash working capital allowance.

Discussion

The Commission has decided to withdraw the proposed NOPR. The evidentiary support for the Commission's proposal of a zero dollar presumption consisted of the eight lead-lag studies cited above. As noted by certain of the commenters, however, these lead-lag studies relate to only five utilities, none of which were selected as representative of the entire industry. This sample of studies is statistically unreliable and constitutes insufficient evidence to justify a change in the Commission's longstanding practice on cash working capital.

In light of this limited evidence, we find it inadvisable at this time to codify *any* policy on cash working capital into permanent and universally-binding regulations. The Commission considers it more appropriate, given the limited data in this record, to continue adjudicating this issue on a case-by-case basis. In doing so, we will continue to require electric utilities seeking a cash working capital allowance to file certain information on cash working capital.[11] We will also continue to apply our longstanding principles, as summarized in *Carolina Power & Light Company*, Opinion No. 19-A:

> Where a fully developed and reliable lead-lag study is available in the record, we will utilize that study to determine the working capital allowance. Where a study meeting these criteria is not available we will continue to apply the 45-day convention. However, two adjustments will be made in the latter instance, provided the information is available. Fossil fuel expense has come to represent a major expense item for many utilities and, therefore a substantial component of the O&M expenses. Where this is the case, and the actual lag in the payment for fossil fuel is known, the amount thereof will be substituted as an adjustment to the results otherwise attained by the 45-day rule. Second, where an adjustment for fuel expense lag is made, a further adjustment will be performed as an add-on to the results under the formula, to recognize the increased importance to the utilities of purchased power expense.[12]

We have long applied these principles and, notably, have continued to apply these principles since we originally issued the NOPR, roughly six years ago. Since that time, we have needed to address cash working capital issues in only a comparative handful, roughly ten, Commission opinions, indicating that these principles continue not to generate excessive litigation. In these opinions, we have continued to find, either expressly or through summary affirmance of the initial decisions, that these principles result in just and reasonable rates.

We conclude that there is not only an insufficient evidentiary basis in this proceeding, but also no cause in our experience since issuing the NOPR, for departing from these principles.

Based on the foregoing, the Commission will withdraw the Notice of Proposed Rulemaking in this proceeding.

Conclusion

For the reasons discussed above, the Commission terminates the Notice of Proposed Rulemaking in Docket No. RM84-9-000.

---

[10] Of the five utilities represented by the eight studies, only two showed a net expense payment lag.

[11] Section 35.13(h)(12)(ii) of the Commission's regulations, 18 CFR 35.13(h)(12)(ii) (1990), states:

> *Cash working capital.* The utility shall indicate average monthly working cash requirements that reflect the extent to which day-to-day operational utility service revenues are received later or earlier than cash disbursements necessary to provide the services, with an explanation of how such requirements are derived.

[12] 8 FERC at 61,286 (footnote omitted).

By the Commission.
Lois D. Cashell,
Secretary.

BILLING CODE 6717-01-M

DEPARTMENT OF JUSTICE

Drug Enforcement Administration

21 CFR Part 1310

Records and Reports of Listed Chemicals and Certain Machines

AGENCY: Drug Enforcement Administration (DEA), Justice.

ACTION: Notice of proposed rulemaking.

SUMMARY: This proposed change does not affect any existing public reporting burden. The DEA proposes to amend the regulations implementing the Chemical Diversion and Trafficking Act (CDTA) of 1988 by excluding a specific transaction from the requirement to maintain records as required by § 1310.03. The DEA has determined that a non-regulated person who acquires a listed chemical for consumption or end-use shall not be required to maintain receipt records for such acquisitions when the person becomes a regulated person by virtue of an infrequent distribution of the listed chemical. It is the opinion of DEA that the lack of a receipt record will not have a negative impact upon DEA's ability to track listed chemicals to illicit sources.

DATES: Written comments and objections must be received on or before December 21, 1990.

ADDRESSES: Comments and objections should be submitted in quintuplicate to the Administrator, Drug Enforcement Administration, Washington, DC 20537, attention: DEA Federal Register Representative/CCR.

FOR FURTHER INFORMATION CONTACT: G. Thomas Gitchel, Chief, State and Industry Section, Office of Diversion Control, Drug Enforcement Administration, Washington, DC 20537, telephone (202) 307-7297.

SUPPLEMENTARY INFORMATION: DEA is aware that on occasion a chemical end-user who would otherwise be a non-regulated person may have reason to distribute a listed chemical, aside from normal business activity, in order to reduce inventory, increase cash flow, or for other legitimate business reasons. Technically, under the provisions of the Act, when a person distributes a listed chemical, they are a "regulated person" and are required to keep records of distribution and receipt of listed chemicals. Thus, by reason of a distribution for a purpose collateral to the person's normal utilization of the listed chemical, the person (otherwise an "end-user") becomes a regulated person and is responsible for receipt records for all listed chemical purchases. An example would be a paint company which purchases 5,000 gallons of acetone per month to use in paint production. In the past year, due to production rescheduling, the firm found itself overstocked with acetone and distributed 2,000 gallons once during the year to another paint company. Although the firm is responsible for meeting all the requirements of the CDTA and regulations for the distribution of the 2,000 gallons of acetone, under this proposal the firm would not be obligated to keep the CDTA required receipt records for the 60,000 gallons of acetone purchased per year and routinely consumed in the manufacture of paints.

The proposal to exclude the requirement to keep a receipt record for all purchases of a listed chemical as a result of such a collateral distribution does not affect the ability of DEA to effectively enforce the law and monitor the distribution, importation, exportation and receipt of listed chemicals. This proposal will lessen the paperwork requirements for an end user who occasionally transfers or distributes a listed chemical.

The Deputy Assistant Administrator, Office of Diversion Control, hereby certifies that this proposed rule will have no significant impact upon entities whose interests must be considered under the Regulatory Flexibility Act, 5 U.S.C. 601, et seq. This rule is not a major rule for the purposes of Executive Order (E.O.) 12291 of February 17, 1981. Pursuant to sections 3(c)(3) and 3(e)(2)(c) of E.O. 12291 and section 6053(b) of Public Law 100-690, this rule has been forwarded to the Office of Management and Budget for review.

This action has been analyzed in accordance with the principles and criteria in E.O. 12612, and it has been determined that the rule does not have sufficient federalism implications to warrant the preparation of a Federalism Assessment.

List of Subjects in 21 CFR Part 1310

Drug Enforcement Administration, Drug traffic control, Reporting and recordkeeping requirements.

For reasons set out above, it is proposed that 21 CFR part 1310 be amended as follows.

PART 1310—[AMENDED]

1. The authority citation for part 1310 continues to read as follows:

Authority: 21 U.S.C. 802, 830, 871(b).

§ 1310.03 [Amended]

2. Section 1310.03 is amended by adding at the end the following: "* * * However, a non-regulated person who acquires listed chemicals for internal consumption or 'end-use' and becomes a regulated person by virtue of infrequent or rare distribution of a listed chemical from inventory, shall not be required to maintain receipt records of listed chemicals under this section."

Dated: September 17, 1990.

Gene R. Haislip,
Deputy Assistant Administrator, Office of Diversion Control, Drug Enforcement Administration.

DEPARTMENT OF LABOR

Mine Safety and Health Administration

30 CFR Parts 56, 57, 58, 70, 71, 72, and 75

RIN 1219-AA48

Air Quality, Chemical Substances, and Respiratory Protection Standards; Extension of Comment Period

AGENCY: Mine Safety and Health Administration Labor.

ACTION: Proposed rule; extension of comment period.

SUMMARY: The Mine Safety and Health Administration (MSHA) is extending the period for public comment on certain provisions in its proposed rule addressing air quality at mines. The comment period is extended to December 14, 1990, for permissible exposure limits other than nitrogen dioxide, nitric oxide, carbon monoxide and sulfur dioxide.

DATES: The comment period on provisions in the proposed rule concerning permissible exposure limits will close on December 14, 1990.

ADDRESSES: Send comments to: Mine Safety and Health Administration, Office of Standards, Regulations and Variances, room 631, Ballston Tower No. 3, 4015 Wilson Boulevard, Arlington, Virginia 22203.

FOR FURTHER INFORMATION CONTACT: Patricia W. Silvey, Director, Office of Standards, Regulations and Variances, MSHA, (703) 235–1910.

SUPPLEMENTARY INFORMATION: On August 29, 1989, MSHA published a proposed rule to revise its standards for air quality, chemical substances, and respiratory protection for coal, metal, and nonmetal mines (54 FR 35760). The Agency initially scheduled the written comment period for the proposed rule to close on November 27, 1989. On October 19, 1989, MSHA extended the comment period to March 2, 1990, (54 FR 43026) in response to request from the mining community. On January 25, 1990, (55 FR 2535) the Agency set three separate comment periods for different provisions in the proposal and announced its intent to hold a series of three sets of public hearings. The comment period for the first group of provisions closed on March 2, 1990, and hearings were held on June 4 and 6, 1990. Provisions in the first group included exposure monitoring; abrasive blasting; drill dust control; dangerous atmospheres; prohibited areas for food and beverages; and permissible exposure limits for nitrogen dioxide, nitric oxide, carbon monoxide, and sulfur dioxide. The comment period for the second group of provisions closed on June 29, 1990, and hearings were scheduled for October 12 and 19, 1990, (55 FR 37333). The second group of provisions included carcinogens, asbestos construction work, means of control, respiratory protection, and medical surveillance.

The third group of provisions includes all permissible exposure limits other than those for nitrogen dioxide, nitric oxide, carbon monoxide, and sulfur dioxide. The comment period was scheduled to close on August 24, 1990, (55 FR 2535); but subsequently was extended to October 26, 1990, (55 FR 36838). Due to requests from the mining community for more time in which to prepare their comments, MSHA is extending the date to December 14, 1990. All interested parties are encouraged to submit comments prior to this date.

Dated: October 15, 1990.

William J. Tattersall,

Assistant Secretary for Mine Safety and Health.

FEDERAL COMMUNICATIONS COMMISSION

47 CFR Part 73

[Docket No. 90–441, RM–7210]

Radio Broadcasting Services; Grand Rapids, MI

AGENCY: Federal Communications Commission.

ACTION: Proposed rule.

SUMMARY: This document requests comments on a petition filed by Haith Broadcasting Corporation proposing the substitution of FM Channel 254A for Channel 255A at Grand Rapids, Michigan, and modification of the construction permit for Channel 255A to specify Channel 254A. Canadian concurrence will be requested for this allotment at coordinates 43–01–36 and 85–41–26.

DATES: Comments must be filed on or before December 7, 1990, and reply comments on or before December 24, 1990.

ADDRESSES: Federal Communications Commission, Washington, DC 20554. In addition to filing comments with the FCC, interested parties should serve the petitioner, or its counsel or consultant, as follows: Robert W. Healy, Reddy, Begley & Martin, 2033 M Street, NW., suite 500, Washington, DC 20036.

FOR FURTHER INFORMATION CONTACT: Kathleen Scheuerle, Mass Media Bureau, (202) 634–6530.

SUPPLEMENTARY INFORMATION: This is a synopsis of the Commission's Notice of Proposed Rule Making, MM Docket No. 90–441, adopted September 25, 1990, and released October 16, 1990. The full text of this Commission decision is available for inspection and copying during normal business hours in the FCC Dockets Branch (room 230), 1919 M Street, NW., Washington, DC. The complete text of this decision may also be purchased from the Commission's copy contractors, International Transcription Service, (202) 857–3800, 2100 M Street, NW., suite 140, Washington, DC 20037.

Provisions of the Regulatory Flexibility Act of 1980 do not apply to this proceeding.

Members of the public should note that from the time a Notice of Proposed Rule Making is issued until the matter is no longer subject to Commission consideration or court review, all *ex parte* contacts are prohibited in Commission proceedings, such as this one, which involve channel allotments. See 47 CFR 1.1204(b) for rules governing permissible *ex parte* contacts. For information regarding proper filing procedures for comments, See 47 CFR 1.415 and 1.420.

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

50 CFR Part 658

[Docket No. 900951-0251]

Shrimp Fishery of the Gulf of Mexico

AGENCY: National Marine Fisheries Service (NMFS), NOAA, Commerce.

ACTION: Proposed rule.

SUMMARY: NOAA proposes to amend the regulations that implement the Fishery Management Plan for the Shrimp Fishery of the Gulf of Mexico (FMP) to modify, temporarily, the boundary of the Tortugas shrimp sanctuary to reduce the area closed to trawl fishing. This action would enable fishermen to harvest marketable-sized shrimp during specified periods from three small areas that otherwise would be closed.

DATES: Written comments must be received on or before November 21, 1990.

ADDRESSES: Comments should be sent to and copies of the Draft Environmental Assessment/Regulatory Impact Review may be obtained from Michael E. Justen, Southeast Region, NMFS, 9450 Koger Boulevard, St. Petersburg, FL 33702.

FOR FURTHER INFORMATION CONTACT: Michael E. Justen, 813-893-3722.

SUPPLEMENTARY INFORMATION: The shrimp fishery is managed under the FMP and its implementing regulations at 50 CFR part 658, as provided by the Magnuson Fishery Conservation and Management Act (Magnuson Act). Under the FMP, the Director, Southeast Region, NMFS (Regional Director), may modify by no more than 10 percent the geographical scope of the Tortugas shrimp sanctuary specified at § 658.22, after (1) consultation with the Gulf of Mexico Fishery Management Council (Council), (2) consideration of specified criteria, and (3) determination that benefits may be increased or adverse impacts decreased by the modification.

The primary purpose of establishing the sanctuary was to protect small shrimp and allow them to attain a larger, more valuable size prior to harvest. The FMP stipulates that, prior to any modification of the sanctuary, NMFS will monitor and assess the impacts of the closure and advice the Council of its findings. The Council may also consider the advise of its Shrimp Advisory Panel regarding the findings. When the sanctuary was partially opened in 1983/84, NMFS determined that harvestable populations of shrimp occur periodically within a small portion of the sanctuary—a fact strongly supported by public testimony. Fishermen contend that shrimp from within this portion of the sanctuary eventually migrate to untrawlable bottoms and become unavailable to the fishery. Poor recruitment of shrimp to the Tortugas fishery has resulted in 4 consecutive years of poor production and economic loss to the adjacent shrimp ports. As identified in the FMP, poor recruitment in the shrimp fishery is more a function of environmental forces than of overfishing. Opening areas of the sanctuary containing all sizes of shrimp is consistent with optimum yield because it will allow shrimp fishermen to obtain, on a temporary basis, a more valuable catch per unit of effort.

The Regional Director, after consulting with the Council and considering the criteria for modifying the sanctuary, determined that small portions of the sanctuary that periodically contain harvestable shrimp should be opened for varying lengths of time during the period April 11, 1991, through September 30, 1991. The areas to be opened are less than 10 percent of the geographical scope of the sanctuary. These openings will increase the benefits to fishermen by optimizing the yield of shrimp. This temporary geographic modification is consistent with Objective 1 of the FMP because it provides temporary economic relief to the stressed fishermen while continuing to optimize the yield of shrimp recruited to the fishery.

The areas to be opened and their periods of opening in this proposed rule are identical to the areas and periods opened in 1990. They were selected to avoid conflict between lobster trap and shrimp trawl fishermen and are in accord with a local agreement between these two groups of fishermen. This proposed rule would formalize that agreement and make it apply to trawl fishermen not otherwise privy to it, such as trawl fishermen from other areas who may fish seasonally in the area of the Tortugas shrimp sanctuary.

The three areas proposed to be opened are along the edge of the Tortugas shrimp sanctuary north of the Marquesas Keys from northeast of Smith Shoal Light to New Ground Shoal Light (see Figure 1 at 50 CFR 658.22). The middle area of approximately 25 square nautical miles would be open to trawling from April 11, 1991, through September 30, 1991. The western area of approximately 5 square nautical miles would be open from April 11, 1991, through July 31, 1991. The eastern area of approximately 33 square nautical miles would be open from May 26, 1991, through July 31, 1991. These areas and time frames will allow fishermen to harvest marketable-size shrimp from areas that would otherwise be closed, while still allowing trap fishermen to harvest spiny lobster from areas customarily available to them.

Endangered Species Impacts

A consultation conducted in accordance with section 7 of the Endangered Species Act for identical openings of the Tortugas shrimp sanctuary in 1990 concluded that this action would not adversely affect the populations of endangered or threatened species such as sea turtles. That conclusion remains valid.

Classification

The Assistant Administrator for Fisheries, NOAA (Assistant Administrator), has initially determined that this proposed rule is consistent with the national standards and other provisions of the Magnuson Act and other applicable law.

The Council prepared a regulatory impact review (RIR) for this proposed rule. Based on the RIR, the Assistant Administrator determined that the rule is not major under E.O. 12291 because it would not have an annual effect on the economy of $100 million or more; would not result in an increase in costs or prices for consumers, individual industries, Federal, state, or local government agencies, or geographic regions; and would not result in significant adverse effects on competition, employment, investment, productivity, innovation, or the ability of U.S.-based enterprises to compete with foreign-based enterprises in domestic or export markets.

The General Counsel of the Department of Commerce certified to the Small Business Administration that this proposed rule, if adopted, will not have a significant economic impact on a substantial number of small entities because the geographical area affected by the rule is small and, as a result, the number of shrimp trawlers affected in the Gulf-wide fishery is not substantial. As a result, a regulatory flexibility analysis was not prepared.

The Council prepared an environmental assessment (EA) for this proposed rule that discusses the impact on the environment as a result of this rule. A copy of the EA is available and comments on it are requested (see ADDRESSES).

Amendment 1 to the FMP authorizes the Regional Director, under specified conditions and restrictions, to modify the boundaries of the Tortugas shrimp

sanctuary, as is being done in this rule. When Amendment 1 was approved, a determination was made that such modifications would be consistent to the maximum extent practicable with the approved coastal zone management program of Florida, the only state affected by this rule. Consequently, a new consistency determination under the Coastal Zone Management Act is not required.

This proposed rule does not contain a collection-of-information requirement subject to the Paperwork Reduction Act.

This rule does not contain policies with federalism implications sufficient to warrant preparation of a federalism assessment under E.O. 12612.

List of Subjects in 50 CFR Part 658

Fisheries, Fishing, Reporting and recordkeeping requirements.

Dated: October 16, 1990.

Samuel W. McKeen,

Acting Assistant Administrator for Fisheries, National Marine Fisheries Service.

For reasons set forth in the preamble, 50 CFR part 658 is proposed to be amended as follows:

PART 658—SHRIMP FISHERY OF THE GULF OF MEXICO

1. The authority citation for part 658 continues to read as follows:

Authority: 16 U.S.C. 1801 *et seq.*

2. In § 658.22, effective from April 11, 1991, through September 30, 1991, the existing text is designated as paragraph (a) and a new paragraph (b) is added to read as follows:

§ 658.22 Tortugas shrimp sanctuary.

* * * * *

(b) The provisions of paragraph (a) of this section notwithstanding,

(1) Effective from April 11, 1991, through September 30, 1991, that part of the Tortugas shrimp sanctuary seaward of a line connecting the following points is open to trawl fishing: From point T at 24°47.8′ N. latitude, 82°01.0′ W. longitude to point U at 24°43.83′ N. latitude, 82°01.0′ W longitude (on the line denoting the seaward limit of Florida's waters); thence along the seaward limit of Florida's waters, as shown on the current edition of NOAA chart 11439, to point V at 24°42.55′ N. latitude, 82°15.0′ W. longitude; thence north to point W at 24°43.6′ N. latitude, 82°15.0′ W. longitude (see Figure 1).

(2) Effective from April 11, 1991, through July 31, 1991, that part of the Tortugas shrimp sanctuary seaward of a line connecting the following points is open to trawl fishing: From point W to point V, both points as specified in paragraph (b)(1) of this section, to point G, as specified in paragraph (a) of this section (see Figure 1).

(3) Effective from May 26, 1991, through July 31, 1991, that part of the Tortugas shrimp sanctuary seaward of a line connecting the following points is open to trawl fishing: From point F, as specified in paragraph (a) of this section to point Q at 24°46.7′ N. latitude, 81°52.2′ W. longitude (on the line denoting the seaward limit of Florida's waters); thence along the seaward limit of Florida's waters, as shown on the current edition of NOAA chart 11439, to point U and north to point T, both points as specified in paragraph (b)(1) of this section (see Figure 1).

Notices

Federal Register
Vol. 55, No. 204
Monday, October 22, 1990

This section of the FEDERAL REGISTER contains documents other than rules or proposed rules that are applicable to the public. Notices of hearings and investigations, committee meetings, agency decisions and rulings, delegations of authority, filing of petitions and applications and agency statements of organization and functions are examples of documents appearing in this section.

ADMINISTRATIVE CONFERENCE OF THE UNITED STATES

Committee on Administration; Public Meeting

SUMMARY: The Administrative Conference's Committee on Administration is considering a draft consultant report dealing with the implementation of the Occupational Safety and Health Review Commission's implementation of its settlement judge and simplified proceedings. The draft report, prepared by Professor Morell Mullins of the University of Arkansas—Little Rock School of Law, may provide the basis for recommendations to OSHRC, OSHA, or other agencies regarding these devices. The proposal will be discussed at the Committee's October 25 meeting, described below.

Pursuant to the Federal Advisory Committee Act (Pub. L. No. 92–463), notice is hereby given of a meeting of the Committee on Administration of the Administrative Conference of the United States. The Committee has scheduled this meeting to discuss the draft report and possible recommendations on implementation of OSHRC's settlement judge and simplified proceedings. The consultant report is available on request from the Conference.

DATES: October 25, 1990, 2 p.m.

LOCATION: Administrative Conference Library, 2120 L Street, NW., suite 500.

PUBLIC PARTICIPATION: Committee meetings are open to the interested public, but limited to the space available. Persons wishing to attend should notify the contact person at least two days prior to the meeting. The committee chairman may permit members of the public to present oral statements at the meetings. Any member of the public may file a written statement with the committee before, during, or after the meeting. Minutes of the meeting will be available on request.

FOR FURTHER INFORMATION CONTACT: Charles Pou, Jr., Office of the Chairman, Administrative Conference of the United States, 2120 L Street, NW., suite 500 (202) 254–7020.

PUBLIC PARTICIPATION: Same as above.

Dated: October 10, 1990.

Jeffrey S. Lubbers,
Research Director.

BILLING CODE 6110–01–M

DEPARTMENT OF AGRICULTURE

Forest Service

Cumulative Watershed Effects Analysis for Timber Management in Grouse Creek Basin, Humboldt County, CA

AGENCY: Forest Service, USDA.

ACTION: Notice of intent to prepare an environmental impact statement.

SUMMARY: The Department of Agriculture, Forest Service will prepare an Environmental Impact Statement addressing cumulative watershed effects and associated timber management in the Grouse Creek basin, located on the Lower Trinity Ranger District of Six Rivers National Forest, Humboldt County, California. This is a mixed ownership watershed in which federal timber management has been suspended because of degraded water quality and fisheries habitat resulting in part from past timber management on public and private land. A complete environmental analysis of all water quality issues related to continued timber management and proposed watershed restoration will be conducted. The Draft EIS will be published in February 1991, and the Final EIS will be available for review in May 1991. The California Department of Forestry, the California Department of Fish & Game, and the North Coast Water Quality Control Board will be asked to participate as cooperating agencies.

DATES: Interested and affected individuals should provide their input for this project by November 30, 1990.

ADDRESSES: Send written comments, suggestions and questions to Lawrence L. Cabodi, District Ranger, Lower Trinity Ranger District, P.O. Box 68, Willow Creek, CA 95573. Telephone: (916) 629–2118.

FOR FURTHER INFORMATION CONTACT: Questions about the proposed action and Environmental Impact Statement should be directed to Mark Smith, Forest Geologist, Six Rivers National Forest, 500 5th Street, Eureka, CA 95501. Telephone: (707) 442–1721.

SUPPLEMENTARY INFORMATION: Grouse Creek is a 37,500 acre watershed on the Lower Trinity Ranger District of Six Rivers National Forest, and is a major tributary to the South Fork Trinity River. It is composed of about 45 percent National Forest System (NFS) lands and 55 percent private timber lands. During the planning analysis of the Wildcat Timber Sale in 1987 and 1988, the following conditions were noted: (1) Very high levels of fine sediment that had degraded fisheries habitat in the main Grouse Creek channel, (2) extensive areas of apparently natural slope instability associated with a major flood in 1964, and (3) many large sediment sources apparently related to timber management within the watershed. The wateshed analysis for the Wildcat Sale concluded that the fisheries resource had been degraded and that previous logging and road construction had played an important role in producing the impacts. Since restoration on only NFS lands could not assure improvement of water quality in Grouse Creek (as required by Public Law 92–500, the Clean Water Act), restoration on private lands would also be required to achieve a meaningful improvement. The decision for the Wildcat EA was to defer all timber harvest on NFS lands in Grouse Creek until restoration efforts to improve the fisheries habitat could be implemented. Because of the potentially significant impacts to water quality from past and continuing timber management on public and private lands within Grouse Creek, it was decided to address cumulative watershed effects in an EIS and apply the analysis to current and future NFS management proposals.

A range of alternatives will be considered that address the complex problem of correcting past management-related impacts in mixed ownership watersheds while allowing continued timber harvest and growth. One of the alternatives will be continued defferal of timber harvest and road construction on NFS lands in the watershed (No Action). Other alternatives will focus on means

of achieving a net benefit to fisheries resources resulting from restoration work completed in conjunction with timber harvesting activities. Various accounting procedures will be developed and evaluated to serve both public and private needs.

The fundamental question underlying the decision of Forest Service must make is: under what framework can federal management of public timber resources proceed in a mixed ownership watershed with degraded water quality, while concurrently improving fisheries habitat? The decision must take into account management activities on private timber lands, but the Forest Service cannot control those management activities. A cooperative endeavor involving all landowners and responsible agencies is desired. If successful, resolution of the mixed ownership problem in Grouse Creek could have implications throughout the West.

Public participation will be very important to the acceptability of the analysis and the decision. During the scoping process (40 CFR 1501.7), the Forest Service will seek information, comments and assistance from Federal, State and local agencies, as well as other individuals or organizations who may be interested in or affected by the decision regarding future timber harvest in Grouse Creek. This input will help the interdisciplinary team prepare the draft environmental impact statement (DEIS).

The scoping process includes:

1. Identifying potential issues;
2. Identifying issues to be analyzed in depth;
3. Eliminating insignificant issues or those which have been covered by a previous environmental analysis;
4. Exploring additional alternatives;
5. Identifying potential environmental effects of the proposed action and alternatives, including direct, indirect and cumulative effects, and connected actions;
6. Determination of potential cooperating agencies and task assignments.

The District Ranger will hold a public scoping meeting at the Lower Trinity Ranger District, Willow Creek, California beginning at 7:00 p.m., Thursday, November 15, 1990.

The DEIS is expected to be filed with the Environmental Protection Agency(EPA) and to be available for public review by February 1991. At that time the EPA will publish a notice of availability of the DEIS in the Federal Register. The comment period on the DEIS will be 45 days from this publication date in the Federal Register. It is important that those interested in management of the Grouse Creek watershed participate at that time.

Review comments on the DEIS should be as specific as possible and may address the adequacy of the document or the merits of the alternatives discussed (implementing procedures of NEPA may be found at 40 CFR 1503.3). In addition, Federal court decisions have established that reviewers must participate in the environmental review in a manner that alerts an agency to the reviewer's position and contentions (*Vermont Yankee Nuclear Power Corp. v. NRDC*, 435 U.S. 519, 553 (1978)), and that environmental objections that could have been raised at the draft stage may be waived if not raised until after completion of the final environmental impact statement (FEIS) (*Wisconsin Heritages, Inc. v. Harris*, 490 F. Supp. 1334, 1338 (E.D. Wis. 1980)). This is to ensure that substantive comments and objections are available to the agency when they can be considered and responded to meaningfully in the FEIS.

After the comment period for the DEIS ends, the Forest Service will consider all comments in preparing the FEIS, which is scheduled for completion by May 1991. The Forest Service is required to respond in the FEIS to the comments received (40 CFR 1503.4). The responsible official will consider the comments, responses, disclosures of environmental consequences, and applicable laws, regulations and policies in making a decision regarding management of NFS lands in the Grouse Creek watershed. The responsible official will document the decision and rationale in a Record of Decision. That decision will be subject to appeal under 36 CFR part 217.

James L. Davis, Jr., Forest Supervisor, Six Rivers National Forest is the responsible official.

Dated: October 5, 1990.

Jack Kahl,

Resources Staff Officer.

BILLING CODE 3410-11-M

DEPARTMENT OF COMMERCE

Agency Form Under Review by the Office of Management and Budget (OMB)

DOC has submitted to OMB for clearance the following proposal for collection of information under the provisions of the Paperwork Reduction Act (44 U.S.C. chapter 35).

Agency: Bureau of Economic Analysis.

Title: Transactions of U.S. Affiliate, Except an Unincorporated Bank, with Foreign Parent.

Form Number: Agency—BE-605; OMB—0608-0009.

Type of Request: Revision of a currently approved collection.

Burden: 3,000 respondents; 4 responses each per year; 12,000 reporting hours.

Average Hours Per Response: 1 hour.

Needs and Uses: The survey collects sample data on transactions and positions between foreign-owned U.S. companies (other than bank branches or agencies) and their foreign parents. (Related Form BE-606B covers foreign-owned bank branches and agencies.) Universe estimates are developed from the reported sample data. The data are needed for compiling the U.S. balance of payments accounts, the international investment position of the United States, and the national income and product accounts. The data from the BE-605 and the BE-606B are also needed to measure the amount of foreign direct investment in the United States, monitor changes in such investment, assess its impact on the U.S. economy, and, based upon this assessment, make informed policy decisions regarding foreign direct investment in the United States.

Affected Public: Businesses or other for-profit institutions.

Frequency: Quarterly.

Respondent's Obligation: Mandatory.

OMB Desk Officer: Marshall Mills, 395-7340.

Copies of the above information collection proposal can be obtained by calling or writing DOC Clearance Officer, Edward Michals, (202) 377-3271, Department of Commerce, Room H6622, 14th and Constitution Avenue, NW., Washington, DC 20230.

Written comments and recommendations for the proposed information collection should be sent to Marshall Mills, OMB Desk Officer, Room 3208, New Executive Office Building, Washington, DC 20503.

Dated: October 15, 1990.

Edward Michals,

Departmental Clearance Officer, Office of Management and Organization.

BILLING CODE 3510-CW-M

Bureau of the Census

[Docket No. 90886-0286]

Urbanized Areas for the 1990 Census—Final Criteria

AGENCY: Bureau of the Census, Commerce.

ACTION: Notice of determination.

SUMMARY: This document contains the final criteria for determining the eligibility and extent of the 1990 urbanized areas. These criteria are the result of the most recent periodic review of the definitional structure under which urbanized areas are identified for statistical purposes. These final criteria reflect the public comment received in response to the proposed criteria published in the **Federal Register** on October 24, 1989. They are published here in order to give notice of the criteria that will be used with the results of the 1990 census to determine the specific boundary definitions for each urbanized area.

The Bureau of the Census identifies and delineates urbanized areas to provide better data on the separation of the urban and rural population and housing in the vicinity of large cities. In order to delineate urbanized areas consistently and equitably nationwide, the Census Bureau established specific criteria when it first created these areas for the 1950 census. The Census Bureau, in consultation with data users, periodically reviews and revises these criteria, including a review before each decennial census. The following criteria will apply to the 50 states, the District of Columbia, and the Commonwealth of Puerto Rico effective January 1, 1991. The Census Bureau may apply these criteria to other areas as well.

Because the Census Bureau identifies and tabulates data for urbanized areas solely for the purpose of statistical presentation and comparison, it does not take into account or attempt to anticipate any nonstatistical uses that may be made of these areas or their associated data, nor does it attempt to meet the requirements of any such nonstatistical program uses. Nonetheless, the Census Bureau recognizes that some Federal and state agencies are required by statute to use the Census Bureau defined urbanized areas for allocating program funds, setting program standards, and implementing other aspects of their programs. The agencies that make such nonstatistical uses of the areas and data should be aware that the changes to the urbanized areas criteria also may affect the implementation of their programs.

If a Federal or state agency voluntarily uses the urbanized areas or their associated data in a nonstatistical program, it is the agency's responsibility to ensure that the results are appropriate for such use. In considering the appropriateness of such nonstatistical program uses, the Census Bureau urges each agency to consider permitting appropriate modifications of the urbanized area results specifically for purposes of its program. When an agency permits such modifications, the Census Bureau urges each agency to use descriptive terminology that clearly avoids confusion with the Census Bureau's official urbanized areas.

The Census Bureau will use the following criteria and the results of the 1990 Census of Population and Housing [1] to determine the territory that qualifies for designation as an urbanized area and the boundaries, central place(s), and title of each qualifying urbanized area.

A. Definition

An urbanized area comprises a place [2] and the adjacent densely settled surrounding territory that together have a minimum population of 50,000 people.[3]

The "densely settled surrounding territory" adjacent to the place consists of the following:

1. Territory made up of one or more contiguous census blocks [4] having a

---

[1] All references to population counts and densities relate to data reported in the 1990 Census of Population and Housing. An urbanized area delineated as a result of a special census conducted by the Census Bureau after the 1990 census (an intercensal urbanized area), at the request and expense of local officials, will be qualified using these criteria and the population counts and densities reported in that special census.

[2] The term "place" in the urbanized area criteria includes both incorporated places, such as cities and villages, and census designated places (CDPs). A CDP is an unincorporated population cluster for which the Census Bureau delineates boundaries in cooperation with state and local agencies to permit tabulation of data for such clusters in Census Bureau products. For Puerto Rico, the Commonwealth government and the Census Bureau cooperatively delineate and recognize zonas urbanas and comunidades as CDP equivalents, which are used when applying the urbanized areas criteria.

[3] People living the rural portion(s) of extended cities, as defined by applying the Census Bureau's extended city criteria, are excluded from the urbanized area. When applied to a potential urbanized area, if the excluded population of the rural portion of an extended city results in a total potential urbanized area population of less than 50,000, the potential urbanized area does not qualify even if the total population of the entire city equals or exceeds 50,000. In addition, for an urbanized area to qualify, at least 25,000 of the people in the potential urbanized area must reside in an area that is not part of a military installation. Also, if a previously existing urbanized area does not have 50,000 people based on the results of the 1990 census, it will not qualify as an urbanized area for the 1990 census.

[4] A census block is an area identified by a unique number on the Census Bureau's maps used for a decennial or special census. Such areas normally are bounded by physical features shown on those maps, such as streets, streams, and railroads, and by nonvisible features such as the boundary of an incorporated place, minor civil division, county, or other 1990 census tabulation area boundary.

population density of at least 1,000 people per square mile,[5] provided that it is:

a. Contiguous with and directly connected by road to other qualifying territory, or

b. Noncontiguous with other qualifying territory, and:

(1) Within 1½ road miles of the main body of the urbanized area, and connected to it by one or more nonqualifying census blocks that (a) are adjacent to the connecting road and (b) together with the outlying qualifying territory have a total population density of at least 500 people per square mile,[6] or

(2) Separated by water or other undevelopable territory [7] from the main body of the urbanized area, but within 5 road miles of the main body of the urbanized area, as long as the 5 miles include no more than 1½ miles of otherwise nonqualifying developable territory.[8]

2. A place containing territory qualifying on the basis of criterion A.1 will be included in the urbanized area in its entirety (or partially, if the place is an extended city [9]) if that qualifying territory includes at least 50 percent of the population of the place. If the place does not contain any territory qualifying on the basis of the above criterion, or if that qualifying territory includes less than 50 percent of the place's population, the place is excluded in its entirety.[10]

3. Other territory with a population density of less than 1,000 people per square mile, provided that it:

a. Eliminates an enclave of no more than 5 square miles in the territory otherwise qualifying for the urbanized area when the surrounding territory qualifies on the basis of population density, or

b. Closes an indentation in the boundary of the territory otherwise qualifying urbanized area when the contiguous territory qualifies on the basis of population density, provided that the indentation is no more than 1 mile across the open end, has a depth at least two times greater than the distance across the open end, and encompasses no more than 5 square miles.

B. Urbanized Area Central Places

One or more urbanized area central places function as the dominant centers of each urbanized area. The identification of urbanized area central places permits the comparison of these dominant centers with the remaining territory in the urbanized area.

Urbanized areas are closely related to metropolitan areas (MAs) [11] in that most urbanized area(s) form the continuously built-up core of a metropolitan area. However, some metropolitan areas include two or more urbanized areas, and some urbanized areas exist outside of metropolitan areas. The Census Bureau identifies one or more central places for each urbanized area. If the urbanized area encompasses all the central cities of a single metropolitan area, then the central place(s) of the urbanized area generally will be the same as the central city(ies) of the corresponding metropolitan area.

Urbanized area central places include:

1. Those metropolitan area central cities entirely (or partially, if the place is an extended city [12]) within the urbanized area. There is no limit on the number of qualifying central places, and not all metropolitan area central cities necessarily are included in the urbanized area title.

2. If the urbanized area does not contain a metropolitan area central city or is outside of a metropolitan area, then the central place(s) is any place(s) that qualifies as specified in criterion C.2 or C.3 of the urbanized area titling criteria. One or two additional places may qualify as central under criterion C.2 of the urbanized area titling criteria. Only one place may qualify as central within an urbanized area under criterion C.3 of the urbanized area titling criteria.

C. Urbanized Area Titles and Codes

The title of an urbanized area identifies those places that are most important within the urbanized area; it links the urbanized area to the encompassing metropolitan area, where appropriate. If a single metropolitan area essentially encompasses the urbanized area, then the title and code of the urbanized area generally are the same as the title and code of the metropolitan area. If the urbanized area is not mostly encompassed in a single metropolitan area, if it does not include any place that is a central city of the encompassing metropolitan area, or if it is not part of a metropolitan area, then the Census Bureau uses the population size of the included places, with a preference for incorporated places, to determine the urbanized area title. The name of the state(s) in which the urbanized area is located also is included in the urbanized area title.

The following criteria are used to determine urbanized area titles and codes:

1. The title consists of the same places named in the encompassing metropolitan area title when the urbanized area exists mostly within a single metropolitan area as of the 1990 census, provided that the places in the metropolitan area title are located entirely (or partially, if the places are

---

[5] Population density is calculated by dividing the total population of the census block(s) by the land area of that block(s). The Census Bureau's calculation of population density for this purpose generally excludes the area of large, nonresidential urban land use areas such as railroad yards, industrial areas, airports, cemeteries, and golf courses shown on the Census Bureau's maps.

[6] The Census Bureau will not include additional noncontiguous area in the urbanized area if the connection required to include it contains territory already qualified under criterion 1 b (1).

[7] For purposes of these criteria, "undevelopable territory" includes only mud flats, marshlands, steep slopes, and other terrain on which development is virtually impossible because of physical limitations. To be classified as undevelopable, the territory must not contain any existing housing or commercial structures. Military installations, parks, and forest preserves shown on the Census Bureau's maps at the time of the decennial or special census also may be classified as undevelopable territory. The land-use zoning of an area is not considered when applying this criterion.

[8] In measurin the distance between the main body of the urbanized area and a qualifying noncontiguous area, the road miles through nonresidential urban land (such as commercial areas, industrial parks, office areas, and major airports) that are contiguous and continuous with the main body of the urbanized area are excluded from the distance. Road miles through undevelopable territory may occur at any point between the main body of the urbanized area and the qualifying noncontiguous area.

[9] Only the urban portion of an incorporated place qualifies to be included in the urbanized area if the place qualifies as an extended city. An incorporated place is defined as an extended city if it contains one or more sparsely settled areas, each at least 5 square miles in land area and having a population density of less than 100 people per square mile. The sparsely settled area(s) must total at least 25 percent of the land area of the incorporated place or encompass more than 25 square miles.

[10] A place included in an urbanized area designated as a result of an earlier decennial or special census is retained in the urbanized area in its entirety even if it does not meet this criterion, unless it newly qualifies as an extended city.

[11] As of April 1, 1990, the term "metropolitan area" or MA serves as the general term for the three types of metropolitan areas—metropolitan statistical areas (MSAs), consolidated metropolitan statistical areas (CMSAs), and primary metropolitan statistical areas (PMSAs). The metropolitan area central cities and titles used to determine urbanized area central places and titles are those in existence just before the release of the primary 1990 census data products. Changes to the list of central cities and titles of existing metropolitan areas based on the results of the 1990 census are not included, because such changes occur after the release of most 1990 census data. The Census Bureau will not change the list of existing central places and titles of urbanized areas as a result of any subsequent metropolitan area central city or title changes until after the next national census. The Census Bureau will determine the central place(s) and title of each qualifying intercensal urbanized area at the time of qualification based on the 1990 criteria. Urbanized area titles, except for those titled under criterion C.4, include only place and state names.

[12] Only the urban portion of an extended city is classified as central.

extended cities) within the boundaries of the urbanized area. Any metropolitan area title cities not located in the urbanized area are omitted from the urbanized area title.

2. If the urbanized area does not contain any place that meets criterion C.1, then the urbanized area title includes the name of the most populous incorporated place in the urbanized area that contains 2,500 or more people, and the names of up to two additional incorporated places in the urbanized area, provided that each additional place has a population of 15,000 or more, and has at least one-third the population of the most populous incorporated place in the urbanized area.

This criterion also is used to determine the title of an urbanized area that is not mostly encompassed within a single metropolitan area, or where a single metropolitan area encompasses more than one separate urbanized area, each centered on a separate metropolitan area title city; that is (a) those urbanized areas mostly within two or more PMSAs, but not within all constituent PMSAs of the CMSA, or (b) those urbanized areas that include one or more metropolitan area title cities but where other separate urbanized areas exist around one or more other title cities in the same metropolitan area. In these instances, the names used in the title of the urbanized area are restricted to metropolitan area central cities that meet the population size criteria given above.

3. If the urbanized area does not contain any incorporated place with a population of 2,500 or more, the urbanized area title includes only the name of the largest nonmilitary place.[13]

4. A regional title may be used to identify an urbanized area with a population of one million or more, if the Census Bureau believes a regional title provides an unambiguous description of the area. Regional titles include only the name of the largest city in the urbanized area, followed by the regional reference.

5. For urbanized areas that have places that qualify under titling criterion C.1, the order of place names within an urbanized area title is the same as the order of the central city names in the metropolitan area title, excluding places not contained in the urbanized area. For urbanized areas that are titled under criterion C.2, the place names within the urbanized area title are listed in descending order of population.

6. In addition to the name of each qualifying place (including the city name in the regional title), the urbanized area title includes the name of each state into which the urbanized area extends. The order of state names is:

a. The same as the order of their related place names mentioned in the urbanized area title, followed by,

b. The names of any other state(s) into which the urbanized area extends in descending order of the state's population in the urbanized area.

7. The numeric code used to identify each urbanized area will be the same as the code for the mostly encompassing metropolitan area (including CMSAs and PMSAs). If the title cities of a metropolitan area represent multiple urbanized areas, or the urbanized area title city does not correspond to the first name of a metropolitan area title, the Census Bureau will assign a code to an urbanized area based on the alphabetical sequence of the urbanized area title in relationship to all other urbanized area and metropolitan area titles.

D. Retention of Boundaries, Contiguity, and Merger of Urbanized Areas

As with the identification of central places and titles, the Census Bureau uses the geographic structure of metropolitan areas (including CMSAs and PMSAs) to determine when to define separate contiguous urbanized areas [14] or to merge contiguous urbanized areas. After delineating the boundaries of each urbanized area, the Census Bureau examines the relationship between the urbanized area and any contiguous urbanized area(s) using the following criteria to determine if each contiguous urbanized area should be recognized separately and, if so, where the boundary should be located between these urbanized areas:

1. An existing urbanized area generally retains all territory previously included within its boundaries if it qualifies as an urbanized area for the 1990 census. When a previously existing urbanized area becomes contiguous with another urbanized area, the Census Bureau generally will not move previously qualifying territory from that urbanized area into the contiguous urbanized area. [15]

2. When previously noncontiguous urbanized areas become contiguous, the Census Bureau will choose a prominent physical feature or political boundary to use as the boundary separating the two urbanized areas. The feature or political boundary selected will be at or near the location of the lowest overall population density between the two areas.

3. No new urbanized area will be created from the territory of an existing urbanized area, even if one or more MSAs or PMSAs subsequently are established that include portions of the existing urbanized area.

4. If the boundary used to separate two contiguous urbanized areas follows a political boundary that also is a metropolitan area boundary, the urbanized area boundary will continue to follow that political boundary even if the metropolitan area boundary subsequently changes.

5. When urbanized areas are contiguous, the Census Bureau will use the following criteria to determine if a merger occurs:

a. The Census Bureau merges urbanized areas when:

(1) Two or more newly qualifying urbanized areas are contiguous and are mostly in the same MSA or PMSA.

(2) A newly qualifying urbanized area is contiguous to an existing urbanized area and both are mostly in the same MSA or PMSA.

(3) Previously existing urbanized areas mostly in the same MSA or PMSA become contiguous.

(4) Existing contiguous urbanized areas, previously entirely or mostly in different metropolitan areas, become entirely or mostly part of the same MSA or PMSA because of a metropolitan area merger, provided that the urbanized areas are contiguous for 1 continuous mile or more and that the average population density of the census blocks along the line of contiguity in each of the affected urbanized areas is at least 1,000 people per square mile.

b. The Census Bureau does not merge urbanized areas when:

(1) Existing urbanized areas are contiguous or become contiguous and

---

[13] A nonmilitary place is one in which more than 50 percent of the population lives outside the boundaries of a military installation.

[14] The Census Bureau considers two urbanized areas to be contiguous if they share a common boundary line (not simply a point), and the areas on both sides of this shared boundary qualify for inclusion in their respective urbanized areas based on the minimum population density criterion of 1,000 people per square mile. Urbanized areas that are separated by no more than 5 miles of undevelopable land or water, but are connected by 5 miles or less of road, are considered contiguous if both include areas meeting the population density criterion at the points where they adjoin the undevelopable land or water and the qualifying road connection exists.

[15] The Census Bureau unavoidably may have to delete previously qualifying territory from an urbanized area or shift previously qualifying territory from one urbanized area to another when there has been a change in a place boundary (due to a detachment from or disincorporation of an incorporated place or a retraction from or deletion of a CDP), a change in a county or minor civil division boundary, or the elimination of a feature previously used as a census block boundary.

are entirely or mostly in different MSAs or CMSAs.

(2) Existing urbanized areas are contiguous or become contiguous and are mostly in the same CMSA but mostly in different PMSAs.

(3) Existing urbanized areas are contiguous or become contiguous and the largest central place of one of the urbanized areas is mostly outside the encompassing metropolitan area.

(4) Existing contiguous urbanized areas, previously entirely or mostly in different metropolitan areas, become entirely or mostly part of the same MSA or PMSA because of a metropolitan area merger but (a) are contiguous for less than 1 continuous mile; or (b) have an average population density of less than 1,000 people per square mile in the census blocks along the line of contiguity in one of the affected urbanized areas.

Differences Between the 1980 Urbanized Area Criteria and the 1990 Urbanized Area Criteria

The following is a summary of the differences between the 1990 urbanized area criteria and the 1980 urbanized area criteria.

1. The Census Bureau will recognize an urbanized area if it contains a place, either incorporated or census designated. Previously, the Census Bureau required a potential urbanized area to contain an incorporated place (except in Hawaii and Puerto Rico, where incorporated places do not occur in the sense of functioning local governmental units). In line with this proposed change, the Census Bureau is replacing the term "central city" with the term "central place."

2. The Census Bureau will add an entire place to an urbanized area only if the qualifying portion is adjacent to or within 1½ road miles of the main body of the urbanized area and the qualifying portion contains at least 50 percent of the population of the place. Previously, a place had to contain only a closely settled area that included at least 50 percent of the population of the place, or a cluster of at least 100 housing units, if the place did not have a population of at least 2,500 or a population density of at least 1,000 people per square mile.

3. The combined population density of any noncontiguous qualifying area and the intervening nonqualifying census block(s) added to the urbanized area must be at least 500 people per square mile. There must be at least one census block that is contiguous to the road connecting the qualifying core area with the noncontiguous qualifying area. Previously, there was no stated minimum population density requirement for adding noncontiguous qualifying area and the intervening nonqualifying blocks to the urbanized area, but the Census Bureau used this proposed criterior as a guideline in the past.

4. The Census Bureau will close urbanized area boundary indentations only when the depth of the area is at least two times greater than a line closing the opening. This criterion applies only when the indented area within the urbanized area is surrounded by area meeting the minimum population density requirement of 1,000 people per square mile. Previously, the Census Bureau generally closed any indentation less than 1 mile across the open end if it encompassed no more than 5 square miles.

5. The Census Bureau no longer will automatically add to an urbanized area the territory that contains a large concentration of nonresidential urban land use (such as an industrial park, office complex, or major airport) and is adjacent to the urbanized area, even if at least one-quarter of the boundary of the land use area is contiguous with the urbanized area. The Census Bureau does not have sufficient information to implement this criterion consistently on a nationwide basis. However, the Census Bureau, will exclude the length of roads passing through areas consisting mostly of nonresidential urban land use when measuring the distance between the main body of the urbanized area and qualifying outlying noncontiguous territory. If other requirements for adding qualifying outlying noncontiguous territory are met, the Census Bureau will add such territory to the urbanized area. Existing urbanized areas will retain territory that qualified under the previous criterion.

6. In most instances, the Census Bureau will use the title of the encompassing metropolitan area as the urbanized area title. If a single metropolitan area does not include most of the urbanized area or if the urbanized area does not contain any places named in the title of the metropolitan area, the Census Bureau generally will use as an urbanized area title the name of the most populous incorporated places with a population of 2,500 or more and the names of up to two additional incorporated places with a population of 15,000 or more and one-third the population of the largest place within the urbanized area. If no such incorporated places exist in the urbanized area, the Census Bureau generally will use the name of the CDP with the largest population for the urbanized area title. The overall effect of these changes will be to have the titles of urbanized areas and metropolitan areas as similar as possible. The Census Bureau generally used 1970, and in some cases 1980, urbanized area titles as the titles of 1980 urbanized areas even through some significant changes in the population of places had occurred.

7. For each urbanized area, where applicable, the Census Bureau will designate, as an urbanized area central place, each place that also is a central city in the encompassing metropolitan area. If there is no such place in the urbanized area, the Census Bureau will designate, as an urbanized area central place, each place included in the title of the urbanized area. The general effect of these criteria will be to have the central places of urbanized areas and the central cities of metropolitan areas as similar as possible in the 1990 census data tabulations. Previously, except in the two urbanized areas assigned regional titles, the central cities of urbanized areas consisted only of those places in the urbanized area titles.

8. All criteria related to delineating a boundary between contiguous urbanized areas and to merging contiguous urbanized areas are new. While the Census Bureau generally used these criteria as "guidelines" in the past, it did not previously publish these as criteria. These criteria, slightly modified since the October 24, 1989 announcement of the proposed urbanized area criteria, will result in the merger of the following 1980 urbanized areas for the 1990 census:

New Haven, CT and Meriden, CT
Norfolk—Portsmouth, VA and Newport News—Hampton, VA
Tampa, FL and St. Petersburg, FL

In addition, the criteria could result in the merger of other 1980 urbanized areas for the 1990 census, if their urbanized areas become contiguous for at least 1 mile, meet the specified conditions for contiguity, and are in the same MSA or PMSA. The following urbanized areas were within 2 miles of each other and mostly in the same MSA or PMSA.

Aurora, IL and Elgin, IL
Baltimore, MD and Annapolis, MD
Beaumont, TX and Port Arthur, TX
Greensboro, NC and High Point, NC
Johnson City, TN and Kingsport, TN—VA
Kingsport, TN—VA and Bristol, TN—Bristol, VA
Macon, GA and Warner Robins, GA
Oxnard—Ventura—Thousand Oaks, CA and Simi Valley, CA
Richmond, VA and Petersburg—Colonial Heights, VA
St. Louis, MO—IL and Alton, IL
San Juan, PR and Vega Baja—Manatí, PR

9. Although not a change to the 1990 criteria, it is possible that an urbanized area that qualified for (or after) the 1980 census will not qualify as an urbanized area for the 1990 census. In past censuses, no previously existing urbanized area had its population fall below 50,000. However, many urbanized areas that qualified in the 1980 census or after had a population that barely exceeded 50,000; any of these in which the population falls below 50,000 in the 1990 census will no longer qualify as an urbanized area.

EFFECTIVE DATE: November 21, 1990.

[Docket 13–89]

Foreign-Trade Zone 68—El Paso, Texas, Withdrawal of Application for Subzone Status for Farah Incorporated

Notice is hereby given of the withdrawal of the application submitted by the City of El Paso, Texas, grantee of FTZ 68, requesting authority for subzone status for the apparel processing plant of Farah Incorporated in El Paso, Texas. The application was filed on July 21, 1989 (54 FR 32101, 8/4/89).

The withdrawal is requested by the applicant because of changed circumstances.

The case has been withdrawn without prejudice, and FTZ Board Docket 13–89 is closed.

Dated: October 15, 1990.

John J. Da Ponte, Jr.,

Executive Secretary.

Certain Circular Welded Carbon Steel Pipes and Tubes From Thailand; Preliminary Results of Antidumping Duty Administrative Review

AGENCY: International Trade Administration, Import Administration, Department of Commerce.

ACTION: Notice of Preliminary Results of Antidumping Duty Administrative Review.

SUMMARY: In response to requests by petitioners and respondents, the Department of Commerce is conducting an administrative review of the antidumping duty order on certain circular welded carbon steel pipes and tubes ("standard pipe") from Thailand. The review covers shipments of this merchandise to the United States from four exporters during the period from March 1, 1987 through February 29, 1988. As a result of this review, the Department has preliminarily determined that dumping margins exist with respect to three of the four exporters.

Interested parties are invited to comment on these preliminary results.

EFFECTIVE DATE: October 22, 1990.

FOR FURTHER INFORMATION CONTACT: Alain Letort or Richard Weible, Office of Agreements Compliance, Import Administration, International Trade Administration, U.S. Department of Commerce, Washington, DC 20230; telephone (202) 377–3793 or telefax (202) 377–1388.

SUPPLEMENTARY INFORMATION:

Background

On March 11, 1986, the Department of Commerce ("the Department") published an antidumping duty order on certain circular welded carbon steel pipes and tubes from Thailand in the **Federal Register** (51 FR 8341). On March 6, 1988, we published in the **Federal Register** a notice of opportunity to request an administrative review of this order (53 FR 7383). On March 8, 1988, certain exporters and an importer of the subject merchandise requested an administrative review of this order. A similar request from petitioners followed on March 31, 1988. We initiated the review, covering the period beginning on March 1, 1987 and ending on February 29, 1988, on April 27, 1988 (53 FR 15083). The Department is now conducting this administrative review in accordance with section 751 of the Tariff Act of 1930, as amended ("the Act").

This review covers shipments made by four exporters of standard pipe from Thailand to the United States. The exporters covered by this review are Saha Thai Steel Pipe Co., Ltd. ("Saha Thai"), Siam Steel Pipe Import-Export Co., Ltd. ("Siam Steel"), Thai Hong Steel Pipe Co., Ltd. ("Thai Hong"), and Thai Union Steel Co., Ltd. ("Thai Union").

From June 28 through July 14, 1989, we conducted a verification in Bangkok, Thailand, of the responses submitted by Saha Thai, Thai Hong, and Thai Union. We made no attempt to verify the response submitted by Siam Steel because, by Siam Steel's own admission, significant portions of its response were not verifiable. During verification, we found that significant portions of Thai Hong's response either did not verify or were unverifiable. Accordingly, we used the best information otherwise available, in accordance with section 776(c) of the Act, in calculating preliminary dumping margins for Siam Steel and Thai Hong.

Scope of the Review

The United States has developed a system of tariff classification based on the international harmonized system of customs nomenclature. On January 1, 1989, the U.S. tariff schedules were fully converted from the Tariff Schedules of the United States, Annotated (TSUSA) to the Harmonized Tariff Schedule (HTS), as provided for in section 1201 *et seq.* of the Omnibus Trade and Competitiveness Act of 1988. All merchandise entered, or withdrawn from warehouse, for consumption, on or after that date is now classified solely according to the appropriate HTS item number(s).

Imports covered by this review are shipments of circular welded carbon steel pipes and tubes with an outside diameter of 0.375 inch or more but not exceeding 16 inches. These products are commonly referred to in the industry as "standard pipe" or "structural tubing." Until January 1, 1989, this merchandise was classifiable under item numbers 610.3231, 610.3234, 610.3241, 610.3242, 610.3243, 610.3252, 610.3254, 610.3256, 610.3258, and 610.4925 of the TSUSA. Since that date, standard pipe has been classifiable under HTS item numbers 7306.30.1000, 7306.30.5025, 7306.30.5032, 7306.30.5040, 7306.30.5055, 7306.30.5085, and 7306.30.5090. As with the TSUSA numbers, the HTS numbers are provided for convenience and customs purposes. The written product description remains dispositive.

Fair Value Comparisons

To determine whether sales in the United States of standard pipe from Thailand were made at less than fair value, we compared the United States price with the foreign market value. Since neither Siam Steel nor Thai Hong provided the Department with verifiable responses, for those two respondents we used Thai Union's responses as the best information otherwise available, in accordance with section 776(c) of the Act.

United States Price

In accordance with section 772(b) of the Act, we based United States price on purchase price, because the merchandise was sold to unrelated purchasers in the United States prior to its importation. We calculated purchase price based on c. & f., c.i.f., or f.o.b., duty-paid, packed prices to U.S. customers.

We made deductions from purchase price, where appropriate, for foreign inland freight, foreign inland insurance, ocean freight, brokerage and handling charges, and bank charges.

We made several additions to purchase price. For Saha Thai only, we made an addition to purchase price for duty drawback, *i.e.*, import duties which were rebated, or not collected, by reason of the exportation of the merchandise to the United States, in accordance with section 772(d)(1)(B) of the Act. We made no such addition to purchase price for Thai Union because, during verification, Thai Union was unable to document the amount of duty drawback it had received from the government of Thailand. We made another addition to purchase price, in accordance with section 772(d)(1)(C) of the Act, for a portion of certain indirect taxes which were later rebated by reason of the exportation of the subject merchandise to the United States. Consistent with our practice in past investigations (*see, e.g.*, Barbed Wire and Barbless Fencing Wire from Argentina; Final Determination of Sales at Less Than Fair Value (50 FR 38563—September 23, 1985)), we limited the addition to purchase price to 1.28 percent of the f.o.b. price of the exported product, which is the amount of allowable indirect taxes found to have been paid by respondents in the countervailing duty investigation of the subject merchandise (see Final Affirmative Countervailing Duty Determination and Countervailing Duty Order; Certain Circular Welded Carbon Steel Pipes and Tubes from Thailand (50 FR 32751—August 15, 1985)). Finally, we made another addition to purchase price, in accordance with section 772(d)(1)(C) of the Act, for the amount of "business (sales) tax" that apparently would have been collected on sales to the United States had they been subject to that tax. Because the business tax is paid in Thailand on gross sales receipts, we applied the business tax rate in the home market to the gross sales price in the United States and increased purchase price by that amount.

Foreign Market Value

In accordance with section 773(a) of the Act, we calculated foreign market value based on delivered or ex-factory packed prices to unrelated purchasers in Thailand. We made deductions to foreign market value, as appropriate, for inland freight, cash discounts, and business tax. In accordance with section 773(a)(4)(B) of the Act and section 353.56 of our regulations (19 CFR § 353.56), we made an adjustment to foreign market value for differences in circumstances of sale with respect to credit expenses and business tax. Because the gross sale price of the merchandise in the home market includes the business tax discussed *supra*, we adjusted foreign market value to eliminate any differences between the business tax in both markets by substituting the business tax on sales in the United States for the business tax on sales in the home market. In order to adjust for differences in packing between the two markets, we deducted packing costs in Thailand from foreign market value and added U.S. packing costs. In accordance with section 773(a)(4)(C) of the Act and § 353.57 of our regulations (19 CFR 353.57), we made adjustments to foreign market value to account for differences in the physical characteristics of the merchandise where there was no identical product in the home market with which to compare a product in the United States.

Petitioners allege that sales in the home market were made at prices below the cost of producing the merchandise. We examined production costs, which include all appropriate costs for materials, fabrication, and general expenses. We found that Thai Union, but not Saha Thai, sold substantial quantities of the subject merchandise in the home market at prices below production costs, within the meaning of section 773(b) of the Act. After disregarding Thai Union's below-cost sales, in accordance with section 773(b), we found that sufficient sales were made at or above production costs in the home market. Therefore, we used those sales to determine foreign market value.

Verification

We verified all information used in making this determination, in accordance with section 776(b)(3) of the Act. We used standard verification procedures, including on-site inspection of the manufacturers, operations and examination of accounting records and other documents containing relevant information.

Preliminary Results of the Review

As a result of our comparison of the United States price to foreign market value, we preliminarily determine that the following dumping margins exist:

Manufacturer/Producer/Exporter	Margin (percent)
Saha Thai	0.48
Siam Steel	75.06
Thai Hong	75.06
Thai Union	75.06

The dumping margin for Saha Thai is *de minimis*.

The Department shall determine, and the U.S. Customs Service shall assess, antidumping duties on all appropriate entries. Individual differences between United States price and foreign market value may vary from the percentages stated above. The Department will issue appraisement instructions directly to the Customs Service.

Further, as provided by section 751(a)(1) of the Tariff Act, the Customs Service shall require a cash deposit of estimated antidumping duties based on the above margins for these firms. For any shipments of this merchandise produced or exported by the remaining known producers and/or exporters not covered in this review, the cash deposit will continue to be at the rate published in the antidumping duty order for those firms. For any future entries of this merchandise from a new producer and/or exporter not covered in the original investigation or this administrative review, whose first shipment occurred after February 29, 1988, and which is unrelated to the reviewed firms or any previously investigated firm, the Customs Service will require a cash deposit of 75.06 percent *ad valorem*.

Article VI:5 of the General Agreement on Tariffs and Trade provides that "[n]o product . . . shall be subject to both antidumping and countervailing duties to compensate for the same situation of dumping or export subsidization." This provision is implemented by section 772(d)(1)(D) of the Act. Since antidumping duties cannot be assessed on the portion of the margin attributable to export subsidies, there is no reason to

require a cash deposit or bond for that amount. Accordingly, the level of export subsidies as determined in Final Affirmative Countervailing Duty Determination and Countervailing Duty Order; Certain Circular Welded Carbon Steel Pipes and Tubes from Thailand (50 FR 32751—August 15, 1985), which is 1.79 percent *ad valorem*, will be subtracted from the dumping margin for deposit or bonding purposes, resulting in a cash deposit rate of 73.27 percent *ad valorem* for all exporters other than Saha Thai. Because the dumping margin for Saha Thai is *de minimis*, the Customs Service shall waive the deposit requirement for all entries of standard pipe from that producer during the review period. For any future entries of this merchandise from a new exporter, not covered in this administrative review, whose first shipments occurred after February 29, 1988 and who is unrelated to any reviewed firm, a cash deposit of 73.27 percent *ad valorem* will be required.

These deposit requirements are effective for all shipments of standard pipe from Thailand which are entered, or withdrawn from warehouse, for consumption, on or after the date of publication of the final results of this administrative review.

Public Comment

Parties to the proceeding may request disclosure within five days of the date of publication of this notice. Any interested parties may request a hearing within 10 days of publication. Any hearing, if requested, will be held 44 days after the date of publication of this preliminary notice or the first workday thereafter.

Case briefs and/or written comments from interested parties may be submitted not later than 30 days after the date of publication. Rebuttal briefs and rebuttals to written comments, limited to issues raised in the case briefs and comments, may be filed not later than 37 days after the date of publication. The Department will publish final results of this administrative review, including the results of its analysis of issues raised in any such written comments or at a hearing.

This administrative review and notice are in accordance with section 751(a)(1) of the Tariff Act (19 U.S.C. 1675(a)(1)) and section 353.22 of the Commerce Department's regulations (19 CFR 353.22).

Dated: October 12, 1990.

Marjorie A. Chorlins,

Acting Assistant Secretary for Import Administration.

Low-Fuming Brazing Copper Rod and Wire From New Zealand; Preliminary Results of Antidumping Duty Administrative Review

AGENCY: International Trade Administration/Import Administration Department of Commerce.

ACTION: Notice of preliminary results of antidumping duty administrative review.

SUMMARY: In response to a request from a manufacturer/exporter, the Department of Commerce has conducted an administrative review of the antidumping duty order on low-fuming brazing copper rod and wire from New Zealand. The review covers one manufacturer/exporter of this merchandise to the United States, McKechnie Pacific, Ltd., and the period December 1, 1988 through November 30, 1989. We preliminarily find a *de minimis* dumping margin for the review period.

Interested parties are invited to comment on these preliminary results.

EFFECTIVE DATE: October 22, 1990.

FOR FURTHER INFORMATION CONTACT: Michael J. Heaney or Robert Marenick, Office of Antidumping Compliance, International Trade Administration, U.S. Department of Commerce, Washington, DC 20230; telephone: (202) 377-4195/5255.

SUPPLEMENTARY INFORMATION:

Background

On December 21, 1989, the Department of Commerce ("the Department") published a notice of "Opportunity to Request an Administrative Review" (54 FR 52436) of the antidumping duty order on low-fuming brazing copper rod and wire from New Zealand (50 FR 49740, December 4, 1985). On December 18, 1989, a respondent, McKechnie, requested an administrative review. We initiated the review on February 16, 1990 (55 FR 5640). The Department has now conducted that review in accordance with section 751 of the Tariff Act of 1930 ("the Tariff Act"). The final results of the last administrative review in this case were published in the Federal Register on November 14, 1989 (54 FR 47379).

Scope of the Review

The United States has developed a system of tariff classification based on the international harmonized system of customs nomenclature. On January 1, 1989, the United States fully converted to the *Harmonized Tariff Schedule* ("HTS"), as provided for in section 1201 *et seq.* of the Omnibus Trade and Competitiveness Act of 1988. All merchandise entered, or withdrawn from warehouse, for consumption on or after that date is now classified solely according to the appropriate HTS item number(s).

Shipments covered by this review are low-fuming brazing copper rod and wire principally of copper and zinc alloy ("brass") of varied dimensions in terms of diameter, whether cut-to-length or coiled, whether bare or flux-coated. During part of the review period such merchandise was classifiable under item numbers 612.6205, 612.7220 and 653.1500 of the *Tariff Schedules of the United States Annotated* ("TSUSA"). This merchandise is currently classifiable under HTS item numbers 7407.21.50, 7408.11.60, 7408.19.00, 7408.21.00, 7408.22.50, 7408.29.50, 8311.10.00, 8311.20.00, 8311.30.60, and 8311.90.00. The TSUSA and HTS item numbers are provided for convenience and Customs purposes. The written descriptions remain dispositive. The review covers one manufacturer/exporter of this merchandise to the United States, McKechnie Pacific, Ltd. ("McKechnie"), and the period December 1, 1988 through November 30, 1989.

United States Price

In calculating United States price, the Department used purchase price as defined in section 772 of the Tariff Act. Purchase price was based on the c.i.f. price to unrelated purchasers in the United States. We made adjustments for ocean freight and marine insurance. No other adjustments were claimed or allowed.

Foreign Market Value

In calculating foreign market value, the Department used home market price, as defined in section 773 of the Tariff Act. Home market price was based on the packed, free-on-railhead price to unrelated purchasers in the home market with adjustments, where applicable, for inland freight. We made further adjustments, where applicable, for differences in credit, commissions, the physical characteristics of the merchandise, and packing between the home market and U.S. merchandise. No other adjustments were claimed or allowed.

Preliminary Results of the Review

As a result of our review, we preliminarily determine the margin for the period December 1, 1988 through November 30, 1989 to be:

Manufacturer/exporter	Margin (Percent)
McKechnie	0.30

Interested parties may request disclosure within five days of the date of publication of this notice and may request a hearing within 10 days of publication. Any hearing, if requested, will be held 44 days after the date of publication, or the first workday thereafter. Pre-hearing briefs and/or written comments from interested parties may be submitted not later than 30 days after the date of publication. Rebuttal briefs and rebuttals to written comments, limited to issues raised in those comments, may be filed not later than 37 days after the date of publication.

The Department shall determine, and the Customs Service shall assess, antidumping duties on all appropriate entries. Individual differences between United States price and foreign market value may vary from the percentage stated above. The Department will issue appraisement instructions directly to the Customs Service.

Since the margin for McKechnie is less than 0.5 percent, and therefore *de minimis* for cash deposit purposes, the Department shall not require a cash deposit of estimated dumping duties for McKechnie. For any future entries of this merchandise from a new exporter, not covered in this or prior administrative reviews, whose first shipment occurred after November 30, 1989, no cash deposit shall be required. These deposit requirements are effective for all shipments of low-fuming brazing copper rod and wire, entered, or withdrawn from warehouse, for consumption on or after the date of publication of the final results of this administrative review.

This administrative review and notice are in accordance with 19 U.S.C. 1675(a)(1)(c) and 19 CFR 353.22.

Dated: October 15, 1990.

Marjorie A. Chorlins,

Acting Assistant Secretary for Import Administration.

Natural Bristle Paint Brushes and Brush Heads From the People's Republic of China; Final Results of Antidumping Duty Administrative Review

AGENCY: International Trade Administration/Import Administration Department of Commerce.

ACTION: Notice of final results of antidumping duty administrative review.

SUMMARY: On February 28, 1990, the Department of Commerce published the preliminary results of its administrative review of the antidumping duty order on natural bristle paint brushes and brush heads from the People's Republic of China. The review covers one Hong Kong reseller of this merchandise to the United States and the period February 1, 1988 through January 31, 1989.

We gave interested parties an opportunity to comment on our preliminary results. Based on our analysis of the comments received, the final results of review are unchanged from those presented in our preliminary results of review.

EFFECTIVE DATE: October 22, 1990.

FOR FURTHER INFORMATION CONTACT: Susan Silver or Maureen Flannery, Office of Antidumping Compliance, International Trade Administration, U.S. Department of Commerce, Washington, DC 20230; telephone: (202) 377-5255/2923.

SUPPLEMENTARY INFORMATION:

Background

On February 28, 1990, the Department of Commerce ("the Department") published in the Federal Register (55 FR 7016) the preliminary results of its administrative review of the antidumping duty order on natural bristle paint brushes and brush heads from the People's Republic of China (51 FR 5580, February 14, 1986). We have now completed that administrative review in accordance with section 751 of the Tariff Act of 1930 ("the Tariff Act").

Scope of the Review

Imports covered by this review are shipments of natural bristle paint brushes and brush heads from the People's Republic of China. During the review period, such merchandise was classifiable under item 750.65 of the Tariff Schedules of the United States ("TSUS"). This merchandise is currently classifiable under Harmonized Tariff Schedule ("HTS") item 9603.40.00. The TSUS and HTS item numbers are provided for convenience and Customs purposes. The written description remains dispositive.

The review covers the shipments of one third-country reseller in Hong Kong, Peace Target, Ltd., which purchased the natural bristle paint brushes and brush heads from a producer in the People's Republic of China and exported them to the United States during the period February 1, 1988 through January 31, 1989.

Analysis of Comments Received

We invited interested parties to comment on the preliminary results. We received written comments from the Paint Applicators Trade Action Coalition ("PATAC"), Peace Target, Ltd. ("Peace Target"), and the China Chamber of Commerce of Importers and Exporters of Foodstuffs, Native Produce and Animal By-Products ("the China Chamber of Commerce").

Comment 1: In determining the U.S. price under 19 U.S.C. section 1677a(b), PATAC argues that the Department misinterpreted Congressional intent regarding the manufacturer's degree of knowledge of the destination of his merchandise required for the Department to use the price to the unrelated reseller as the basis of U.S. price. PATAC claims that the legislative history and case law establish a minimum threshold for proof of knowledge. Therefore, the standard should be "knew or should have known."

PATAC argues that PRC producers should have known that Chinese paint brushes were destined for the United States, because a large volume of Peace Target's sales were made to the United States. Further, Peace Target's response indicates that PRC brushes were supplied to Peace Target based on U.S. customers' specifications. Therefore, the PRC producers had actual knowledge that the ultimate customers were located in the United States, because PRC producers were aware of U.S. specifications prior to production of the brushes. The PRC producers knew or should have known the destination of their brushes, and as a result, the Department should have used the PRC/Peace Target transaction price rather than the Peace Target/U.S. transaction price in determining U.S. price.

Peace Target maintains that PRC producers had no knowledge at the time of the sale that the paint brushes were destined for the United States. Paint brushes are commodity items. Peace Target's order for brushes made to certain specifications in no way restricts or predetermines the ultimate destination of the brushes.

Further, Peace Target reasons that the fact that it made significant sales of brushes to the United States does not suggest that PRC producers knew that the brushes were destined for the United States. It would be contrary to Peace Target's interests to disclose its customers and their locations to the producer who would, in turn, by-pass Peace Target as an independent middleman and sell directly to Peace Target's customers.

Department's Position: In the Trade Agreements Act of 1979, Congress modified the definition of "purchase price," in U.S.C. 1677a(b) to provide statutory authority for the administrative practice of basing U.S. price on the transaction from a producer to an unrelated reseller if the producer knew that the product was destined for the United States. H.R. Rep. No. 317, 96th Cong., 1st Sess. 75. The statute does not indicate the degree of knowledge necessary to find that a producer knew the destination of its merchandise. However, the Statements of Administrative Action adopted with the Trade Agreements Act of 1979 refers to the standard as "had reason to know". The Department uses this standard in its administrative practice. H.R. Doc. No. 153, 96th Cong., 1st Sess., Pt. II 411 (1979). And, as part of that administrative practice, the standard of knowledge that has been developed is "know or should have known" *Fuel Ethanol from Brazil* (51 FR 5572, February 14, 1986); *Certain Stainless Steel Sheet and Strip Products from the Federal Republic of Germany* (48 FR 20459, May 6, 1983). The standard for imputed knowledge, "should have known," is high. For example, knowledge was imputed in *Fuel Ethanol from Brazil* when it was determined that 100 percent of the exports of fuel ethanol were to the United States during the period of investigation.
